FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JULY 2, 1898.

VOL. LI.—No. 1. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

Emerson says that when a naturalist has "got all snakes and lizards in his phials, science has done for him also, and has put the man into a bottle." I do not deny that there are such cases, but they are quite exceptional. The true naturalist is no dry collector. Sir John Lubbock.

A FISHING NUMBER.

WHILE every issue is a fishing number, our columns to-day are filled with such a wealth and variety of angling papers that special note may be made of them.

What a showing it is of the angling resources of the continent—Florida tarpon; California tuna; Maine trout and land-locked salmon, Canadian salmon; Michigan trout and bass; New York weakfish and bluefish; West Virginia trout; Wisconsin muscalonge and bass, and so through the catalogue. We have said it more than once before and shall say it more than once again, that in all the world no other land is so favored as America in the abundance, variety and excellence of its angling opportunities; the sun shines on no other land where fishing waters are more easy of access and more generous in their rewards to the angler. And a somewhat comprehensive acquaintance with the angling literature of the day gives confidence to the remark that nowhere else than here is angling a more fertile and fruitful theme to engage the pens of appreciative and felicitous writers. As contained in the pages of this journal from week to week, the literature of angling is in every way a creditable and adequate presentation of the subject.

Mr. Mygatt's account of the tarpon fishing at Boca Grande, on the Florida Gulf Coast, will be a revelation to fishermen who know the tarpon only in such supply and feeding habits as are manifested in Florida waters in the months of winter and early spring. With such a superabundance of magnificent game fish, and such possibilities of taking the game beyond any known way of utilizing the catch, one must stop short of his opportunities, or kill wantonly, or devise some way of having his fun and freeing his fish. The last expedient was that adopted by Mr. Mygatt; he played his fish, and then let them go to "grow bigger." And the story he has to tell reads all the better because it carries with it no sickening tale of butchery and waste.

Florida has a rival in Southern California, which is represented by Mr. Beard's enthusiastic relation of the game qualities of the tuna, and all that he says in celebration of the fish is admirably and effectually endorsed and illustrated by Prof. Holder's story of the notable struggle with his big fellow.

Tarpon and tuna, these are the heroics of rod and reel; most of us must be content only to read of them, for it is not given to all of us to make a thousand-mile journey to catch a big fish. We must be content with shorter excursions and smaller fish; and so it is Mr. Mather's province in his practical paper to preach the doctrine of crappie fishing as one way to make the best of what good things fortune sends us. It is a sound, sensible, and satisfying rule, to get what we may with rod and line, and to have an outing near home if we may not visit distant waters.

As for many of us, we ought to have better fishing in local waters than is to be found there; and we would have it if our fish commissioners and fish protectors did their duty. Fish stocking and fish protection are directly in the interest of the man of circumscribed opportunities and limited means, whether of time or money. No better answer may be made to the cranky opponent of fish and game protection than just this, that the cause of protection is the cause of the people. A fish supply in home waters means that more of us may go fishing with something to show for it. We are accustomed to hear ignorant or selfishly interested criticism of fish laws as class legislation. No sillier suggestion could be made. The only class aspect of such regulations is that if properly enforced they do prevent the piracy of the small class of men who would rob the public for their own individual gain. The illicit net fisherman of our inland waters is vociferous in his denunciation of the laws as infringing on his rights and robbing him of his legitimate occupation, when the truth is that he has no special dispensation to take in his nets for his own profit the public fish which a hundred other men might take with rod and line. The community has been a long time in coming to a recognition of this, but year by year the merits of the fish net question are more clearly understood, and the time is surely coming when the supply of our local waters will no longer go to the nets of a few, when, by wise administration, it may afford pleasure and substantial profit, each his due share, to so many more.

THE FOREST RESERVES.

No forestry measure has been so bitterly opposed nor so warmly supported as that set on foot by President Cleveland in his proclamation of Feb. 22, 1897, which set aside thirteen large tracts in the West as forest reservations. The taking effect of this proclamation was postponed by act of Congress until March 1, 1898, and a provision was inserted in the Sunday Civil Service Appropriation bill now before Congress absolutely nullifying it. In conference committee of the two Houses, however, this provision was stricken out, and the proclamation thus remains in force—a tremendous victory for the cause of forestry. Public sentiment in this country—though at first often hasty in jumping to conclusions and so, for a time, often wrong—may usually be trusted, after the people have had time to study any question. So it is that even in regions where, through misunderstanding, the preservation of our forests by means of reservation was at one time bitterly opposed, so great a change of feeling has taken place that those who a few months ago hotly denounced the plan are now among its warm advocates. The public officials to whom is entrusted the duty of establishing a forest service, and of enforcing such laws and regulations as exist to-day, may wield a powerful influence for or against forestry in this country, according to the manner in which they deal with that section of the public residing in and near any reservation. It is within the power of these officials to make forest preservation popular or unpopular. It is a new thing in this country, and is distinctly opposed to the American idea, which is that the public domain, belonging as it does to all alike, is at the mercy of the first comer, so that any one is at liberty to appropriate to his own use anything on it that he may desire to possess. Many people will be found, therefore, who at first will be disposed to regard laws which in any way limit their freedom in this respect as infringements on their rights. Such persons must gradually be educated to a respect for the forestry laws, and every effort must be made to show them that such laws, and the service by which they are carried out, are for the benefit of all, even though at times these restrictions may seem in some degree to interfere with practices to which years of time have given the apparent sanction of established custom. People should be induced to take an active interest and pride in the forest reservations of their own section, and thus be brought to strengthen the hands of local adminis-

The establishment of a satisfactory forest service will not be easily or quickly accomplished, but the progress made during the last twenty-five years gives a guarantee that it will be done.

SNAP SHOTS.

When an association reaches its fortieth annual convention it may be presumed to have a name and a history which must be endeared to its members. The New York State Association for the Protection of Fish and Game met in Rochester last week for the fortieth year, and when a change of name came up for discussion this sentiment of pride in the long held name naturally manifested itself among the veterans. We give the debate in our trap columns. The title was retained; and whatever potency there may be in a name will continue to be exercised by the New York State Association for the Protection of Fish and Game.

The history of the Association is instructive. It was founded by men who had the single purpose only of gathering together to combine their influence for the enactment of game and fish laws, and to secure their enforcement. Trap-shooting was an afterthought, and was at first only subsidiary to the main purpose of the organization. It developed and in time absorbed the entire effort and activity of the annual meetings, in which game and fish protective interests had no part, or if any only one so slight and perfunctory as to be ridiculous. True, committees were named to report at the annual meetings, and certain enthusiastic and well-meaning individual members prepared papers to read; but as a matter of fact both the reports and the papers were listened to with impatient attention and scant courtesy by the delegates who were eager to discuss shooting rules instead. Whatever the constituent clubs may have done at home, in association they did nothing, nor made any pretense of it. After some years of this, certain members of the Association, led by Gen. D. H. Bruce, of Syracuse, called a winter meeting of the clubs for the express purpose of providing a way for the Association to return to its original purpose and work. This was attained by a system of two annual meetings instead of one, the winter meeting being set apart exclusively for game and fish protection interests. The natural development has followed; those members of the Association who were interested in protective work have attended the winter conventions; those whose interest was in trap-shooting alone have had part only in the summer tournaments. This will be the rule in the future. The game and fish protective element will carry on its work under the title of the League, and the trap-shooting will continue under the name of the Association. Individual clubs interested in both activities will have membership in both organizations, and each will have fullest opportunity of development unhampered by the other.

In early days, when many sections of the country were but little known and not at all settled, it not infrequently happened that persons journeying from place to place lost their bearings, wandered about for days or weeks through uninhabited regions, and ultimately perished of starvation. Sometimes this took place in a region where food was more or less abundant, although not in such shape as to be evident to the lost man as food. If the prairie did not furnish buffalo or the forest deer, there were yet often birds' nests in the trees, snakes among the grass, turtles in swamps and creeks, roots in the ground, and more or less nutritious bark on certain sorts of trees Yet the lost man, delirious with fear, and with thinking of only saving himself by reaching some human habitation passed, by these sources of food supply, and frightened to the point of losing his wits, failed to use reason and at length died of inanition. Among the sources of food supply in many parts of America, as suggested by Mr. George F. Kunz in his recent interesting paper on the occurrence of pearls in the United States, are the fresh-water mussels, which are found in very many brooks and streams of the United States. These, while not especially nutritious, might obviously sustain life for days in the lost hunter or explorer who knew enough to look for them where they might be found.

One mean phase of mean human nature, and a quality closely akin to thievishness, is the propensity to sneak into the enjoyment of an advantage without paying the honest due for it. It is a trait sometimes exhibited even by the man of the gun and the hunting rifle, though your typical sportsman is by common convention held to be above mean things. The Nova Scotia Game and Inland Fishery Protection Society reports that they have in that Province two distinct cuasses of visiting sportsmen from the United States. One is of those who give in their license fees, the other of "quasi sportsmen" who slip away to some distant places, go into the woods by one route and come out by another, and so by the maneuvers of outlaws and renegades succeed in killing their game without paying the license fee. Others resort to the trick of taking out a bird shooting license, and then on the strength of it hunting moose. Nova Scotia is not alone in suffering from the fraudulent ways of dishonest hunters. A notorious case of the same general character was that of a Lynn, Mass., moose hunter, who, without a license, killed a moose in New Brunswick last year, and then attempted to blackmail his guide. Whatever an individual who is an honest man, may think about the justice or injustice of license fees for hunting, if the license system is in force he cannot do else than conform to the law. His conscience and self-respect compel him to be honest and decent in the woods as well as out of them.

The Sportsman Tourist.

Honey Dew, Four Hounds and the Grapevine Telegraph.

WE were gathered about the stove in the tent. After supper pipes were puffing, the little stove was roaring hot, and it was either raining or snowing outside, nobody cared which. The visitors from the saw mill settlement down the valley were discussing a pet deer some one down there had raised from a fawn once upon a time.

"She were as delicate an' gentle as a little girl, 'n' no man ever got acquainted with a pet deer like that that he didn't feel kind of mean every time he went a-huntin' an' killed one like her. Of course he'd kill just as many as ever, but then he couldn't help feelin' as if he hadn't ought to. She was sure like one of the children, in the house, out in the yard and wanderin' off on the ridge. She had a bell, and nobody would get to shootin' at her; but the dogs would run her down off the ridge every day or so and she'd put fer the house and never stop till she was in the room 'n' the door shut. She stayed out one night 'way after dark, and after 'while Thompson's wife heerd the dogs a-runnin', and she waked Thompson up, and he listened 'n' he says: 'That's Jennie, sure; they're a-headin' right down the valley!' And so he got up 'n' opened the door a crack, and here she come a-runnin', 'n' when she sailed over the fence he opened the door 'n' she hustled in 'n' lay down en front of the stove 'n' Thompson shet it and went back to bed. What did she eat? Oh, twigs 'n' garden sass 'n' things, 'n' she was a glutton fer milk. She had a fawn once. She must 'a' been a tame deer down in the valley and a wild one up on the ridge, just the same as the rest of them. Went a-gaddin' around all the time. The little one grew up pretty near to a yearlin', and a feller back on the ridge shot her one day by mistake before he ever see her mother."

We townspeople asked what had become of Jennie.

"She died. Some thought it was from eatin' honey dew."

"Honey dew?"

"Yes. They say it'll kill a deer if it eats it."

"And what is honey dew?"

* * * * * * *

And that is what the writer would like to know of the reader. According to these men, it is a sticky, honey-like deposit, which comes on the upper surface of all the leaves of some particular tree, the variety most affected being, I think, the hickory and one other which I have forgotten. The deposit is made in a night, and the sun gradually dries it up, leaving a thin, silvery film on the leaf. Honey dew! None of us had ever heard of it before. Has the FOREST AND STREAM ever nibbled the leaves of a honey dew tree? Did any reader ever make chewing gum out of it when he was a boy? Does any one cure snake bites with it? When I went to school why was not my almost pathetic thirst for knowledge assauged by some news about honey dew? Other things might well have waited. One was liable to "meet up" with honey dew most anywhere, whereas I have not bumped up against Sir Isaac Newton's binomial theorem in twenty-five years!

I learned about the grapevine telegraph while on that same trip. I had the dim impression that the term was merely one of derision, applied to the imperfect news-gathering equipment of rival journals. It is, however, a distinct system of rural telegraphy.

And how necessary such a thing as a rural telegraph must be! What would life in the sparsely settled mountains be without it? The first thought of a newcomer in such a locality is that the people must be very lonesome and that life, being devoid of newspapers, is devoid of interest. That nothing new ever happens; that the country paper is a week old before it is brought in from the settlement, and that its contents were a week old when they were printed. True, but for the grapevine telegraph.

For instance, when the hounds got out of hearing after jumping the big buck that week, what information could we have gotten of them from the county paper? What could the people at the saw mill tell us when the hounds did not run in their hearing; but for the grapevine telegraph, what would any of us ever have known about that deer chase?

We heard the hounds trailing, then we heard them jump the deer, and the deep-voiced melody swing around through H.'s stand, where there was an unsuccessful shot. Then the moving chorus swinging around the ridge I stood on, down past the charcoal pit, through a gap, toward Silver Creek—and that was all. We did not see nor hear three of those dogs until 9 o'clock that night, and the other one of them not until 6 o'clock the next morning, and yet, gentle and credulous reader, by 8 o'clock we had the complete story of the chase by the grapevine telegraph, and by bedtime we knew where the missing dog was. The two men who followed the hounds reached Spring Creek, seven miles distant, after the chase had disappeared; but a woman at a cabin had heard the hounds and she said the deer had followed the water for half a mile and took back north on the next ridge, and her little boy said there were four hounds and a man from up the hollow pretty near got the deer. He got one "shoot" at it, and he "reckoned" he hit it. The chase came back on the ridge east of our camp, for three days afterward I myself met the log hauler who saw the whole outfit, and who told one of the saw mill men of it at the time, and who in turn fetched the news to our camp that evening of the hunt at about 6 o'clock. (He was getting into camp about flapjack time, my friend.) We therefore knew the chase had transferred itself to Block River, which is about ten miles from Spring Creek, and that the deer would lose the hounds at the river, and the hounds would be back by bedtime; we of course blowing the horn at intervals after dark as a guide to them. But directly along came a man with a new complication. A feller had been a-comin' from L'ville on his way to a town five miles west of our camp, and had passed a hound just this side of and going toward L'ville. Now, therefore, when by 9 o'clock three dogs were in, their owner was able to announce upon the arrival of the last mentioned telegram that Mute had gone to a certain house at L'ville, and that from there, not finding his master, he would go to Jake Sutton's at S.; which is another settlement back on Spring Creek, and that Jake would fetch him on to camp in the morning. And sure enough Jake Sutton came riding into camp next morning in time for breakfast with Mute at his heels. From the place where the dogs had jumped the deer to the river, where they lost it, and back thence to camp, the distance traversed by three of the dogs at a rough estimate and not counting circles, of which there were doubtless many, was something like thirty miles. Mute's trip to L'ville and thence to Sutton's made his trip about forty-five miles.

And yet some men folks think they are better than dogs.

GEORGE KENNEDY.

Along the Potomac.

As my thoughts ramble over the scenes and localities of my boyhood, I find them inadvertently approaching the precincts of the patriots' Mecca, the consecrated shrine where rest the remains of one

Whose fame will rise day after day,
As centuries come and pass away.

I will not attempt an elaborate description of this intensely historical and renowned place, which has been described so often by the celebrated writers of the world, in comparison to whom I am a mere cipher.

JOHN NORRIS.

Yet there are a few minor incidents in connection with my earliest recollection which may be of sufficient interest to recall, before passing on other scenes and localities. Among them, I recollect distinctly (although quite small at the time), when Gen. Lafayette visited the homestead and tomb of his illustrious friend at Mt. Vernon, and planted the first memorial tree near the tomb of Washington. This beautiful manner of commemorating his love and friendship has been followed by numbers of distinguished men, among them the Emperor of Brazil, the Prince of Wales, heir to the English throne; the Duke Alexis, of Russia; Gen. Grant, several Presidents, and also representatives of foreign monarchies, all of whom have voluntarily planted a living record of their sincerity to commemorate the virtues and wisdom of the great leader who battled to establish human liberty and equality, notwithstanding its antagonism to those forms of government which many of them represented. Before departing I cannot refrain from recalling in memory the sensations experienced when standing upon that emerald mount crowned with the historical mansion overlooking the Potomac, enjoying the distant scenery along the Maryland hills, or the beautiful panorama at close range moving over the surface of the river bearing to and fro the white winged messengers of commerce, and also numerous flocks of water fowl feeding along the margin or waving through the air; as it was enjoyed by the illustrious proprietor in his declining years, after the turmoil of battle was over. On turning my eyes in a different direction, with feelings of reverence, I gaze down the descending slope winding through the verdant quiet valley leading to the tomb, upon arriving in the vicinity of which all who approach appear to be impressed with a reverential or intuitive feeling to speak in subdued tones when looking upon the sarcophagus containing the remains of one whose name will live when that of Napoleon will be lost in the vortex of oblivion.

Crossing the boundary of Mt. Vernon we enter the estate of Belvoir, the property in early days of Col. Fairfax, the nearest neighbor and intimate friend of Washington. The buildings on this property were destroyed by fire previously to my acquaintance with the place, though I have frequently passed by and among the charred ruins, and gathered some fine fruit from the orchard, which still flourished in my boyhood. Col. Fairfax abandoned his title as one of the lords of England's realm with the luxuries of wealth and refined surroundings, and voluntarily made his home in the wilds of Virginia, where he was buried, and I believe his descendants are still in Virginia.

Another near neighbor to Mt. Vernon was George Mason, a warm friend and adviser of Washington, and the author of the Constitution of Virginia, upon which the Constitution of our Republic was based. He occupied a position as a statesman in advance of the age in which he lived, unsurpassed if equaled anywhere. He was also a successful manager of his extensive plantations. Following down this northern neck, whose eastern base is washed by the incesant roll of old Potomac's sparkling flood, my memory recalls from the past a galaxy of illustrious men who possessed and appreciated the magnificent forests, the verdant hills and charming valleys of this attractive and beautiful country.

Many of those gentlemen, whose names are indelible upon fame's record, performed services in the early history of our country which contributed to establish the foundation and give impetus to the germ which led to the present greatness of our Republic. Among them the different branches of the Lee family had their homes here; two of whom were signers of the Declaration of Independence, Richard Henry and Francis Lightfoot Lee. The Pendletons, Fitzhughs, McCartys, Peytons, Carters, Marshalls, Lewis, George Washington and several other distinguished gentlemen, whose names adorn history, were resident proprietors of the lands bordering on the Potomac, and formed a social galaxy of intellectual ability seldom, if ever, equaled in a similar extent of territory.

Inasmuch as those men were the direct descendants of the original colonists, the question naturally arises from what sources this preponderance of talent obtained existence in such a comparatively small community. The only solution is found by tracing their genealogy. In doing so we find the class of settlers (the Cavaliers) along the west banks of the Potomac, and also on the James River, were unequaled in social position, wealth, and education, by any body of emigrants that ever settled a new country, except those who colonized New England (the Puritans). They were equal in social standing, education and wealth. The difference was entirely in their political and religious tenets. Although widely differing in their political and sectarian opinions, yet they united in the common cause to resist the encroachments of the Mother Country, when attempting to abridge their vested rights. Notwithstanding we sometimes hear words of reproach in reference to Puritans, they consistently adhered to principles they advocated in reference to human rights previous to leaving their homes across the seas. On the other hand, without intending any disparagement, the Cavaliers abandoned their long-sustained loyalty to the crown, and stood shoulder to shoulder with the Puritans, battling for human equality from Bunker Hill to Yorktown. There are some singular circumstances in connection with those two powerful classes or divisions of colonists, the Puritans and the Cavaliers. Although their motives for emigrating were diametrically opposite to each other (the Puritans for their hatred of Charles I., for his oppressive methods; the Cavaliers for their disloyal feelings to Oliver Cromwell, after Charles was beheaded), yet they each contributed their quota, and were equally ardent in erecting the pedestal upon which our mighty and still rising Republic stands. Another circumstance in connection therewith; there are but two family names on the Declaration of Independence, duplicated, each pair leading members, respectively, of the Cavaliers and Puritans, Richard Henry and Francis Lightfoot Lee, Samuel and John Adams.

Another case illustrating the abnegation or impartial status of a Puritan patriot is that of John Adams, who presented the name of George Washington, a Cavalier, and strenuously advocated his selection as possessing the essential qualities necessary to command the army in the impending struggle. Another striking coincidence of mutual feelings of patriotism of the two great parties, still fresh in memory, was the simultaneous death of their acknowledged representatives, Thomas Jefferson and John Adams, on the anniversary of the day of our nation's birth, the 4th of July.

I make the above digression from the line of ideas I was pursuing for the purpose of vindicating or recalling to memory a few facts culled from authentic history, with the view of silencing malicious innuendoes in reference to the dubious services and status of the Puritans in the struggle for fundamental principles of self-government. Therefore, any attempt to cast a shadow on the integrity of those patriots should fall harmless, under the evidence of history.

In regard to their descendants, with a number of whom I have the pleasure of a personal acquaintance, many of them are extensively known as enterprising business men, as well as ardent patriots.

And we are indebted to the enterprise, courage and perseverance of their race, from the settlement of this country down to the present time, for the wonderful and rapid prosperity of the United States of America. Therefore, let us ignore sectional criticism as applicable to Puritan or Cavalier.

JAMES NORRIS.

MAGNOLIA, Harford County, Md

[TO BE CONTINUED.]

Out of Commission.

BY CHARLES HALLOCK.

I HAVE an invalid friend here who is a patient at the Asheville Sanitarium, and whose helpless hand I take at intervals in the spirit of fraternity. A hard chance has made his a paralytic, and all he can do is to lie on his couch with his face toward the inclosing mountains and watch their changing aspects as the sun passes over them on its diurnal rounds. We are two superannuated sportsmen here together, grizzled with age and travel over the wide ranges of the continent, and our sympathies are in unison. We have passed our best years in the varied enjoyments of nature, and now the present environment of expansive forests and high peaks which enfold our lodgment is especially grateful to us. Every morning the wood thrushes and song sparrows carol in the oak groves, and quail call lustily on the edge of the fields. Occasionally a gray squirrel trips over the lawn and runs up a tree. All this is charming to men who are incapacitated by disability. No instinct of pursuit incites us now to destroy them, as in our younger days. Nay, rather, as we come to feel the insidious drain upon our vital forces, and perceive the life gradu-

ally ebbing out of us, we begin to realize ourselves how precious it is. And so it has come to this pass that time and circumstances have made us not only conservative lovers of nature, but truly Thoreau-bred, and we have other use and value for game than to chase, kill, and eat it. Thoreau, like Audubon, loved to take these gentle creatures to his heart; to note their habits and expressions; and to observe my companion how nearly related we are in the divine economy. And Emerson has quaintly said:

"Not unrelated, unallied,
But to each thought and thing allied,
In perfect nature's every part,
Rooted in the mighty heart."

Sometimes I bring to my invalid friend my fly book, and we look over the varied patterns. They are not remarkable, but are mindful. He says that there is no trout region in all the wilds of America to compare with that which lies within comparatively easy reach of us in the Sapphire country of North Carolina. There are beauteous lakes there in the heart of the Blue Ridge, with crags like walls abutting upon their shores, where eagles nest; and streams that are broken by riffs and pools, in which great 2lb. trout hide; and waterfalls hundreds of feet high, which leap sheer precipices, or tumble in foaming cascades over gradient ledges; and at the foot of every one of them speckled trout disport! Mr. Geo. F. Weston, of the Biltmore estate, confirms this statement, and so do all gentlemen of veracity who know.

For years this angler's elysium has been isolated and kept intact by distance and inaccessibility, and even now it is a twenty-seven-mile drive from the nearest railway terminus, at Brevard. This month, however, a capacious up-to-date hotel has been opened to the public, and sportsmen are invited to come. Every modern convenience is supplied, and the livery equipment is as good as the best, so that the visitor can accomplish the long drive over a road which is incomparable in this mountain region.

I was on my way myself to this delightful Sapphire country, the brighest of all rural gems, when I had to sidetrack here at the Asheville Sanitarium on Oakland Heights, in behalf of an invalid wife, who could no further go. I am thankful to be here; but, spero meliora, I long to be beyond and taste of the living waters. Should my experiences be gratifying, of which there can be no doubt, I may perhaps write up some sylvan notes for your ad captandum. For the present, however, this poor sample must suffice.

My friend aforesaid has read the FOREST AND STREAM from its inception, and joins me in congratulations upon the completion of its useful and captivating quarter of a century, as will also scores of veterans who have hung up their rods and guns, as well as others who are closely following them on the down grade. May the spirit of sport and fraternity attend their declining steps, while your journal goes marching on for good.

THE PACIFIC WALRUS.
Mounted under direction of William Palmer for the U. S. National Museum.

Natural History.

The Walrus.

(*Concluded from page* 511.)

One method of hunting the walrus is practiced by the Siberian Eskimos and by them alone as follows: After the passage of the ice floes, females with their young are often seen making their way along the coast toward Behring Strait and the ice fields of the Arctic Ocean. At such times the watchful Eskimos man their oomiaks and lie off some prominent headland where the walrus are likely to pass, and as the young do not like to stay under water very long the coming to the surface of the pup gives the hunters a good idea of the position of the young from time to time, and chase is given at once. The oomiaks are about 30ft. long, propelled by eight men; there are three seats or thwarts across the body of the canoe, each occupied by two men; a single seat in the stern and one in the bow occupied by the harpooner. The one in the stern steers the oomiak and gives all orders, which are implicitly obeyed. There are usually six pokes or floats; these last are made of the skins of seal taken off whole, then turned the flesh side out, and all the blubber scraped off, and all the natural vents of the body tied up and the skin blown up until all the stretch is gotten out, and then dried. It is then turned hair side out and all the holes stopped up, and in one opening is put an ivory stud with a small hole drilled through to blow up the poke. These are used to attach to the line when a walrus is harpooned and keep him from getting away, for he is unable to draw this float beneath the water. This leaves the hunter at liberty to attack another if chance offers.

When all his implements are in place and the walrus are seen, they paddle directly for the spot where the walrus disappeared; and knowing the course taken, the hunters urge the oomiak forward. The man in the bow has an instrument for slapping the water. It is made of whalebone, about 6ft. long and 3½in. wide, ⅜in. thick, with one end cut away to form a good hand hold. With this he continually slaps the water as the canoe is paddled swiftly along. The sharp report made by this instrument when skillfully struck flat on the surface confuses the walrus, and they lose their wits and come to the surface in helpless terror. When this occurs the canoes come up and the men throw their spears with the floats attached. Then the animal is killed with a lance and cut up and placed in the canoe and taken to land. A medium sized walrus will load an ordinary oomiak, for everything is saved except the blood. The intestines are freed of their contents and saved, and when washed out and inflated and dried they make the very best waterproof clothing; also when the grain is broken the women make very pretty overcoats to wear in winter. The material is quite white and very thin and light, and they ornament the seams with colored feathers and bits of woolen thread. Being very soft and pliable it makes a very desirable garment to wear over the winter garments of fur to keep the drifting snow from blowing into the fur. For waterproof the intestines, after being dried, are given a coat of oil and dried again. These strips are sewed together round and round, the arms are put together the same way, and notwithstanding the many seams are quite waterproof, and the numerous uses to which the walrus is put is a very interesting and instructive study.

The migration of the walrus southward does not begin until the formation of the new ice gives warning of the closing of the Arctic Sea.

I have been informed by reliable natives that the walrus sometimes wintered in the vicinity of Point Barrow, but only a few individuals. These made their home beneath the ice exactly as the seal does by keeping open a small hole through the ice to furnish a constant supply of fresh air. These breathing places, called alooes by the Eskimos, are formed as follows: When the ice is thin, say an inch or two thick, the walrus comes up beneath and raises a hummock with its strong head, and there will be cracks through which they can readily breathe. The warm breath soon enlarges this opening; the frost formed from the breath obliterates the traces of fracture and soon the drifting snows make the surface even and the walrus comes and goes, and none but the dwellers beneath the ice can see his movements. The ice thickens rapidly in the intense cold, and when the walrus comes up into his allooe to breath he picks away the ice with his strong tusks, constantly enlarging it until its dimensions are satisfactory. No doubt this process has to be gone over many times during the winter and perhaps a little every day. As the ice grows thicker it floats higher and higher, making the dome of his winter home more and more roomy; and as the greater part of his time must be spent in the allooe, it must be a lonely existence to pass the winter beneath the ice for a creature so fond of the society of his kind as is the walrus. It seems to me they would never voluntarily make their home beneath the ice in this region, but it must be because they have been caught by the heavy ice crowding upon the land and their escape to the south has been cut off in the same way the unfortunate whalemen were in 1897 at Point Barrow.

I was told by Mung-ie-ah-loo, a bright and reliable Eskimo, that the walrus caught the little common seal and ate them; at first I was rather incredulous about the matter, and told him it was impossible for a walrus to seize a seal in its mouth, which does not project beyond the two tusks, and both jaws are back of the line an inch or more. But he explained that the walrus kills the seal with the tusks and then tears it to pieces in the same manner, and when a strip is torn off they get the end in their mouth and in that way devour it. The following summer, when the walrus were passing, he brought me the stomach of one in which were the remains of a partly digested seal, which had been torn and eaten just as he described the process.

The migration of the walrus southward does not begin until the new ice begins to form, and gives warning of the closing of the sea, and whale ships seldom see them in the vicinity of Bering Straits on their way out at the close of the whaling season, about Oct. 1.

I doubt if the walrus ever voluntarily remain north of Bering Straits, but if some straggling individuals get belated and find their southern journey arrested by strong, heavy ice, they may elect to remain and make their home beneath the floe, as the seals of the region always do. In the five years I spent at Point Barrow not a single walrus was taken or reported to have been seen in winter.

One reason for the migration of these animals to the north and their keeping among the ice floes is to protect their young from the orca, which attacks and destroys the young of all the cetaceans, and the walrus recognize the safety to be found among the ice fields, upon which they can readily climb and be entirely safe from the attack of the orca. The orca dislikes to go among the ice because of its dorsal fin, which would be likely to come in contact with the ice when near the surface.

Soon after the walrus leave the Arctic Ocean the Bering Sea in its northern part becomes filled with ice, and the walrus herds keep on the southern verge and drift southward on both shores of the sea. They are seldom seen in winter because of the boisterous weather encountered in these high northern latitudes; in winter no commerce is carried on north of the Alutian Islands; no port stands with open arms to receive the storm-tossed mariner; the seal of the ice king is placed on land and sea.

The females on the return journey to the south are joined by the males on the southern part of the ice, and there the winter is passed drifting to and fro with the ever-moving ice. Whether they pass much time on the ice during the intense cold of winter is unknown, but I have no doubt they could endure the cold with their thick skin and heavy coating of blubber. However that may be, the water is not much colder in winter than in summer, since among the ice at that time the temperature is always over the freezing point. The animals in the far north keep in good condition in winter, and the polar bear does not hesitate to plunge into the water to secure the coveted seal, and his coat of wet fur cannot compare with the warm coat of blubber on the walrus. From this I am inclined to believe that they pass a large part of their time on the ice in winter as well as in summer.

Their desire to sleep on a solid foundation seems irresistible at times, although they can sleep in water, and do when no other convenient resting place is at hand. Their position when asleep in the water is with the head and the back flippers hanging down and only a small portion of the side of the animal rounded up above the level of the water. I have seen the very old males sleep in an entirely different position. These old fellows have the ability to take a perpendicular attitude, with the loose, flabby folds of the skin spread out around them like an umbrella, and with the neck drawn down and just the top of the head and tusks showing above the wrinkled, hairless body of the strange looking mass floating on the sea. In the first-named position the walrus are compelled to raise their head every ten or fifteen minutes to breathe, but in the latter the nostrils are at all times above water and continuous sleep is at their command.

It is a common impression that every creature has its foes "besides the great destroyer man," yet it seems to me the walrus has great immunity from foes. His home among the ice floes makes a safe retreat from the orca, and only the very young could be eaten by them, for I do not think an orca could tear the skin of a six months' old walrus, because of the thickness and strength of their skin even at this tender age.

It has always been my opinion that any animal that can eat a walrus must carry a sharp knife to cut him up with first, and even the Eskimo in the stone age must have had a hard task to carve the tough covering with implements of stone, slate, etc.

The polar bear, though large and strong, would get

hungry feeding on the carcass of a walrus. I have sometimes heard of desperate conflicts between the walrus and the bear. Both these creatures are found in summer on the large island of St. Mathews, in the Bering Sea, and among the ice fields; of course the bear is hungry, and when he smells meat may attack the walrus, but I have often thought the walrus would smile if he had the smiling faculty when he viewed the pugilistic efforts of the bear to "knock him out," when the greatest harm that he could do would be to slightly scratch the epidermis or bite the clumsy short feet. More than a thousand walrus carcasses left on the Moller Islands were found the following year very little disturbed, although the peninsula of Alaska adjacent abounded in great cinnamon bears, fully as large and strong as the grizzly of the California coast range. The bear paths were well worn and numerous, although previous to our killing this herd no paths had existed on the island.

From these observations I am led to believe that no harm could be done the walrus. Although the walrus is very clumsy on land he is never found far from water, and if in the scrap the bear got in the way and the walrus could strike him fairly, so great is their strength the great tusks would be driven entirely through the bear. So it seems to me that these two creatures, inhabiting the same region for centuries, must have learned their lesson; and that the bear must know the utter futility of trying to breakfast on walrus.

Some years ago I was amused on reading a story in one of the leading magazines describing the ferocity of the Greenland walrus. There was an illustration of a walrus catching a man on the ice in its mouth and rushing rapidly for the sea. It was amusing to one who had seen so many of these animals and knew that the first effort they would make would be to get away from man and seek refuge in the sea. The tusks of the animal grow directly downward on each side of the mouth from its massive skull; and between them is the rather small mouth, which does not protrude beyond the tusks at all, but is rather within the lines. By no possibility could they seize in the mouth and carry a human body. They are very timid, and shy of the presence of man, but heroic battles are fought over the females; and if they are proud of scars they have scars to show. So thickly are these massed they might be taken for a natural growth upon the skin were they not to be seen in all stages of healing. At Port Moller once a walrus was killed that had been struck by another, whose tusk had penetrated the thick skin and broken through the skull itself, and through the wound the brain was oozing. The animal was much emaciated and did not come to land with the rest, but kept away by himself.

Their appearance in the water after hundreds of them have left the ice and surround the boat, is not at all ferocious, but rather of great curiosity. They come to the surface as closely as possible, uttering hoarse guttural cries. At such a time a thump on the boat or the splash of an oar will send them all beneath the surface, to reappear in a few moments, then to be as easily dispersed as before.

Accidents sometimes occur when a walrus comes up near the boat, and hooks his tusk over the gunwale, sometimes in the effort to escape filling the boat with water and staving it; but I always thought the walrus was as glad to get away as we were to have him go. They never come up near a boat except when a herd has been driven off the floe and a boat is in the immediate vicinity, as before described.

The eye of the walrus has not the beautiful appearance of that of the seal, but is bloodshot and repulsive; it is not round, but elongated, and can be turned backward as though that was the natural position.

The tusks are of great use in hauling upon the ice. Stretching its head well over the edge, the creature strikes its tusks into the ice and with the strong muscles of the massive neck drags itself forward, also using the pectoral flippers to aid the movement, and in this way gains position on the surface. I once saw a single individual on a fragment of ice which had worn away by the action of the waves in imitation of a monster toadstool, and he was sleeping quietly upon the crown; but before he had drifted out of sight the stem washed away and the strange craft and its passenger parted company.

The walrus are only found in high northern latitudes. They were long hunted by the Norwegians for the oil and ivory. The ivory was of great value to the Eskimo in the stone age, for they were able to fashion from it many useful weapons and implements of the chase, some of which are so well adapted to the purpose intended that they are largely used to this day. The present toggle iron or harpoon used by the whalemen was adapted from the Eskimo ivory weapon used for the same purpose, and these are to-day unexcelled for the capture of the whale.

The ivory cut out for shoeing sleds has been found to move more easily than any other substance, except the iced runners of these people; polished steel and brass are not to be compared to the ivory, because the steel when it strikes a lump of earth adheres to it, but the ivory glides over with very little friction.

The skin of the walrus is eaten with a relish. Once when told an old chief was eating walrus skin I thought he must be having a hard time, but I afterward found that it was much more palatable than the flesh of the seal, and it has not the strong gamy flavor. Made into a souse and put in vinegar was often used by our party. The skin of a female walrus when prepared by the Eskimo will cover an oomiak 30ft. long. The skin is split in a very ingenious way by the natives. It is cut across the shoulders and tail, then tightly stretched on the ground and dried until dry on the outside. They then begin at the tail and split the skin through the center; the middle being still damp and soft, the knife follows the softest portion. It is in this way cut near to the shoulder, where a sufficient skin is left to hold the two sides together; it is then stretched and dried again and laid away for use. The Siberian and St. Lawrence Island Eskimos are very expert at this work.

There are no walrus in the Southern Hemisphere. In the far south the waters are of great depth, with no shallow seas, nor low ice fields, which form in winter and are melted away by the summer sun; but instead is the deep sea, with immense bergs that are more like islands drifting away to the north after breaking from the great glaciers of the south.

I was told by a Mr. Root, of New Bedford, who made a voyage to the far south in a German steamer in search of fur seal, that they steamed for nearly a hundred miles along one berg, the walls of which were from 50 to 80ft., and it was of such vast extent that they pronounced it an island, and they only discovered their mistake when they returned that way and found that the supposed land had drifted far away to the eastward.

In regard to the extermination of the walrus, it would seem that they are too well protected in a sea that is unnavigable for so large a part of the year, and also because of their ability to keep among the ice floes in summer out of the reach of the hunters. They are not compelled to come to land to bear their young, as are the fur seal and sea lion, and some other marine mammals. In the day when the great polar whale shall become a stranger the walrus and hair seal will ever remain. They will always be a boon to the Eskimo, so many useful purposes do they serve.

One highly prized dish furnished by the walrus, which I almost forgot to mention, is of the clams taken from the stomach. The freshly eaten and hard portions, like the syphon, make a dainty dish, which is always secured by the Eskimo.

E. P. HERENDEEN.

THE National Museum report, referring to Mr. Palmer's walrus, which is here illustrated, says: "In the discussion of the recent taxidermic work in the Museum, which has appeared from time to time during the past year in the scientific journals, the Pacific walrus, which was exhibited at the World's Fair, has been severely criticised, and it has been said that it is inartistic and false to nature.

The preservation of a worthy memorial to the north Pacific walrus is especially desirable, since this is one of the species threatened with extinction. Numbered by tens of thousands and flocking together in immense droves when the American whaling fleet first entered the Arctic in 1854, they have now been reduced to a mere handful in American waters, and the old males are now entirely extinct in the western Pacific, and it is doubtful whether this particular phase of the species is to be found anywhere. The specimen shown at the World's Fair (Pl. 39) is an admirable example of the old male, and since it was acquired only after long and continued effort it seems but proper that its truth to nature, as now mounted, should be vindicated.

The skin in question was mounted by a most skillful and conscientious member of the staff, the chief taxidermist, Mr. William Palmer, who spent some months on the Pribilof Islands making preliminary studies in order to fit himself for this particular undertaking.

Capt. E. P. Herendeen, formerly of the U. S. Coast Survey, who was familiar with the Arctic Ocean for fifteen years, and who has seen tens of thousands of walruses in the times when they were abundant, in 1854 and in subsequent years, and who has been thousands of them at one time upon the shore at Sandy Point, says of the specimen in the Museum:

"I am satisfied that the mounted specimen is true to nature and in every respect an admirable piece of work. The only criticism which I would make upon it is that an animal in the attitude of extreme attention and activity in which this is represented would be slightly smaller about the neck. The arrangement of the wrinkles in the skin and the tuberculated appearance of its surface are perfect, and the attitude of the limbs cannot be criticised.'"

Camp-Fire Flickerings.

"That reminds me."

Editor Forest and Stream:

"Tone's Partridge Story" in "Flickerings" reminds me of Gus F.'s remarkable shot, or rather of one of them, for he has had more extraordinary experiences and has come out on top oftener than any man I ever met.

Gus and his old pointer Cap had dropped in to warm up, and incidentally to swap a few hunting yarns with me. I wasn't very busy, so I told a pretty stiff one as a starter for Gus, relying on him for a good one for the benefit of a stranger who was waiting for the train. Gus fired a stream of tobacco juice at the coal scuttle as a sort of range finder, made old Cap charge in the corner, and began:

"One winter morning when Mose and Jim and me was all at home on the old farm, Mose came in and said two deer had crossed the road and were in on the ridge between Two-Mile Run and the hill road. Of course we had to gather them in. Jim took his own rifle, I took Mose's (and a good one it was too) and Mose took my little muzzleloading shotgun. The one I told you about, that I made the barrels out of old horseshoe nails, and had the gun built in New York city. Cost me a hundred dollars to have her built. If I had her again I wouldn't take five hundred for her. When she barked at a bird it jest dropped there. Well, Mose, he took the track and Jim and me put for the crossing, and we had 'em both in a couple of hours." (The killing of a couple of deer in an hour or so was a mere circumstance in one of Gus' stories.)

"Well, after we had hung up our deer the boys proposed to get a mess of pheasants on the way home. So I changed guns with Mose and took my shotgun. Jim and Mose went down the hollow along Two-Mile and I took along the brow of the hill jest ahead of them, so when they put up a bird I could head it off. Whenever a bird would start my way the boys would holler, and it was a lucky bird that crossed the deadline alive. Here! Charge, you old whelp. I'll break you in two!" (This to old Cap, who had got up carefully, one foot at a time, and was making his sneak out of the door.)

"Well, sir, they kept a-comin' till I'd killed eight and missed one." (I never could understand how he came to miss that one. He didn't make a practice of doing that kind of thing.) "I had both barrels empty and was just pouring in the shot for another load when Mose hollered: 'Look out, here's another.' I see it a-comin' like a bullet straight for me with its wings set. Now I tell you I wasn't long shoving a wad down on the shot and throwing the ramrod on the ground. I give it to him as he came head on. Wal, boys, what d'you spose that bird done?"

At this point Gus curled up one corner of his lip till his mustache tickled his off eye and fired a line shot of tobacco juice at the coal scuttle, and Cap took advantage of his preoccupation to run the blockade, and struck out for a foraging trip around the neighboring kitchen doors.

"Wal, boys, I shot a little high and tore the head clean off him, and he was comin' so straight to me and so fast, I hope to never fire another shot if that bird didn't strike the muzzle of the gun just where his neck joined the breast, and the first thing I knew after the gun went off the bird was strung up the gun barrel clear up to my hand.

"Wal, boys, I must be goin'. Here you! Heel! Where in thunder has that old imp gone to? Here you! Come in."

As he passed out the stranger heaved a deep sigh like a man coming out of a trance. "A most extraordinary shot, considering the fact that he forgot to put a cap on his gun."

Mc.

Game Bag and Gun.

CHICAGO AND THE WEST.

The Hand Car in Sport.

CHICAGO, Ill., June 18.—Mr. Geo. F. Titus, of Norwalk, Ohio, finds occasion to write me as below about conveyances in shooting trips:

"In your letter to the FOREST AND STREAM of June 4 mention is made of Mr. G. F. Winslow, of Eau Claire, being allowed the use of a special train by which he could reach good shooting grounds accessible only from the railroad. This was a more modern and sumptuous mode of hunting than that enjoyed by a party of sportsmen of this city, of whom my father was one. It was early in the 60s, when this division of the Lake Shore was known as the Cleveland & Toledo Railroad. In those days game was abundant and life was worth living, from a sportsman's point of view. The conveyance used was an ordinary hand car. The start was usually made at daylight, and the car propelled up as far as Shedd's cut, a distance of six miles. The run back was an easy matter, as the grade is a rather stiff one, the car being stopped at the covers noted on the way up. Good bags were frequently made, the best being sixteen rabbits and nineteen quail to four guns, all the game being shot on railroad grounds. To obtain the same quantity of game now in this vicinity one would have to travel over an entire township. These hand car trips were continued at intervals during the fall shooting, and only stopped when the increased business of the railroad, occasioned by the war, necessitated the running of trains every day in the week."

I have myself, in common with many others who now and then find themselves in out-of-the-way corners of the country, had reason to bless the man who invented the hand car. Once, I remember, I helped pump a car from De Motte to Shelby, Indiana, and we had the top of the car full of rabbits, more than I should have liked to carry. Last week, over in Michigan, while we were trout fishing, we ran to and from our fishing points on the river by means of a hand car. A year ago, out in the Rockies, our party lightened several weary miles by a jog on a hand car. In short, in the far countries and the new countries, into which the railroad has just come, the hand car aids us in our shooting and fishing, and while it is not quite so palatial as a parlor car, and runs a few harder, it gets you to more fun in fewer townships.

Wisconsin Game Birds Nesting.

Mr. Geo. A. Morrison, of Fox Lake, Wis., writes me about the game birds of his locality:

"We have more bluebills nesting with us this year," he says, "than for many seasons past. I think 100 pairs a low estimate. Have seen many females waddling onto bogs or sunning themselves on the edge. Mr. Waldo, of this place, found a nest of Bartramian sandpiper containing four eggs, while plowing for corn ground on May 21. Nest was merely a depression on the bare ground. Eggs incubated about one week, and a finely-marked set, which Mr. Waldo kindly gave me. This is the species of upland plover that has the peculiar habit of raising its wings till they almost touch, as it alights on ground or fence, uttering a long drawn out whistle at the same time."

The Bartramian sandpiper is the bird commonly called upland plover in the West. Its long, shrill, sweet, mysterious note is known to every boy who ever lived on the Western prairies, and every such boy would recognize the bird by the description Mr. Morrison gives of one of its habits.

E. HOUGH.

1206 BOYCE BUILDING, Chicago, Ill.

"A MOST curious campaign is now progressing in Lee county, Georgia," remarked a Georgia representative to a Washington Star reporter, "between two popular men who are running for the Legislature in that State. Politically there is not much difference between them; they are plain Democrats with no side line in the shape of money issues, but on the issues of the local campaign they are very wide apart. The issue between them is fish baskets or no fish baskets, and all the other questions of the day are temporarily laid aside. The present incumbent of Legislative honors had a bill passed by the Legislature during its last session prohibiting the placing of fish baskets, which is but another name for fish traps, in the waters of that county. The man who is endeavoring to succeed him has quite a strong following. He thinks that fish traps should be allowed so that the fish may catch themselves. They are speechifying to their adherents nightly and have already got into a lively fight."

Sea and River Fishing.

Boca Grande's Great Tarpon Fishing

Editor Forest and Stream:

I think an account of some wonderfully good tarpon fishing that a friend and myself had lately in Florida would be of interest to your readers.

The place where we fished is one that hitherto has not been used for tarpon fishing, although some anglers, I believe, have given it a few hours' trial at different periods. As it is in my opinion the best tarpon fishing grounds in Florida, and may prove to be the best and most convenient to reach along the Gulf Coast, our experience may be of some use as a guide to anglers during the coming winter.

Mr. W. Littauer and myself left New York for Florida on May 15, and on June 1 we were back in New York with an even 120 tarpon to our credit, fishing one rod apiece. Having fished tarpon for some ten winters, and fully realizing how hard it is, at times, to get even one or two in a day, I am quite prepared to have this statement received with incredulity.

Our best fishing, by all odds, was had at Boca Grande Pass, some eight miles to the north of Captiva Pass. In fact, we only got a dozen at Captiva Pass, all the others being got at Boca Grande.

A short summary of our trip will give some idea of the extraordinary good tarpon fishing we met with:

Arriving at Punta Gorda the night of May 16, we went on board the schooner Decoy and sailed the following morning for Captiva Pass. Owing to the very light winds we got there late that night. We began tarpon fishing the next morning, May 18, and got a few, but there were not many showing themselves in the pass.

On Thursday, the 19th, we got a few strikes and landed one tarpon in the morning. Not satisfied with the fishing, we sailed for Boca Grande Pass. For several winters I had felt convinced that in this large, deep water pass there must be good fishing, if any one would take the trouble to find out the best places, and the proper time of the tide for fishing in those places.

We cast anchor on the south side of Boca Grande Pass at 3 P. M. At 4 we started out in two rowboats to see if we could find any tarpon about. My friend stayed on the south side of the pass, while I rowed over to the north side and tried that. I saw a great many tarpon in the pass, and by 7 o'clock had managed to land two, and had had several other strikes.

This seemed promising for the next day, so on Friday morning, the 20th, we started at 5 o'clock in the morning, and rowed over to the north side of the pass. The tide was slack low water, but we could not find any tarpon about. We rowed about hunting for them. Finally rowing about a mile outside the pass, we found ourselves literally surrounded by hundreds of tarpon. In fact, for half a mile in every direction one could see them curving out of the water, blowing, playing and chasing small fish. We started to troll for them, using the white belly of a mullet as bait.

We got strikes at once. In fact, from 6 until 8 A. M. one could get a bite as soon as the bait was in the water. Between 8 and 10 o'clock the biting slackened up a good deal, but if five minutes went by without a strike one really felt quite neglected. By 11 o'clock I had hooked eight tarpon. Three of these I landed. Three more were taken by sharks after I had played them from twenty to thirty minutes each. One got off after playing for twenty minutes, and the other broke the line by falling on it. I probably had twenty other strikes. L. caught five, and had two taken by sharks.

After 11 o'clock the tarpon stopped biting. We fished again at 3 o'clock, on the ebb tide, but got no strikes until after 4 o'clock, when they bit for two hours. L. managed to get one more, and had another stolen by a shark. My total catch for the day was four caught, four taken by sharks. L.'s catch for the day was six caught, three taken by sharks. Our fish averaged about 120lbs. Altogether the sharks were very bad that day, and although the tarpon were so thick, it did look as if we would have all our work and trouble simply to furnish food for the sharks. However, the sport was gloriously exciting, and next morning, Saturday, the 21st, saw us up at 4 o'clock, and at 5 A. M. we were on the fishing grounds, a mile outside Boca Grande Pass, surrounded by even more tarpon than the day before. The same strong east wind was blowing against the tide, and the water was very rough. By 6 A. M. I had caught four tarpon from the boat, weighing from 50 to 100lbs. each. Then the wind began to fall and the water became smoother. By 8 A. M. I had caught four more, three from the boat and one from the beach, making eight in four hours. The last four averaged over 100lbs.

The wind was getting lighter all the time, swinging around to the south, preparatory to getting to the west, as it does on most afternoons in May and June. After 8 o'clock the fish did not bite so voraciously, but still one could get a strike every three to ten minutes up to 12 o'clock, during which time I had caught five more tarpon, making in all, between 5 A. M. and midday, thirteen tarpon to one rod. The fish seemed to steadily increase in size as the day wore on, the last three landed by me measured 6ft. 6in. by 40in. girth; 6ft. 8in. by 41in. girth, and 6ft. 10in. by 42in. girth. At 12 o'clock I stopped for lunch and rested until 3 P. M. Starting to fish at 3 P. M., I tried from anchor by the lighthouse pier, on the ebb tide. There were quite a number of tarpon about, but they would not bite. The water was about 60ft. deep, and when we left our anchor, the tide, owing to the length of rope, dragged our buoy out of sight, although an eight or ten gallon can. The tide was too strong to row against, so having lost our buoy, we went ashore to wait until the tide slackened up. At 4:30 o'clock we saw some tarpon jumping inside the pass, where the current was more slack, so we rowed there and started to fish. There were quite a number of tarpon about, and they kept increasing up to dark. Between 4:30 o'clock and 7 I landed six more tarpon, whose lengths were 5ft. 10in., 6ft. 2in., 6ft. 3in., 6ft. 6in., and two small fellows, making a total catch of nineteen tarpon for the day. L. landed ten tarpon during the day, losing three others by sharks.

The sky was slightly overcast, and the new moon was of no use, or otherwise we might have gone on. But between the darkness and being absolutely tired out we gave it up for the day. I had only two taken by sharks, which was a small proportion compared to the total number that I had on. Neither of us kept any account of the strikes, as from 5 A. M. to 10 A. M. and from 5 P. M. to 7 P. M. the strikes were practically continuous. The water was beautifully clear and transparent, and altogether it was a marvelous day's fishing, and one long to be remembered. That I ever would have a better day's catch never entered my mind, and yet four days later showed me better luck.

On Sunday morning we found ourselves so tired out that we decided not to fish, but do our duty and rest.

On Monday, the 23d, I caught eight.

The 24th I caught six in the morning at Boca Grande and two that afternoon at Captiva, where we had sailed to meet a friend.

On Wednesday morning, the 25th, we tried Captiva again, but so few tarpon were about that we sailed back to Boca Grande, arriving at 4 o'clock. Between 5 and 7 P. M. I caught four tarpon.

On Thursday, the 26th, 5 A. M. saw us about a mile outside the pass, on the old fishing grounds, where we found all the tarpon as usual; simply thousands of them. From 5 A. M. until 9 A. M. they bit like catfish. From 9 A. M. until 3 P. M. they bit fairly well, but falling off toward midday. Although the guide and myself had only had a cup of coffee for breakfast at 4 o'clock, we fished steadily from 5 A. M. to 3 P. M. Too much excited to notice hunger, we would rather starve than miss such wonderful fishing. During these ten hours I caught thirteen tarpon. The two biggest measured 6ft. 10in. by 42 in. girth, and 6ft. 11½in. by 44in. girth. These fish I sent to Meyers, to have mounted. At 3 P. M. we had breakfast or lunch or dinner, I do not know what it was, and both of us slept until 7 P. M. It turned out to be a lovely evening. A light westerly wind was blowing and the tide was running out; with not a cloud in the sky and not a mosquito about. In fact, an absolutely perfect fishing night. We fished in the lagoon inside the pass. Between 7 P. M. and 11 P. M. I got nine more tarpon, averaging about 100lbs., making a total of twenty-two tarpon for the day to one rod.

Every fish was played squarely to a finish without any help whatever. Only three tarpon out of the twenty-two were gaffed. I find that it is not necessary to gaff tarpon in order to land them. Once a tarpon is brought with his head up on the beach, the guide only has to take hold of the wire snell and pull his head up on the sand, when he can take the hook out and turning the fish back into the water let him swim off. If not taken to the shore, but caught from the boat, I found that as soon as the tarpon is tired and lying on his side near the boat, playing him hard for two or three minutes and holding his head at every chance flush with the surface of the water prevents him from diving down, so that he can only flounder about and is soon played out. Then the guide, with a heavy glove on his left hand, seizes the fish by the jaws as he lies motionless on the surface and removes the hook. A slight blow from the blade of the oar starts the fish off once more on a career of usefulness, little the worse for wear, and sure to be all right in ten minutes if not caught by a shark while getting back his wind.

It particularly pleased me to originate this scheme, as formerly one of the great drawbacks in fishing tarpon has been to me the unnecessary killing of so many fish merely for the sake of sport.

I am quite certain that from 80 to 90 per cent. of the fish we caught at Boca Grande, in the manner described, and let go, recovered.

L.'s catch for the day was fifteen in all, making thirty-seven to our two rods. L. had very hard luck in the morning. After catching four tarpon, he had three in succession taken by sharks, the last a very large tarpon, which he had been playing for well over an hour, stolen just as he got him near the boat. This disgusted L. so that he gave up fishing at 11 A. M. Had it not been for this, he would have caught quite as many as I, for he had better luck than I that night. Between 7 o'clock and 11:30 he caught eleven tarpon, which is one about every twenty minutes. Between 5 and 9 A. M. the tarpon bit so frequently that it simply became a question of physical endurance on our parts in playing them, and good luck in escaping the attention of sharks.

On Friday we missed the best fishing from 5 to 9 A. M., being too tired to get up. Between 9 and 12 o'clock I got three. Between 8 and 10 P. M. they bit fairly well for an hour, and I got two more.

On Saturday, the 28th, we sailed at 7 A. M. for Punta Gorda to catch that evening's train for Tampa. Before we set sail, between 5 A. M. and 7 A. M., we fished about a mile and a half outside of the pass in the gulf. I caught three tarpon; one big chap 6ft. 10in. long, which I took on board and transferred to the Meyers steamer, which we met on our way up to Punta Gorda.

Our total catch for the nine days was 120 to two rods, Littauer landing forty-two and I seventy-eight. My best one day's fishing in ten years was eight in one day. This jump to nineteen and twenty-two in a day is so wonderful that it is only explainable by the fact that better tarpon fishing can be had at Boca Grande than anywhere else. Certainly I have never seen tarpon in such quantities.

All sorts of other fish can be had here too, and what should prove of particular interest to yachtsmen is the fact that this pass is one of the largest and deepest in Florida. Vessels drawing up to 20ft. of water can get in the pass and find good anchorage inside. Again, what is unusual in most passes in Florida is the large body of deep water to be found in this pass. Inside and outside there are several square miles of water varying from 30 to 50ft. and over in depth, which for Florida is most unusual. In the pass itself the depth in places reaches 80ft.

We got quite a number of kingfish, mackerel and channel bass. There were thousands of mackerel about on every flood tide.

Mr. Lester, who is in charge of the lighthouse in the pass, and who was very much interested in watching us fish, told me that in the four years that he had been there he had always seen tarpon about in large quantities. Strange to say he had never seen one out of the water in his life until we landed our first fish on the beach opposite his house.

Dr. Blunt, who was in charge of the quarantine station, assured us also that there were tarpon in large quantities to be seen most of the year in the pass. The fact that good tarpon fishing had not been had before at Boca Grande I attribute to the fact that the pass being so large and deep is at times very rough, so that the few anglers who tried fishing there gave it only a few hours' trial, probably not at the right place or at the right time. For instance, when we were there it would have been absolutely useless to have fished inside the pass in the mornings. All the fish were about half a mile to a mile outside the pass in the gulf, and it was only in the evening on the ebb tide that the tarpon seemed to come into the lagoon inside the pass. At such times one could not get a strike outside the pass.

There are so many square miles of deep water that it takes some conscientious hunting to find out the best place and time to fish at.

I feel convinced personally that Boca Grande will turn out to be one of the best, if not the best, tarpon fishing grounds in Florida or anywhere else along the Gulf Coast. I know there is excellent tarpon fishing along the Texas coast, but I think such fishing as we had at Boca Grande will be very hard to equal elsewhere. From what Mr. Lester and Dr. Blunt tell me about the tarpon continually showing themselves in large numbers in this pass, I feel sure that we had not exceptional luck, but that any angler who devoted some time to this pass would meet with just such good days. A great point in favor of Boca Grande Pass, as a tarpon rendezvous, is the fact that the largest yachts can sail right in and get good and safe anchorage practically right on the tarpon grounds. The Nourmahal was in there last year, and this year an English yacht equally as large was anchored inside. Strange to say, both the owners did their fishing at Captiva Pass, eight miles off. Had they only known it, they might have done far better within a mile of their yachts. It is possible though they had very windy weather, when the water at Boca Grande gets too rough to fish in from small boats.

As far as I can see there are only two drawbacks to Boca Grande. One is the fact that in strong winds it gets rough. The other that sharks are very thick at times, and steal a lot of fish. However, one can afford to lose a tarpon now and then when there are so many about. It is exasperating though to have a fine large tarpon on your hook an hour or more and then have it taken by a shark.

I advise anglers doing tarpon fishing at Boca Grande to use especially strong and stiff rods, in length from 6ft. 8in. to 7ft. The water is so deep (80ft. in one place) that a stiff rod is needed to lift the fish when they start boring down, and to keep them near the surface. If the rod is not stiff it is impossible to play a tarpon hard in these waters, and so a man may be kept busy for hours with one fish.

There is a fish ranch around the southern point of the pass, where bait can be bought.

O. A. MYGATT.

Tea Creek.

THIS could be properly entitled "To the Memory of Tea Creek," for this is one of the saddest examples of man's ravages on a stream which once swarmed with brook trout. The fashion of fishing which has played havoc with all our streams can be described as follows: The men on a farm a dozen miles distant, having planted corn, in the interval which intervenes between the planting and the working decide to go fishing. They roll up their lines on a piece of cork, take bacon, bread, maple sugar, and a frying pan, in a sack around their shoulders. A good deal of rivalry exists and when the fishing begins the object is to catch the most, and a count is had at the end of each day. The result is that the smallest trout counts as much as a large one, and every one is retained. They fish from sun-up to sundown as if they were sawing wood, and take maybe 1,500 trout, to be gorged by the whole neighborhood. Such fishing has effectually depleted our streams, and they are given a forced rest. One of these parties do more harm in one trip than all foreign sportsmen, of whom they are inclined to be jealous, accomplish in a whole season.

Such is the condition of Tea Creek. A good fisherman can catch a good many by the exercise of all his finesse, but the man who only fishes for blood goes there no more.

Then the only thing that makes it remarkable is not the fish in it, but the stream itself. After an acquaintance of several years with the streams in Pocahontas and adjoining counties, where the Potomac, James, Greenbrier, Elk, Tygart's Valley, Cheat, Williams, Cranberry, and Ganley rivers have their head, I felt myself competent to say something of the beauties of the streams which are found in the very apex of the Alleghanies, and I said to a friend of wider experience than mine, "Do you not think that the North Fork of Cranberry is the prettiest stream in West Virginia?" He replied, "With the exception of Tea Creek, I think it is," and when I came to see Tea Creek even the glories of the North Fork paled in comparison.

The day I went to the Big Lick at the forks of Tea Creek I count as one of the most eventful of my life. It is just about a year ago, and I can still derive some satisfaction in thinking on what I saw and how the day was passed. I do not intend to give you any special word pictures of the scenes along the stream, for you have all seen some scenery yourself, and if I chortle concerning the beauties of nature you must excuse me, for I can assure that, as a usual thing, I can look upon mountain scenery without becoming the least hysterical, so you must believe that what is to be seen on Tea Creek is extraordinary.

This is to be a narrative of how the Commonwealth's attorney and myself, on the 28th day of May, 1897, took in the sights of Tea Creek. We were camped at the mouth of the creek where it flows into Williams River just below the Deadwater.

Five lawyers and their wives comprised the camp. The first, last, and only time the ladies went to the

woods with us. We have been since, but our wives love wild flowers and more grow at home than in the yew pine woods. They were like John J. Ingalls and his prize fight: They saw what was to be seen in camp once, and enjoyed it, but do not care to see it again.

That morning a heavy white frost lay on the ground. We therefore choose the humble and unobtrusive fishing worm for bait. We belong to the class of those who fish for trout with fly, but are not so hide-bound but that we can use a fishing worm on a frosty morning in early trout fishing. We have both probably caught more fish with fly than several millions of men who would never, no, never! condescend to fish with bait under any circumstances, yet who are not gifted enough to catch a fish with a fly or anything else. They retire into the exclusiveness of the fly-fisher and seek to have the public at large consider bait-fishing a crime. Fly-fishing has bred a large, healthy lot of imposters, who shine only on the social side of camp life.

We took our way up the stream, fishing in every likely place, and now and then catching a good sized trout. Pretty well up the stream big boulders, as large as a house, lie in the bed of the stream, and the water filters under and between them. It was quite a sensation to stand on the top of one of these and fish down the perpendicular side, 20ft. below, and bring up a trout banging against the rocky wall as it came.

The journey up can be described by quoting from Sir Walter Scott: "The very first plunge carried him with little assistance from a few overhanging boughs, or projecting roots of trees, 8ft. sheer down in the course of a torrent, up which the Son of the Mist led the way. Huge stones over which they scrambled—thickets of thorn and brambles, through which they had to drag themselves—rocks which were to be climbed on one side with much labor and pain, for the purpose of an equally precarious descent on the other; all these and many such interruptions were surmounted."

Arrived at the forks the show places were the big pool, big enough for boating purposes, and no doubt among the fish considered as the metropolis of the fish kingdom; the falls, where the water plunges down about 20ft. of sheer wall; and the deer lick.

Try to imagine the first two, for they are bits of scenery worth coming hundreds of yards to see, but let me talk about the deer lick.

The Commonwealth's attorney had been at the lick several years before, but was not able to locate the spot exactly, so we took the first path we came upon. It was so plain that we supposed we were quite near the lick.

Not being quite sure whether everyone knows what a deer lick is, I will stop here to explain. I once knew a man who was in such dense ignorance. A deer lick is a spring the water of which holds in solution a small quantity of salt, and is the only provision of nature to supply the deer with salt, for which it is usually ravenous. They come for miles and drink the waters.

We left our rods at the stream. The deer were inconsiderate, and their path lay for a long distance through laurel, and to travel it we went on hands and knees a great deal. We found plenty of deer hair and other signs. At length we came to a lick, and without agonizing in words over it I will simply say that if a thousand sheep had watered at the spring they could not make more sign in the way of trails. It has been going on for ages, and a hollow has been tramped out of the mountain side.

Deer cannot be killed in this State legally for five years. There is no open season. Any stranger would be promptly arrested who ever "pursued with intent to kill," in the language of the statute, which is a long way often from killing, but the undisciplined mountaineer comes here often and kills a deer and "spoils the lick" until the signs disappear.

There is a blind, and all around the beech trees bear initials of hunters, and it is interesting to read the registry of hardy men who have penetrated the woods as far back as this lick.

We were there in the middle of the day, when the deer come not, and with nothing more dangerous to deer than 8oz. fishing rods. Secure then in our innocence the Commonwealth's attorney, the deer's faithful protector, wrote our names on a stone and laid it on the root of a beech. In less than a month afterward we were approached in a confidential way by a man who seemed to have something in common with us. He was a notorious despoiler of the deer. He had seen our names and he claimed us as partners in crime. He had succeeded in spoiling the lick. In vain I explained that we had no guns along. He was very polite, but took care to let us know that there was no green in his eye.

We got to camp about dusk. We had 51 trout each of about the same size. The two catches could not have been told apart.

I meant to tell more about the day, about a deer we found rotting in the stream a mile above camp, which had probably died from a shot wound. About the color of the water, a beautiful amber, caused, I think, by the roots of the pine trees. And a lot of things that make me wish I could live all the time on Tea Creek, which I know I would not enjoy. ANDREW PRICE.

MARLINTON, W. Va.

Gratulation.

BALTIMORE, June 22.—*Editor Forest and Stream:* Your editorial in the Jubilee Number will command the enthusiastic commendation of all sportsmen, whether of rod or gun.

It seems to me that any one devoted to angling can follow Mr. Mather with such advantage as would give satisfactory results, as also Mr. Cheney, in the matter of reproduction of fishes, as well as killing trout with the fly. Your contributors, Mather and Cheney, are such that will educate the present generation in true sportsmanship, and while I do not claim an alter ego, I want to go on record as subscribing to the tenets laid down by them. Good success to the FOREST AND STREAM, and may your every anniversary be largely extended, and may your reward be such as belongs to a labor well done. E. S. YOUNG.

Other-Day Angling at Rochester.

Editor Forest and Stream:

A casual meeting one day this week with Capt. F., a veteran of the war for the Union, and a native of this city, led to his giving me some reminiscences of lang syne in Rochester that make vivid the contrast, from an angler's point of view, between the conditions that existed in the 50s and those that prevail at this end of the century.

"I heard that you remember when Deep Hollow Creek was a trout stream, Captain."

"Yes, I remember it very well, for I caught many a plump trout in the creek in the neighborhood of where Sherman street crosses the line of the creek. The stream then ran through a pasture skirted by a woods that stretched west, and it was my daily chore to drive the family cow from the city to pasture. On one of those excursions I discovered that a pool on the creek in the shadow of the woods was alive with trout, and from that time on I had trout whenever I wanted them; and driving the cow to pasture became more interesting than before I made the discovery. The only thing needed to make my happiness complete was a cow that would carry a bag on her back—an accomplishment possessed by some of the cows driven by other boys of that day, but one which ours never showed any inclination to master."

The point of this story would not be apparent to one who did not know that the winding brook known as Deep Hollow Creek is a brook no more, but the route of a great trunk sewer that drains a large area of the city and one of the towns on the west, discharging its fetid stream into the Genesee River near the Lower Falls. The stream from earliest days was a conspicuous feature in the topography of this town. In pioneer days it was large enough to tempt an enterprising resident to set up a saw mill on its banks. But history relates that "Genesee fever" prevailed to such an extent that the builder of the mill had to abandon it because of the sickness that struck down his men. When I became old enough to be trusted with a hook and line the trout in the creek had disappeared and given place to suckers and minnows, and until comparatively recent years it was the best water near the city in which to fill the minnow pail. There were even a few years ago enough of sloping banks covered with beech and maple to indicate that in its virgin state it was a very charming stream, for it could very truthfully say:

I chatter over stony ways,
In little sharps and trebles;
I bubble into eddying bays,
I babble on the pebbles.

With many a curve my banks I fret
By many a field and fallow,
And many a fairy foreland set
With willow, weed and mallow.

Some twenty years ago, more or less, intent on the slaughter of snipe, I was tracing a branch of the stream in the town of Gates, and came to a point where the water bubbled up in the middle of a field, forming a pool several feet across. On approaching it a fine black duck jumped into the air, and was so near that even a charge of snipe shot brought him down.

I can imagine that the pool from which he rose must have been a pretty place to drop a fly say half a century since, for it was the visible source of the main body of water that came down the Deep Hollow Creek. But it was not in the book of fate that this particular brook should "go on forever." Of late years it has gone from bad to worse, until it is now literally blotted from the face of the earth, and the places that knew it will know it no more forever. The valley is become a dumping place for ashes and city littler, and no doubt in a few years there will be a thousand dwelling houses standing over the very bed of the stream that in the lifetime of middle-aged men held—

Here and there a lusty trout,
And here and there a grayling.

Fred Mather's very interesting article on pike in a late FOREST AND STREAM recalled old times on the lower Genesee, when pike fishing was the favorite form of angling with members of the fraternity in this city. Of course pike fishing was never to be compared to fly-fishing, but when it was at its best one could leave the center of the city on the street cars, and in fifteen to twenty minutes be afloat on the water where the many-named fish did much abound. This was before Rochester had a water works system, with its resulting sewage, that pollutes the river from the city to Lake Ontario. May and June were the only months in which pike fishing was carried on to any extent, and my recollection is that the biggest and best fish were caught in May.

"June pike" were little ones, of a bluish cast, and seldom weighed over 2lbs. The yellow pike were taken up to 10lbs. or more. The late Albert Gallatin, or Gally, Cooper was long envied of other anglers, inasmuch as he took a pike that tipped the scales at 10lbs. 8oz. The fishing ground for pike was within the city lines and immediately north of the Lower Falls, above which of course the fish could not come in their migrations from the lake. The pool at the foot of the falls was a good place for pike, but one had to either go clad in a waterproof suit or endure a drenching from the mist. The fishing there had to be done from the rocks, for the water was so agitated that there was no comfort in fishing from a boat. Eels were abundant in the pool, and would often take the bait intended for pike; and the surface of the water was not infrequently broken by the splurge of a sturgeon. But the best ground for pike, the region where the finer joy of the sport was had, was from a point about opposite where the Glen House ruin stands to the foot of Buell avenue. On my introduction to the locality a solitary house at the foot of the "long hill" was the only place on the west side where a boat could be hired, and it was from that landing that nearly all the anglers pushed out when after pike. The practice of "the fathers"—Seth Green, William Billinghurst, A. G. Cooper, Dr. Hurd, and others less vividly recalled—was to bait with plain, every-day earth worms, tying a scrap of red cloth just above the hook. I never knew any of the veterans to vary from the above lure; but a succeeding generation caught more fish with a spoon hook, supplemented by a strip of salt pork.

I have not heard that any one has tried for pike in the river of late years. The sewage has probably rendered the water so offensive that the fish no longer come up from the lake. If they do venture into such an unsavory region I doubt that there is any man rash enough to risk his health by entering the atmosphere that must exist where several large sewers discharge into the once sparkling river.

The person who first applied the name "pike" to this wall-eyed inhabitant of the deep has much to answer for. The name should have been reserved for the flat-snouted family that corresponds with the European pike, which I suppose had his name and features impressed on the minds of our angling ancestors before Columbus set sail. The "yellow perch," wall-eye," "pike-perch," or what you will, is a toothsome fish and worthy of a distinctive name. I caught many of them, but never one that showed any such fighting qualities as the black bass. That part of the Genesee River where the wall-eye used to be caught was also good ground for the bass, but one of the latter fish weighing 2lbs. would afford more play with the rod than a 5lb. wall-eye. E. REDMOND.

ROCHESTER, N. Y., June 7.

Fishing at Lake Manistique.

SINCE September, 1882, I have been making annual trips to Manistique Lake, Luce county, Michigan Upper Peninsula, and a more beautiful spot to spend a vacation could hardly be made to order.

Leaving New York on the New York Central Railroad, via Montreal and the Canadian Pacific Railroad, it is about thirty-six hours' ride to the Soo St. Marie, thence over the Marquette Soo to McMillan. Mr. S. V. Skinner, agent for the Canadian Pacific in New York city, is very glad to give any information as regards trains, etc. At McMillan you will find a very gentlemanly agent in Mr. E. E. Nichols.

It is a ride of about fourteen miles through a most beautiful country from McMillan station to Mr. Holland's, where I have made my headquarters for practically sixteen years. Mr. Holland is a farmer, lumberman and a general agent to all mankind. Glad to see everybody, and only too glad to make them welcome and comfortable with anything in his power.

Mrs. Holland is a good woman for a good man. In case of visiting Mr. Holland it is well to have some one in the party musically inclined as regards singing and playing. And, by the way, music is a great passport to the people in this country.

The general amusement at Mr. Holland's is fishing and hunting. Plenty of the first in the spring, and all one could ask for in the fall, in the way of deer, ducks and partridge. As regards fishing: as illustrated from my present trip. They are wonderfully plentiful; as this is a wild lake, and is hardly ever visited from the outside. Any fisherman can imagine that the fishing must be good. Out of my last trip I fished only thirteen or fourteen days in the twenty-five days I spent there, and I never returned with less than four, and from that to fifteen and eighteen bass that would average 4½lbs. I caught one small-mouthed black bass weighing 6¼lbs. with the Montreal trolling fly, which I had procured as something new and catchy from my friend "Conroy" before leaving. I used principally a 4½ Skinner spoon on a very light rod, and found it a very, very good bait. I have never had the privilege of being in this country during July and August, when bass are supposed to rise to flies, so I cannot say what the actual experience of fly-casting would be.

There is also an immense quantity of wall-eyed pike, which the Canadian's call "dore," also pickerel and muskelonge in great abundance. There is at a short distance from the Big Lake first-class trout fishing, but it is always my misfortune, as I am obliged to take my vacation in May, not to have very good success with the trout, for the reason the creeks have all overflowed their banks and the trout are meandering anywhere from where they should be.

A party of two, three or four going to this country can camp, or they would be able to obtain board there at Mr. Holland's, at the head of the lake, or at Mr. Gaylord Helmar's, at the foot of the lake. The latter place is only six miles from the station at McMillan. Mr. Helmar has a general country store and a post office, also two or three good boats. At this place there are parties that come from Dayton and Springfield, Ohio, who camp out during the month of July. There are several farmers on the edge of the lake, at any of which you will be welcome, as they are always glad to see any one from below. I was blown off this season in a heavy wind, where I was obliged to remain all night with Charles Burke, and was highly entertained by Mrs. Burke playing on the harmonica.

The full extent of Manistique Lake is on an average five miles wide and eight in length, but one is not obliged to remain on the big lake at all times, as just north of the east end there is a large lake three and a half to four miles square, and on the south side of the lake a very short portage of about forty rods, or going by the outlet a distance of one and a half miles to what is known as White Fish Lake, all of which make good fishing and interesting trips.

At Mr. Holland's, if you have the luck to find Bob Hague, you will find him a "king" among fishermen. He has his own peculiar method of making his catch, but I can assure you it would be a sight for any of our Eastern fishermen to see "Bob" when he is rigged for business. He has a good-sized boat, with two 16ft. poles, one on either side, with 80 to 100ft. of trolling line. He has a connecting line from each of the long lines, which he holds in his teeth, and for fishing in that vicinity he takes the medal every time. His catches ordinarily amount to from 75 to 100lbs. in a very short time. "Bob" is rather a difficult man to get in with, as he prefers fishing alone. On one occasion I had the opportunity of going with him, and we had most excellent sport from early morning till about 11 o'clock, when we were caught in

one of the sudden gales which appear on this lake, and were wind-bound the rest of the day, and arrived home at 4 o'clock the next morning.

Manistique Lake will be a paradise for fishing and hunting for years to come, and for camping-out parties it is certainly perfect. Mr. Helmar, at Helmar P. O., as I said before, can accommodate one or two, but he would prefer to have you bring along a camping outfit and make your headquarters at the store. In going or coming from a fishing trip one will find it a great pleasure to remain over a day at Soo St. Marie, both regarding trout fishing in the rapids, shooting the rapids with the Indians in their canoes, and examining the magnificent locks in the canals, both on the Canadian and American sides.

E. O. LANCASTER.

Fresh-Water Angling.

No. IX.—The Two Crappies.

BY FRED MATHER.

(*Concluded from page* 517.)

Fishing in Tree Tops.

Here a short rod, say 8ft., is long enough, and the line should not be much longer than the rod. A reel is not needed, because the fish should not be allowed more line, even if it were able to take it and wind it about a limb, where you would be in chancery. The boat should be so placed that a fish can be led away from the limbs, if possible, but often there is a desirable opening, like a well, into which the hook is dropped, and then one must take chances of being fouled, and try to keep the fish in the middle of the hole as it is brought up. The uncertainty of landing a fish in such a place constitutes the sport of tree-top fishing.

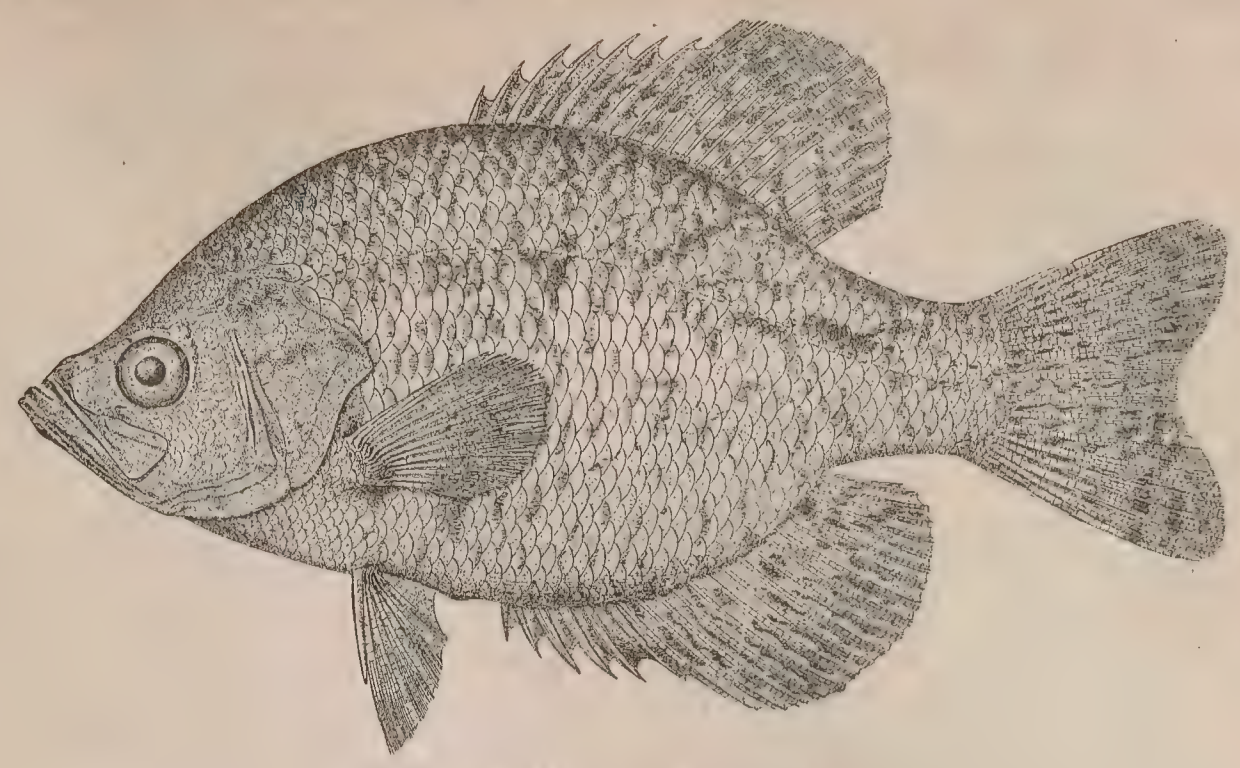
In my early crappie fishing days we used Limerick hooks as large as No. 2, but in later years, when I fished in Southern waters and had come to the belief which I hold to-day, that the smallest hook which is practicable, is the best, I used hooks as small as No. 6. To-day I would select the Pennel Limerick with turned-down eye, not larger than 4, nor smaller than 6, but these hooks are a late invention and are of spring steel, a thing unknown twenty years ago. A foot or two of gut between line and hook is always desirable. Angle worms, grubs and small minnows are good baits. Unless there is a current through the tree top a sinker is not necessary when worms or grubs are used, but if the bait be a live minnow it must be weighted in order to prevent it from wandering among the branches; then use a half ounce sinker and attach the gut to the sinker and shorten it to a foot, thus giving the minnow a weight to drag. In such angling one can usually see the fish take the hook and can then check its rushes to a thicket of limbs. In "Much Ado About Nothing" Ursula says:

> "The pleasant'st angling is to see the fish
> Cut with her golden oars the silver stream,
> And greedily devour the treacherous bait."

If that be true, then fishing for crappies in a tree top, in clear water, should be the highest form of angling; but it is not true, for the angler would prefer to leave the size and species which takes his bait entirely to his imagination while he is bringing it in. This is one of the charms of bait fishing, you don't know what you have on your line until it comes to the landing net.

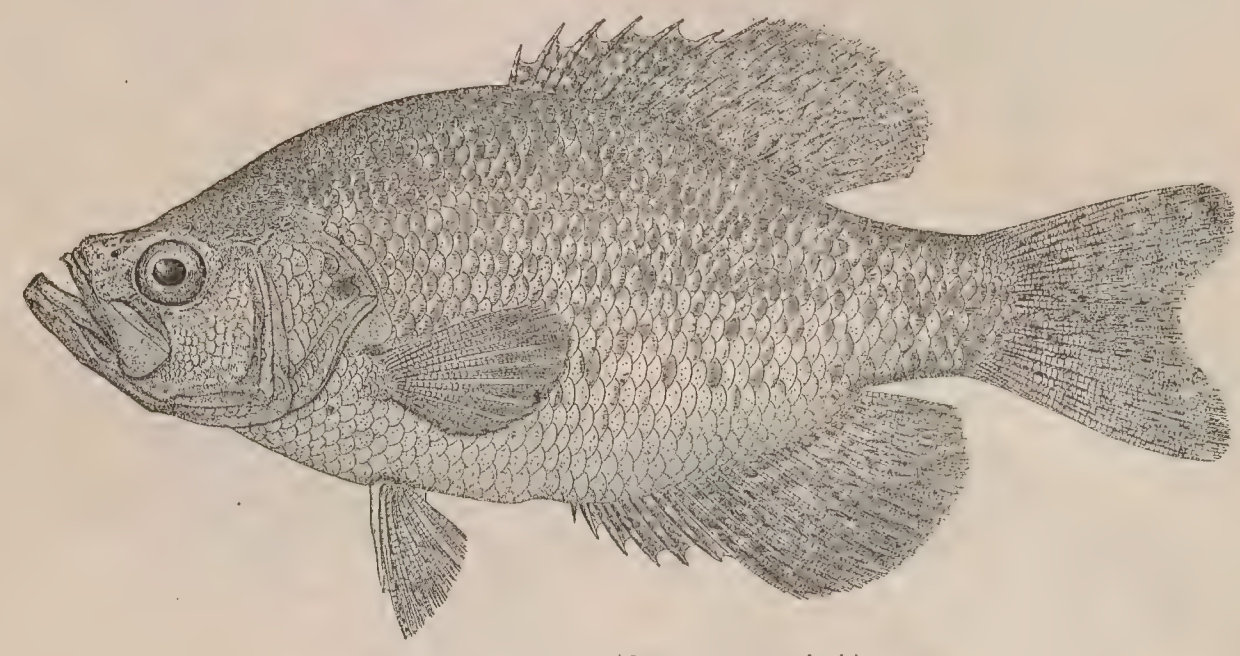
While fishing in a tree top in one of the sloos near Potosi, Wis., I saw a crappie take my hook and immediately put the strain of the rod on the fish, but there was an unusual resistance, and there was danger of tearing the mouth out of the struggling crappie, whose every movement sent a thrill up the line and rod. The fish had not fouled my line, for I had seen every motion. Henry Neaville was in the other end of the boat and said: "Keep still; the fish has another line in its mouth," and Henry lashed his pocket knife to his rod and ran it down and cut another line which was wound around a limb, and I landed the fish. The coarse hook and cheap line told the story; the fish had been hooked a day or more ago, and had taken a turn or two around a limb, and the angler, probably a boy, had strained his line to the breaking point, leaving the fish fast and hungry enough to take the next bait.

Trolling for Crappies.



While trolling a small spoon in southern Louisiana, for any fish that might incline to that sort of food, I took several of the big-mouth crappies in the still waters of the bayous. I did not get the other species there, although Jordan, "Manual of the Vertebrates," gives its Southern range as in that State. It was a small spoon made of abalone shell, and about 1¼in. long. I do not know the sizes of spoon hooks, because I seldom use them, but have an impression that each maker numbers his wares to suit himself. The spoon was an old one, without feathers, but it spun well, and its exquisite pearly tints were attractive.

I had other spoons, of many designs and sizes, as well as most known devices for taking fish, including gill nets, for I was collecting fishes for the Smithsonian Institution and the U. S. Fish Commission, and wanted to gather every species that inhabited those waters, even if it never grew to be over an inch in length. And I was not forbidden to enjoy the sport.



The first crappie taken on the spoon was thought to be one of those accidents which occur to anglers, but after taking a dozen or more it was evident that the crappie would afford sport when offered a small spoon. When I changed to a big silver spoon, some 3in. long, no crappies were taken. They knew the capacity of their mouths, and would not rise at the larger one. Here I took the largest crappie I ever saw; it might have weighed 2lbs.; Jordan gives the extreme weight as 3lbs.

Fly-Fishing for Crappies.

It was in Bistineau Lake, in northwest Louisiana, some twenty years ago, that I took my first crappie with a fly. I had a colored boatman to whom my light rods and fly-book were curiosities which were looked at with considerable skepticism, until I took some very large black bass with them, and then he was profuse

SMALL-MOUTH CRAPPIE (*Pomoxys sparoides*).

BIG-MOUTH CRAPPIE (*Pomoxys annularis*).

in his admiration of "dat yah leetle pole no stouter 'an a coach whip, an' dem leetle hooks wid fedders on em w'ich 'pears like mi'ty dry fodder for trout." By "trout" he meant "black bass," and when I took a crappie with a red ibis he said: "Dem ah little fedders is good for de sacalay [sac-à-lait] too; golly, I 'spec's dey's good fo' all de fish in de lake, 'cept de ole gahs an' de catties. You don' 'spect a catty he come up to de top fo' yo' fedders, does yo'?"

"No, Gus, not here in this deep water, but a catty has been taken with a fly in shallow water. We call these things flies, not feathers; don't you see that they imitate the insects on the water?"

"No, sah, nebber see no flies like w'at you got in yo' book, nevah did, fo' a fac'."

And no other man ever did. The imagination necessary to recognize a so-called artificial fly as an imitation of any living thing is not possessed by every man. This ignorant Afro-American did not have it, and I, who was trying to educate him to see a resemblance to nature, was totally lacking in that same quality of imagination. Verily it was a case of the blind leading the blind, but I only wanted my pupil to see that my flies were only theoretical imitations of things which might or might not exist, but for such theories his brain was not sufficiently advanced. He saw that a little hook covered with "fedders" would take fish, that had been demonstrated, but that these things should be considered to be "flies" was another thing.

I found the crappie a fairly good riser to the fly, and took many in Lake Bistineau. No doubt they can be so taken in other places. They do not put up as stiff a fight as a yellow perch or a white perch, but with light tackle they afford sport. We neglect many good fishes, in this land of good fishes, because they have not been faithfully written up, and we have no traditions referring to them.

European and American Fishes.

We have a wealth of game fishes which are not only unknown to Europeans, but also to American anglers. The reason for this is because there has been no one to write them up. American angling literature is only thirty-four years old, that of England is several centuries old. There is no other angling literature worth mentioning. Early American writers copied English works until Norris wrote his "American Angler's Book" in 1864, and corrected subsequent editions. There were English works before Walton, 1653, whose latest editions, published during the present decade, number over a hundred.

The trouble with the early compilers of English works for the American market was the fact that they were apparently ignorant that they were dealing with a fish fauna which had so few members in common that it might be considered distinct. The only fishes which inhabited Great Britain and North America in common were the salmon, the yellow perch and the pike. The salmon of our Atlantic coast is identical with that of the west coast of Europe; our "yellow perch" is common throughout Europe, and so is our pike, and by this term I mean our great fish, *Esox lucius*, which grows to 40lbs. weight, the only fish which has a right to bear the name of pike.

In case some one should think that the American trout is neglected in the list, I will rise to say that America had no true trout east of the Rocky Mountains until the brown trout of Europe and the rainbow trout from the West were brought here. Our so-called "trout" are known as "chars" in Europe, a higher form of trout, if you will, with finer scales, higher colors, etc., which cannot be detailed here and are only mentioned to show that the trout had not been forgotten.

European Game Fishes.

Leaving out salmon, trout, char, perch and pike, there are a lot of species which English anglers know as "coarse fishes." They are: Bream, barbel, chub, dace, roach and other soft-finned fishes. On the continent there is the zander, which is a close relative of our "wall-eye," which the Germans breed as a food fish, but do not angle for, and there the list ends. Outside the trout, salmon, pike and perch there is not a fish in Great Britain which an American angler would waste his time on.

The chubs of Europe are superior in size to ours, growing up to 5lbs., while our largest species seldom get to be more than half that weight; and while I have had fair sport taking our large chubs, *Semotilis*, with a fly, they are not generally angled for, and on this side of the frog pond we do not think any soft-finned fishes, except the salmon and pike families, worth our attention; we have a wealth of hard-finned game fishes that are unknown in Europe, and the two crappies may be placed in the list.

Of course their promiscuous introduction into Europe might disarrange the fish fauna there, but fish are more circumscribed than are rabbits in Australia, and European sparrows in America. No man can foresee what good or evil may result in introducing a new species of beast, bird or fish to a new country. The Californian who wished to see the dandelion with its beautiful yellow blossom sent to Massachusetts for the seed, and the men who have lawns on the Pacific Coast are cursing him as we are cursing the introducer of the European sparrow, and the Australian is anathematizing the man who set rabbits free in a land where there were no owls, hawks nor foxes. The fauna of each continent is complete, and the introduction of a foreign form of life upsets the balance. By reason of their restricted range the fishes do the least damage.

American Game Fishes.

We have a wealth of game fishes which would have delighted Izaak Walton, but many of them have not been treated as such by our writers, who have mainly confined their articles to the salmon, the trout and the several members of the pike family. For years our anglers took black bass without giving it the high rank it now holds, until Henshall wrote the fish up and told them that "pound for pound it is the gamiest fish that swims." The quotation is from memory and may not be exact.

So it is with many other neglected fishes, among them the two crappies, and some other fishes which we will consider in the future.

"WE may reprove the tendency of our men of leisure to copy rather than emulate our English brethren in dress and deportment, but it is undoubtedly to them we owe our love for outdoor sports, and it is this, spreading marvelously even within the past few years, which has improved the breed of men and changed the character of their clothes. The dandy no longer trips in dainty shoes and shuns exertion, but is proud of his square shoulders and deep chest, and his dress is distinguished not more by its simplicity, comfort and serviceability."—American Wool and Cotton Grower.

CHICAGO AND THE WEST.

Success of the Fly-Casters.

CHICAGO, Ill., June 18.—In my supplement to the report of the fly-casting tournament at Grand Rapids, Mich., last week, I had occasion to speak of the luck of those of us who fished the Boardman under the guidance of Col. Fox and Mr. Widdicomb. Since then I have had word from all the different parties who went out from Grand Rapids to the streams for a try at the trout, and it seems that the Boardman party was about the lowest of the lot. Mr. Fred N. Peet tells me that he and Mr. John Waddell, fished the Pere Marquette, getting off at the Roby tank, some 2½ miles from Baldwin. They were on the stream three days, and were so lucky as to meet the big rainbows for which we were all of us searching. On the first day they caught nearly all rainbows (twenty rainbows and only one speckled trout). The next day they took about two dozen fish, half rainbows, and on the third day had three rainbows in their baskets of about thirty trout in all. They found the river in good condition, and had a most enjoyable experience. Mr. Peet says that his host, Mr. John Waddell, of Grand Rapids, is the best trout fisherman he ever saw on a stream, and it was to Mr. Waddell's rod that the best fish fell, one weighing 3½lbs. He lost one fine rainbow, which seemed nearly 2ft. long as it showed in the water, but took yet another fish of 2½lbs., and several that went over 2lbs. Mr. Peet caught one weighing 2½lbs., and also several that would go over 2lbs. Their take was by all odds the handsomest made by any of the fishers.

Mr. Eber Rice took out Mr. Smith, of Chicago; Mr. Frost took Mr. Blackman, of Chicago, and Mr. Harry Ketchum and Judge Burlingame, of Grand Rapids, also went along. All these fished the Little Manistee, near the railway crossing, and they had fine luck with the trout, though taking no rainbows. The average was about 20 to 30 trout to the rod each day, Mr. Smith taking 46 in his fishing. They brought down nice baskets, but had nothing especially heavy.

Mr. Rogers took up Mr. Hascall, of Chicago, and they went out on the Pere Marquette, near the hatchery, Mr. John Power, of the hatchery, going with them. They had plenty of brook trout, but only small rainbows. Their average was in the 8in. class, a few larger, but nothing very startling in weight. They report a grand time on the river, which was in good condition.

Next to the Pere Marquette the Maple seems to have been the lucky stream for the visitors and their hosts. I have already mentioned the take made by the party of railway officials in whose special car we traveled to and from the Boardman, at Mayfield, on the Grand Rapids & Indiana Railroad (not the "G. R. & T." as the proof reader of FOREST AND STREAM had it last week). After these gentlemen left the Maple to come home, Messrs. D. G. Henry and his guest, Mr. Fred Divine, of Utica, stayed behind for a little more fishing. I saw Mr. Divine at Cleveland day before yesterday, and he says that he had the finest sort of sport. He and Mr. Henry caught in all about 250 trout, 14in. in length being the largest, but the average very good. The last day they filled their baskets early and quit on the stream, saying they had enough and taking down their rods. They found Professor and Queen of the Waters the best flies. I presume their take was perhaps the second best made by the parties, and that of Mr. Waddell and Mr. Peet the best. The latter angler is very enthusiastic over the big rainbows, which he says are regular whirlwinds on the rod. He also says that no one better than Mr. Waddell knows how to handle one of them in the heavy water of such a stream. It was necessary to turn loose and follow the fish down stream, as though it were a salmon.

All in all, the gentlemen of Grand Rapids may feel very proud of their tournament, and also proud of the sport they showed the visitors who came to see them. They are certainly in the heart of a great angling region.

Reports from Many Waters.

CHICAGO, Ill., June 25.—The angling season in this part of the West sprang into sudden activity within the past couple of weeks, and reports come in from many waters. I have word from Fay Buck, of Buck's resorts, Manitowish, Wis., and he says the fishing for muscallunge is good. He caught three fish, weighing 10lbs. each, before breakfast on the day he wrote, this week. This was at the Divide resort. Bass fishing on those chains is also good.

Several parties have been up in the Wisconsin 'lunge country, and with good success, though I do not hear of many fish. The average of the Wisconsin muscallunge this year has not been above 10lbs., if indeed so large as that, and I imagine the average weight grows less each year on those waters, which are fished a great deal.

Mr. Jacob Rehm, of Blue Island, Ill., has just returned from a ten-days' fishing trip at his camp on Rice Lake, Manitowish waters. He reports the fishing good, though the water is still high and roily.

Most of the 'lunge landed were small, running from 7lbs. to 9lbs. Some good catches of 6 to 8lb. pike were made. He caught between thirty and forty bass, ranging from 1½ to 4¼lbs. Many of the fish were returned to the water.

Master in Chancery Charles T. Farson, of Chicago, with Messrs. McHugh and Burges, of Oak Park, Ill., have just returned from a week's fishing trip at Pike Lake, Wis. The water was unusually high. One day's catch was eighteen muscallunge, thirty pike, and three bass, the 'lunge running up to about 10lbs. In one day on Pike Lake Mr. Farson landed a 10lb. pike, a 12lb. and a 13lb. 'lunge.

A Milwaukee party, consisting of Dr. R. G. Richter, J. P. Murphy, W. E. Furlong and A. T. Shay, spent some time in the same vicinity, and in two days they took sixty-four fish in all, including twelve muscallunge. The 'lunge run under 10lbs. each. Most of these were taken from Thompson and Tucker lakes.

A party consisting of B. W. Sherman, Chas. T. Farson, Ambrose Risdon, Jacob Newman, Dr. Fred Fish, Clifford White, have arranged for a week's fishing trip, which they will spend at Pine Lodge, on Tomahawk Lake. They go about the middle of July.

Messrs. J. L. Flanerry and C. G. Aken, of Chicago, have returned from Kabekona Camp, in Minnesota. On June 17 the former caught one 'lunge which weighed 32lbs., and Mr. Aken killed another that scaled 22lbs. I think 32lbs. is the record weight (a tie) at that place this spring and summer so far. At the same place, or rather in a little unvisited lake reached by a portage, Mr. Ben Bingham and his wife, of this city, took in one day 320 black bass to their two rods, thus breaking the record of Mr. Raisbeck and his friend, made last summer, if any special interest may be said to attach to that fact. Mr. Bingham uses but one fish out the number taken, all the rest being returned to the water. He says they could have caught 400 if they had wanted to, as the lake was alive with them. There had been no fishing there to amount to anything. Mr. S. M. Sutherland, of this city, reports that on his trip to these same waters about Woman Lake he caught fifty-seven bass in sixty-seven minutes. No ruling has yet been received from the State Fish and Game Commission on this sort of fishing. The law says only fifty fish shall be "killed" daily.

The party of Chicago anglers who returned from Kabekona last week brought out with them 500lbs. of fish, muscallunge and bass, these all taken by Dr. H. H. Frothingham and wife, Mr. Bingham and wife, and Mr. J. M. Oliver and friend, there being five persons in the party coming out. The report from these visitors is that the 'lunge have quit biting for a while, though the bass fishing is too good to be good.

Mr. McCartney has sent out instructions to his men at Kabekona Camp to be strict in the observance of the law, and under no circumstances to pack for any one leaving the State more than the fifty fish prescribed by law. He has put on the doors of the rooms the article clipped from FOREST AND STREAM bearing on excessive fishing, and he means to keep within the law and within sportsmanship all the time.

In regard to law breaking, a curious set of circumstances comes to light regarding this same chain of Minnesota lakes, which may be of interest to the State Fish Commission. On one of his trips out from this camp, Mr. H. G. McCartney found at Pine River station, waiting for the train, a supposed sportsman and his wife, who reported that they had been camped for some time on a lake well known to Mr. McCartney, near the place of a certain old fisherman, who once used to fish for market there until he was shut off. This "angler" had five barrels along with him, big pork and whisky barrels, filled with ice and fish. He said that all his fish were black bass, and that he had kept them in good shape at his camp, and was now taking them down to his home in Minneapolis, "for his friends." He was talked with about the fishing, and asked if he was not afraid to take out so many fish, and answered that he wasn't afraid of anything. He said it was not against the Minnesota law to take these fish out to a town within the State, and that he only wanted to show his friends that he had good luck. At the camp where this man had stopped Mr. McCartney found a spot where the fish had been cleaned, and he says there was about a barrel full of the entrails which had been thrown into the lake. It was certainly a very heavy catch that was thus disposed of, one very far beyond all sportsmanlike limits. Mr. McCartney says that he could not help thinking, in view of the company this man was in, and the way he acted, and the amount of fish that he had, that this might be a new way of the dealers to smuggle bass out of the woods into the market. It is unlawful to sell black bass in Minnesota. This tip is given for what it is worth. Its chief interest to FOREST AND STREAM lies in the fact that there still exists, without any shadow of a doubt, a man, a sportsman or at least one claiming the name of sportsman openly, who does not scruple to take away from the waters where he has fished the amount of five barrels of bass, probably in actual weight of fish something like a ton. The man who would do that might as well be a market fisher, and add respectability to his calling. Such a performance cannot in these days be called sport, or any part of sport. I could not learn the name of this man, nor could my informant, but I hope some day Sam Fullerton, of St. Paul, will learn it and will keep an eye out for its owner.

At Fox Lake, Wis., the bass fishing is still going on in good shape. The season has been good there. At Lake Geneva, so I am advised by a friend, the bass have quit the shallows and gone to deep water, so that the fishing is not so good. At Fox Lake, Ill., this is the case nearly always by this time in the summer, and I presume that the bass cannot now be taken so easily, though I once in a while get word of a good basket coming down from that chain, which lies near Lake Villa and Antioch.

At Lake Okauchee, Wis., Messrs. Walter Dupee and Charlie Lester caught a 17lb. pike, after something of a hard fight. Every once in a while we hear of one of these big "pickerel" being taken in some lake in lower Wisconsin.

Last week Messrs. J. Nagle, Max Rahr, J. Miller and W. D. Richards, of Manitowoc, Wis., and Messrs. J. S. Vilas, W. Watson and two others whose names I did not learn, from Kaukauna, with Mr. W. S. Drake, of Milwaukee, made a very good fishing trip on Planting Ground Lake, near Three Lakes, Wis. On one day they caught eighty-six black bass, and on another seventy-five, but did not get any 'lunge.

Bass fishing at Gill's Landing, on the Wolf, is reported to be good this week, and at this point one may be sure of small-mouth bass in reasonable quantities.

E. HOUGH.

1206 BOYCE BUILDING, Chicago, Ill.

First Fish—"How are you getting on?"

Second Fish—"No luck at all. The man at the end of that line is an idiot?"

First Fish—"What's the trouble?"

Second Fish—"I took the bait an hour ago, and I've been waiting ever since for him to put some more on."—London Judy.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

A Michigan Trout Stream.

NEW YORK, June 23.—*Editor Forest and Stream:* In your issue of April 16 I noticed a list of fishing waters in Michigan, along the line of the G. R. & I. R. R., and having entered into communication with the anglers of Michigan familiar with those waters, I made a visit to Michigan during the first of this month. As you requested a report from those of your readers who visited any of these streams and found the fishing to be especially good, I venture to submit the following. I am prompted to do so, further, by the fact that I find my name mentioned in your issue of June 25, in a letter written from Mayfield, in a manner which, while I am sure it was not so intended, might be interpreted as implying an infringement on what I consider the proprieties in fishing.

I visited the Maple River at Pellston, on the line of the G. R. & I. R. R., and stopped at a small road house very well kept by a Mrs. Walters. The name "river" is a misnomer, for the stream is an ideal trout "brook," as we call it in this section of the country, having a gravelly bottom dotted with pools and very easy to wade, unless the water should be too high. This, however, was not the case when I was there. I reached Pellston on June 5 and stayed until June 13, and I append a table of my catch during that time:

June 5, 67 trout; afternoon.
June 6, 58 trout; afternoon.
June 7, 105 trout; all day.
June 8, 68 trout; afternoon.
June 9, 79 trout; all day.
June 10, 79 trout; afternoon.
June 11, 107 trout; all day.
June 12, 54 trout; all day.
June 13, 69 trout; 10 A. M. to 4 P. M.

Of these trout, I need scarcely say I returned to the stream all but ten each day that I fished, and as I used small flies, that is, a twelve to fourteen hook, I returned the trout practically uninjured.

Of course, many of these trout were very small, but many of them also weighed a quarter of a pound, although I did not take any that weighed more than ¾lb. The numbers given are valuable, however, as indicating how well the stream is stocked, and as a promise for the future.

I was assured, however, that there were much larger fish in the stream, and I have no doubt that the information was correct. A number of the trout that I took were rainbow trout, which I learned were introduced into the stream three years ago. All of my fishing on this stream was within a distance of a five-mile stretch. The fish in this stream are particularly fat, and I found those that I took gorged with small minnows and caddis worms, showing that the fish have an abundance of most desirable food.

On my return from the Maple River, I stopped at the Père Marquette in the hope of taking some of the large rainbow trout which I was informed were in that stream, but in this I was not successful, although I took a number of small fish—not enough, however, to make it worth while to keep a record. I fished the Marquette for three days unsuccessfully, and found the stream a very peculiar one. It seems to have a clay sub-bottom which is covered over in most places with sand, although in a few spots there is gravel. The clay bottom has been washed by the stream into long ridges on either bank, according to the direction of the current, and in the deep holes of rapid water thus formed the large trout lie. I saw four trout in one of these pools, and, as well as I could judge, the largest would weigh 5lbs., while the smallest would weigh 3lbs.

I cannot speak too highly of the hospitality with which I—a stranger—was treated by the gentlemen of Grand Rapids composing the Fly-Casters' Club, and I am glad to be able in this way to return especial thanks to Judge Burlingame, of the Superior Court; Mr. Frederick Adams, of the Grand Rapids Evening Post, and Mr. C. L. Lockwood, general passenger agent of the G. R. & I. R. R., for their more than courteous treatment.

J. E. HINDON HYDE.

New England Fishing.

BOSTON, June 24.—Women take to sport with rod and line eagerly when the chance is offered, and women readers of FOREST AND STREAM are on the increase. Twenty women fish to-day where there was one twenty years ago. Mr. and Mrs. J. L. Harberger, of Boston, have just returned from a very satisfactory fishing trip to the Rangeley section of Maine. Mrs. Harberger took, in the immediate vicinity of Billy Soule's camps, Cupsuptic Lake, two trout weighing 7½lbs. and 7lbs. respectively, and one salmon of 4½lbs. These, together with one trout of 5¾lbs., taken by Mr. Harberger from Lower Richardson Lake, comprise the larger fish of the trip. To say that Mrs. Harberger is pleased with her success as a fisherwoman but poorly expresses the enjoyment she has got from the outing. Here let it be said—possibly for the one hundredth time—that the above-mentioned trout were all brook trout. The only reason for saying it is that only yesterday a gentleman, who should have known better, said that Mrs. Harberger's trout were "lakers." There are no lake trout or togue in the Rangeley waters.

The salmon fishermen are getting away to their rivers and preserves. By the first of July the camps at the best rivers will generally be occupied. Mr. Francis Dumaresq, with his friend Mr. Wharton, has gone to the home of the Marguerite Club, on the northwest branch of the river of the same name. Mr. D. H. Blanchard, a salmon angler much respected by all the guild, has gone with his daughter and family to his preserve on the northeast branch of the St. Marguerite. Later he expects Mr. Richard O. Harding down for a few weeks' fishing. Mr. Harding has been ill for some time, but his many friends of the Sportsmen's Show will be glad to hear that he is on the mend. Mr. Walter Brackett, the salmon artist, with Mrs. Brackett, has gone to his salmon preserve at the junction of the northeast and northwest branches of the St. Marguerite.

June 26.—Peculiar luck ofttimes seems to follow some sportsmen and hunters, while others stand idly by. Mr. Eugene Lynch, who hooked the salmon that landed squarely in the boat of Mr. Porter, mentioned in last

week's FOREST AND STREAM, had another freak of luck the next day. He hooked on to a big trout at his favorite spot in the pool, below the Upper Dam. His friends began to advise him not to allow the fish to jump into some other boat, while other boats offered to be in readiness to receive him. After a good deal of resistance the trout, evidently a very large one, was drawn up beside the boat, and Mr. Lynch's guide was about to net him. A chub of over 1lb. weight now took a hand in the fray. He seized the fly, on which the exhausted trout was impaled, and actually knocked the hook from the trout's jaw. The chub was landed, but the trout is in the pool now, ready for some other fellow. Tradition has it that Mr. Trout once did the chub a great favor; he declined to eat him when he was a little fellow. Ever since fish gratitude has existed between them. Mr. Chub witnessed that last struggle from a safe distance, and when he saw the net about to slide under his friend, to raise him out of their beloved element altogether and forever, he dove between death and his friend, actually preferring to sacrifice his own life rather than that his noble friend should fall a victim to the frying pan. Let those sportsmen who know it all, and believe that "all fishermen are liars," read this chub story and believe it; not spending their energies in disbelieving the story of the salmon jumping into the boat, which story can be proven by several witnesses whose word is beyond reproach, and who have fished as many years as the amateurs have days, who believe that all fish stories should be taken *cum grano salis*.

Mr. T. B. Stewart, of New York, has taken another trout at the Upper Dam, weighing over 4lbs. Mark Hollingsworth, of Boston, has also just taken one of 4lbs. R. N. Parish, of Montville, Conn., has taken one of 4lbs. At the Mountain View House, Mr. H. J. Hessler has taken salmon weighing 6½, 4¾ and 3½lbs. Fish Commissioner L. T. Carlton is also credited with a salmon of 6½lbs. and a trout of 3lbs.; Mr. H. W. Clark, a salmon of 9½lbs. At Bemis fishing continues good, as indeed is the case through the whole Rangeley region.

SPECIAL.

A Plea for a Noble Fish.

Editor Forest and Stream:

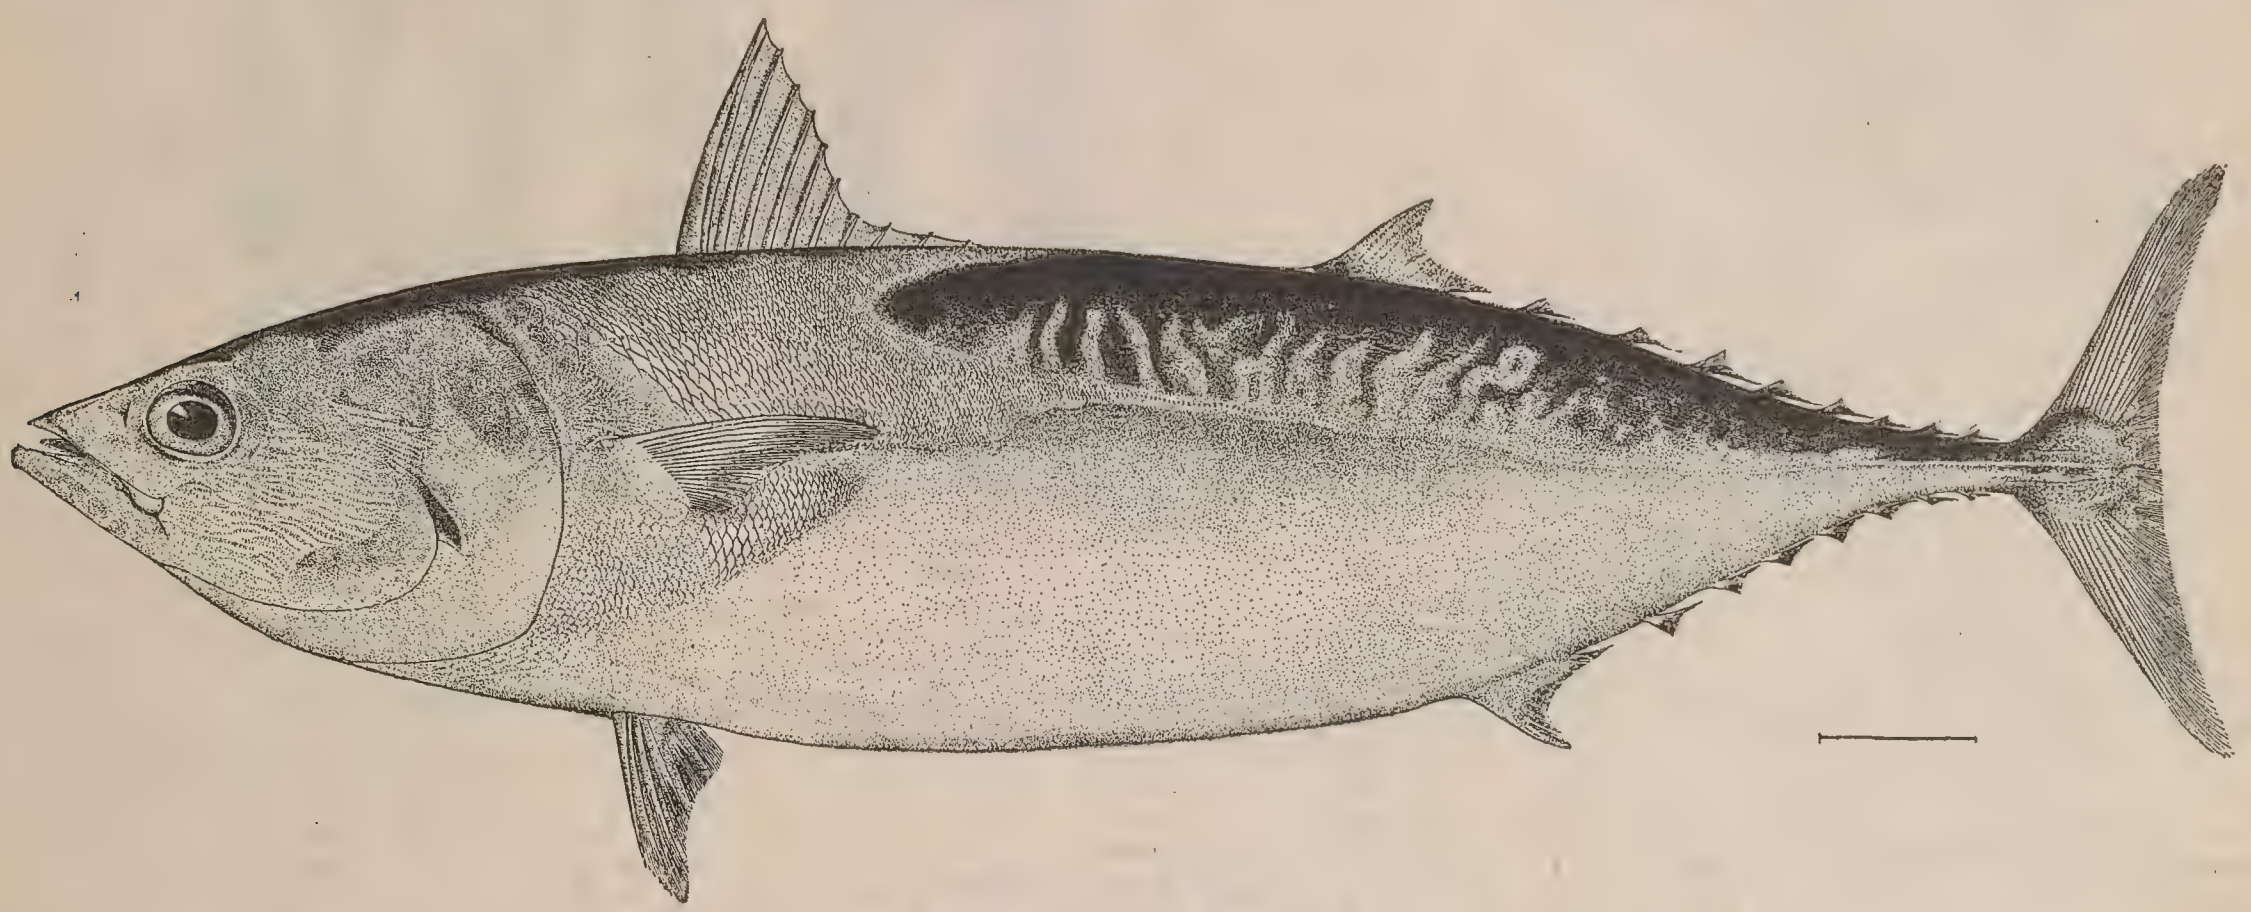
In your issue of June 18 I note a letter from "Señor X.," in the course of which he is kind enough not only to pay me a pretty compliment as to catching yellowtail at Santa Catalina Island, California—the subject of a recent letter from me in FOREST AND STREAM—but moreover he calls me his "good friend." This is surely the kindest sort of treatment, coming as it does from so ready a pen as that of Señor X., and I hereby beg leave to express my due appreciation of the same. Nevertheless, when a man such as this puts himself to inconvenience for my benefit and also greets me as his "good friend," it naturally arouses my interest as to his personality. Señor X. is too modest. He treats me well and yet conceals his identity. In my eyes he is like Pope's Man o' Ross, who "did good by stealth and blushed to find it fame." Now I cannot lay claim to much if any of Poe's extraordinary ability at guessing cryptograms and enigmas, but I think that in this case I do not err when I say that I have solved the Señor X. personality problem. There are certain little references in his able article on Catalina yellowtail, under date of May 14, that have given me reason for my belief. Señor X. is not only the modest and retiring grub, which, fearing examination and recognition, hides itself away, but he is as well the gorgeous, full-grown butterfly, the envy of all. On page 492, at the bottom, he is simply "Señor X.," who pays "his good friend, Mr. Beard," a compliment; turning to page 493 and reading the very first line—from another hand—he becomes "Charles Frederick Holder, author and writer," to whom the said "good friend" before mentioned now willingly takes off his hat and bends the knee, for in killing a leaping tuna, 183lbs. in weight, Prof. Holder has done, and well done, a feat with rod and reel that is beyond all praise from the angler's point of view.

For game qualities that fish, the tuna, is truly a wonder. Note this little clipping from the Sun as to the capture of a much smaller specimen than that of Prof. Holder. He was foul hooked, it is true, but see what he did:

TOWED TWENTY MILES BY HIS FISH.

From the St. Louis Globe-Democrat.

LOS ANGELES, June 11.—Clifton R. Scudder, who went to Catalina Island a few weeks ago in company with Samuel Cupples, had a thrilling experience with a big tuna yesterday. He started fishing at 3 o'clock in the morning. At 7 o'clock the fish struck his hook, and for seven hours afterward there was an almost even struggle for the mastery. The strike occurred near the little town of Avalon, and at 2 o'clock, when the fish was finally brought to gaff, the boat had been towed fully twenty miles. The big fellow weighed 130lbs., 50lbs. less than one caught a few days ago, but it was found to have been hooked in the back, which explained the vigorous and protracted fight it made. The time required to land this tuna exceeded by two hours and one-half any former record.



Years ago Genio C. Scott, the well-known authority on angling, said of this fish (Thynnus orcynus), the horse-mackerel, tunny or tuna, "it is not a fish for the rod and reel," and so he has remained up to within a year or so secure from the angler because of his tremendous speed and endurance, his unequaled strength, and the peculiarity of his habits. At Catalina within recent date a few gentlemen such as Messrs. C. P. Morehouse, of Pasadena; H. A. Vachell, and C. R. Scudder, have now succeeded in proving the fallacy of Mr. Scott's statement, demonstrating that the tuna can be caught with rod and reel, and that he is moreover what I have maintained him to be for years, "the grandest game fish in the world." Just as Mr. Wood, in Florida, taught sportsmen how to catch the tarpon with a rod, so did Col. Morehouse teach the anglers of Avalon how to fish for tuna. In 1895 this was not understood. The new use of the power yacht to tow the angler, thus giving a rapidly moving and therefore attractive bait, had not been thought of then. That has all come since my time. His majesty was there in all his bravery of steel and silver, but he would not bite except at very rare intervals. Daily by dozens during that summer I watched the astonishing aerial gymnastics of his kind, as they vaulted 12 and even 15ft. above the water in pursuit of prey; many a time have I heard the thunder as of breakers when the ocean's surface was torn and lashed into waves by the feeding tuna school as though it were storm troubled; and again and again did I mark what was to me as an angler the most marvelous sight in all the vast realm of nature, how some individual giant, very incarnation of speed, flushing a hapless flying fish from the glassy sea rim, would drive it a thousand feet and more, the flyer, swallow swift, 10ft. in the air, the swimmer ready always at the surface, until with dried and exhausted membranous wing the brave little fellow sank to certain death at last into the mighty jaws of the waiting gaze-hound beneath. That is truly a sight to stir the heart. It never grows commonplace. It never fails in interest. I have witnessed it not once, but a hundred times, and it has never failed to thrill me with astonishment and wonder.

It was my ambition at Catalina to meet and conquer this mighty over-lord of the sea. I camped on his trail, I studied his habits, I schemed and toiled and lost sleep over him, ever in hopes of getting a fair chance at him. All to no purpose. Once indeed I came very near it, and I have often thought that the smile of a pretty woman cost me my fish. Sailor Jim Gardner, capital boatman and good fellow always, was splicing an extra 200ft. of cuttyhunk to my 800ft. reel-line one evening as we sat in the hotel Metropole. We were talking of Mr. Tuna, for this extra length was to help compass his destruction, I fondly hoped. Jim was doing the intricate "sailor's splice" as only a sailor can do it. Suddenly fate in the shape of a very sweet and pretty girl whom we both knew stopped near us and wanted to know, woman-like, "just how he did it." Jim is always courteous and he tried to show her as he worked away busily; but I saw very quickly that he was a bit rattled by her close attention. His fingers lost some of their deftness, and I remember too that he complained of the warmth of the room. The knot finished, seemingly in good shape, I laid my tackle carefully away, full of faith in Jim's heretofore always truthworthy splicing work. Alas for me, three days later I had reason to remember that girl. One evening the bay at the Isthmus was full of feeding tuna. I baited with a fresh flying-fish and went out to interview them. When right in the midst of the school one great fellow flashed up to the surface, making a swirl fully 10ft. across, and I had a strike that might have cost me a finger had I been incautious enough to have tried to grasp the flying reel handle. He had taken the bait at full speed, and next instant I was getting a glorious run from a fish that made all other fish ever caught or hooked by me seem absolutely tame and slow by comparison. My boatman did his part well, and easing the strain on the rod by the ready use of the oars in following, we went flying across that bay like a power yacht. My big multiplier fairly shrieked, one long continued, steady cry, while 700ft. of line melted away like snow from under my hard pressed leather brake. From the butt under my right thigh to the very tip my rod was one beautiful, nervous arc. It was magnificent. Anticipation seemed giving place to a happy fruition. The fight for which I had longed was on. Like a happy, new wed lover who sees the future unroll before him, I felt myself married to the object of my longing, a splendid leaping tuna. Suddenly, however, the end came. The game fellow, a plummet of lead, dropped to the bottom, and then without any warning or reason whatsoever—for my rod could pull only 4¼lbs. of dead weight, and so an overstrain on the line was an impossibility—the tip straightened, the pull ceased, and my only tuna strike was a thing of the past. When I sadly recovered my line, I found that the trouble had occurred right at Jim's splice: Cherchez la femme.

With all of this and much more in mind concerning the doings and habits of this truly royal fish, it is with a feeling of sincere pleasure that I note Prof. Holder's recent success in bringing him to gaff. Eastern anglers have no conception of what he really is, or awakening from their indifference they would not begrudge the time and money necessary for this capture. I predict that there is a change coming, a day when he will be appreciated as he deserves; when the ablest knights in that tournament of sport wherein the rod is king, instead of seeking battle in Florida with the tarpon, a fish which cannot stand comparison with the tuna in that he is utterly worthless when caught, is less beautiful to the eye, and certainly takes a lower place in the scale for game and strength. I predict that in that day the man who can honestly lay claim to the capture of the heaviest leaping tuna will be easily ranked as the "world's high hook." To pun vilely, it is even now a case of Holder of the world's record. I am glad of it too, and I want to see an article from his pen telling just how he killed his grand fish. Such an article in FOREST AND STREAM, coming from such a source, will not only promote interest in and substantiate my statements concerning the possibilities of this wonderful game fish, but it will make others beside myself think of and long to carry out that old-time maxim, "Go thou and do likewise." Señor X., we await your good pleasure.

STUART-MENTETH BEARD.

NEW YORK, June 17.

THE TUNA—From Fisheries Industries.

Weakfish and Bluefish.

WEAKFISHING and bluefishing are reported good on the Great South Bay, Long Island, the best points are "the cinders" and the west channel. The Long Island Railroad to Sayville, Islip or Bayshore is the route from New York.

INNER BEACH, L. I., June 27.—Crabs are more plentiful than they have been in years, and other sorts of fish food abound everywhere in the bay. The result is a great rush of large fish through the inlets, and the best fishing we have had in years. Great numbers of weakfish have been caught. One peculiarity of the fishing this season has been the superior chances of the fisherman who is on the ground early in the morning. This is said to be the result of the great quantities of food which is in the bay. After the first hour or two of feeding the appetite of the weakfish is appeased, and they will bite only the most tempting bait.

EAST ROCKAWAY, L. I., June 27.—The creeks and shoal waters of the bay are fairly alive with crabs; nothing like it has ever been known before at this season of the year. A common catch of amateur parties, with meat for bait, and a crab net, is 100 crabs in an afternoon; while the regular baymen are averaging from six to ten dozen soft crabs for a day's work. It is thought that the reason for the unusual number of crabs at this season is the great quantity of vegetable matter which was washed into the creeks by the heavy rains of April and May.

ROCK.

Messrs. John Balch and B. Moliter on Saturday made the largest catch of weakfish with hook and line ever recorded in this bay. They took 160 fish, averaging about 2½lbs. each. On Sunday, Hugo Kuestler, Harry Frith and John Balch landed 114 weakfish. Other parties caught almost as many. Fluke were also very plenty.

The Tuna Record.

AVALON, Santa Catalina Island, Southern California, June 16.—*Editor Forest and Stream:* Several years ago the writer in articles on the "Game Fishes of the Pacific Slope," in Scribner's Magazine and the Cosmopolitan, mentioned the "leaping tuna" as a possible catch with rod and reel, and for seven or eight years I have made many attempts to take one, but always failed by using too light tackle, and I must confess I would rather fail than take so noble a fish unless all the advantage was on its side. Year after year the leaping tuna gathered in my rod tips and lines and hooks. He unreeled 600ft. of line and took the tip of my rod before I realized what the mass of foam astern meant; and Mexican Joe, my boatman, hinted that I was asleep; but I was not. And so time went on and finally I laid out a campaign, which was to use a reel that would hold 1,000ft. of 21-strand line, and before I could find a reel and equipment some one else caught the first fish. This was two years ago; and now the fish is caught by skillful wielders of the rod almost every day, when the attempt is made: and it was reserved for me to make the record catch of the largest game fish ever taken on the Pacific slope—so it is said—with rod and reel; and I am inclined to go further and claim that the catch represents the most active and hardest-fighting thoroughly game fish ever taken on rod and reel and 21-strand line. I am aware that this will be disputed by tarpon fishermen all over the country, but in making the claim I am perfectly loyal to the silver king. I have landed this magnificent fish and know it well. I have also caught all the fish of the Mexican gulf that can be taken, including the Florida jew fish. I have taken, I think, every fish in the Atlantic from the striped bass to the swordfish, and on the Pacific from a black sea bass, weighing 347lbs., to a 50lb. white sea bass; so that, so far as experience goes, I consider that I am a fair judge of the fighting qualities of a fish, and I have no hesitation in saying that if my 183lb. tuna was fastened to one end of a rope and three 183lb. tarpon were on the other end, the tug-of-war would be at once decided, as the tuna would wear them out and never stop. In other words, I consider that the tuna entirely outclasses the tarpon in strength and activity, in the fierceness of its rushes, and in the splendid attempts to escape. I confess that the tarpon is more sensational in its leaps, which are due to the shallow water, but the tuna is the acrobat of the sea, and leaps on all occasions, except when hooked, and then, having 200 or 300ft. of blue water beneath, he has no occasion to take to the air. But I have seen them leap 10 and 15ft. into the air and seize flying fish in full flight; and the grandeur of their feats passes all description. Again the tuna is an excellent table fish, bringing a high price in the market, and sportsmen feel no hesitation in taking a fish which is in constant demand, and not killed simply to afford sport.

I think then that I have proved the claim of the tuna to be classed as a thoroughly game fish, and I would give it the first place among the oceanic fishes. My evidence must be the story of my catch, and a description of the tactics of the fish, which at the end of four hours, I am free to confess, left me exhausted, while the fish could readily have towed my boat five miles further.

I took my fish with a 20oz. rod, about what is used for tarpon and striped bass by some fishermen, though possibly heavier than some use. The reel was a Vom Hofe holding 900ft. of cuttyhunk line, to which was attached a 6ft. piano wire leader. The bait was a 12in. flying fish, the natural food and prey of the tuna. The boat used was a regular Santa Catalina yawl, broad of beam, and rigged with two seats so that the fishermen face the stern, and are back to the oarsman and gaffer, who in this instance was "Jim Gardner," an expert and thorough tuna fisherman. But for his faithful work I should have lost the fish several times, as for four hours it kept him upon the move to keep me facing the fish. My companion was Mr. C. H. Heverin, of New York.

Our boat was fastened behind a launch, and at 3:30 in the morning we slipped out of Avalon Bay, which was as smooth as glass. Mr. Heverin had the first strike, not 100yds. from the beach, and in an hour had brought a fine tuna to gaff, weighing 90lbs. The method of procedure is for the boatman to hold the painter, having his oars ready, and the moment a strike comes to cast off from the launch and back water, getting headway in the boat to offset the terrific rush of the fish, which will often unreel 500 or 600ft. of line before the fisherman remembers where he is. I received my strike at 6:30, just below Long Point, six miles from Avalon, and Mr. Heverin received a strike at the same moment; the fish coming boiling along the surface striking in a highly sensational manner. Mr. Heverin failed to hook, and slipped aboard the launch to continue fishing from her, while I began the fight which lasted four hours without let up. I had been trolling with about 150ft. of line out, and at the rush the fish tore at least 500ft. from the reel, with accompanying music that could be heard a long distance. Gardner started the boat astern and I stopped the fish, the boat rushing through the water for several hundred yards, the fish now plunging down and beating upon the line in savage attempts at escape. Then I gained 20ft., then lost 50 in a savage rush. Then the magnificent creature rose rapidly from a two minute sweep deep in the heart of the channel, until I broke water in a cloud of foam 500ft. away. Then turned and facing the boat came at me like an arrow from the bow. It was a magnificent move, and I reeled for my life on the big multiplier, but could hardly take in the line before the fish turned 20ft. from me a blazing mass of silver in the sunlight, and shot away with a velocity that was inconceivable, bearing off the line in one great burst of speed. It was with the greatest difficulty that I stopped the fish at what I believe to have been between 500 and 600ft., using the heavy leather pad brake as carefully as I could, and realizing that had I not soaked line and pad in advance the line would have been burnt off at the first rush. The fish now plunged down deep into the blue channel, sulking like a salmon for a few moments, hammering on the line in a peculiar manner. Then, as I gained on it in reeling, it rose in great circles, towing the boat rapidly, and when at the surface it came at me again, hoping to take me unawares. Failing in this, it made several desperate plunges, rose to the surface and heading out to sea swam rapidly away, towing the boat at half the speed of the launch against the oars of my boatman, who kept them over, hoping to stop it. It towed the boat a mile in this way, during which I gained and lost perhaps 200ft. Then I finally turned it, and after a sensational rush in and by me it kept on and towed us over a mile in the opposite direction with a force that it was impossible to resist with the thread-like line I was using. The shores of the island are lined with kelp here, and I fully expected to lose the fish, but I succeeded in turning it about 200ft. from the rocks, and then the fish began a series of circling, diving, hammering, rushing in and out, that I saw would in time wear me out. By the greatest effort I three times brought the fish to within 50ft. of the boat, when it would break away again, all the time towing the heavy boat around in a large circle. In this way three hours slipped away, and I noted what I consider to be the most remarkable feature of this fish: it continually gained strength and vigor.

PROF. C. F. HOLDER AND HIS 183LBS. TUNA, WITH BOATMAN JIM GARDNER.

At about 9:30, or about three hours from the time of the strike, the fish had towed us back to almost the identical spot where it was hooked, and after several desperate rushes, which almost resulted in its escape, it turned down the island and towed us five miles, stopping only to rush in several times when I forced the fighting, and towing the boat stern first and against my boatman's oars, which were held to stop it, and part of the distance against a heavy sea. The strength of this noble creature can be imagined when I say that two launches, which followed, were obliged to keep up half speed most of the time. Mr. Heverin being in the Catalina and Mr. C. L. Doran being in his launch, the Narod, with Mr. C. R. Scudder, of St. Louis, and Mr. Charles Orr, of London, who had come out from Avalon to see the finish.

The fish towed our boat directly home, or to Avalon Bay, and I am confident that it would have towed us five miles more, but I "forced the fighting," and three times brought the fish to the gaff, and three times it broke away, and it was then, for the first, that I realized its size and proportions. Again it was reeled in, its rich blue back and massive silver belly presenting a rich contrast, while numerous bright yellow fins flashed like gold. For a moment I held him and Gardner put the gaff into the silver mass. A wild plunge and the gaff went to pieces, and he was away, and we were in despair. Once more he was reeled in, and this time the big gaff caught him and the magnificent creature came sliding into the boat a mass of silver sheen, a blaze of labradorite blue; while a cheer went up from the witnesses. The deed was done, yet I could not but regret taking so magnificent a creature, that had earned its liberty a thousand times in that hardly fought four hours.

The fish weighed 183lbs. an hour later, measured 6ft. 2in. in length, and was about 4ft. in girth around the deepest portion. I gave the fish to "Jim Gardner," who is having it mounted, and will swing it on his fish stand, I presume, to commemorate the record catch, and I might add his own qualifications as a perfect boatman. To further illustrate the strength of a small tuna—one of 125lbs., when foul hooked, towed Mr. C. R. Scudder and Jim Gardner seven hours. The writer joined them, and was in the boat the last three hours, and when picked up we were seven miles from the island, in a heavy sea, and the fish was as active as when it was hooked. It towed Mr. Scudder in all at least twenty miles, and my fairly-hooked 183lb. fish towed me, including the turns, at least ten miles.

All tunas may not fight equally well. All fish differ. The long, slender tarpons are the "game fishes," but I believe the "leaping tuna," if taken on the tackle described, to be the great game fish of the world, and one which will afford unlimited sport to those lovers of rod and reel fishing who love big game at sea.

CHARLES FREDERICK HOLDER.

American Fisheries Society.

THE twenty-seventh session will be held at Omaha, Neb., July 20-22. The preliminary programme of proceedings shows that the following persons have announced their intention to present papers on the topics indicated. Other papers will be added to the programme as received:

Dr. H. B. Ward, "Aquacultural Experiment Stations and Their Work."

Mr. James Nevin, "The Propagation of Fish."

Mr. Livingstone Stone, "The Origin and Infancy of the American Fisheries Society."

Hon. J. W. Titcomb, "Desirability of State Organization for the Promotion of Fishculture and the Passage of Legislation by the Several States for the Propagation and Protection of Food and Game Fish."

Mr. J. J. Stranahan, "The Microscope as Practically Applied to Fishculture."

Dr. H. C. Bumpus, "The Indentification of Adult Fish That Have Been Artificially Hatched."

Dr. J. A. Henshall, "The Artificial Culture of the Grayling."

Hon. F. B. Dickerson, "The Protection of Fish and a Closed Season."

Prof. Jacob Reighard, "How Can Biological Investigation of Fresh Waters be Made of Most Value."

Mr. J. E. Gunckel, "Fish and Fishing."

Mr. F. N. Clark, "Notes in Connection with the U. S. Fish Hatcheries in Michigan."

Prof. E. A. Birge, "The Relation Between the Areas of Inland Lakes and the Temperature of the Water."

Herschel Whitaker, "Some Popular Errors Needing Correction."

Dr. Bushrod W. James, "The Protection of the Pacific Coast as Related to its Food Supply."

Mr. Seymour Bower, "The Justice of a License Fee for Commercial Fishermen and for Anglers."

The headquarters of the Society will be at the Hotel Millard, in Omaha. Members living east of Chicago will rendezvous at the Great Northern Hotel, Chicago, on the afternoon of the 19th, where the secretary can be found, and where assignments can be made in sleeper set apart for the special use of members.

Texas Tarpon.

TARPON, Texas.—Mr. W. B. Leach, of Palestine, Texas, caught at Aransas Pass Islet, on June 14, the largest tarpon on record here taken with rod and reel. The weight four hours after taken was 125lbs.; girth 35in.; length, 7ft. 7in. The fishing was in the morning with a strong flood tide. The following people were present and can testify as to the size and weight of the fish, viz.: G. A. Chabot, San Antonio; L. B. Clegg, San Antonio; A. B. Daniels, Denver; H. E. Chubbuck, Utica; Fred J. Scudder, San Antonio; Simon Veith, San Antonio. The tackle used was a bamboo rod, 4.0 Vom Hofe reel, Hall 27 line and 9.8 hook.

J. E. COTTER, Official Recorder.

New Jersey Coast Fishing.

ASBURY PARK, N. J., June 24.—Bass, and of large size, this has been the story from Deal Beach and Elberon the past week. Never have results been more satisfactory or fish finer in condition. To give a list of rods and fish would be well nigh impossible; the largest however, fell to the lot of Mr. Walter Davis this morning; weight 31lbs. One can well remember when the capture of such a fish on the delicate tackle now in use would have been deemed an impossible performance.

Kingfish are fairly plentiful, and are now in the rivers and bays in quantities; weakfish too have put in our tidal streams, and are taking the hook.

From Harvey's Cedars the best reports come. I append catches made at that point by my friend, Mr. L. P. Streeter, of Morristown, and Mr. H. W. Boyer, of Philadelphia. I have known Mr. Streeter for years, and the fact is assured that not one of these fish were allowed to go to waste, as in all cases he sees that they are put where they will do most good.

LEONARD HULIT.

HARVEY CEDARS, N. J., June 19.—My Dear Mr. Hulit: I take it for granted that you have heard of the catch made by the Atkins party, of which I was a member. The following, a rather unusual score, was made after Mr. Atkins left the Cedars by Mr. Boyer and myself:

June 16.

Mr. Boyer—Nine bluefish, weighing 40lbs.; 2 striped bass, 12lbs. and 14lbs. each.

Mr. Streeter—Fifteen bluefish, weighing 75lbs.

June 17.

Mr. Boyer—Twenty-five bluefish, weighing 92lbs.; 2 striped bass, 7lbs. and 22½lbs. each.

Mr. Streeter—Twenty bluefish, weighing 80lbs.; a striped bass of 7½lbs.; a channel bass of 21lbs.

June 18.

Mr. Boyer—Eight bluefish, weighing 22½lbs.; a striped bass of 15½lbs.

Mr. Streeter—Fourteen bluefish weighing 39lbs.; a striped bass of 6½lbs.; a channel bass of 21lbs.

June 19.

Mr. Boyer—Eleven bluefish weighing 48lbs.

Mr. Streeter—Six bluefish weighing 24½lbs.; a channel bass of 18½lbs.

Recapitulation.

Mr. Boyer—Fifty-three bluefish weighing 202½lbs.; 5 striped bass weighing 71lbs.

Mr. Streeter.—Fifty-five bluefish weighing 218½lbs.; 2 striped bass weighing 14lbs.; 3 channel bass weighing 60½lbs.

The above is a record catch for the Cedars, and will you kindly have it inserted in FOREST AND STREAM.

L. P. STREETER.

Chicago Fly-Casters' Club.

CHICAGO, June 25.—*Editor Forest and Stream:* The records of the club for last week and to-day are as follows. June 18 scores:

	Long Distance Fly, Feet.	Distance and Acc'y, Per Cent.	Bait Casting, Per Cent.
I. H. Bellows	106	..	96 4-5
C. Antoine	..	..	84 2-5
L. I. Blackman	..	..	83 4-5
C F Brown	..	70 1-3	..
L F Crosby	..	..	85 4-5
B W Goodsell	105	89 1-3	91 3-5
L Goodwin	..	62 1-3	79 1-5
H. G. Hascal	102	74 1-3	96
N. C. Heston	..	70 2-3	95
C. A. Lippincott	84	67	93
C. G. Ludlow	94	78 1-3	83 4-5
G. A. Murrell	..	62 2-3	93 2-5
H. A. Newkirk	..	69 2-3	86 2-5
F. N. Peet	110	80 1-3	71
G. W. Salter	..	65 2-3	96 1-5
J. E. Strong	100	..	..
A. C. Smith	..	72 1-3	96 4-5

Holders of Medals—Long distance fly, F. N. Peet; distance and accuracy, B. W. Goodsell; bait casting, A. C. Smith.

The very high wind prevented a larger attendance and participation in last Saturday's events. The meet to-day was made memorable by the feats of Messrs. Peet, Goodsell and Ludlow, who broke the world's record in long distance fly-casting:

	Long Distance Fly, Feet.	Distance and and Acc'y, Per Cent.	Accuracy and and Del'cy, Per Cent.	Bait Casting, Per Cent.
J. D. Belasco	..	..	..	78 1-5

Sept. 7.—Manitoba Field Trials Club trials. William C. Lee, Sec'y, Winnipeg, Man.

National Beagle Club.

NEW YORK, June 20.—An Executive Committee meeting of the National Beagle Club was held June 17 at 15 Broad street, at 3:15 P. M. Present: Messrs. Post, Appleton, Schellhas, Kernochan and Wharton. The report of the '98 Futurity Committee was accepted, ordered placed on file. It was voted that the report of the Committee on the Constitution, etc., be accepted, and notice given the members of the club of the proposed changes.

Mrs. Jas. L. Kernochan and Mrs. H. P. Whitney were elected to membership. It was voted that the president appoint the regular Field Trial Committee and sub-committees. The following were appointed:

Field Trial Committee—Messrs. Appleton (chairman), Schellhass, Wharton, Kernochan, Geo. B. Post, Jr., A. Wright Post, Turpin, Laxby, Summers, Joslin, Rogers, Bateman, Baldwin, Princeton and Lewis.

On Grounds—Messrs. Kernochan, Appleton and Wharton.

On Judges—Messrs. Schellhass and Geo. B. Post, Jr.

On Arrangements—Messrs. Purinton, Laxby, Summers and Wharton.

On Premium List—Messrs. Appleton, Schellhass and Wharton.

On Finance—Messrs. Geo. B. Post, Jr., Reed and Wharton.

G. MIFFLIN WHARTON, Sec'y.

Continental Field Trial Club.

THE Continental Field Trial Club has effected a thorough reorganization in the past few months, and purposes going on with unabated ardor in its mission. It was seriously in debt at the close of its last trials, but a steadfast few raised sufficient funds to cancel its obligations, which were the only obstacles to its continued activity, for the interest and energy of the working members never faltered. The present officers are Mr. Hobart Ames, of Boston, president; Messrs. Edward Dexter and Edmund H. Osthaus, vice-presidents, and Mr. W. B. Meares, secretary-treasurer, all well known and accomplished sportsmen. Messrs. Osthaus and Meares have been engaged to judge, and the great merit of the judging is amply set forth in the mere announcement of the judges, for they are men of great experience and sterling uprightness.

In our business columns the club announces its fourth annual Derby, and its conditions. There are three prizes respectively, first, second and third, $250, $150 and $100. Entries close Aug. 1. Entries for all-age stake close Oct. 15. Entries for free-for-all sweepstake close the night before the race. Mr. Meares' address is Hillsboro, N. C.

Yachting.

IT will probably be news to most of our readers that a racing schooner is now building in this country and will soon be seen in the races, but such is the fact. The new boat is not intended to meet the Watson schooner Rainbow, of 115ft. l.w.l.; in fact, she is just 91ft. shorter, being designed for the 21ft. l.w.l. class of the Massachusetts Y. R. A. Under the rules of the Association she will be entitled to an "allowance for rig," which will make her nominal measurement 21 instead of 24ft., thus admitting her to the class. Her designer and owner, Mr. S. N. Small, intends her for the Quincy challenge cup races, and the question has arisen as to her eligibility.

We have not the space to go into the technical side of the question at present, but in our opinion it is one that should never have been brought up. The allowance for rig and the recognition of mixed rig races are very well in their way in ordinary club races, and the experiments of Mr. S. N. Small with his miniature schooner, and of his brother, Mr. J. F. Small, with a still smaller yawl, Katydid, of 17ft. l.w.l., and measuring into the 15ft. class, promise to be interesting, and may produce some valuable results showing the comparative efficiency of the sloop, yawl and schooner rigs. At the same time it is quite plain that all sorts of handicaps and special allowances are out of place in important international or even interclub matches. In all such contests the main idea is to test the superiority of the opposing parties in the matters of design and handling, and to make this test as perfect as possible, all differences of size, rig, etc., are eliminated; and the same conditions are laid down in advance for both to work to. If one party builds a schooner and the other a cutter, the result will probably be decided not by the merits of the designing and handling, but merely by the allowance for rig, which is at best but a guess and a makeshift. The whole course of international racing for fifty years has tended toward the elimination of such inequalities as difference of rig, of size, of methods of measurement favoring one special type, until to-day, in such conditions as those governing the Seawanhaka international cup, both challenger and defender are placed at the start on the fairest possible footing, to produce yachts of the same measurement, the same rig, and carrying the same weights of crew and helmsmen. There is ample opportunity in the programme of frequent races about Boston to make a satisfactory test of the schooner rig in the regular club races, and we believe that when all sides of the question are considered those interested in the experiment will see the propriety of confining it to the regular open races and of not entering in special inter-club matches.

The Alteration of the Measurement Rule.

WE have already published the report of the special committee of the Seawanhaka C. Y. C. appointed to propose a new rule of measurement for the club. As the matter now stands, the formula suggested by the committee represents the only definite and practical proposal for a new rule now before the yachting public, with the exception of such proposals as have been advanced during the past winter and spring in the FOREST AND STREAM by various correspondents who have taken part in the discussion of the measurement question through its columns. The council of the Yacht Racing Union, at its meeting last month, failed to reach any definite conclusion, being unwilling to adopt the British Y. R. A. formula in toto. It is most desirable that some final action be taken early next fall in the adoption of a new rule of measurement, but if anything is to be done the whole subject must be very thoroughly discussed through the summer; to this end we shall devote all necessary space to such of our correspondents as are interested in this important question.

While the main question is still perhaps a long way from a final settlement, much has been accomplished in the course of the past two years in opening the way to the general acceptance of a better rule, when such has been found. Two of the serious obstacles to the adoption of a satisfactory rule have at last disappeared, after doing untold harm to yachting for many years. The attempt to make a new rule on the basis of old boats has recently had a most satisfactory and probably final trial, proving a complete failure, and we believe that American yachtsmen are now ready to abandon it and to proceed on the reasonable and sensible basis of framing a rule solely with relation to the new boats that will be built under it. This step of itself is a very great advance.

Following it in natural sequence, though of equal or even greater importance, is the question of the class of yacht which it is designed that the new rule shall produce. It is all very well to say that in theory a satisfactory rule of measurement should give equal opportunities to the racing machine and the all-round yacht, and that under it both should flourish side by side, but as a matter of fact such a perfect adjustment of the values of the many factors of advantage is absolutely impossible, and no rule can be framed that will not put at a premium some one class of yacht, the racing machine, the all-round fast cruiser, or possibly even the slow cruiser. It has so happened in the past that every rule tested on an extensive scale has in time resulted in the production of an extreme racing type, to the exclusion of more moderate and generally useful craft; this was the case under the "cubic contents" rule of the New York Y. C., the old tonnage and "1730" rules of the British Y. R. A., and later of the Seawanhaka rule and the Y. R. A. "rating" rule since the introduction of the fin-keel. This inevitable tendency of every rule has been fully recognized of late years by the various experts and committees called upon to suggest new formulas, and the question has repeatedly been put by such committees to the clubs and associations appointing them as to whether they were to seek for a formula that would produce yachts of the highest possible absolute speed, or one which would produce yachts of a generally useful type, but capable of racing in their classes. For a long time this question was evaded by the clubs, but for several years past the British Y. R. A. has answered it positively in a declaration in favor of the all-round yacht, instead of the extreme racing machine, and American yachtsmen will now, in all probability, agree with the position of the Seawanhaka C. Y. C. at the present time, that the main object of the desired new rule is to produce fast but generally usable yachts.

If yachtsmen are finally willing to accept these two propositions, that only new yachts are to be considered in framing a new rule, and that the object of this rule is to produce a less extreme type than the modern racing machine, Defender, Niagara, Quisetta and Dragoon, there is far more hope of a satisfactory solution of the measurement question than has ever before existed.

The most recent developments of the question are the report of Mr. Jarvis on his visit to England last winter, as published in the FOREST AND STREAM of March 12 and 19, and the report of the Seawanhaka special committee, June 4. The former report relates to the present "lineal rating" rule of the British Y. R. A., with girth as the new and important factor, compared with the old Y. R. A. rule, this new rule being proposed by Mr. Jarvis for adoption on this side. It brings up a very important question, which we hope to discuss next week, of the value of girth as a factor in producing the result aimed at, a reasonably large midship section.

The Seawanhaka proposal also demands a careful and thorough inquiry into its basis and its probable effects, good and bad, which we hope, with the aid of our correspondents, to take up later.

The Race Committee of the Seawanhaka C. Y. C. has had the subject of a new measurement rule under serious consideration for the past two years, and in the fall of 1896 it began active work by calling a number of meetings to which designers and others interested were invited. The discussions were at first of a very general nature, developing a variety of views and numerous proposals, most of the latter being rejected by the majority on careful inspection. The work has necessarily gone on slowly, the committee being engaged at the same time in its regular routine work and in the management of an international race each year, and progress has been slow. During the past winter, however, it has been possible to dispose of much extraneous matter and to focus the discussion on a few main points, as shown by the following letter, framed by the committee and sent to various yachtsmen:

NEW YORK, Jan. 30, 1898.—My Dear Sir: Referring to the recent conferences which have taken place on the rule of yacht measurement, the Race Committee of the Seawanhaka Corinthian Yacht Club is very anxious to follow the matter up and to accomplish some definite results. With this in view, I write at its request to ask you if you will not be good enough to give to it your views in writing, covering the following points:

1—In contriving a new rule of measurement, what should be the purposes aimed at; that is to say, should the rule tend to the development of a so-called "wholesome type" of boat, or should racing qualities mainly be considered and the effort be restricted to such regulation as will insure the development of these qualities along fair lines without special reference to cruising qualities?

2—Should the purpose be recommended to encourage a "wholesome type" of boat, what constitutes, in your opinion, such a type?

3—Is it correct in principle, or desirable, to fix arbitrary limits upon any element of speed, as for example sail or draft?

4—What elements of speed should be taxed?

5—What cognizance should be taken of the difference between centerboard and keel types?

At a meeting of the Race Committee held this week especially to consider this subject, it seemed to be the general view that a new rule should tax load waterline, sail area and draft, and possibly also beam, either separately or associated with draft; and that perhaps displacement should be introduced for what may be called

"inverse taxation" or premium; also, that lightness of construction, or factors dependent thereon, might also be considered.

If you will sufficiently interest yourself to answer these inquiries, and especially to formulate for its benefit a definite rule of measurement, it will be very much appreciated by the committee. It is inviting expressions of views from several of those who have shown the greatest interest in the subject, and as soon as possible as it receives them it will endeavor to make some proposal for final consideration. Yours very truly,

(Signed) C. W. WETMORE,
For the Race Committee.

From the replies received by the committee, which are far too voluminous to be published in full, we make the following extracts, arranging them in order as answers to the different questions:

Question 1.—"It is my opinion that racing qualities should mainly be considered, but no vessel should be encouraged that cannot keep the sea. These two qualities are in my opinion perfectly consistent. We want a measurement rule which will lead a designer to produce a good type of boat. A boat over 40ft. l.w.l. of the fin type is unwholesome, and to make racing popular we must make it clear that an honest man can build an honest boat, sail her for several years, and then find a market for her as a cruiser."

"The old argument seems to me to hold good, that speed is only relative, and that our conception of speed and size is framed only from the measurement rule. I feel very strongly that if racing is to prosper with us in Canada the type of boat that is most successful therein must at least be of a kind suitable for ordinary cruising and sailing purposes, and if it were possible to make the most successful racers the most desirable cruising boats, racing would receive a tremendous impetus."

"A good rule should as nearly as practicable put a just value upon every element or feature of recognized advantage to speed, the use of which is permitted; its purpose should not be to favor the production of any special kind of yacht, or of any special feature of yachts, excepting in so far as to make practicable the production and the successful racing of such vessels as will most readily meet the desires and requirements of the owners; and such as will most likely be built and raced in the largest numbers. * * * An assurance needs to be given to the owner who would build that, if his ideas are reasonable, he may have built and may race with a prospect of success a vessel of adaptation to his wants and conveniences."

"The essentials (which a rule should encourage) are speed, reasonable accommodation, utility outside of mere match sailing, durability, and final conversion to some useful end. It is impossible to put any exact valuation upon each of the qualities, but, comparing the leading yachts of 1896 with those of 1890, I think that it would be fair to say that where a gain of 5 per cent. has been made in speed it has been accompanied by a loss of at least 20 per cent. in accommodation, utility and durability, and upward of 50 per cent. in sale value when outbuilt for racing.

"In making such comparison it must be considered that no small part of the gain in speed during this time is due not to extreme features of design, but to legitimate improvements in construction, sail making and rigging, especially the latter. Making due allowance for the advance in this direction, it would seem that the actual gain in speed over a racing triangle has been purchased at a very heavy cost in the substitution, for instance, of Niagara and Drusilla for Minerva, Gossoon and Gloriana. In the races, apart from the boats, the increased speed has not improved the sport, either through making it in any degree more exciting or interesting, or adding to the number of competitors—quite the contrary being the case.

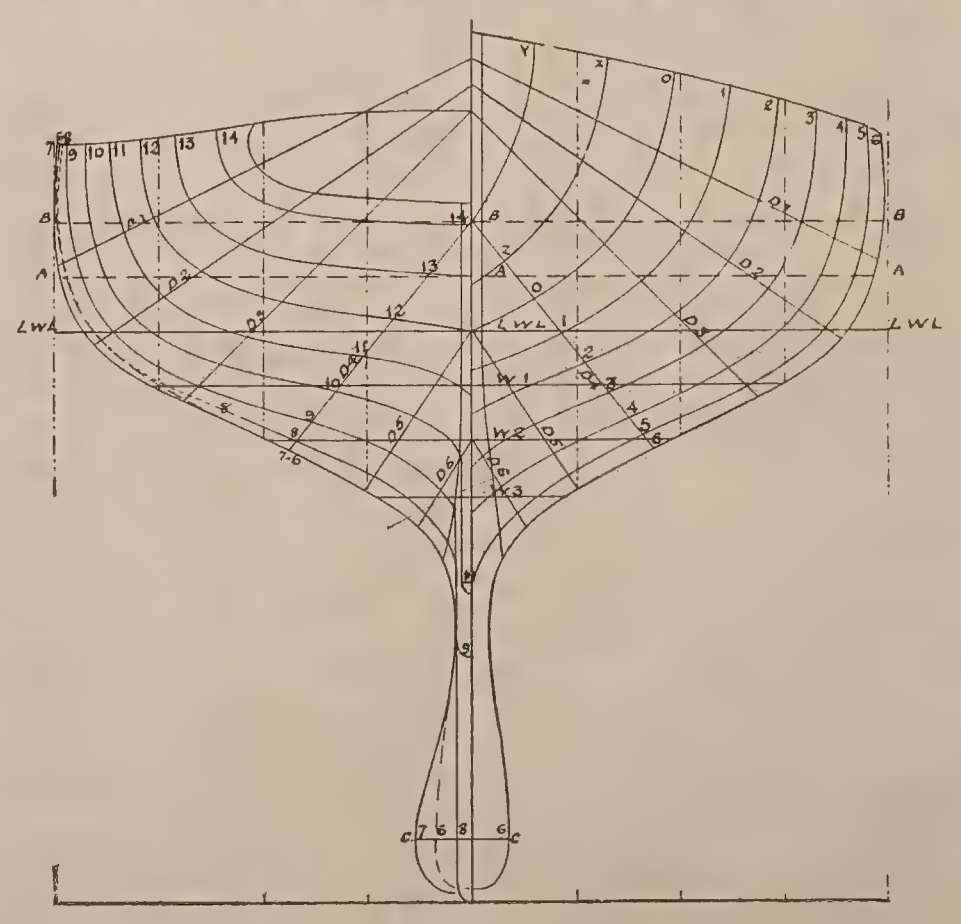
"I do not consider it necessary or desirable to attempt to legislate in favor of essentially cruising boats; but I think that the time has come for a positive statement that the object of measurement legislation is the production, not of the fastest yacht without regard to other considerations, but of the fastest yacht under certain restrictions tending to produce the other qualities mentioned above, these restrictions being as few as possible."

Question 2.—"This is a difficult question when considered, as is now necessary, from a racing standpoint. Taking a concrete example, I should favor such legislation as in the present 42ft. R. M. class, for instance, as would not stop at the penalization or possibly the exclusion of the bulb-fin Drusilla, but would place such semi-fin craft as Norota and Canada under some penalty as compared with boats of the type of Minerva and Uvira, of materially greater interval space on a reduced draft. * * * To answer this question in more compact form, I should define a 'wholesome' type as one that, with a high degree of speed, combined a reasonable amount of internal space and headroom, moderate instead of extreme draft and sail area, and a freedom from the freak features of form and keel contour seen in the latest yachts."

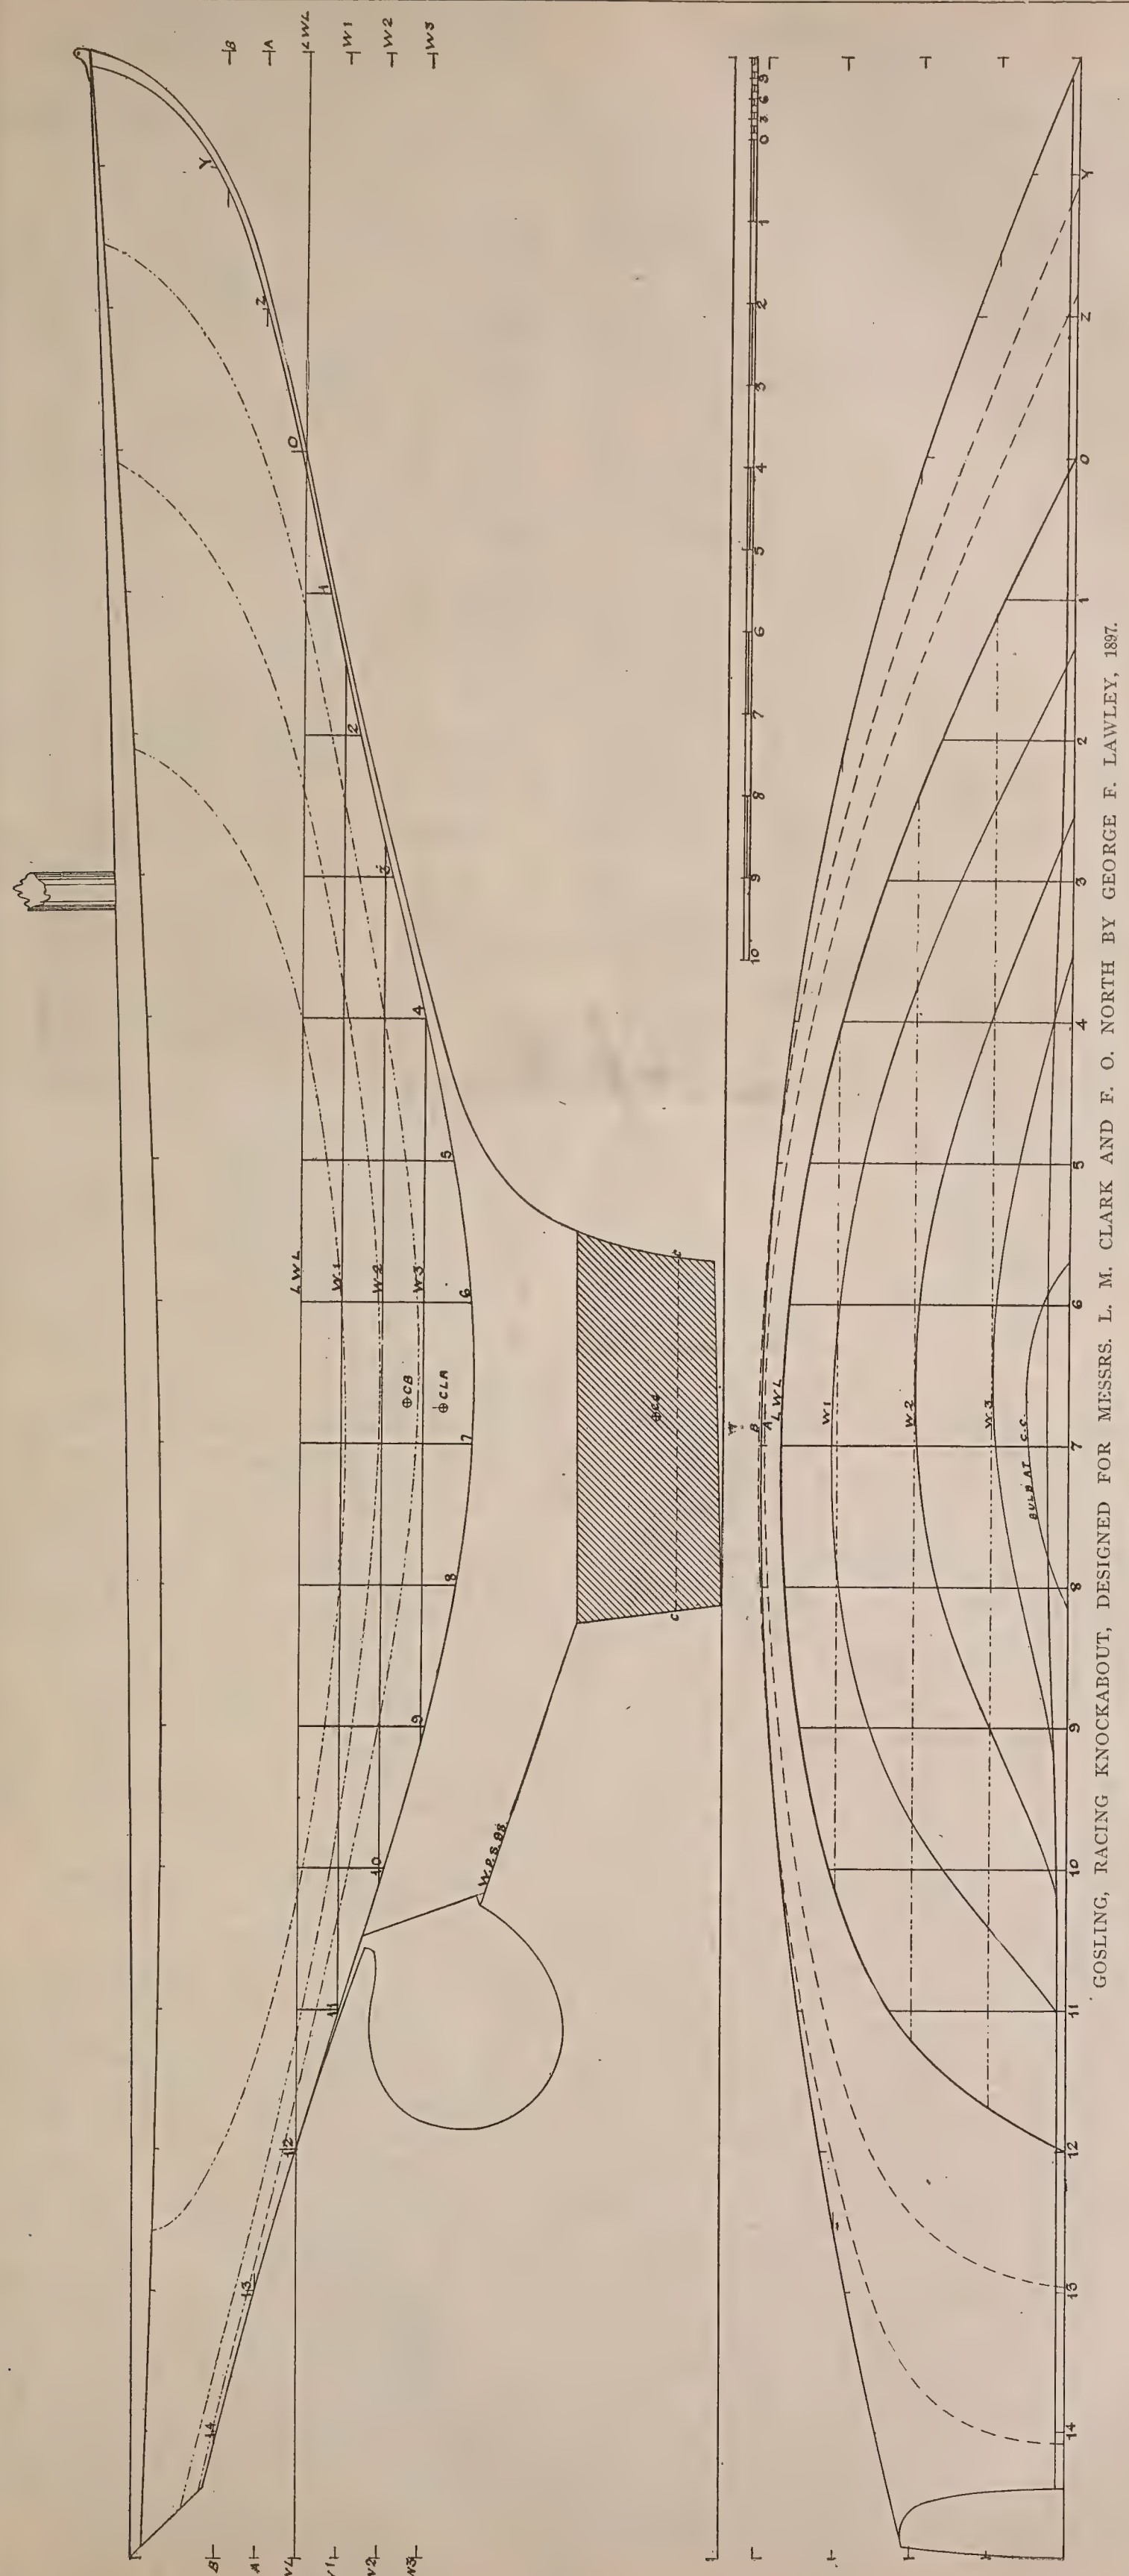
"I find it difficult to define the 'wholesome' boat, but, broadly speaking, should think it was that type that would be intelligently selected for pleasure sailing in the absence of rules."

Question 3.—"Arbitrary limits appear to me proper, or at least desirable, on certain factors of speed. Draft should be encouraged to a reasonable and convenient limit, and is only objectionable when it is excessive. Any tax upon it should therefore only start at the minimum limit and be of such value that it would practically prohibit a draft beyond that considered desirable. These requirements appear to be difficult to accomplish with anything but an arbitrary limit. The same argument also applies to the ratio of midship section to the circumscribing parallelogram if this factor is to be used to promote displacement."

"I am not in favor of arbitrary limitations save in exceptional cases, for instance, in the matter of draft. We know by long experience that when certain limits are exceeded there is no gain whatever save in speed in racing; vessels are seriously restricted in the choice of harbors, docking facilities, etc., and owners are put to considerable unnecessary inconvenience and cost. Within these natural limits, which I should place at about 10ft. for yachts of 51ft. R. M., and under 12ft. for all larger, we have in the past produced excellent vessels, capable of general use and quite fast enough for all racing. In exceeding these limits of recent years, we have produced craft with greatly exaggerated sail plans and materially less accommodation than of old; the harm to the sport at large far exceeding the mere gain in absolute speed. * * * I see no objection, should it seem desirable, to supplementing any formula with some limit of draft based upon a practical inspection of the charts and of the harbors frequented by large and by moderate-sized yachts. I should much prefer, however, that such a formula might be found as would of itself prevent the undue development of any one element, making it unnecessary to deal specially with each."



Question 4.—"Any failure to properly tax a feature of advantage to speed really compels its use. All such features should, as fairly as possible, be taxed at their estimated value for speed; and if this is not practicable, they ought, for the common benefit, to be either handicapped or strictly interdicted. * * * I doubt very much if the yachting public would tolerate any attempt to put beam and draft into a formula as objects of direct taxation; I also doubt if, in the present state of knowledge, any just value can be assigned to either of these, as they are related not only to each other, but to the l.w.l. of the vessel. I do not see that at the present time it is either necessary or desirable to take draft into account at all, neither do I see it to be necessary to take beam by itself. What does seem to me to be a very urgent need is that the function of the weighted lever, acting on the buoyancy which supports the vessel, should have a value put upon it; that the length of lever which can be used without tax should be made measurable by and apportioned to the size of the body, from which it is dependent. The effect of this would be that for a small body a short lever only is allowed, for a larger body a proportionately longer lever.



"The rule I would suggest would not take direct cognizance of draft, independent of beam, or of beam alone, but would in practice be a check upon an excessive lever unaccompanied by displacement, whether such lever assumed the form of excessive beam, with the crew to windward as the weight, or of excessive draft with a lead bulb. I would leave the designer free to determine for himself what beam and draft he will use, as he does at present, only bringing under the influence of the rule the relation between the sum of these two dimensions and some function of the area of the midship section."

"After inspecting a very large number of formulas proposed abroad in the past half dozen years, I am at a loss to suggest any one as promising to attain the end in view; nor can I say what elements should be taxed. These formulas as a rule include L. and S. A., with the addition of girth or some element designed to encourage

GOSLING.
From photo by N. L. Stebbins.

GOSLING, RACING KNOCKABOUT, DESIGNED FOR MESSRS. L. M. CLARK AND F. O. NORTH BY GEORGE F. LAWLEY, 1897.

a larger body; but none seems likely to be completely successful.

"In my opinion, the faults of the modern yachts are very closely associated with extreme dimensions of beam and draft, reduced displacement, and large sail plan. What yachtsmen are now looking for in the 'wholesome' type would seem to be a vessel of greater body, driven at a reasonable speed for racing by a moderate sail plan. To produce such a craft, whatever elements need to be considered, the main ones would seem to be sail area (S.A.) and displacement (D.). The expression $\frac{S.A.}{D.}$ indicates two things: First, the desirability of taking a large amount of displacement; secondly, of using sail as economically as possible. The present tendency, to cut L.W.L. and D. and to take S.A. to an extreme degree, is directly opposed by this expression. Unfortunately, as it stands it is only a ratio, and not a practical working formula; nor have I thus far been able to conceive of any formula based on these terms as its vital factors. * * * It appears to me that if in any given class we can insure a reasonable amount of displacement (or what is practically the same thing, area of midship section), and can limit the coefficient of this midship section to some certain percentage, there should exist no necessity for including either L.W.L., beam or draft in the formula. * * * I am satisfied that we cannot dispense with S.A. in the formula; I am strongly of the opinion that it is desirable to add displacement in the manner suggested by the committee, and I am by no means certain that we need of necessity have any further regard for load waterline."

"It seems to me that the earlier boats produced under the Seawanhaka rule were excellent craft for all purposes, and that the fault in modern boats lies in the larger linear dimensions for the displacement and the light construction, with, in some of the smaller classes, excessive sail plans. I agree therefore with the suggestion of the committee, that the basis of a rule should be L.W.L. and S.A., a premium on displacement and a restriction on draft, with possibly a small tax on over all length. On the above lines I would suggest a formula somewhat after the present Seawanhaka rule, with the addition of beam and draft; with displacement used as a divisor."

Question 5.—"Centerboards can, I think, fairly be provided for by fixing two limits of draft, one for keel boats or the vessel proper, and the other for the extreme draft with the centerboard down. To prevent undue advantage being taken of weighted centerboards, it could be provided that when the weight of the centerboard pennant exceeded a certain amount for each class, the centerboard should not fall below the limit of draft fixed for the keel vessel. This, of course, is a rather severe penalty on the weighted centerboards, but except in the very smallest classes they appear to me an objectionable contrivance."

"Experience has demonstrated that for large boats the deep centerboard type is the best, while for small boats, say under 60ft. l.w.l., the keel has been the most successful. I would therefore ignore in the rule all distinction between the two types."

"With such a rule as is here suggested, in which no arbitrary limits are fixed for beam and draft, and in which one dimension is interchangable for the other, the need for any discrimination between centerboard and keel vessels does not seem to be urgent."

The above extracts are necessarily far from complete, as the specific answers to the committee's questions were accompanied by lengthy remarks in most cases. The five questions offer the best basis yet presented for a discussion of the measurement question, and we shall be glad to hear from any who may be tempted to try to answer them.

The Racing Knockabout Gosling.

GOSLING was the winning yacht of 1897 in one of the best racing classes now existing in this country, the Boston knockabout class. The origin of this class dates back about six years, when Carl, a small keel cutter, was built for C. H. W. Foster, of Boston. She differed from the small keel yachts then numerous about Boston and Marblehead mainly in that her lines were thoroughly modern, and her form a great improvement on the older boats; while her rig, being intended merely for "knocking about" off Marblehead in any weather, without regard to racing, was simplified by the absence of a bowsprit, a small jib being set with the tack fast to the stemhead. The little boat soon became noted through her good performance, especially in bad weather, and her evident utility, and others were built to about the same dimensions, the name "knockabout" attaching itself to the class by common consent as it gradually assumed a definite shape. It was soon discovered that the boats could be raced, and that there was far less arduous work and more real pleasure in sailing them than the absurd machines of the then existing 21ft. open class, with nearly twice the area of sail on the same waterline.

Through 1893 and 1894 the racing of these boats, by this time quite numerous, became a recognized institution about Boston waters, from Marblehead to Hull, and in the fall of the latter year there was organized the Knockabout Association, with definite rules to restrict the building. The season of 1895 saw some new boats in the racing, specially designed to the limit of the new rules, while some of the slower of the original boats naturally dropped out; the class showed about fifteen starters in the season's races, the winning boat being Spinster, owned by L. M. Clark, president of the Y. R. A. of Massachusetts. In the following year the racing became still keener, largely through the addition of a Herreshoff boat, Cock Robin, that proved exceptionally fast. Second to her, however, out of a racing fleet of a round dozen, was Bo Peep, owned by Mr. Clark and F. O. North, both of Dorchester.

Carl was built by the George Lawley & Son Corporation, of South Boston, builders of Puritan, Mayflower, Merlin, Jubilee, Sachem, Alcaea and many other large

yachts, with small ones of all kinds, and Spinster came from the same yard, as did many of the early knockabouts, including two for Mr. North. Bo Peep was ordered by Messrs. Clark and North after the season of 1896 was well under way and the superior speed of Cock Robin had become a matter of note among yachtsmen; she was designed by George F. Lawley, president of the corporation. In twelve races she won seven firsts and two seconds, being third on each of the other three occasions, her season's average being 72.9, all of her races being sailed between Aug. 13 and Sept. 21.

The success of Bo Peep induced her owners to try again for the honor of heading what was now becoming a very lively racing class, and to this end Mr. Lawley designed Gosling, his firm building her in the winter of 1896-7. She was raced steadily last season, starting twenty-six times and scoring seven firsts, eight seconds and four thirds, with an association percentage of 46 as compared to 37 of the second boat in the class; thus winning the Y. R. A. championship medal and pennant of the knockabout class.

A comparison of the present design with that of Carl, published some time since in the FOREST AND STREAM, will show the changes necessitated by the continual demand for higher speed in the class; Gosling being built as closely as possible to the limit, which is as follows:

A knockabout is a sea-worthy keel boat (not to include fin-keel), decked or half decked, of fair accommodations, rigged simply without bowsprit, and with only mainsail and one headsail. The load waterline length shall not exceed 21ft. The beam at the load waterline shall be at least 7 and not more than 8ft. The freeboard shall be not less than 20in. The forward side of the mast at the deck shall be not less than 5ft. from the forward end of the load waterline. The planking, including deck, shall be not less than ¾in., finished. The frames shall be not less than 1in. square, and spaced not more than 12in. on centers. The deadwood shall be filled in, the rudder shall be hung on the sternpost. The outside ballast shall be not less than 3,500lbs. The limits of freeboard, beam, planking, frames, deadwood, rudder, place of mast and amount of outside ballast shall not exclude any existing knockabout boats which otherwise come within the restrictions. The actual sail area shall be not over 500sq.ft., not over 400 of which shall be in the mainsail. Only mainsail and jib shall be allowed, but a storm jib may be substituted for a working jib.

While Gosling, like all of the later boats of the class, complies literally with the above restrictions, there is very little wasted in the effort to secure accommodation at the price of speed, the displacement and depth being cut to a minimum, and there being but a low cuddy under the forward deck. As the class now is, the boats are built for racing only, which end they answer admirably. Gosling's dimensions and elements are:

Length over all	30ft.	7½in.
L.W.L.	20ft.	10 in.
Overhang, bow	4ft.	10½in.
stern	5ft.	
Beam, extreme	7ft.	7½in.
L.W.L.	7ft.	1 in.
Freeboard, least	1ft.	8½in.
Sheer, bow	1ft.	
stern		2 in.
Draft, extreme	5ft.	2½in.
Displacement, long tons	2.55	
pounds	5,700.00	
Coefficient of displacement	.44	
Ballast, long tons	15.66	
pounds	3,500.00	
Ratio of ballast to displacement	.61	
Midship section, area, sq. ft.	9.75	
coefficient	.26	
Lateral plane, area, sq. ft.	46.50	
coefficient	.43	
L.W.L. plane, area, sq. ft.	104.40

Ideal, P. W. Wheeler	1 46 42
Hoodoo, C. McCurdy	1 47 50
Tom Tit, J. C. Merchant	1 51 20

Massachusetts Y. C. Annual Regatta.

Nahant—Massachusetts Bay.

Friday, June 17.

THE Massachusetts Y. C. sailed its annual regatta on Bunker Hill Day, June 17, and over the old historic Nahant course after all, the change of course to Boston Harbor, as at first decided on in consequence of the mines, being rescinded just before the race on the statement of the authorities that the outside course was safe. The wind was very light in the morning, interfering with some of the yachts from a distance, which were not able to arrive in time, but after the start, which was postponed for an hour, there was a moderate south wind that made a good race. The courses were, for the knockabouts and all larger classes, from off Nahant around the Graves Whistling Buoy and the Winthrop Bar Buoy, ten miles, and for the 18ft. and 15ft. classes to the Graves Buoy and return, six miles. The first leg was to windward. The times were:

30ft. Class.

	Elapsed.
Ashumet, C. F. Bache	2 00 26
Elfreda, Hall & Johnson	2 05 38
Emma C., P. A Coupal	2 05 46
Heroine, C. A. J. Smith	2 10 21

25ft. Class.

Little Peter, Henry Moebs	2 08 49
Eleanor, D. B. Clapp	2 09 35
Thordis, T. B. Wales	2 09 56
Beatrice, John Cavanagh	2 10 18
Red Skin, J. L. & L. H. Sturtevant	2 14 55
Nettie, Walter Burgess	2 17 48
Tantrum, Frank Coleman	2 50 19

21ft. Open Class.

Elsa II., H. M. Crane	2 13 43
Tacoma, Elmer Prior	2 14 45
Typhoon, E. V. R. Thayer	2 18 17

21ft. Cabin Class.

Privateer, A. E. Schaaf	2 01 41
Omeme, W. P. Barker	2 22 44
Arab III., C. D. Lanning	2 24 06
Harriet, L. T. Harrington	2 30 09
Princeps, J. L. Whiton, Jr.	2 33 57
Alice, Q. Tucker	Withdrew.

Knockabouts.

Jilt, W. O. Gay	2 17 56
Chinook, Adams Bros.	2 20 33
Hazard, H. M. Sears	2 26 55
Dafila, W. D. Turner	Withdrew.
Sparkle, I. B. Mills	Withdrew.
Tautog, W. C. Lewis	Withdrew.

18ft. Class.

Duchess, C. D. Mower	1 45 27
Alpine, C. J. Blethen	1 55 40
Vamoose, R. M. Benner	1 56 34
Circe, F. L. Pigeon	1 58 13
Woodbine, F. T. Wood	2 15 08
Midget, N. C. Robinson	Withdrew.
Perhaps, J. E. Robinson	Withdrew.

15ft. Class.

Vitesse, C. D. Mower	1 56 34
Katydid, J. F. Small et al.	2 12 33
Ray, S. A. Freeman	2 14 08
Glide, G. D. Silsbee	2 14 14
Gnome, H. B. Faxon	2 16 49
Attilla, A. L. Lincoln	Withdrew.

The judges were Messrs. W. S. Crosby, W. E. Robinson, F. Perrin and James Bertram.

The winners are: First prizes, Ashumet $15, Little Peter $12, Elsa II. $12, Privateer $12, Jilt $12, Duchess $12, and Vitesse $8; second prizes, Elfreda $10, Eleanor $8, Tacoma $6, Omeme $6, Chinook $6, Alpine $6, and Katydid $6; third prizes, Emma C. $5, Thordis $5 and Ray $4.

Thordis was defeated for the first time. The winners in three classes, Ashumet, Little Peter and Privateer, were designed by H. M. Crane, and built by C. C. Hanley. Elsa II. is the new boat designed by H. M. Crane and built by Stearns for the 18ft. class and the 21ft., in which latter she sailed. Jilt is a keel knockabout, Chinook being the new c.b. Purdon boat. The two Mower boats, the new Duchess and the old Vitesse, headed their respective classes, the former winning by ten minutes from second boat. The race was, of course, sailed under the Massachusetts Y. R. A. rules, without allowance, and with very satisfactory results; there were not so many starters as last year, but more than in 1896, and the boats were quite as fairly and evenly classed as under the old rules.

Indian Harbor Y. C. Special Race.

Greenwich—Long Island Sound.

Saturday, June 25.

THE special race of the Indian Harbor Y. C. on June 25 was sailed in a reefing breeze from the S.W., making a lively and exciting race. The course for the larger boats was around the gas buoy off the eastern end of Little Captain's Island, then to a stake boat anchored south three-fourths west one and five-eighths miles, thence to the red spar buoy off the western end of Great Captain's Island, thence to the spar buoy at Carmel's Reef, and return, two rounds making thirteen miles. The smaller yachts sailed courses of ten, five and three miles. The start was postponed until 1 P. M., the yachts crossing as follows:

Fidelio, 1:05:30; Edwina II., 1:10:01; Myrmaid, 1:11:10; Dot, 1:15:15; Dosoris II., 1:15:21; Wanda, 1:15:22; Uarda, 1:15:22; Win or Lose, 1:15:25; Shippan, 1:15:31; Laura Lee, 1:20:00; Lark, 1:20:05; Minnetonka, 1:20:30; Gosbird, 1:20:41; Ruth, 1:20:41; Louie Belle, 1:20:43; Indianola, 1:30.02; Mongoose, 1:30:04; Yellow Pup, 1:35:07; Swinet Pup, 1:35:09; Tern, 1:36:04; Prize, 1:36:09; Ketch II., 1:36:21; Surprise, 1:45:41, and Vorant II., 1:46:00.

Vorant II. parted her throat halyards shortly before the gun, and her opponent, Surprise, waited for her to make repairs. The first round was timed:

Yellow Pup, 1:59:50; Prize, 2:00:08; Tern, 2:00:42; Swinet Pup, 2:00:48; Wanda, 2:11:03; Dot, 2:12:12; Uarda, 2:14:22; Dosoris II., 2:14:40; Shippan, 2:14:55; Fidelio, 2:16:38; Win or Lose, 2:18:42; Spray, 2:18:52; Indianola, 2:24:58; Minnetonka, 2:25:15; Mongoose, 2:26:03; Surprise, 2:41:05; Gosbird, 2:44:10, and Vorant II., 2:45:47.

The second round was timed:

Edwina II., 2:21:48; Prize, 2:22:33; Yellow Pup, 2:23:25; Swinet Pup, 2:25:54; Tern, 2:26:13; Lark, 2:30:58; Louie Belle, 2:36:22; Ruth, 2:46:18; Wanda, 3:03:32; Dosoris II., 3:11:55; Uarda, 3:12:35; Shippan, 3:15:23; Indianola, 3:21:37; Win or Lose, 3:22:07; Mongoose, 3:23:20; Fidelio, 3:26:08; Spray, 3:28:12; Minnetonka, 3:32:06; Surprise, 3:37:29; Vorant II., 3:45:15.

The final times were:

Cabin Sloops—36ft. Class.

	Length.	Elapsed.	Corrected.
Surprise, De V. H. Warner	34.68	1 59 29	1 52 29

Dot, C. T. Pierce	30.00	Withdrew.	
Dosoris II., G. P. Vail	29.24	1 56 55	1 56 01

Cabin Cats—25ft. Class.

Wanda, F. T. Bedford, Jr.	25.00	1 48 32	1 48 32
Uarda, H. H. Gordon	24.64	1 57 35	1 57 00
Win or Lose, J. S. Appleby	23.35	2 07 07	2 04 42
Shippan, A. M. Bradley	25.00	2 00 23	2 00 23

Open Cats—20ft. Class.

Minnetonka, A. B. Alley	18.89	2 12 06	2 11 56
Gosbird, R. H. Nevins	N.M.		

Open Cats—15ft. Class.

Ruth, C. T. Willis		1 26 18	. . . .
Laura Lee, F. S. Ray		Withdrew.	
Lark, C. J. Davis		1 10 58	. . . .
Louie Belle, J. M. Williams		1 16 22	. . . .

Special Class—Racing Knockabouts.

Indianola, L. R. Alberger		1 51 37	. . . .
Mongoose, Simeon Ford		1 53 20	. . . .

Special Class—Dories.

Ketch II., L. V. Ketchum		Withdrew.	
Prize, H. E. Jones		0 47 33	. . . .
Tern, W. B. Greeley		0 51 13	. . . .
Swinet Pup, F. S. Doremus		0 50 54	. . . .
Yellow Pup, C. S. Summerville		0 48 25	. . . .

The winners were: Surprise, Fidelio, Spray, Edwina II., Dosoris II., Wanda, Minnetonka, Lark, Indianola and Prize.

Wanda is a new catboat, sailing her first race. Indianola won very handsomely from Mongoose. The Regatta Committee included Messrs. F. Bonne Jones, C. P. Tower and Chas. McManus.

Buffalo Y. C. Championship Races.

Buffalo—Lake Erie.

Saturday, June 11.

THE first of the championship races in the 22ft. class of the Buffalo Y. C. was sailed on June 11. The race was called at 2:30 P. M. sharp, with a one-gun start, the wind light from the west. The Regatta Committee has laid out a new course this year, starting from the end of the club house pier to a spar buoy off the end of Bird Island pier, leaving it to starboard, thence to the red can buoy on Waverly Shoal, leaving it to port, thence to a spar buoy off the Lehigh Valley coal docks, leaving it to port, thence back to the club house, finishing off the end of the dock.

Six boats started, Marie, fin; Beppo, fin; Caprice, centerboard sloop; Windward, centerboard sloop, and Nerena and Monsoon, centerboard cats. The buoy off Bird Island pier was placed there to prevent the yachts from crowding each other into the pier in rounding the end, but Nerena and Monsoon forgot this, and indulged in a luffing match to see which could turn the end of the pier the closest. Beppo followed suit, and as a consequence all three boats were disqualified for neglecting to round the buoy. It was a beat out to the can buoy, and Marie outfooted and outpointed the rest of the fleet, rounding the can buoy well in advance, and holding her lead to the finish.

While the leading boats were on the last leg the wind shifted to the southwest, giving them a decided advantage.

After Marie, Beppo, Monsoon and Caprice finished, a thunder squall came out of the northwest, compelling Nerena and Windward to beat home. This accounts for the poor showing of Nerena, who is ordinarily considered a fast boat; Windward fared still worse, as a second heavy squall from the same direction caught her before she finished, compelling her to lie to and double reef, and beat in under shortened sail. Marie gets first prize, and owing to the other boats being disqualified, Caprice gets second, and Windward, in spite of all her hard luck, third. The course is nine nautical miles.

Start, 2:30:	Finish.	Elapsed.	Corrected.
Marie	2 53 45	5 23 45	2 53 18
Beppo	3 01 45	5 31 45	3 01 45
Monsoon	3 07 30	5 37 30	3 06 15
Caprice	3 16 40	5 46 40	3 15 41
Nerena	3 28 18	5 58 18	3 25 02
Windward	4 25 00	6 55 00	4 23 45

Judges—George J. Bailey, Henry Ganson, Roderick H. Smith.

Shackamaxon Y. C. Annual Regatta.

Philadelphia—Delaware River.

Sunday, June 19.

THE Shackamaxon Y. C., of Philadelphia, sailed its eleventh annual regatta on June 19, over a course from off the club house up the Delaware around the Wheatsheaf Buoy, off Andalusia, and return, twenty-eight miles. The wind was light from the south, up the river, for the first part of the course, increasing on the return and shifting to S.W., finally bringing up a heavy thunder shower, followed by a calm. When near the finish a light breeze came up and brought the fleet in. The times were:

Fourth Class Duckers—Start, 11:38.

	Turn.	Finish.	Elapsed.
McGinty, W. Clausen	1 35 10	5 28 40	5 50 40

Water Lily, C. F. Lyman	1 33 17	1 33 17
Maia, E. Paine	1 35 58	1 33 28
Lorelei, G. W. Roberts	1 43 30	1 43 30
Curiana, J. P. Clark	1 47 45	1 47 45

The winners were Susanne, Rowena, Water Lily and Nettie firsts; Sintram and Maria seconds, and Chinook third.

Model Yachting.

THE postponed races for the American Model Yacht Perpetual challenge trophy and the Eagle cup were sailed June 26, at the sailing station of the Wave Crest Miniature Yacht Club, foot of Fifty-fourth street, Brooklyn, N. Y. The weather was all that could be desired, blue sky, wind southwest, 6.5 miles velocity, sea light, short and choppy, in fact, an ideal day for model yachting. The race for the Eagle cup was called first. The challenger, the Star (Messrs. Townley & Pigott, owners), of the American Model Yacht Club, and the defender, the Viking, Mr. Gilley, owner, were promptly at the line, and the race was started at 12:20, resulting in a victory for the Star, as follows:

First Heat.

	Start.	Finish.	Elapsed.
Star, Townley & Pigott	12 20 15	12 31 55	0 11 40
Viking, Gilley	12 20 15	Did not finish.	

The Viking did not appear for the second heat, and the Star went over the course again in 11 minutes 45 seconds; remarkably fast time considering the short, choppy seas. Course one-half mile to windward and return.

The trophy race was then called, and the challenger, Water Witch, A. Moore, owner, representing the American Model Yacht Club, reported ready to start. The defender, Asthore, J. Martin, owner, did not appear, so the referee decided that the Water Witch should sail over the course alone, which she did in 11 minutes and 5 seconds and was declared the victor.

Referee, F. J. Sweeney, commodore of the New York Model Yacht Club.

Atlantic Y. C.

Sea Gate—New York Harbor.

Saturday, June 18.

THE Atlantic Y. C. sailed one of its weekly races for the smaller yachts on June 18, with a special class for the canoes of the New York C. C., on the opposite side of Gravesend Bay. There was a fresh southerly wind, kicking up a sea and making rather heavy weather for the canoes. The courses were a three-mile triangle for the yachts and a two-mile for the canoes, nine and six miles respectively. The times were:

30ft. Class—Mainsail Yachts.

	R. M.	Finish.	Elapsed.
Grayling, J. S. De Selding	27.77	5 29 00	2 14 03
Oriole, C. F. Larzelere	N.M.	5 45 57	2 30 57

25ft. Class—Mainsail Yachts.

Streak, Charles H. Lary	24.05	Did not finish.	
Qui Vive, George A. Freeth	24.93	5 28 20	2 13 20

Canoes.

Pioneer, Frank C. Moore	....	4 19 00	0 44 00
Eclipse, Frank Dunnell	....	Did not finish.	
Nipsic, C. V. Schuyler	....	Did not finish.

Az Iz, L. H. May	....	4 34 50	0 59 50
Tanis, Henry W. Smith	....	Did not finish.	
Foggy Dew, H. L. Quick	....	4 25 56	0 50 56

The winners were Grayling, Qui Vive and Pioneer.

Saturday, June 25.

The race of June 25 was marked by a violent windstorm, followed by a heavy thunder shower, in the course of which the catboat Sunshine capsized as she neared the club breakwater, her crew being rescued by members of the club. At the end of the first round Qui Vive and Wabasso were in collision, the latter withdrawing with a hole in her bow. The times were:

Special Class—21ft. Knockabouts.

	Start.	Corrected.
Scrap, J. W. Bainbridge	3 05 40	1 50 05
Impudent, Louis Boury	3 06 05	1 49 32

Sloops—21ft. Class.

Wabasso, H. B. Shaen	3 12 30	Withdrew.

Cabin Cats—25ft. Class—Series C.

Pedro, H. O. Miller	15.00	2 55 03	1 25 03
Vif, A. Winsor, Jr	....	Withdrew.	

Bernice was not timed, sailing without owner on board. Vif fouled Lara and withdrew.

YACHTING NEWS NOTES.

Col. Stephen Van Rensselaer Cruger, one of the older members of the Seawanhaka C. Y. C., died on June 23 at his home in Bayville, L. I., after an illness of about a month, from which, however, no serious termination was looked for. Col. Cruger, who was born in 1844, served through the war, and was twice wounded at the battle of Resaca. He received the brevet ranks of major and lieutenant-colonel, and after the war was for several years colonel of the Twelfth Regiment, N. Y. S. N. G. He took a deep interest in the affairs of the National Guard. Col. Cruger was one of the old yachtsmen of Oyster Bay, owning the sloop Indolent; a few years ago he owned the steam yacht Allegro.

The twenty-eighth annual Corinthian race of the Seawanhaka Corinthian Y. C. will be sailed on June 29, off Oyster Bay, starting promptly at 12 M. The race will be an open one, for the cutter, sloop and yawl classes from 15ft. to 60ft. R. M.; the 20, 25 and 30ft. cabin cat classes, and the 15, 20 and 25ft. open cats, with the 30ft. l.w.l. special class, and the Seawanhaka knockabout class. In consequence of the death of Vice-Com. Cruger, this race is postponed to a future date, about July 15.

The thirteenth annual regatta of the New Rochelle Y. C. will be sailed on July 2 over the club's regular courses on the Sound, starting off Echo Bay at 12 M. sharp. Yachts will be started in eight divisions, viz.: First Division—Sloops, cutters and yawls of the 51ft. class; this division will sail Course No. 1, three times around. Second Division—Sloops, cutters and yawls of the 43ft., 36ft. and 30ft. classes; Course No. 1, twice around. Third Division—Sloops, 25ft. and under; Course No. 2, three times around. Fourth Division—Cabin catboats, all classes; Course No. 2, three times around. Fifth Division—Open catboats, all classes; Course No. 2, three times around. Sixth Division—Sloops, special 30ft. class; Course No. 1, twice around. Seventh Division—Knockabouts, 21ft. racing class; Course No. 1, twice around. Eighth Division—Dories, one-design class; Course No. 2, once around. Entries may be made to the Regatta Committee, Box 735, New Rochelle, N. Y., Chas. P. Tower, chairman.

Felicia, steam yacht, designed by H. J. Gielow and not completed, has been tried over the measured mile on Narragansett Bay, making 17.39 knots under a pressure of 150lbs. The trial was under the supervision of representatives of the U. S. Government, who recommended the yacht for purchase, and she will be converted as quickly as possible to a torpedo or scout boat.

Yarta is the name of a fine steel steam yacht, designed and superintended by Mr. Alfred H. Brown, and built by Messrs. Hawthorne & Co., Leith, for Capt. A. Wiggins. She is 160ft. 6in. B.P., 150ft. l.w.l., 22ft. beam and 12ft. 9in. in depth, of 350 tons. Her engines, also built by the firm, are 13, 21 and 34 by 24in. She made a very successful trial on the Firth of Forth on June 2, and left two days later on a cruise to the Baltic.

Niagara II., steam yacht, Howard Gould, was at New York last week after her preliminary sea trial at her builder's hands. She was docked and cleaned at the Erie Basin, and sailed again for sea.

Trap-Shooting.

Fixtures.

June 27-July 3.—Milwaukee, Wis.—Tournament of Milwaukee Gun Club, carnival week. Live birds and targets. $1,000 added money.

June 30.—Auburn, Me.—First annual tournament of the Auburn Gun Club. L. A. Barker, Sec'y.

June 30-July 1.—Milwaukee, Wis.—National Gun Club's tournament.

July 1.—Sherbrooke, Canada.—Grand annual tournament. Targets. Regular sweeps, variety and merchandise. C. H. Foss, Sec'y.

July 3-4.—Davenport, Ia.—The West End Gun Club's amateur tournament on targets. L. Haneman, Sec'y.

July 4.—Bridgeport, Conn.—Third tournament of the Connecticut State League, on the grounds of the Bridgeport Gun Club. J. G. Kingsbury, Sec'y.

July 4.—Brockton, Mass.—All-day shoot of the Brockton Gun Club. Special prizes.

July 4.—Pawling, N. Y.—All-day shoot of the Pawling Rod and Gun Club, at targets. Morton Haynes, Sec'y.

July 4.—Centredale, R. I.—Fourth of July shoot of the Centredale Gun Club. N. F. Reiner, Sec'y.

July 4.—Geneseo, N. Y.—Geneseo Rod and Gun Club's annual shoot. W. E. Lowe, Sec'y.

July 4.—Louisville, Ky.—The Kentucky Gun Club's fifth annual championship shoot. Emile Pragoff, Sec'y.

July 4-5.—St. Louis, Mo.—Open shoot, $100 added; 145 targets per day. Dupont Park.

July 4-6.—Newport News, Va.—First annual tournament of the Chesapeake Gun Club. Geo. B. James, Sec'y.

July 6-7.—Meadville, Pa.—Tournament of the Interstate Association, under the auspices of the Meadville Gun Club. Chas. Stein, Sec'y.

July 7-9.—Denver, Colo.—First annual tournament of the Overland Association. Open to all. Inanimate targets. Added money. John W. Kane, Manager.

July 13.—Albany, N. Y.—Forester Gun Club's annual tournament; targets. H. H. Valentine, Manager.

DRIVERS AND TWISTERS.

A visitor from the far South, who comes this year to spend the summer on or about the shores of Long Island, is Joe George, of San Antonio, Tex., one of the popular Big Three, of that city. Mr. George tells of happenings in San Antonio that will be of interest to those who know Oscar Guessaz, whose writings under the name of Texas Field are well known to readers of FOREST AND STREAM. Guessaz is not only married, but has gone to the war, and now ranks as a captain in the Second Texas Volunteers. When the Second Texas were ordered to New Orleans from Austin, Oscar Guessaz was quartermaster, and did his best to look after the creature comforts of his men. The following incident will prove that fact: When the train carrying the men stopped at Algiers, La., Guessaz rushed to the refreshment room, and called loudly and peremptorily for "100 sandwiches at once." "Who are they for?" quoth the proprietor. "For the Second Texas Volunteers," said Guessaz. "And who may you be?" said the proprietor. "I am the quartermaster," said Guessaz. The reply not being favorable, Oscar seems to have fancied he was already in Cuba, with a Spaniard in front of him, for he is said to have grabbed the gentleman who was behind the counter by his collar and to have hauled him bodily over that same counter. What might have happened is not known; but what did happen is this: Three shining barrels belonging to three equally shining six-shooters were shoved under his nose, the six-shooters being held by three of the proprietor's friends. With the courtesy of Beau Brummell, Mr. Guessaz acknowledged that the combination was a winning one, and bowed low to the force of circumstances as befitted a good soldier. His request, however, was that the guns be laid aside, in order that he might show what splendid physical condition he was in to fight for Cuba Libre. The request was not granted, and it is also understood that the train left without the 100 sandwiches; but there may be some mistake about this part of the story.

Mr. E. C. Meyer, the president of the New York State Association and of the Rochester Gun Club, entertained a number of the visiting sportsmen at his home on Thursday evening. Mr. W. C. Hadley won the applause of the company with several well played sections on the violin, with piano accompaniment, after which several groups of whist players, or raher groups of le grand players, formed in three rooms, and so earnest were they in solving the intricacies of the game which permits of whist, pedro, hearts, etc., being played that they reluctantly stopped to partake of the bountiful refreshments which were served. Mr. Colville (Dick Swiveller) and Mr. Hadley were in a most absorbing discussion, as connoisseurs, on violins, and for a time one wondered how so much enthusiasm in instruments and music could leave any for guns and shooting. Everyone departed feeling that an evening of most perfect enjoyment had been given by the gracious hosts, Mr. and Mrs. E. C. Meyer.

Mr. E. Hough mentions in "Western Traps" that the St. Paul Gun Club, of Minnesota, will hereafter throw targets at 1 cent each. This is a matter worthy of earnest consideration by all clubs whose membership is composed of shooters of average means. Many clubs have demonstrated that they could grow strong in numbers and reputation on the revenues derived from targets thrown at a price of 1 cent to members, 2 cents to visitors. There is much speculation at present as to the lessening attendance at trap shoots. The explanation is simple—it costs too much as run at present. Say 200 targets at $4, 200 cartridges at $5, and railroad fare, sum a total which makes an afternoon's sport come too high.

On Tuesday evening of last week a fortunate few who were in attendance at the New York State shoot were favored with a musical treat of rare excellence in the parlors of the Powers Hotel, Rochester. Mr. R. L. Colville (Dick Swiveller) invited a few friends to hear his daughter, Miss Anne H. Colville, perform on her grand Guarneri violin, made over by Colton. Miss Colville is a violin virtuoso, and it therefore goes without saying that the music rendered by her was of the masterful kind, rare and pleasing. Those who were her audience were earnest in their praises of her skill.

The monthly tournament and team match of the Philadelphia Trap-Shooters' League will take place on July 2, under the auspices of the Wayne Gun Club, on its grounds at Sixteenth and Courtland streets. The programme contains fifteen events, 10 and 15 targets, 50, 75 cents and $1 entrance. Targets 1½ cents. If less than twelve entries the money will be divided 50, 30 and 20 per cent.; if more than twelve, the money will be divided 40, 30, 20 and 10 per cent. Open sweeps commence at 10:30 A. M.

Mr. Edward Banks, secretary of The American E. C. & Schultze Powder Company, tied in the second class of ties of the merchandise event, first prize in that class being a Lefever hammerless, valued at $80. In the shoot-off at 10 targets he broke straight, then surrendered his claim and took second prize, a stove. He tied with Glover for high average on .952 in the State event, then surrendered in favor of Glover, acts of generosity unprecendented in the trap-shooting world, yet which were the subject of unlimited praise.

Col. A. G. Courtney, representative of the Remington Co., was one of the two who killed 20 live birds straight in the Dean Richmond trophy event, doing it with a dignity and deliberation which nothing could ruffle. The total score was Courtney 20, McMurchy 19, Mosher 19. All three used U. M. C. shells. A score like this demonstrates the growing proficiency of trap-shooters, which may radically alter existing rules and conditions. It also is a convincing proof of the excellence of present guns and loaded shells.

Sim Glover made a notably good showing throughout the tournament. He seemed to know about what he wanted, and helped himself. He took the Lefever trophy, the Troisdorf trophy, the E. C. & Schultze cup, and in the Dean Richmond trophy contest he killed 20 live birds straight, using a Parker gun, Trap shells and Schultze powder. He tied with Banks for highest average in the State events, Fulford being second, and all used E. C. or Schultze.

Mr. N. J. Lane, who scored a win of the Troisdorf cup at the shoot of the Brooklyn Gun Club, last Saturday, is deserving of great credit for his performance. About a year ago, he started in as a novice, unskilled in the art of shooting, but by conscientious practice he has improved to a creditable degree of skill. His win was a popular one, and we trust is but the beginning of many.

Mr. Elmer E. Shaner, of Pittsburg, takes part in the actual shooting betimes instead of managing tournaments that others may shoot, and in either branch he performs well. On June 23, at the second of the series of monthly shoots of the Greenfield Avenue Gun Club, he won first average on a 90 per cent. performance. C. H. Miller was second with 88 1-3 per cent., T. B. Fleming third with 85 1-3 per cent.

Airy Lou-hardt (or Lou Erhardt) struck New York this A. M., June 28. When asked how long he'd be here he replied that he had been ten days on the road from Atchison, Kans., coming in by way of Montreal; that as he had but $8 left, he expected to leave this evening not later than 6 o'clock. Friends have come to his assistance, and he will spend at least another twenty-four hours in the city of New York.

The summer tournament of the Stanley Gun Club, of Toronto, is open to the world. It is fixed for July 1, on the Woodbine Club House grounds. There are seven events in the programme, 10, 15 and 20 targets, entrance 75 cents and $1, targets extra. In two events respectively $20 will be added. Four moneys, 40, 30, 20 and 10 per cent. Shooting commences at 1 o'clock. G. J. Mason, Jr., Sec'y-Treas.

The third target tournament of the Connecticut State League will be held July 4, on the grounds of the Bridgeport Gun Club. There are twelve events on the programme, 10 and 15 targets, 50 cents, 75 cents, $1 and $1.25 entrance. The team race will begin at 2 o'clock. Targets 2 cents. All money divided 40, 30, 20 and 10 per cent. J. G. Kingsbury, Sec'y.

Uncle Ben Catchpole, of Sodus, N. Y., who is ripe in years when measured by their number, but whose spirits and enthusiasm are as fresh as those of youth, took part in several of the target events and acquitted himself very creditably, considering that he is of the oldest trap-shooters in New York, and being eighty years old, probably one of the oldest in America.

On Thursday, at the New York State tournament, Jack Fanning, of Gold Dust powder fame, made the excellent run of 90 straight, and that too in the calm, imperturbable manner which is peculiar to him. Jack is a high-class man with the gun, whether shooting at targets or pigeons, and never fails to make an excellent showing.

Mr. Ferd Van Dyke was one of the contestants at Rochester last week, and just by way of showing them what he could do with his Winchester on Thursday he broke 79 targets straight, missing 3 in his next 20, scoring the excellent number of 96 out of 100. A 96 per cent. gait is not to be passed by lightly.

Mr. Irby Bennett, of the Winchester Arms Co., is now in the East on a visit near the center of trade. He is the picture of ruddy good health, browned to a turn by the kind touches of the Southern sun, in that land of open-hearted hospitality and best shooting and fishing.

At the Herron Hill (Pittsburg) Gun Club's contest on June 21 the chief event was the 50-target race for the cup, ten contestants. Pills won it by a score of 46, Shaner being close up with the second highest score, 45.

The Bedford Rod and Gun Club, of Bedford, Ind., has indefinitely postponed its tournament, fixed for July 14 and 15.

The Fulton Gun Club, of Atlanta, Ga., will give a two days' target shoot on July 19 and 20. J. E. Avery, Sec'y.

The regular monthly shoot of the Boiling Springs Gun Club takes place on Saturday of this week.

BERNARD WATERS.

ON LONG ISLAND.

EMERALD GUN CLUB.

Brooklyn, N. Y., June 21.—The monthly club shoot of the Emerald Gun Club was held to-day at Dexter Park, Liberty avenue and Enfield street. As usual the shoot was well attended, twenty-seven shooters taking part. Only two clean scores were made, Sands and Hillers, both 28yds. men, tieing for first place with 10 kills each. The scores:

G B Hillers, 28	2112112212—10	F W Place, 28	1020112111— 8
W Sands, 28	2222222222—10	J Rathjen, 25	1211202012— 8

C. W. BILLINGS.

BROOKLYN GUN CLUB.

Brooklyn, June 25.—The following scores were made to-day at the club shoot. The Troisdorf cup event was won by Skidmore, a handicap event with an allowance of misses as breaks.

A violent wind storm set in during the shoot. Some said it was more than that; that it was nothing less than a cyclone. Great consternation prevailed for a time. Dr. Littlefield grabbed his gun and a small boy's coat and rushed to the barn close by for safety. The instinct of the Doctor was to save something from destruction, hence the solicitude concerning the coat. It was a very pleasant afternoon's diversion.

The Dean Richmond Trophy.

In respect to a part of the conditions governing the Dean Richmond trophy, the New York State Association passed upon them as follows:

"Mr. Gates—I move that the term county, as used in reference to the Dean Richmond trophy, be deemed to include the entire territory of Greater New York. It is practically impossible for any of the New York clubs, under these conditions, to send a team up here to contest for the Dean Richmond cup. If that is so, I see no objection to their sending a team where one man lives in New York and the other in Brooklyn. I understand the New Utrechts cannot send a team here on that account.

"Mr. Hadley.—The constitution and by-laws and rules have been approved by this Association and cannot be altered in this way.

"The President.—I think the point of order is well taken.

"Mr. Gates.—I will ask unanimous consent to renew it. I think it is such an eminently proper thing. I am not making it for the purpose of affecting this year's shoot.

"Mr. Hadley.—Let the club that has the shoot next year fix it."

To us it would seem the better way to have taken action looking toward an equitable solution then and there. Next year the succeeding club might use the same words; that is, "Let the club that has the shoot next year fix it."'

New York State Tournament.

THE regular programme of the New York State Association for the Protection of Fish and Game began on Tuesday, June 21, and lasted four days. Some sweeps were shot off on June 20, about thirty shooters participating therein. This was the fortieth annual convention of the Association. It was under the management of the Rochester Rod and Gun Club. The tournament was held on the old base ball grounds, Riverside Park, Rochester. The foreground was occupied by the tents, the largest of which, near the center, was the tournament tent, within which was the business office of the tournament. In the group of tents which faced toward the traps were also the tents of the Rochester Rod and Gun Club, the Manufacturers and Dealers, The E. C. & Schultze Powder Co., the Audubon Gun Club, the Oneida County Sportsmen and a large tent used as a restaurant, within which good meals were served at very reasonable prices.

In the tournament tent three different cashiers and their assistants kept three distinct accounts, respectively of the expert, State and amateur events.

The grounds were ample in space. Three magautraps were used, one for the experts, one for the State, one for the amateur events.

As one stood facing toward the traps the expert was set near the right, the State trap in the middle, and the third near the left of the grounds.

The constant tread of many feet reduced the surface of the ground to fine dust and sand, which, floating in the air, made the shooters look grimy toward the latter part of the day and caused some discomfort.

On the first day the traps worked with rather irregular success, which Mr. Paul North, who had them in charge, explained was caused by the drifting sand getting into their bearings. On the second and third days they worked much better.

The members of the committee of arrangements were: Messrs. W. C. Hadley, E. C. Meyer, W. F. Brinsmaid, Geo. Borst and Frank E. McCord. They worked incessantly in attending to the infinite details of the shoot each day.

No effort was spared to make the event an enjoyable one to all who participated. On Tuesday morning a mammoth eight-in-hand tally-ho carried to the grounds a large party, composed of distinguished visitors and members of the press. On Thursday evening Mr. E. C. Meyer, the President of the Association, invited a number of the visitors to his home, where he entertained them charmingly.

The scores were kept on blackboards, one at each set of traps, and also by a scorer, who kept them on regular score sheets. There were many errors made, however, and the scoring at the amateur set of traps was notably inefficient, the scores thereat getting mixed up with annoying frequency.

AVERAGES.

The averages of those who shot through the programme are as follows:

Banks and Glover .952, Fulford .928, Levingston .912, Ward, Mayhew and Carr .904, C. S. Burkhardt and Forrester .888, Kelsey and Whitney .872, Wayte .862, Barker and McCord .840, Meyer and C. Wagner .832, Kirkover and Tuttle .816, Beyer .808, A. C. H. .800, Courtney .784, Wryde .696, Willing .658 in the State events. In the amateur events Baker and Chase .856, P. Willey .696.

Barker and Chase .856, P. Willey .696.

Glover $20, Fulford $15, Levingston $10, Ward, Mayhew and Carr $1.65 were the divisions of the average money in the State events.

This tournament fell off greatly in its support and interest as compared with many predecessors. There was much conjecture as to the cause, some ascribing it to one thing, some to others. There were relatively very few who shot through the programme, and the list of scores shows a weak and scattered support. On the third day the attendance was very light, and the shooting was correspondingly short of what was desired and expected. The programme was an excellent one, worthy of strong support from far and wide. The auspices under which the tournament was held could not be bettered, and yet the tournament fell far below expectations.

TRADE REPRESENTATIVES.

Notwithstanding the attractions offered at the open set of traps there was a smaller attendance of paid experts and manufacturers' agents than is usual at this shoot. Among those in this category who were present were:

Paul North, of the Cleveland Target Co., whose sole duty (and an arduous one at that, on account of the flying sand) was to look after the three magautraps that fed targets to the different classes of shooters; Fred Van Dyke, of the Winchester Repeating Arms Co., who did not strike his gait until the last day, when he shot the take-down and W-A powder well to the front in the open events; E. D. Fulford and Col. A. G. Courtney, both shooting Remington guns and Schultze powder; Simon Glover, a resident of Rochester, shooting a Parker gun and Schultze powder; J. S. Fanning and W. L. Colville (Dick Swiveller), the latter the Eastern agent of the U. S. Smokeless (Gold Dust) Powder Co., Fanning being the expert exponent of the art of handling that powder; Harvey McMurchy and Chas. Wagner, both of the Hunter Arms Co., Fulton, N. Y.; Tom Keller, of whom nothing further need be said than that he and King's Smokeless were always where they ought to be—well to the front in execution and sociability; Edward Banks, secretary of The American E. C. & Schultze Powder Co.; Uncle Dan Lefever, of the Lefever Arms Co.; Geo. A. Mosher, of the Syracuse Arms (Hollenbeck gun) Co.; W. R. Crosby, of the Baker Gun & Forging Co., Batavia, N. Y., fresh from his victory in the Board of Trade diamond badge contest at Peoria, Ill., where he won the badge with a record of 98 straight at live birds; W. F. Parker and S. A. Tucker, of the firm of Parker Bros., Meriden, Conn.; B. H. Norton, of the Hazard Powder Co., whose scores show a big improvement over last year's efforts, etc.

AMATEURS AND OTHERS.

The amateur class was well represented, Buffalo having the post of honor in that respect. Among those from Buffalo were F. D. Kelsey, President J. J. Reid of the Audubon Club, C. S. and E. C. Burkhardt, Alex. Forrester, 333, Hammond, Warren, H. D. Kirkover, B. Tolsma, etc. Rochester naturally had plenty of representatives, the following being on hand: President E. C. Meyers, Wride, Dr. Weller, L. V. Byer, George Borst, F. E. McCord, C. Lane, Secretary Griffiths, W. C. Hadley and others; Uncle Ben Catchpole, from Sodus, could not be kept down, but shot along and shamed many a far younger man by his energy and enthusiasm, as well as by his skill with the shotgun; Gus Dexter and H. L. Gates, together with Mart Mayhew, were the most prominent members of the Utica delegation. Binghamton sent only one representative so far as we could find out, and he was H. W. Brown, the best shot in that city; Messrs. Kendall, Boss, Hobbie and others from Binghamton were marked among the missing. Saratoga sent H. M. Levengston, a worthy representative, who shot along in the Auburn squad—McMurchy, Banks, Levengston, Wagner and Kelsey—until the last crack of the gun. Another shooter who held up his end well was Mr. Clark, of St. Louis, whose scores in the amateur events are to be found under the nom de fusil of Chase. John Lowden, C. A. Ward, M. E. Barker, Atwater, Doremo, Bradley, Palmer, and several others figured prominently when it came to dividing up the purses.

THE CONVENTION.

THE fortieth annual convention of the New York State Association for the Protection of Fish and Game was held at Rochester, June 20, at the rooms of the Chamber of Commerce, President Meyer in the chair. Mr. Hadley reported the credentials of the following clubs as approved: Rochester Rod and Gun Club; Spencer Sportsmen's Club, of Lyons; Sterling Rod and Gun; Empire Gun Club, of Lacona, N. Y.; Dansville Gun Club; Canajoharie Gun Club; Catchpole Gun Club, of Wolcott; Saratoga Gun Club; Rome Gun Club; Hunter Gun Club; Sodus Gun Club; Riverside Rod and Gun Club; Syracuse Gun Club; Bison Gun Club; Leather Stocking Gun Club, of Oswego; Watertown Gun Club; Oneida County Sportsmen's Club; The Gun Club of Syracuse; Onondaga Sportsmen's Association; Richfield Springs Gun Club; Audubon Gun Club, of Buffalo; Peoria Gun Club, of Buffalo.

In the debate on name and constitution Mr. Hadley said: The condition which has affected this organization for the last year has necessitated some changes in the constitution, which have been made for the Association through the Rochester Rod and Gun Club. It is not necessary for me to state that the winter meet of the Association has withdrawn from the summer contingent, and that will necessitate the changing of the constitution. The constitution has been changed by the Rochester Rod and Gun Club, and is now before you for your approval or disapproval, or such changes as this convention may find it proper to make at this time. I move that the articles of the constitution be taken up seriatim and be disposed of in that way, article by article or section by section. They can be read and if there are any changes to be made let them be discussed and settled when we come to them. Motion was seconded and carried. I will read the constitution for the secretary: "Article 1.—Name.—Sec. 1. The name of this Association shall be the New York State Association for the Protection of Fish and Game." I move that it be adopted.

Mr. Gavitt.—I desire to introduce an amendment to the motion: I do not address this convention as president of the New York League for the Protection of Fish and Game, but as a delegate here from the Spencer Sportsmen's Club, a regularly organized member of this Association. As president of the League, I may say that, as has been read from the minutes of the previous meeting of this Association, held in Auburn last year, the matter was left in the hands of a committee of six duly appointed, three from each branch of the Association, at that time. They were to convene, agreeable to resolution, and fix upon some suitable disposition of the matter. The protective branch of that committee met in October of last year in the city of Syracuse, in due conformity with the notice, which was also given to the trap-shooting branch, or the members of the committee from the trap-shooting branch, and there were present at that meeting only the protective members. The protective members got up a report and reported to the winter meeting that in their belief it was wise to separate from the shooting branch, and in order not to conflict in any way with the shooting branch they decided at the meeting in December to change the name of that branch of the Association and call it the New York State League for the Protection of Fish and Game. I have to state at this time that that League is now duly incorporated, and has a membership of nearly thirty-nine clubs. I am here as a delegate to ask the meeting to discard the name of the old Association, so that in the future the distinction may be apparent to all, and the true objects of this Association may be thoroughly understood. As it stands in the recommendation Mr. Hadley has read it is to be called the New York State Association for the Protection of Fish and Game. As a member of this shooting branch of the Association, I desire to ask the members here in what sense are we an association for the protection of fish and game? I have been a member of this Association for over twenty years and I have failed to find in any of the proceedings of this Association of trap-shooters held from year to year anything touching upon the protective matters which would give us a right to be called by that name. I see no harm in our appropriating a name more distinctive to the interests of the present Association. It is truly a trap-shooting association.

Mr. Hadley.—I do not know why Mr. Gavitt comes into this Association. I must acknowledge his right as a delegate from the old reliable and always popular Spencer Sportsmen's Club, of Lyons, as a delegate from that club. The trials that have afflicted this Association ever since I have known anything about it have been caused by the fishing element. If I may go back a little, I will call your attention to the time the convention met at Coney Island, and there are lots of you here that bear that delightful memory in your minds to-day. It went from there to Niagara Falls, and for want of birds it could not be held. The next year Buffalo took it, but the New York State Association for the Protection of Fish and Game died at Niagara Falls virtually. Did the fishermen put their hands in their pockets and help resurrect it? Not much. The old Audubon Club, of Buffalo, went down to Niagara Falls and took the meeting to Buffalo and sunk $1,000 that the old New York State Association might live. From Buffalo it went to Syracuse. That grand old organization, the Onondaga Sportsmen's Club, from Syracuse, sunk $600. That was the price that they paid that this Association might live. Did the fisherman reach out his hand? No, no, no. It came from Syracuse to Rochester; it began to breathe, by the tender care of the sportsmen. It went from Rochester to Utica, and the shooters were then so numerous that they classified them, and they had a splendid shoot. They gave $100 for the first gun, and only 12 birds. Did the fisherman put his hands in his pockets and help do that? Oh, no. It went from Utica to Auburn, from Auburn to Albany; from Albany it came back to Lyons, from Lyons to Rome, and from Rome to Syracuse, and there it struck the fishermen, who found that there was something in it. They called a winter meet, and they made a new constitution and new by-laws that forced upon the sportsmen a per capita tax of 25 cents each that it might help you take care of your fish. It was not carried. The weather was hot and everything was in a hurry, but after the per capita tax was taken off the constitution and by-laws were permitted to pass by adding that each club should pay yearly dues to the Association of $5. Some of them paid it and some of them didn't. One of the officers of the winter meet of the Association caused to be published in the FOREST AND STREAM, only a short time after this proposition was made to dissolve, the fact that "We have used the sporting part of the New York State Association until we are strong enough to go alone, and now we want to get out." I say go in peace. I promised through the papers to hand back to the delegates the old New York State Association for the Protection of Fish and Game, and please God, I'll do it without any fish slime or fish scales upon it. If you will listen to me you will be sportsmen and belong to the old Association. The element that left us has done enough for us, and the only redeeming feature of the whole thing was their surrendering what they knew they couldn't keep, because when they drew out they severed their connection with us and they had no right to the trophies. But they didn't give up the money they had; no. That belonged to this Association also. I hope that when this question is decided it will be in favor of keeping the old name. It is known and it is well and favorably known throughout the United States. There is not a manufacturer in the United States but what knows it, but what do they know about the New York State Sportsmen's Association? They don't know anything about that; you have got to teach it to them. It is only another act of the insidious fishermen to destroy our old Association.

Mr. Mattison.—My friend Hadley makes a true statement when he names how some of the old clubs worked away back in the 50s and 60s, and so on. I want to say that I represent the Leather Stocking Club, of Oswego, organized in 1860. In 1874 we had the State shoot at Oswego, and we sunk $1,500. I was one of a party with Judge Nutting that helped pay up our balance of $1,500 to protect the good old State Association whose name we are now laboring over. (Applause.) When my friend Gavitt makes the statement that the clubs don't assist in protecting game I beg leave to differ with him. In looking over the record of the Leather Stocking Club prior to coming here I find that in the last thirty odd years 75 per cent. of our money in the treasury has been spent to assist in protecting fish and game, and only 25 per cent. has been spent for the pleasure of attending State shoots or any other shoots. I have been a member of the State Association since its organization, and I would like to see, God permitting, the name of the State Association to remain as it is until myself and Uncle Ben Catchpole and such men have died, and then you can change it. I am here for the privilege of defending the name of the State Association that I believe has been a credit to the sportsmen of this State. I am proud of it. I am here to vote against changing the name of it as long as I live. I believe Mr. Hadley has told the truth. I believe it would be a bad idea. The State Association is known all over the world; not in this section, not in the city of New York, but wherever you go, you hear of the New York State Association. Let us vote this amendment down.

Mr. Gavitt.—The sentiment of the meeting seems to be so clearly in favor of retaining the old name that I do not see why I should object as a delegate here. I will withdraw my amendment.

The motion as originally made was carried. The rest of the constitution was adopted as already published in FOREST AND STREAM.

The American Association rules for inanimate target shooting were adopted.

Mr. Hadley.—Death has taken from our midst a man who has always been prominent in this Association. He was a whimsical fellow, full of humor and peculiarities, but a good-hearted sportsman. How many of you can remember at Saratoga, when we were riding to and from the grounds, his jolly way of reciting

"The sweet girl graduate, with her golden hair,
Now steps before the world to read her thesis,
And there is naught that helps to make her fair,
But Ivory soap its daintiness increases."

How many times we laughed at the poor fellow and at the grotesque manner in which he recited those few lines. Always ready for an argument and always ready for a shoot, his memory is dear to me. I have fought him in every possible shape, and he was a good fighter, and I like a good fighter. Mr. President, I move that a page be set aside in the records of this Association and dedicated to the memory of William M. Richmond, of Charlotte. The motion was seconded and carried.

Mr. Redmond.—This is the fortieth annual convention of the New York State Association for the Protection of Fish and Game. We have a new constitution, and it occurred to me that it would be well for us to emphasize to-night the fact that while we occasionally gather once a year, and occasionally oftener, to shoot blue-rocks, etc., from spring traps, we are not associatted for that purpose alone, but that the name of the Association virtually represents the object that we have at heart. I have been a member of this Association for a long time, and I have been in hopes that not only will the Association flourish during our time, but that it will survive, as it has already survived, for a long period, and prove an honor to the State of New York. Since we last met in

annual convention we have had a secession, and while I do not approve of attributing any ill motives, for I am sure that the gentlemen who quit us are just as good sportsmen as we are, I should be very sorry to have this Association say we have any doubt of their integrity or believe that they left us from any bad motives. I can very well understand that the gentlemen who form the association which meets in the winter are actuated by just as good motives as we are, but I would like to say to them—and I think it must occur to everybody here—that we are quite as good game and fish and forest protectors as they are, and that any protection that has been given to the fish, game and forests of this State any time during the last thirty or forty years has been due directly or indirectly to the influence brought upon the Legislature and upon public opinion by the men who formed the old Association. Holding that belief, I have a resolution here to offer, and it is my opinion that if it is adopted we will take action here to-night that may have a much wider and more beneficial effect upon the public affairs of this State than we now anticipate.

"Whereas, It is the settled policy of this State to give due protection to its forests, fish and game, with a view to their judicious preservation for all time; and,

"Whereas, The clearing up of woodlands destroys the nesting grounds and shelter of game, thereby entailing the extermination of fish, birds and mammals, which it is desirable to protect; and,

"Whereas, The only public land now reserved by the State as forest preserve is mainly confined to one quarter of the State, whose people in other districts derive only indirect and remote benefit from the preserves; therefore

"Resolved, That the State authorities should not confine their efforts to the establishment of forest preserves in the Adirondacks and Catskills alone, but ought to take measures for the founding of small preserves in all quarters of the State, so that the whole body of people may participate in the advantages that flow from forest preservation;

"Resolved, That the respective counties of the State should be encouraged to promote the preservation and extension of woodland by a law that would reduce the taxes on, or exempt from taxation, all farm land that is under wood.

"Resolved, That if, in the course of events, it should be determined by the people to abandon the existing canals as highways of commerce, the land, outside of cities and villages, now occupied for canal purposes, should be retained by the State, and gradually transformed into woodland, in which game should be protected all the year around.

"Resolved, That copies of resolutions be sent to Gov. Black and to the Forestry Commission."

I move the adoption of this resolution. I did not intend to take up much of your time, but I wish to say simply that it is due to ourselves to adopt action of this kind to-night. I am not prepared to say that this Association should approve of establishing as great preserves in western New York as already have been established in the eastern quarter, but I have no doubt that if the subject is urged and the attention of the Legislature is brought to the matter we can do a great deal in the matter of having small preserves established in suitable quarters of the State outside of the northeast district. Those preserves, the Adirondacks, the North Woods, and so on, are all very well, but 99 out of every 100 people cannot go there, whereas if small preserves were established by the State, a man might go from his home a short distance and pass a few days with great satisfaction. I think furthermore the headwaters of the Genesee River should have all the benefits that the people of this country have found to follow the preservation of forests. We have the second largest river in the State, and the experience of everybody that lives here is that in the summer the channel of the river has little more water in it than there is in the streets of the city. If the forests at the headwaters of the Genesee had been preserved by wise foresight we might have a much more beautiful river and no doubt the health of the community would have been benefited by it. In regard to the matter of preserving the canals for all the people of the State, it must be recalled by everybody here that when the Genesee Valley Canal, which ran from this city south, and the Chenango Canal and various others that I cannot recall, were abandoned, the State instead of retaining possession of them allowed the adjacent landowners to take the land. If in its wisdom the great Empire State should abandon the Erie Canal and the Oswego Canal, and it looks as if it might in the future, if that land was preserved by the State, in time we would have 10,000 of 15,000 acres of woodland extending from Albany to Buffalo, outside of the cities. The land, outside of that occupied for canal purposes, will average 250 to 300ft. wide clear across the State, and it would certainly be a monument that New York State might be proud of.

The motion was seconded and carried.

THE COMPETITION.

On Monday there were about thirty shooters on the grounds, Riverside Park. The programme events, however, did not commence till the following day.

TUESDAY, FIRST DAY.

The weather had a touch of coolness in temperature, though not to an uncomfortable degree. A sky obscured by masses of clouds made a dull light, which with rather fast targets and a stiff wind blowing from the rear tended to a lowering of the scores. Glover and Kirkover tied on 92 per cent., Banks being close up with .915. No remarkable runs were made on the first day.

The programme for the experts, in addition to the regular events, called for ten sweepstakes, 20 targets each, $2 entrance, birds extra at 3 cents, $10 added in each event, moneys divided 40, 30, 20 and 10 per cent. None of the experts were lucky in dropping into a place alone excepting Whitney, who with a full score was alone in No. 7, which paid $20.80, otherwise the money was split up, mostly into fine parts. However, taking State events and all, Banks was high winner of the day, he netting $77.30.

In the State events, Nos. 1 and 2 were shot. For the sake of convenient reference, and as No. 4 was shot partly on Wednesday and partly on Thursday, all the State events are given in one table. No. 1 State event was at 25 bluerocks, $1 entrance, targets included, $50 added, seven moneys, 22, 18, 16, 12, 12, 10 and 10 per cent. No. 2 was at 25 targets, $3 entrance, targets included, $25 added, seven moneys, as in No. 1.

Of the thirty-two experts, sixteen shot through the day's programme, the largest entry being twenty-five, in Nos. 1 and 3. Of the sixty-six amateurs who shot in the day's programme, only five shot through it.

The magautraps worked badly during the day and kept Mr. Paul North quite busy adjusting them. He explained that the trouble was caused by the sand, which was more or less freely moving, and of which there was an abundance on the grounds. It sifted into the trap pits and got into the bearings of the machines; however, there was much less trouble in their works on the following day, and still less on the last day of the target shooting.

Following are the scores:

EXPERT EVENTS.

Events:	1	2	3	4	5	6	7	8	9	10	
Targets:	20	20	20	20	20	20	20	20	20	20	Av.

* Birds only.

The amateur events were ten in number, five at 15 bluerocks, $1.50 entrance, $5 added, and five at 20 targets, $2 entrance, $10 added, money divided 40, 30, 20 and 10 per cent., as in the expert events. Those who desired to enter for practice could shoot for targets only. The management reserved the right to classify all shooters. The money as a general thing was split up into small parts in the ties, though C. A. Ward netted $22.40 on a lone score of 14 in No. 1. In No. 7 a score of 15 alone netted W. H. Brown $12.80, and he was lucky again in No. 8 in being alone with a score of 18, which paid $16, while Swiveller on a lone score of 17 took in $12. Chase in No. 10, the last event, broke 19 alone and took $12.80, Barker taking $9.60 alone on a score of 17.

WEDNESDAY, SECOND DAY.

The weather was clear and pleasant. A gentle breeze blew at right angles to the traps, without adding anything worthy of note to the difficulties of the shooting. The traps worked better and the targets were thrown easier than on the previous day. Of the twenty-eight experts thirteen shot through the programme. Jack Fanning broke 931 per cent., the highest average of the day, while Glover broke an even 90 per cent.

Several of the experts had qualified as amateurs on the scores of the previous day, and participated in the pleasant diversions in garden with the amateurs, and they made a very commendable showing.

There were seventy-six who participated in the day's amateur events, but only ten shot the programme through. In No. 3 Byer had the greatest luck of the day, he being alone with 15 straight, which gave a return of $28.40. Of the experts Fulford, Crosby, Fanning, Levingston, Banks and Kelsey were the most fortunate winners.

Events Nos. 5 and 6 of the expert programme gave way to the E. C. cup event. No. 5 in the amateur event was the Gold Dust Smokeless event. The scores of both these events are given in full below:

EXPERT EVENTS.

Events:	1	2	3	4	7	8	9	10

THE E. C. & SCHULTZE CUP CONTEST.

The E. C. cup contest took the place of Nos. 5 and 6 of the expert sweepstakes programme, which were omitted. The contest was on 50 targets, in two sections of 25 targets each, optional sweep on each $2. The regular entrance was the price of the birds, $1.50. The sweep was divided 30, 25, 20, 15 and 10 per cent. The cup went to the highest score. If there were ties they were to be shot off on 25 targets. Class shooting. No handicap. Open to the world. Sim Glover was alone with a score of 48, and won the cup. He missed his 20th and 32d. Jack Fanning seemed to have a cinch on the cup up to his 48th and 49th targets, when he was unfortunate in dropping two together, he having only one previous miss, his 23d target. The scores:

333 (16) and H. L. Gates (17) retired after shooting 25 targets.

THE GOLD DUST SMOKELESS EVENT.

This was an event open to amateurs only, and took the place of event No. 5 of the amateur sweepstakes programme. The prizes were one keg of Gold Dust to three high guns, and one can each to the twelve next high guns. The conditions were 25 targets, no handicap, entrance price of targets, 75 cents.

Barker and McCord broke straight, while Byer was alone with 24. Covert, Keller and Waters were 23. Wayte, Lane, Cooper, Kay and Parker were 22 each. The scores:

THE MERCHANDISE EVENT.

Contest No. 3 of the State programme events was the merchandise event, the conditions being 25 bluerocks, entrance $5, birds included, $1,166 in prizes. They numbered ninety-two and were valuable and varied. There were seven classes of ties, each of which was shot off at 10 targets, which were extra. The shoot-off of the event and the ties took up the better part of the day at the State traps. The scores were as follows: Jones 19, Pan 18, A. M. S. 24, Baker 19, D. E. B. 19, Lowden 16, Tassall 17, Hopkins 16, 333 14, Hammond 21, Fulford 23, Hadley 20, Friday 20, Glover 23, Deremo 24, Mayhew 23, Kelsey 20, Levenson 23, Wagner 20, Banks 24, A. C. H. 23, Warner 24, Burkhardt 21, Kirkover 24, Forrester 22, Denny 22, W. H. T. 22, Frantz 19, Griffith 16, Gates 21, Courtney 24, Atwater 21, Lane 18, C. Burkhardt 22, Whitney 19, Borst 21, Ressinger 19, H. P. Hill 18, E. Hill 18, Willey 19, Tuttle 19, Carr 25, Geo. Mosher 24, E. F. Burnett 21, Wride 20, A. A. Mosher 12, White 20, Brown 23, Ward 22, Covert 23, A. Rickman 24, McCord 22, Byer 23, E. C. Meyer 25, C. F. Wayte 23, Tolsma 24, Storey 15, J. M. Louden 20, W. H. C. 21, M. E. Barker 22, B. G. Palmer 16, Louis Fries 20, G. Crouch 21, F. Lefever 22, T. Lane 18, Roberts 20, B. Rickman 21, Hadlock 17, E. Bauman 24, C. D. Cooper 18.

It required a long time to shoot off the ties. Carr broke 9 to Meyer's 8 in the 25s. First prize was an L. C. Smith gun valued at $80. Kirkover, Banks, Talsma, Geo. Mosher, A. M. S., Deremo and Bowman, after shooting off the ties on 24s, were in the order named, Banks, who was shooting a very strong gait, withdrew to second place so that the others could shoot for the Lefever hammerless, valued at $80, Banks winning a cook stove, valued at $35. In the third class of ties first was an Ithaca hammerless. The winners from first to eighth were: Glover, H. W. Brown, Levengston, Fulford, Byer, C. F. Wayte, A. C. H. and Covert.

The ties on 22 were as follows: First, M. E. Baker; second, Kelsey; third, Ward; fourth, F. Lefever; fifth, McCord; sixth, A. Forrester; seventh, H. N. Denny; eighth, E. C. Burkhardt; ninth, W. H. T. First prize was a sewing machine, second a Winchester shotgun.

On 21s the results were: First, Mayhew; second, C. F. Burnett; third, E. F. Hammond; fourth, Borst; fifth, Gates; sixth, B. Rickman; seventh, Burkhardt; eighth, J. J. Atwater; ninth, Geo. Crouch; tenth, W. H. C. First prize was a Remington ejector shotgun.

The 20s were as follows: First, Wride; second, L. Fries; third, White; fourth, Hadley; fifth, Roberts; sixth, Friday; seventh, J. N. Louden; eighth, Wagner. First prize a shotgun.

Ties on 19 were as follows: First, Foley; second, Whitney; third, Tuttle; fourth, Willey; fifth, J. Rissinger; sixth, J. N. Miller; seventh, D. E. B.; eighth, Frantz; ninth, Baker.

Ties on 18: First, Dain; second, E. Hill; third, G. D. Cooper; fourth, W. P.; fifth, H. P. Hill; sixth, P. Lane; seventh, T. Lane.

Ties on 17: First, Hadlock; second, Tassell.

Ties on 16: First, B. J. Palmer; second, H. Lowden; third, Hopkins; fourth, Griffith.

Ties on 15: First, Storey; second, W. C. Lais; third, Norton.

THURSDAY.

The weather was warm, clear and pleasant. A gentle breeze blew betimes. The attendance had largely diminished, and the events dragged somewhat. Only eight of the experts shot through the programme. McMurchy broke 135 out of 140, at .964 gait, while Van Dyke was smashing things in his old form, scoring 79 out of his first 80, finishing with 96 out of 100 shot at. Fanning tied McMurchy with .964, and there was a general rise in averages all along the line. However, the targets were thrown easier, though they were not easy to score on at that. There were no large winnings in the day's competition.

The scores at the expert traps were as follows:

EXPERT EVENTS.

Events:	1	2	3	4	5	6	7

* Birds only.

THE AMATEUR EVENTS.

At the amateur traps a few who went over the 85 per cent. limit were banished from the amusements of the amateurs, and forced to saw wood with the experts, or not participate. Of the fifty-one amateurs only seven shot the programme through. Of the twenty-six experts only eight shot through. The expert events were stopped at the seventh and the Lefever medal contest was commenced.

The scores of the amateur events were as follows:

Events:	1	2	3	4	5	6	7	8	9	10	
Targets:	15	20	15	20	15	20	15	20	15	20	Av.

TEAM CHAMPIONSHIP.

The team championship contest, four men to a team, entrance $10 per team, had six entries. Each member shot at 25 targets, or 100 per team. The prizes were a Parker gun to first, and 40, 30, 20 and 10 per cent. of entrance to second, third, fourth and fifth respectively. The Rochester Rod and Gun Club won on the excellent score of 91. The contest was a very close one, Syracuse being but one target behind the winners, Oneida but one target behind Syracuse, and the Audubons Nos. 1 and 2 tieing on 88, one target less than Oneida, while Audubon No. 3 was one target behind Nos. 1 and 2. The scores:

Rochester Rod and Gun Club.

LEFEVER ARMS CO. DIAMOND MEDAL.

There were twenty-two contestants in the diamond medal event. It was shot at 20 single targets and 5 pairs, entrance $2. The contest was most spirited and close, and was watched with the greatest interest by all present. Glover, Banks, Tuttle and Barker tied on 29, Kirkover and Mayhew being close with 28. In the ties there was some as pretty target shooting as ever was witnessed. Banks and Glover were shooting in admirably fine form, the former rather the better, since he caught the targets quicker, centered them well and shot with great confidence. Banks' first pair in the ties flew in line with a tree at the boundary fence, and in attempting to catch them before they could blend with the colors of the tree and thereby become indistinct, he shot too quickly, lost his time and missed them both. Up to that moment Banks seemed a sure winner. Glover missed one in his next pair, then broke the rest and won by one target. The badge now becomes his personal property. The scores:

B Palmer	10111011101110111111	11 11 10 00 11—23
H L Gates	11101110111111110111	11 11 10 11 11—26

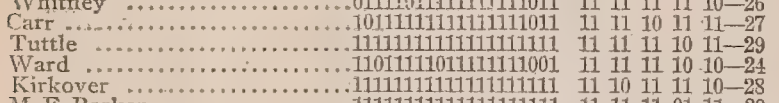
FRIDAY, FOURTH DAY.

The Dean Richmond Trophy.

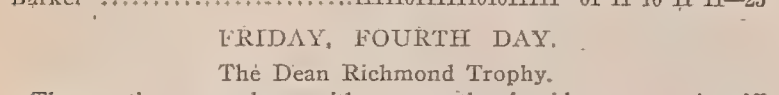
The weather was clear, with a warmth of midsummer. A stiff wind blew toward the traps, making the shooting far from easy. The grounds from the constant tramping of the multitude had a heavy covering of dust, which was lifted up and scattered around the shooters and traps in clouds at such times as heavy gusts varied the steady blowing.

The birds were an exceptionally good lot, considering the time of year, and were not so easy to kill, as the scores below will show. The keenest interest was shown by the spectators from start to finish, and good kills were impartially applauded.



The Dean Richmond trophy event was the only one left of the programme; the Lefever Arms Co. diamond medal, fixed for Friday, had been shot on the previous day. A few sweepstakes occupied the forenoon. The main event commenced at 1:03.

There were eight teams in this contest, the Syracuse Gun Club team proving the victors with the excellent score of 58 out of 60, Col. A. G. Courtney killing straight, while Mosher and McMurchy each scored 19.



Mr. J. Fanning was referee; Mr. Will K. Park, of Sporting Life, was scorer, and Mr. L. W. Davis was trap-puller. The scores;

THE STATE EVENTS.

The State events were shot off on Tuesday, Wednesday and Thursday. Events Nos. 1 and 2 were shot on Tuesday; No. 3, the merchandise event, and part of No. 4 were shot on Wednesday; the latter was the Troisdorf smokeless powder trophy, same conditions as No. 3, namely, 25 bluerocks, $3 entrance, targets included, $25 added, seven moneys, divided 22, 18, 16, 12 12, 10 and 10 per cent. Part of event 4 and events 5 and 6 were shot off on Thursday, as were also the team race and the Lefever badge. The scores:

The Calumet Heights Gun Club has an elaborate programme for its July 3 and 4 shoot, embracing contests at targets, live birds and rifle shooting.

Worcester Sportsman's Club.

WORCESTER, Mass., June 18.—There was a small attendance, but a large rivalry at our weekly shoot. The weather has been so bad here of late that we have not been able to hold a shoot on our regular dates:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	15	15	15	15	Targets:	15	15	15	15
Walls	15	14	15	15	Snell	13	..	..	..

A. W. WALLS.

Items from the South.

ST. LOUIS, MO.

LITTLE ROCK, Ark., June 23.—Manager J. A. Corray, of Dupont Park, is out with his programme announcing a two days' tournament for July 3 and 4. This is to be an open affair, but trade representatives will be taxed 50 cents extra in each event. This is to constitute an average fund, to be divided among the amateurs who shoot through. The programme consists of five 15 and five 20-target events each day, making 175 shot for the day. The entrance in the 15-bird events is $1.50, while in the 20s it is $2. There will be $5 added in each event, $100 all told for the two days. This should draw a fair crowd, but it is a difficult matter to pull off a very pretentious event on these dates, as half the clubs in the country will be holding shoots on the Fourth.

MEMPHIS LIVE-BIRD MEDAL.

The Memphis Gun Club has discontinued its live-pigeon shoots for the summer, and has now turned its attention to targets. The close of its pigeon-shooting season left a very complicated state of affairs in so far as the club medal is concerned. There were ten contests all told for this trophy, which resulted in T. A. Divine, J. P. Edrington, A. H. Frank and J. C. Neely, Jr., winning it twice, W. F. Allen and Dr. W. H. Gragg once each. To become permanent possessor of it it must be won three times. However, no one was equal to the requirements. Frank was the first one to win it twice, and though he managed to tie for it several times after, he was unable to land it the decisive time.

A singular thing about these contests is that Frank Poston, one of the very best shots in the club, never won it once, though he never scored less than 23 and on several occasions 24 and 25 straight. It was always his misfortune to be shot out in the tie.

In the fall pigeon shooting will be resumed by this club, and matters will be taken up where they were dropped.

LOCALLY.

The approach of the State shoot is livening up matters considerably here and there is a good crowd of shooters on hand each Friday. At the last shoot Mayor Woodson was on hand, and though he complained of feeling bad and furthermore being rusty—this being his first appearance this season—he set a pace that none of the others could follow. Ninety-three per cent. was entirely too hot a clip. Quite a number of those who were present hoped that his illness would prove contagious if it had that kind of an effect. John Pemberton kept plugging along right behind him, always a bird or so shy though. In a live-bird shoot a few days previous John Dickinson was easily first with 17 out of 20, Pemberton winning second.

State tournament affairs are progressing very nicely, and $350 added money has already been raised, while efforts are being made to bring this amount up to $500. This is going to be a rattling good event, and shooters will do well to bear this in mind. The promoters hope to make this the best shoot held in the South this season, always excepting the Hot Springs shoot, of course.

IN ILLINOIS.

Sidell has a gun club, and they too will be doing business on the glorious Fourth, and the 5th also. All targets, and the schedule varies from 10 to 25 birds. Fourteen events sum up the shooting for the two days, though extras will be run off to suit those present. The management consists of Jas. A. Linder, President; Frank Jackson, Vice-President; W. A. Gray, Secretary and Treasurer; H. J. Scounce, Captain.

PAUL R. LITZKE.

Auburn Gun Club.

AUBURN, Me., June 18.—The Auburn Gun Club held its regular weekly shoot this afternoon. There was a strong wind blowing, making the birds fly hard, but in spite of this the best scores of the season were made. Event No. 1 was the badge shoot, which Rickford won with 24. The boys are getting all the practice they can before the tournament, which is to be held on June 30. They are all looking for that Parker Gun. Scores:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	25	10	10	10	5	Targets:	25	10	10	10	5

Uxbridge Gun Club.

UXBRIDGE, Mass., June 18.—The medal shoot of the Uxbridge Gun Club was held here this afternoon. Rawson won the medal, making two wins to his credit for the season. Previous to the last 10 birds Day had a lead of 2 over his nearest competitor, but after making a grand stand flourish with his gun and some jocose remarks about a cinch he went to pieces and broke only 5 out of the 10. Nos. 5 to 8 was the medal shoot. The scores:

Events:	1	2	3	4	5	6	7	8

ENDEAVOR GUN CLUB.

Marion, N. J., June 18.—An enjoyable afternoon's shoot was given by the Endeavor Gun Club to-day. The competition was spirited throughout. A stiff wind added to the difficulties of making good scores.

The eight-men team shoot was the main event, and excited much interest. The Endeavors succeeded this time in defeating the Dunellen Gun Club's team by a score of 154 to 134. No. 7 event was at 10 singles and 5 pairs. A novel team race was shot in No. 6 event, 15 targets, nine men on a side. Each man drew a number from a hat. No one knew till after the race was over what team he was on, or who was for or against him. O. and E. in the scores denote the odd and even numbers, the odd numbers making one team, the even the other one.

W. H. HUCK, Sec'y.

Seattle Rod and Gun Club.

SEATTLE, Wash., June 13.—The boys are shooting fairly well, but will have to wake up a little bit more, for we shoot Tacoma again next week for the State cup, and of course we want to hang on to it now that we have won it. Tacoma has a great crowd of shooters though, and we may have a hard time to keep it in Seattle. Nevertheless we are still going to let them know that we are alive, and hope to keep the flies off them.

Stevens is shooting in elegant form now, and if he keeps it up will make plenty of them hustle at Vancouver on the 29th.

Black and Ruppe are also shooting in good form.

Bige Hall still swings on to the pump gun with a vengeance.

Several of the boys are going to the Vancouver shoot on the 29th to try their luck against the cracks of the Northwest. May they take all the medals and some of the cash. We took the State cup away from Tacoma, and now we want some of those golden medals that they have dangling at their waists, and if it is possible to get them by good, clean shooting we are out for them.

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7

Event No. 2 was for the club medal. Ruppe with 6 handicap won with 30; Hall with 6 handicap got second with 29. Event No. 4 was a challenge event for the pump gun. Event No. 6 was 15 reverse and 5 pairs. Event No. 7 was also reverse pull, unknown angles, use of both barrels.

Buffalo Audubon Gun Club.

BUFFALO, N. Y., June 18.—The club's last badge shoot of the season was held by the Buffalo Audubon Club this afternoon. The members are divided into three classes, and the club offers two prizes in each class for the largest number of wins. The first prize in each class is a trophy valued at $25, and the second prize is valued at $15. A prize valued at $15 is also given to the member making the best average in all the club shoots. In addition, a prize of $10 value is offered in each class for the member breaking the most targets during the season, and another of $10 value for the member having the best attendance. In Class A the race was so close between C. S. Burkhardt and E. C. Burkhardt that a shoot-off was necessary, C. S. Burkhardt winning. This gave the second prize in the class to E. C. Burkhardt. L. W. Bennett won the average prize in this class. C. S. Burkhardt also won the trophy in Class A for the greatest number of targets broken during the season. In Class B, B. Talsma won first prize, and J. P. Fisher and George Zoeller tied for second. Talsma also won the average prize. J. J. Reid won first in Class C, with W. R. Eaton second. Reid also carried off the average prize. The prize for the most straight scores was won by A. C. Heinold. The scores of to-day were:

Trap Around Reading.

SOUTH END GUN CLUB.

READING, Pa., June 18.—The members of the South End Gun Club held a successful shoot on their grounds, on Boyer's Island, to-day. Several hundred people attended, and the shooters enjoyed themselves popping at bluerocks until dark. The club house has been enlarged and is not finished, but it is expected that by July 4 the members of the South End Gun Club can show their friends one of the finest shooting parks in the State. The grounds are so laid out that two squads can shoot, one over the magautrap and the other at live birds, and not interfere. Following is the summary of the events:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7
Shaaber	7	7	8	19	6	..	..	Hill	8	6	7	..	6	6	..

Grossman	7	9	6	..	7	4	3	Fornoff	4	3	..	10	..	..	..

No. 4 was at 25 targets, the balance at 10.

SHULER ASSOCIATION.

Pottstown, Pa., June 18.—Two interesting team matches were shot on the Shuler Association's grounds here to-day, and some excellent scores were made:

Wickersham's team—Capt. Wickersham 18, Grubb 19, Davis 19, Smith 13, Longacre 13—82.

De Witt's team—Lieut. De Witt 13, Trego 19, Saylor 21, Hawkins 11, Slowacker 18—82.

Shoot-off, 10 targets per man:

Wickersham's team—Wickersham 6, Grubb 8, Davis 9, Smith 6, Longacre 6—35.

De Witt's team—De Witt 5, Trego 9, Saylor 6, Hawkins 3, Slowaker 9—32.

Team shoot, 10 targets per man:

Saylor's team—Saylor 9, Davis 9, Miller 8, Cole 6—32.

Wickersham's team—Wickersham 5, Grubb 6, Slowaker 10, Longacre 4—25.

Sweepstake, 7 targets: Wickersham 6, Grubb 6, Saylor 6, Davis 6, Miller 5, Smith 4, Cole 4, Slowaker 3, Longacre 2.

Same: Slowaker 3, Longacre 3, Davis 5, Saylor 6, Grubb 4, Wickersham 7.

GLEN WILLOW VS. WAYNE.

Philadelphia, Pa., June 18.—The second of a series of three match shoots between the Glen Willow Gun Club and Wayne Gun Club took place yesterday afternoon, resulting in a victory for Glen Willow, making the match a tie, each club having won a shoot. The conditions were 25 targets per man, teams of eight men each. Sweeps followed for small purses. The scores follow:

Glen Willow Gun Club—Cowan 22, Whitehouse 19, Stumm 19, Butler 18, Winkler 15, Hopkin 15, Hinkle 14, Crowther 13—135.

Wayne Gun Club—J. Dillon 22, E. Dillon 22, Daly 20, Van Nort 18, Morrison 16, Green 12, Engle 12, Morgan 11—133.

Sweepstakes:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6

All events were at 10 targets except No. 6, which was at 25.

Match, 25 targets: Daly 20, Cowan 18.

ARTHUR A. FINK.

Fort Smith Gun Club.

FORT SMITH, Ark., June 27.—The regular weekly shoot of the Fort Smith Gun Club took place at the Fair grounds Saturday evening. Several of the members were out of town and the attendance was accordingly light.

The targets were unusually hard, one trap in particular, on which the elevation rod was broken, throwing targets somewhere in the neighborhood of 100ft. high, and the way some of the boys did not hit that bird was a caution.

The ladies were out in force, and seemed to take as much interest in the target smashing as their husbands and sweethearts. Among the ladies present were Miss Grace Keam and Mesdames Matthews, Atkinson, Webber and Will Vick. We trust the ladies will continue to lend their presence, as we are always glad to have them. Mrs. Atkinson made a very good score, considering that she was shooting a little single-barrel 20-gauge gun that even Rolla Heikes himself couldn't handle successfully.

Walter Boyd is the sourest man in town, and is telling his friends how it happened. Payne was shooting so poorly that he was afraid to show up; said he was busy taking stock. Webber has a new gun, and is so enthusiastic that he can hardly wait for shoot day to come. Echols was out of town and missed the fun. Stewart Miller was on hand to guy the winners and jolly the losers. Mrs. Matthews fired a couple of shots at the flying targets and failed to score, when some sympathizing friend remarked, "Never mind, Mrs. Matthews, your husband shoots well enough for both." And he does. Following is the score:

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
Matthews	50	45	.900	Baptiste	50	30	.600
Leach	50	42	.840	A W Boyd	50	24	.480
Webber	50	34	.680	Mrs Atkinson	10	4	.400

SECRETARY.

Dupont Park.

ST. LOUIS, June 15.—The handicap at live birds, Dupont Park to-day, had nine entries. The conditions were 50 birds, $35 entrance, birds and distance handicap, American Association rules. The first 25 birds were good; the second 25 fair. The State medal will be contested for at 25 targets on June 26. The tournament, $100 added, will take place on July 3, 4 and 5.

First was divided by Winston, Woodward and Nald; second by Selzer; third by Selzer, Prendergast, Smith and Kling.

JOHN E. WILSON, Sec'y.

Boston Gun Club.

WELLINGTON, Mass., June 22.—With smiling skies and scarcely a zephyr the Boston Gun Club's ninth prize shoot was ushered in to-day, augmented by a successful attendance. One of the most welcome of the thirteen was Mr. Sheffield, who has not been with us to the same extent as in former series, when he was noted for his weekly enthusiasm. A business that demands fortnightly attendance in Chicago, vice versa, with Boston, almost deserves neglecting, but as aptly put by the shooter most interested, if there was no business there would be no shooting; business first, pleasure afterward is the safest plan to follow.

Mr. Hollis duplicated his success of last week in the individual match, and the 26 striking out a 23 ties him with Horace on second. Next week ends the suspense.

Leroy and Woodruff tied on average, 85 per cent., excellent shooting at 21 and 17yds. respectively, the targets being thrown fast and a distance of from 50 to 60yds.

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Targets:	10	10	10	6	10	10	10	10	15	10	10	6

Ogden Gun Club Tournament.

OGDEN, Ill., June 25.—The tournament of the Ogden Gun Club, held at Ogden, Ill., June 23, was a complete success, although rain delayed the beginning of the programme for two hours. The club used a magautrap, and all contestants were much pleased with the way in which the new trap threw bluerocks. All the surrounding cities were represented by good boys. Max and Wade Holton are twelve and fourteen-year-old boys from Sidell, Ill. The contestants were so keen for sport that no stop was made for dinner.

The scores for the entire day were as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18
Targets:	7	7	10	10	15	15	10	25	10	7	10	10	15	15	10	25	*	25

WESTERN TRAPS.

GARFIELD GUN CLUB.

CHICAGO, June 24.—The Garfield Gun Club, of this city, held its regular weekly target contest at the traps, on the club grounds, corner Fifty-second Place and West Monroe street, on the afternoon of the 18th inst. The attendance was fair, and quite a bit of practice was indulged in by those present. Some good scores were made.

Events 1, 2, 3, 5 and 7 were known traps, unknown angles. No. 5 was reverse pull. No. 8 was 5 unknown traps.

Following are scores in practice events:

Events:	1	2	3	5	6	7	8
Targets:	15	10	15	15	15	10	12
C P Richards	11	9	10	10	11	6	9
"De Maris"	7	5	..	..	..	..	..
Dr Shaw	13	9	11	8	15	9	..
Pollard	11	7	8	9	..	..	..
Bradley	11	8	12	11	..	..	..
Silas Palmer	9	4	6	7	2	5	5
R Kuss	15	8	14	14	10	8	8

CALUMET HEIGHTS CLUB.

The Calumet Heights Club held its regular weekly target contest on the club grounds, at Grand Calumet Heights, Ind., on the 19th inst. While the attendance was good, but few participated in the shooting events.

The day was most glorious, with a soft sunlight and a cool wind. Great preparation is being made for a "Dewey" Day on the Fourth of July, and all bids fair to success.

Following are scores in the practice events, all of which were shot on the magautrap. Nos. 1 and 4 were unknown angles, No. 3 snipe, and No. 5 doubles:

Events:	1	3	4	5	Events:	1	3	4	5
Targets:	15	10	15	10	Targets:	15	10	15	10

FOSS VS. PATERSON.

The event for the Chicago challenge trophy took place to-day at Watson's Park, Burnside Crossing, Ill., between H. B. Foss and A. C. Paterson, both of Chicago.

The contest was attended with interest, and many enthusiastic friends of both participants. Many side bets were made of small money. There was a strong driving wind from the right quarter with an overcast sky and occasional sunshine. It was expected that Foss, who is an old shooter at the traps, would have made a better showing, and the result of his efforts was somewhat of a disappointment to his friends. Paterson, who has held the trophy since it was first put up, showed himself to be in good form, and made a good score, notwithstanding the shooting was exceptionally difficult.

The birds were a great lot of swift flyers, and no hesitation was shown on their part when liberated from the traps. The flush ropes were an unknown quantity. Foss's eighth bird was a swift outgoer, which he grassed in good shape with the first barrel. His eleventh bird he missed clean with his first and made a good kill with his second. His twentieth was a good one, but his twenty-second was a whirlwind, which the best could not have stopped.

Pateson shot a B. E. O. Remington, 3½drs. Dupont, and 1¼oz. No. 7 shot. Foss used 3½drs. of Schultze and 1¼oz. of No. 7 shot.

Paterson's second and twentieth were both very low tailers, both of which were cleanly killed, his third and eighth were outgoing towerers which were nicely stopped, on his fourth he made a splendid stop with his first barrel and finished with the second, the bird was a strong swift tailer.

Following are detailed scores, H. B. Foss shooting at 27 birds from 29yds., and A. C. Paterson shooting at 25 birds from 30yds.

Trap score type—Copyright, 1898, by Forest and Stream Publishing Co.

It is understood that immediately after the contest Mr. Henry Levi, of the Garden City Gun Club, of this city, sent in a challenge for contest for this same trophy, and that he will be the next contestant for the same. Mr. Levi has been doing good work at live birds shooting recently. At the State tournament he proved himself equal to the occasion, finishing in the ten hole with 31 others in the diamond badge event. Last week he scored 9 in the trophy contest of the Garden City Club event of 10 live birds, and was high man. A surprise is to be looked for from Mr. Levi.

EUREKA GUN CLUB.

The Eureka Gun Club, of Chicago, held its regular weekly target contest on the club grounds, corner Seventy-ninth and Vincennes avenue, on the afternoon of the 26th inst. The weather was extremely warm notwithstanding a strong wind blew from the right quarter, which had a tendency to make the flight of the targets very erratic, in consequence of which few good scores were made. In the medal contest Mr. Cunnyngham led the contestants with 21 out of 25.

Following are scores in the practice events:

Events:	1	2	3	4	6	7	8	9	10
Targets:	15	15	15	15	20	15	20	10	15

* Visitors.

While it is not definitely settled, it is very probable that the club grounds will be open on July 4 to target shooting, for the convenience of the club members who desire to shoot on that day.

GARFIELD GUN CLUB.

The Garfield Gun Club have arranged for a general field day, and have extended invitations to friends and members to participate in their 4th of July outing. The order of the day will consist of target shooting the entire day, during which time lunch will be served by the ladies in attendance.

The club held its weekly contest at targets during the afternoon of the 25th inst., with a good attendance.

There was a strong sunlight accompanied with a brisk wind, which blew from the right to left, and had a tendency to make the targets low flyers.

Following are the scores in the practice events, Nos. 1 and 5 were known traps, unknown angles; No. 3, reverse pull; No. 4, a team shoot, and No. 6 unknown traps and angles.

Team contest between selection of Dr. S. Shaw and R. Kuss, 15 targets per man, known traps, unknown angles:

Dr. Shaw 15, M. J. Eich 9, C. P. Richards 13, A. Hellman 14, C. Steiger 12, J. Meek 14; total 77. R. Kuss 11, H. Fehrman 14, Sam Young 12, De Maris 5, Eaton 10, J. Workman 8; total 60.

Events:	1	3	5	6	Events:	1	3	5	6

PORTMAN WINS.

Gus Portman, of the Peoria Gun Club, won the medal at the last monthly shoot, last week, with a score of 46 out of 50, defeating Frank Whiting, who at the last previous contest won that medal and about everything else in sight. Following were the scores: Leisy 44, Whiting 41, Gus Portman 46, Stafford 44, Weber 41, Meidroth 43, Scott 43, Connors 45, Pump 44, Simmons 35, Nelson 44, Wilson 38.

THOMAS WINS.

Theodore Thomas, of the Milwaukee Gun Club, of Wisconsin, has been given the Wulf medal of that club, Dr. Williamson not appearing to contest in the last shoot for the same.

STILLWATER OFFICERS.

At the annual election of officers of Stillwater Gun Club, of Minnesota, the following were returned: President, P. S. Murray, of South Stillwater; Vice-President, H. Mohr; Secretary and Treasurer, H. C. Roberts. Mr. Murray was also chosen field captain. The club is in a flourishing condition.

NOHITEMS.

The settlements at the head of the Lakes have several gun clubs, including the Central Gun Club, of Duluth; the West Duluth Club and the West Superior Club. Yet another is the body bearing the humorous title of the Nohitem Gun Club. This club held its last regular contest June 19, with the following results for members and visitors. Event No. 7 was at 5 pairs:

Events:	1	2	3	4	5	6	7	8	9
Targets:	10	10	10	15	15	10	10	10	10

A WORK OF ART.

The Hunter Arms Co., of Fulton, N. Y., are sending out to favored individuals their beautiful portfolio containing eight water-color views of U. S. battleships and cruisers, the subjects chosen being the battleship Maine, of unfortunate memory; the battleships Massachusetts, Indiana, Iowa, the cruisers Minneapolis New York, Brooklyn and Columbia. These ships are shown in eight different colors, and the portfolio is a work of art of current interest, and of a sort to make one feel glad he is an American and not a Spaniard.

NOTES FROM MANY TOWNS.

At the fourth annual tournament of the Hazelwood Gun Club, of Anderson, Ind., manufacturers' agents were barred, and the events held open for amateurs only.

La Crosse, Wis., will have a new gun club, to be called the La Crosse Gun Club. The grounds are on French Island, and weekly shoots will be held.

At the big Soo Gun Club tournament this week at Sioux City, Ia., experts were barred. C. J. Callison, of Cummings, Ia., won the interstate championship medal with 42 straight. The entry was heavy and the shoot a good one.

The St. Paul Gun Club, of Minnesota, will hereafter shoot targets at 1 cent.

Princeton, Ill., will have a trap shoot on the Fourth.

Algona, Ia., again has a gun club. There are twenty-five members, and some good shooting is appearing among the learners. Meets are held Wednesdays.

The directors of the Illinois State Sportsmen's Association held a meeting this week and audited bills. It seems that the Peoria Gun Club came out a little ahead of the game on the tournament.

Wabasha Gun Club, of Wabasha, Minn., will hold a tournament on the Fourth. Winona and other adjacent towns will send representatives.

An interesting little trap shoot was held at Fox Lake, Wis., this week, with a dozen or more entries from places near by. Targets and live birds were shot. Rockwell, of Columbus, and Atkinson, of Markesan, reaped most of the honors.

Winnebago Gun Club, of Oshkosh, Wis., is keeping up its pleasant club shoots. The members use a magautrap, and a good attendance is usual. On June 21 the scores were: W. E. Fildes 38 out of 50, J. P. Steier 33, J. Thomas 30, E. P. Sawyer 30, G. A. Buckstaff 30, W. W. Waterhouse 28, Chas. Maulick 28, Mm. Meter 26, Oscar Crary 25.

E. HOUGH.

1206 BOYCE BUILDING, Chicago, Ill.

Haverhill Gun Club.

HAVERHILL, Mass., June 20.—The Haverhill Gun Club held its second annual meeting on June 13 and elected the following officers for the ensuing year: President, Ed J. George; Vice-President, F. J. Blake; Secretary-Treasurer, Geo. F. Stevens; Captain, S. G. Miller; Members Executive Board, to serve in conjunction with the president, secretary and captain: Geo. H. Leighton and C. J. Orne.

Two years ago twelve enthusiastic "gun cranks" met one evening at the gun store of Mr. John F. Brown and organized the Haverhill Gun Club. At their first annual meeting they numbered forty-one members, and at their last or second annual meeting fifty-six, a gain in membership highly gratifying to the originators of the club. The attendance at the weekly practice shoots has thus far been very light this season, but that fact must be attributed to the dull times rather than a diminishing interest in the sport of target smashing, for the boys turn out well at the holiday shoots, and are counting on a regular surfeit of shooting at the coming Interstate tournament, Sept. 7 and 8.

Quite a deal of enthusiasm is manifested over that event, and all hands seem to be imbued with a desire to do something toward making the shoot a pronounced success.

It can hardly fail to be otherwise, for we have already received many promises of attendance from different sections, and given that, and abundance of enthusiasm in the home club, all under the able management of Mr. Elmer Shaner, how can it fail to be a successful affair.

We have a live town here of nearly 40,000 people, situated some thirty miles from Boston, on the Boston & Maine Railroad. Our grounds are very pleasant and easily accessible by electric cars every fifteen minutes from the depot and hotels. We have a comfortable and roomy club house, and can easily run two sets of traps if the attendance should warrant it.

We hope to see many out of town shooters here on those two days, and can assure them one and all of a sportsman's welcome, and our best efforts to make their visit a pleasant one.

GEO. F. STEVENS, Sec'y-Treas.

Omaha Gun Club.

OMAHA, Neb., June 18.—Owing to counter attractions the Omaha Gun Club's shoot to-day was poorly attended, only ten men participating. Event No. 1 was the club shoot, 20 targets; No. 2, a sweepstake, 20 targets. The scores:

Events:	1	2	Events:	1	2
Beresheim	19	16	Townsend	15	15

F. W. CARMICHAEL.

Answers to Correspondents.

J. D. B.—The New Jersey woodcock season will open on July 1.

J. B. D., Petrolia, Ont.—The second volume of Maj. Taylor's book on the dog has not been issued.

PUBLISHERS' DEPARTMENT.

Convention National Educational Association, Washington, D. C.

REDUCED RATES VIA PENNSYLVANIA RAILROAD.

FOR the National Educational Association Convention to be held at Washington, D. C., July 7 to 12, the Pennsylvania Railroad Company will sell excursion tickets from points on its line to Washington and return at rate of single fare for the round trip plus $2 membership fee. These tickets will be sold on, and good going, July 4 to 7, and good to return leaving Washington July 8 to 15, when stamped by Joint Agent at Washington. By depositing ticket with Joint Agent on or before July 12 and on payment of 50 cents the return limit may be extended to Aug. 31. Tickets for side trips from Washington to Gettysburg, Richmond, Old Point Comfort and Southern battlefields will be on sale at the ticket offices of the Pennsylvania Railroad Company in Washington during the continuance of the Convention.—*Adv.*

Savannah, Fernandina, Jacksonville, Tampa and Key West.

THE Southern Railway and the F. C. & P. R. R., Florida Short Line, offers the quickest time between New York and Savannah, Fernandina, Jacksonville, Tampa and Key West. Double daily service with through Pullman Sleeping Cars, New York to Tampa, leave New York at 4:20 P. M. and 12:05 A. M. Dining car on the afternoon train from New York to Charlotte. Connections are made at Tampa and Miami for Key West. For full particulars call on or address Alex. S. Thweatt, Eastern Passenger Agent, 271 Broadway, New York.—*Adv.*

Camp Comfort.

THE "Perfection" air mattress, manufactured by the Mechanical Fabric Co., of Providence, R. I., has been adopted for the equipment of many yachts, and because of its portability and comfort is liked by campers. These mattresses are inflated for use, and when deflated are so reduced in bulk and so light that they add practically nothing to one's duffle. Their use insures a comfortable bed, and sound sleep and perfect rest at night are quite as important in the woods as at home. Send to the manufacturers for an illustrated catalogue.

"THE Ideal Handbook of Useful Information for Shooters," published by the Ideal Manufacturing Co., of New Haven, Conn., contains a store of useful facts. It would be difficult to find a poser for the Handbook in any of the thousand and one questions that come up about loading and the mechanical practices and principles of rifle, shotgun or revolver shooting. The shooter may profitably send for a copy and study its pages. Of course the long line of Ideal goods is illustrated and described.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JULY 9, 1898.

VOL. LI.—No. 2. No. 346 BROADWAY, NEW YORK.

PRIZES FOR AMATEUR PHOTOGRAPHS.

THE sportsman tourist of to-day is an amateur photographer, and the camera has a recognized place in the outfit of the field. The results of successful snap shots often constitute the most cherished mementoes of an outing. In recognition of the important place held by amateur photography in its relation to sports of the field and prairie and mountain and forest and stream, this journal in 1892 gave a series of prizes for meritorious work with the camera, and the result was an interesting collection of photographs, many of which were reproduced as half-tone engravings in these columns. The series was exhibited in a special exhibition by the New York Camera Club, and was put on view in other cities, everywhere attracting deserved interest.

We propose now to renew the offer of a series of cash prizes for such work, the prize list being more liberal than of those given before. The conditions are as follows:

The prizes will be divided into three series: (1) for live wild game; (2) for game in parks; (3) for other subjects relating to shooting and fishing.

(1) For live game photographs three prizes are offered, the first of $50, the second of $25, and the third of $10.

(2) For live game in parks, for the best picture, a prize of $10.

(3) For the best pictures relating to FOREST AND STREAM's field—shooting and fishing, the camp, campers and camp life, sportsman travel by land and water, incidents of field and stream—a first prize of $20, a second of $15, a third of $10, and for fourth place two prizes of $5 each.

There is no restriction as to the time nor as to where the pictures have been made or may be made.

Pictures will be received up to Dec. 31 this year.

All work must be original; that is to say, it must not have been submitted to any other competition or have been published.

There are no restrictions as to the make or style of camera, nor as to size of plate.

A competitor need not be a subscriber to the FOREST AND STREAM.

All work must be that of amateurs.

The photographs will be submitted to a committee, who, in making their award, will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities, and other things being equal, the unique and difficult nature of the subject.

Photographs should be marked for identification with initials or a pseudonym only, and with each photograph should be given, answering to the initials, the name of sender, title of view, locality, date and names of camera, and plate or film.

ADIRONDACK FLY CASTS.

THERE is a decided difference of opinion among the anglers who visit the Adirondack region as to the kind of artificial flies which are the most effective for speckled trout fishing, and the topic is one of never failing interest. The successful fisherman who at the conclusion of a day's sport returns to his hotel, boarding house or camp and exhibits a big trout, is sure to be greeted with the query: "Where did you catch him?" and when this has been answered evasively or otherwise, some one will ask: "Did you use bait or a fly?" In case it was the latter, or if the angler is known to fish exclusively with flies—and to ask if he did is consequently superfluous—the interrogation is: "What fly did he take?" To meet expectations on such occasions one must be prepared to say that the fish rose to a red ibis, white miller or queen of the water, as the fact may have been, and furthermore to add that the other flies on the cast were so and so, naming them, of course. The chances are that a general discussion as to the relative merits of these and other flies will follow, perhaps not immediately, but as soon as there is a favorable opportunity, and an hour or very likely an entire evening will thus be whiled away most agreeably. Incidentally, entertaining stories will be told about other big trout that have been caught, and concerning uncommonly large catches of somewhat smaller ones.

These conversations are characteristic of Adirondack life during the fishing season, and the theme being of common interest, they invariably prove enjoyable. Every fisherman who has visited that region will have pleasant memories of the evenings passed in this way, for when several long hours have been spent on a stream or lake in quest of trout the after-supper interchange of ideas among fellow anglers appears to round out the day's enjoyment as nothing else can. Nothing will break down the barriers and bring about a general conservation among strangers at a wilderness resort more surely and speedily than the introduction of this subject. Casually ask the man nearest you what his favorite fly is, and in nine cases out of ten that will suffice to set the ball rolling. In a few minutes you will be talking together as earnestly as though you had been acquainted for years, and everyone else within hearing, who knows anything about fly-fishing, will be eagerly listening and putting in a word whenever the opportunity is presented. If you don't believe it try the experiment. Should it fail it will be because the man you address is not an enthusiastic angler, or you are not well up on the subject yourself. Many warm and lasting friendships have resulted from an acquaintance begun in this informal manner.

It is curious to note what a wide range of opinions there is even among expert fly-fishermen regarding the effectiveness of trout flies, and "when doctors disagree who shall decide?" Some rejoice that there are so many varieties to choose from, and believe that although there are upward of 200 kinds on the market there is yet room for valuable additions. Others go to the opposite extreme and laugh at the idea of a large assortment being essential or desirable, arguing that half a dozen or a dozen at the most are all that are required. It is doubtful, however, if the extremists either way are the most successful fishermen, for it has been pretty clearly demonstrated that there is a happy medium in the use of artificial flies as well as in many other things.

Some of the would-be fly-fishermen who have not yet acquired sufficient practical knowledge of the gentle art to entitle them to be classed as experts, and will not for some time to come, carry books full of flies, gaudily colored ones predominating, and are willing to have people believe that they are authority on the subject. Such a man, while relating his fishing experiences, delights in telling how many times he changed his flies on a trouting expedition before he succeeded in finding a cast that the speckled beauties favored. It was a difficult matter to suit them, but the right kind were eventually hit upon, and a well-filled creel resulted. In a case of this kind the narrator is wont to dwell upon the good judgment he displayed in picking out the flies, and substituting those which successfully lured the trout, and his stories are apt to give the novice an exalted idea of the fastidiousness and perceptive powers of the fish which subsequent experience does not fully sustain.

The angler who enters into details too minutely in giving an account of the changes in flies found necessary in a day's fishing should be ready, if occasion requires, to undergo a cross-examination, for there may be a skeptic within hearing, one who is disposed to ask questions. After the story has been told of how the first cast, consisting, for example, of a professor, coachman, brown hackle and great dun, was superseded by a blue professor, Esmeralda, brown pennell hackle and hawthorne; these by a red-head, lady of the lake, Epting hackle and black ant, and so on until a successful combination was secured composed of an orange coachman, lake green, soldier palmer and black June, when all this information has been volunteered and the angler is dilating upon the merits of the last-mentioned flies, then the skeptic may come to the front with two or three apparently innocent inquiries. The initial one is likely to be something like this: "What time in the day did you begin fishing?" The next one may be: "How long had you been fishing before you made the first change of flies?" And then this one: "About what time was it when your last combination was made up and the trout began to bite in earnest?"

These queries, propounded in an inoffensive and interested manner calculated to convey the impression that the questioner recognizes the story teller as authority and is anxious to learn something, may, if promptly and truthfully answered, place the latter in an uncomfortable position. If the admission is made that it was later than 10 A. M. when the flies were first wet, that the quartet headed by the coachman was abandoned after a brief trial, and if it was nearly 3 P. M. when the trout began to thump the inside of the basket, then the skeptic is in his element, and the hitherto unsuspecting angler will be asked a few more questions, something like these: "Is it not possible that the time of day had as much to do with the refusal of the trout to bite during the first few hours as the get-up of your flies did? Is it not likely that a cast made up of a royal coachman, grizzly king, red hackle and black gnat would have been just as effective as your big four? Don't you think that after 3 P. M. the trout would have risen just as freely to your first combination as they did to your last?" A man must possess uncommon nerve and presence of mind if he unhesitatingly gives a negative reply to these questions, and yet if he does not do so and admits that any one of the three should be answered in the affirmative, what becomes of his vaunted skill and good judgment?

It is perhaps unnecessary to say that the angler of long experience in the Adirondacks, even though he believes in the policy of carrying all sorts of flies, will never allow himself to be trapped in this manner. If he has occasion to speak of changing his flies he does so in a matter-of-fact way, as if willing to give his hearers the credit of knowing that it must have been the only proper thing to do under the circumstances, and therefore his statements have none of the red-rag appearance which is so annoying to the skeptic, and so sure to provoke an attack from the cynic. The experienced fly-fisherman is more familiar with the names of the different artificial flies than is the superficial amateur who has taken great pains to memorize them in order that he may appear to possess much knowledge, and, further than this, he knows what insect each one is designed to imitate. There is method in everything that he does and he will never be found at a loss to explain his motive for changing his flies, no matter how often it may have been done. He always has at least one unanswerable argument on his side, and this is that the trout, when coming to the surface of the water for food, will be more apt to take a fly which looks like the natural ones upon which they are feeding than any other. Basing his actions on this known fact, he carefully observes what kind of fly or flies are on or near the water in which he proposes to fish; then, believing that the more nearly the manufactured fly resembles the real one the more likely it will be to deceive and allure the trout, which inspect it closely, he exercises the utmost care in selecting from his stock the individuals which are to compose his cast.

The other extremist, he who professes to believe that a very limited assortment of flies is sufficient to answer all requirements, does not hesitate to admit that the choice of a fly should be governed to some extent by the kind that the trout are rising to, but pins his faith more on its color or general appearance than on any finer points of resemblance. He cares little or nothing for the name, and knows the flies only as light and dark, or rather as black, white, brown, red, green, yellow and mottled. For his purposes any one of the four or five combinations of flies previously mentioned as being used in one day by the tyro would be just as good as another. He rarely uses more than three flies at a time, and frequently but two. He places a great deal of confidence in hackles and never fails to have one or more on his leader. His belief in the soundness of the well-known rule that dark flies should be used on light days and light flies on dark days is firmly founded, and to a considerable degree he is controlled by it. In his opinion finical fishermen waste a great deal of valuable time making substitutions in their strings of flies.

The Sportsman Tourist.

A Samoan Forest Stream.

THE climate, the indolence which comes to white men in the tropics, and the absence of incentive combine to make the Samoan bush practically unknown. It is only when some globe-trotting tourist or naval officer comes to the islands fresh from cold countries that any attempt is made to penetrate the jungle, and even in such cases one trip proves quite sufficient. From this it happens that very few indeed have ever visited the Afu Tapu or "Sacred Waterfall," which is one of the landmarks for the harbor of Apia. From the vessels in the harbor it shines as a bright ribbon against the dark green background of jungle, which begins with the cocoanuts at the beach, and extends back unbroken to the crests of the tallest of the mountains in the backbone of the island. One of the few visitors was the captain of one of her Britannic Majesty's cruisers, the Royalist, and he was forced to confess that it "took it out of him."

A wardroom party had gone into the bush with the American Consul, had reached a spot some four miles back from the beach, had put in the whole day in doing it and late in the evening had reported aboard tattered and completely fagged out, and with a universal clamor for embrocation. The next morning when the Consul came off to see the victims, Capt. Rason, a superb athlete, was unmerciful in his jeers at the wardroom country and his open wonder as to what was to become of the service if there was no more stamina than that among the younger men. The wardroom country knew its own bruises and creaky tendons, and whence obtained, and it plotted to put the captain through the same sort of work to see if he could stand it. The Consul was called upon to help, and the plot was speedily hatched. Under the quarter deck awning plans began to be developed for a two-days' leave to make the trip to the top of the sacred waterfall, plainly to be seen half way up the mountain. Capt. Rason bit at once. "Two days to go to a place that cannot be five miles off! Absurd! I'll undertake to leave the ship after breakfast, go to the top of the fall and be back here for luncheon." A few deprecatory suggestions from the wardroom country confirmed the captain in his plan, and the trip was arranged for the next day. As there was just enough of a wager on the event to make it interesting, Lieut. Hamilton went in the party to see fair play, and the American Consul went along to manage the guides and to take care of the Samoan end of the expedition.

Except for one or two well-defined trails across each island the Samoans are densely ignorant of the hill country. They live as close to the beach as they can set their houses, and always use the way of the water by choice. In all Apia and the neighboring towns on the beach it was impossible to find a man who knew the trail to the waterfall, even though it was such a prominent landmark, and only a few miles away. It was necessary to send to the town of Magiagi, a mile and a half back from the beach, and therefore considered a jungle settlement, to get guides. Their coming developed one of the unpleasant sides of Samoan nature. There were three white men, therefore there must be four Samoans, a bearer for each white man and the guide in charge of the whole party; the trip would take two days, and each Samoan must have three meals each day, consisting of one tin of corned beef, one tin of salmon and one of sardines, together with a loaf of bread. The charge was to be eight shillings a day for each of the bearers, a pound a day for the guide. Two hours spent in negotiation succeeded in reducing these prices by half, even then twice too much was paid, but it took too long to adjust this item. It was the case that on the rare occasions, not a dozen in all, when trips had been made to the fall two days had been given to the journey. But by laying in just enough rations for one meal on the customary dietary scale and not allowing that fact to be known until the beach was far behind, the Samoans were jockeyed into cramming the trip into one day.

For the first half-mile the route lay along one of the very few good roads in Samoa. But just beyond Malifa it was necessary to turn off into a well beaten path leading to Magiagi, and here the Vaisigano was first crossed and crossed on a bridge. The remainder of the excursion consisted in crossing and recrossing this river, but this was the only bridge. When the yelping curs of Magiagi had ceased to express their disapproval of the white men the guides insisted that a halt should be made while they brought bananas and cocoanuts for the refreshment of the party. Meanwhile the elders of the town discussed the hardships of the trip, and the danger of meeting the cannibals in the bush. Fortunately the two naval officers were ignorant of Samoan, and therefore did not understand the dreary picture of calamity which was being presented.

From this village the path rapidly dwindled into a mere trail, and about a half-mile further on forked, at least the Samoan guides said it did. Here a halt was called while a boy walked up a tree and began to drop cocoanuts down, the explanation being that this solitary tree was the furthest inland that was known, and it was the last chance of a drink. To the left the trail could be seen extending to a cleared patch, where a party of Samoans was seen cultivating the village farm of yams and tars. But the guide said the trail forked just under the last cocoanut, and in proof of it he climbed a slanting tree and jumped off on to the side of a small hill. Thence outward for the rest of the trip nobody but a Samoan who was familiar with the bush could pretend that there was such a thing as path or trail. They walk always in single file, and their bare feet make little impression on the luxuriant herbage, unless a path is a regular highway. This path, so far from being a common highway, was kept secret as far as possible, in order that it might be used in the frequent wars. It leads to Alaoa and Lata Pulumakau, where King Malietoa maintains a camp in which to take refuge whenever rebellion breaks out against him.

Soon after the trail ran up the tree the guide brought the party to the brink of a steep descent, down which it was necessary to slide for several hundred feet. Thus he approached the rocky bed of the river. Within a quarter of a mile this stream had to be crossed no less than five times. The Samoans simply kilted up their lavalavas and waded, one of the white men walked into the stream and out, boots and breeches and all. But the naval contingent tried to find stepping stones in order to cross dryshod. The lieutenant negotiated two fords without getting wet, then made up his mind that it was too hard work, and waded the next one. The skipper came to grief on the fourth crossing. A rock on which he jumped rolled over and deposited him in a pool, where he soused in over his head; after that he lost interest in keeping dry. Beyond the fifth crossing the way continued up the course of the river, but the river itself was absent. For a long distance this fork of the stream flowed in a subterranean channel beneath the sheet of lava which filled the valley of its course. After some distance of arduous climb along the bare and unshaded lava sheet, the guide turned off at a point where a hill struck straight up about as steep as the side of a house, and as high up as could be seen through the tree trunks it kept on going skyward. Up to this point Capt. Rason had been talking about the easy going and expressing his wonder at the wardroom party for being so used up. But at the bottom of that steep hill he suddenly remembered that he weighed two hundredweight, and he took time to think it over. A halt was called, and the skipper remembered his camera and found this a good place for views. By this means he protracted the halt to half an hour, and recovered sufficiently to begin reviling the wardroom country with his former vigor.

That hill called for more than 900 steps by actual count to bring the climber to the top, and each step was as nearly vertical as it is possible to be without becoming a ladder. Not even the guides scorned whatever aid might be handy, and for the most part the climbing was accomplished by resting against one tree trunk, catching hold of a liana hanging down from a tree higher up the slope, and working hand over hand to the next trunk, which offered a resting place. To do this successfully it was necessary to make sure of the attachment of the liana for one of the party got hold of one which was fast down hill, and lost a hundred feet before he could bring himself to a stop. It was a free-for-all scramble up that hill, with no thought of style. The lieutenant and the other light weight were first at the top, and as the Samoan bearers came up with the supplies they were sent down hill to help the skipper, who was evidently making bad weather of it. At last he reached the top completely used up. He had no wind left with which to revile that wardroom for being used up by their short trip. All that he cared for was to lie on the grass in the shade and enjoy the view. For the first time in the whole trip there was a view. Hitherto the eye had met nothing but jungle close at hand and every vista was promptly cut short by tree trunks or dense masses of herbage. But this hill crest pressed through the surrounding forest and yielded a view of Apia harbor and the north coast of Upolu which it was worth the climb to gaze upon. The harbor lay about four miles away as the crow flies, and every detail of the warships at anchor was as clear as in a picture. At this distance the successive waves could not be seen, but the barrier reef seemed to rest as lightly on the sea as flocks of wool stuck on a mirror.

From this view point, after a long rest, the guide again led on. The way for the next two miles was fairly easy and without any of the slopes so hard to negotiate. In fact, it was along the nearly level ridge of a hill so narrow that in many places it was possible to look down on either hand into deep valleys. On this stretch of easy going one had a chance to look about him at the jungle. The cocoanut in the Pacific Islands never thrives at any distance above the sea, but its place in the view was filled by the far more handsome areca palm. Here and there were great banyans colonizing an acre at a time, with the outlying stems and branches of a single tree. Everywhere was the tree with buttressed stem which leads to the saying that Samoa has a tree which grows ready made plank. Overhead the shade is so dense that the sun never penetrates. Underfoot the ground is never dry, and the foot sinks deep in moldering leaves. Every tree affords lodgment to ferns and orchids, and from trunk to trunk are stretched long lianas. One species of these vegetal ropes when cut into lengths will yield copious store of drink to the thirsty, a fact of which the Samoans with their remarkable absence of woodcraft are ignorant.

Finally the noise of many waters was heard deep in the ravine. Another steep descent was to be attacked, and it was the hardest of all. It was impossible to move a step without clinging to tree trunks and the deceptive lianas, and there were 700ft. of that sort of work. With many a slip and slide, banging against trunks and rocks, with one nasty fall that ripped open Capt. Rason's arm, the descent was made. At the bottom a 20ft. stream was flowing so quietly that every one was tempted to lie right down and let the water flow over him. Having yielded to this temptation for some ten minutes, the skipper demanded to know how far off the waterfall was. He was horrified to learn that he had been lying down in the river not 50ft. from the brink. Just around a bend the river fell sheer 500ft., and the lower gorge was so narrow that the roar of the waters was pent up and did not reach the brink of the fall. But if the fall were dumb it was still a splendid spectacle. It was possible to climb out into a natural rock seat, which hung sheer out over the chasm at one side of the cataract. From this seat one could look at the face of the fall and watch the volume of the stream dissolve into mist before it reached the bottom. From the same seat the gap in the hills framed in a view of the harbor of Apia, between its two points of Mulinucu and Matautu.

At the foot of the fall the gorge opens into a small plain where the waters of the river gather together after the plunge. Here were to be seen evidences of cultivation, and at last keen eyes discovered a group of huts under the trees. We had found the encampment of the runaway black boys from the German plantations, cannibals every last one of them, and therefore a great bugaboo to the Samoans. But here the Samoans were above, the cannibals below, between was a rocky precipice, which could not be scaled except after hours of exertion. Therefore the Samoan guides and bearers had the coward's courage, which will face anything if only it is tied. They vented their enmity in loud cries of "mea uli—black things." Very likely the cannibals did not hear the taunt, at least they paid no attention, and our Samoans were brave until they got back once more into the jungle, where they might chance on a stray black boy.

In camp at the top of the fall the baskets of food were opened, and preparations made for the meal. All preparations were completed by chopping down a banana leaf and emptying upon it a tin of corned beef or canned salmon. Just at this period the Samoans made the discovery that there were just enough rations for one square meal. Up to that time they had been convinced of the impossibility of making the round trip in less than two days. Now they saw the necessity of making a prompt start in order to get back to Apia before dark. The round trip consumed eleven hours, including stops.

The wardroom country was amply avenged for all slights cast upon their ability to take a stroll ashore. All the officers had business just about the gangway when the skipper came aboard, and the only comment made to show that things were evened up was the remark of the executive, "You must have gone somewhere else afterward, sir."

WILLIAM CHURCHILL.

Adirondack Trails.

Editor Forest and Stream:

One of my best friends has written to me out of the woods. It brought the sound of trout splashing in a still water, the scent of a spruce slashing in a balsam swamp, and enough of the woods life to make me woefully homesick for a couch of boughs under a roof of bark. The letter was written by a woodsman whose skill at his craft is unexcelled, whether wielding a heavy axe, whether carrying a heavy pack, whether following the trail of a deer, or on a dance platform under the trees, he is one of the finest looking men I ever saw, for he fills his niche better than any one I know of. There is a bit of information in the letter, however, which deserves especially attention, as bearing on woods life, for it calls to mind the most remarkable feature of men in the woods—the trails they follow and leave. Here is the way my friend put it:

"The League is getting pretty gay. Now they forbid any one going across their land. They have a man at North Lake to stop any one."

I do not intend to say much about why the Adirondack League has done this, and what I do say will be, perhaps, in justification of their course. The vast possessions of this sportsmen's club, extending from the West Canada Creek to Moose River, and north further than I know about, have more than once excited comment in your columns and elsewhere. Of the many curious happenings on this territory, none are more interesting than those on the Canachagala Lake and the old Bisby trails, which have now been closed to the public by the man at North Lake. The closing of the trail is sufficient excuse for telling a little about the trail. There is no human path more interesting in those woods:

I believe it was one of the Indian paths, followed by scalping parties in the old days, from Canada down to the Mohawk Valley. Certain it is the trail was blazed through more than forty years ago, and has since then been the public highway for hunters, fishermen and campers of every class, from the purely market-profit seekers to the beauty hunters, and recreators. If, by shutting this trail, the League has put a stop to the crimes in deer and other slaughter that have been committed at its terminus, they have done a favor to every man and woman that has ever trod it. We can think of those beautiful woods now with the utmost satisfaction. Not only are the League lands protected, but thousands of acres of Government territory beyond them, accessible only across their property to wood followers, are preserved from vandal hands.

But this is not telling about the trail. From the northern end of North Lake the trail leads away up Canachagala Mountain four miles to Canachagala Lake. North Lake is really a still water of Black River, raised by dams so that it might serve as a feed to the Black River Canal. It winds along just like the stream did, and twists back into the woods away out of sight behind hills and points and islands.

In the old days, say five years ago, the trail was a mere footpath, going around, too, thick tree tops and avoiding little hummocks and grades. It was up and up with heart-breaking steadiness all the way to the lake on the mountain. Packs of men following it grew heavier at every step, and the bearers staggered at the last with throbbing head and starting eyes into the clear view across the lake to the islands and the woods beyond, whichever way one came from. It is a restful place, a sort of elixir of life locality, and one gets his second wind marvelously going across that lake in a boat, listening to the loons and gulls, and seeing perhaps a deer.

On the far side the trail rises for a few rods, then plunges down into a gully—plunges down on the river side a bank so steep that men slip and slide and grab at fallen trees and saplings in going down. This is the "Windfall" where a true twister storm once parted the trees and then mussed them up together again. For a half mile or so there is little or no trail, then one comes into the Old Bisby trail, and thereafter one walks on a at times slightly rising grade to the river, along the foot of a ridge, through ever changing wild land.

It has been a part of the education of the Herkimer county woods lad to learn about this trail. He shivers at the thought of the windfall even before he has even seen North Lake. He imagines how the birch roots look, where one leaves the Bisby trail to go to Canachagala Lake. He almost sees the resting places at springs which are so important to that trail's followers.

The boy's ambition is to follow this trail with a party of hunters, bearing his share in a fish basket for a pack, and a rifle to shoot. He knows how heavy his pack ought to be. He dreams wistfully of the 100lbs. or greater packs such as men like my correspondent makes records with, and wishes that he too might carry such a back-breaker over such a trail.

It is a good place to dream about, this forest, especially for boys. No matter how it may have been slashed over, or burned, or gone to second growth, it is yet

clearer and sweeter than other topics, and lasts longer. Dreamed about or in the reality it is of never ending interest, and there is no rod on the Canachagala trail where one might not study a life, or a death, or think philosophy by the yard.

In the earliest days now remembered it was no uncommon thing to hear the wolves on their howling race for prey. The fearsome print of the panther's paw was often found in the damp places at spring sides, a pad sometimes just crumbling into the hoof-print of a deer—that was thrilling. The trail to the lake has been changed much of late. A year or so ago the State Canal Commissioners decided to increase the size of the State reservoirs. The dams of Canachagala Lake were to be raised 5ft., and a gang of men was needed. To house the men a camp had to be built, and that meant lumber and a wagon road. The old trail, already slashed and mangled, was cut out almost entirely by the Government road to the lake. It is now as rough and muddy a road as one can think of, almost. It is by no means as inviting to the pack carriers as the old trail, yet it is still the Canachagala trail. Deer and other game were driven away by the human operations thereabouts, but now that the road is closed to human trafficking their tracks may again be seen by the flocking blue jays in the leaf-strewn woods road should the birds care to look. They may even see the animals themselves. Beyond the lake, although there was much lumbering carried on there a few years back, the old camps have been destroyed, and the little "camp wood" clearings about their sites are growing rapidly into second growth, as excellent deer browse and cover. No woodsman ever yet passed by day over the river side of the trail without seeing the signs and traces of game that thrill.

A strange and motley array of people has passed over the trail, ranging all the way from students of nature to purely business men, from children to the sick and aged, and every kind of garb, almost, has been worn over it too—the man who because his clothes had been lost somehow had to come out in a deerskin clout, and the other one who wore patent leather shoes and a silk hat, having started on the spur of the moment, are still told about. The fanciest of hunting rigs, from gold mounted rifles to moose skin hunting boots, as well as the loud-colored mackinaw flannels, with a deer tallowed repeater, and everything between, have astonished the red squirrels into the hastiest of scamperings and most stuttering of protests.

There is no hour of the day or night that has not found men creeping through "The Windfall," or picking their way feet first along the packed beaten way. Men these were who had received word of sick ones at home, or had news of tragic import to carry in. Sometimes it was to catch trains. Always, however, it was a trip of interest, occupying the tramper's closest attention by day or night.

There were voices along the trail, too, always. Sometimes the commanding of a deadly weapon, of a gun or rifle, mellowing away through the hawk's scream, the hound's bay and man's shout to the veery's dreamland cry at night, and the lisping sob of the leaves and tongues of roots and charred fagots, the heel marks of tongues of roots and charred fagots, the hell marks of boots and traceries of insects, the chips and signs left to lie in silence, unseen often, but each with a volume to tell of adventure in one way or another, were a listener ready. Near the end of the trail is a tree through which a bullet once passed. It was this bullet that killed young Pell a few years back. A man—maybe several men, trappers and the like—was once looking for this trail on the mountain near by, but he never found it. A wanderer in the spring came upon a few traps, well rusted, near by was a little axe, and then he found a rifle. A little further, beside a log, were the marten and fox knawed bones of a man. In the winter snow the man had been lost and then died. His bones were carried down the trail to his home.

Who can tell of the venison and fish that were carried over this trail? One party, I remember, of sixteen, each man of whom brought out a pack load of say 60lbs.—half a ton of jerked venison, besides the venison that never came, not even as dog bone and tissue, but lay under the trees, food for beetles and bears. Men who trod that trail alone killed—who will venture to put high enough the number of deer? But it was worth the health it gave to the men who found not alone health, but life there, whatever the slaughter of game.

And trophies; Charlie Thomas', George Squires', Fred Jones', Dye's and my own—all these deer horns. The mouldy moose horn Fred Jones picked up, and which now hangs at Will Light's. That strange doe skin Will Miller killed at the Natural Dam one fall—a doe in the fall coat, but red as the reddest summer buck. The lop-sided head—spike on one side and five point on the other—the great angular thing killed by a New York broker; loads of skins and furs, rocks that were the hope of gold and silver seekers—and best of all, woods lore to last a century, came to remind people.

Curiously enough, besides all sorts of weapons, foods, drinks, garments and camp ware in general that have gone over the trail, some few books have found their way to camps at the end of it. Only last year I found half a dozen novels in one new camp, and scraps of poetry were to be read on the peeled logs, written with pencil, as if somebody had carried a few book lines in his head. Sometimes a little original rhyming was done, and it seemed as if the bluejays had learned them "by heart." There never is a lack of names or initials carved into the bark of trees, and I have seen deer hair hanging on the splinters of such carving—that deer had been rubbing it in.

The trails that cross the man trail—they too deserve attention, greater attention maybe than seventeen men trails should receive. But this is the story of what men followed, and only a line can be given to the others. Overhead the migrating birds, "setting their course by the mountains"—not blazed saplings—passed on their way north or south; squirrels in the tree branches, and on the ground the deer, rabbits, and the mice running, or walking, always in the same footsteps, the easiest courses to given points, left more or less plainly marked and followable paths, and they cross the man trail all along its course, sometimes even follow it aways, but it was woe when the wild tribes disputed the right of way with the tamed!

Perhaps now that none is to be allowed to follow the old trail any more it will grow up and become forgotten, something for mythologists to sit on. But until certain many of the now living die, nightly there will pass over it beings for whom the trespass laws have no terrors, and though the watcher at North Lake wear the cap of invisibility and the shoes of silence, he will never catch them, for what gamekeeper will venture to try guarding dreamland?

At any event it is the hope of every honest lover of the woods that never again will an ill-gotten bit of meat come over that trail, that neither the bay of hound nor man's voice seeking any injustice will ever disturb the serenity of those forests. Enough bloody tragedies have been enacted there to let it now be said that they are now baptized as peace. The wrongs of the past are not all irremediable. That some will be there is no doubt, and gracefully, too, before it is too late. A right and just relation between man and man and man and beast there is bound to be sooner or later, but especially when they meet in the shade of the balsam, spruce and birch, sung to by all the woods birds, by all voices there, their own joining in the chorus.

NEW YORK CITY.

Yukon Notes.—VIII.

History of the White Pass Route.

IT had taken our party nearly two months of incessant labor, working on the average five horses daily, to pack across supplies for two men to Lake Bennett, forty-five miles from Skagway, and also advance the supplies of the other three members of the party to the cache, where Herrington and Baskerville built a shack and wintered, fifteen miles from salt water and about five from Summit Lake. At the start our outfit in the aggregate weighed upward of 8,000lbs. Of this less than 2,000lbs. reached Lake Bennett last October, including about 1,500lbs. of food. And yet this showing, barren as it is, was far above the average. Hundreds of men wintered on the trail who had landed weeks before our arrival, and of those who started at the same time we did not one in a score succeeded in getting over the pass before the lakes closed.

Almost the only men who got through to Dawson, starting on equal terms with our party, were those who crossed Chilcoot Pass. In general terms, the 4,400 persons who by actual count passed Fort Selkirk en route for the gold fields in 1897 either landed in Skagway late in July or early in August, before the season of heaviest rains, or else went in over the Indian route.

ON THE TRAIL.

From sketch by J. B. Burnham.

The White Pass trail was one of the great swindles of the century. It was systematically boomed through the newspapers in the interests of a land and railroad company who had no immediate advantage to gain, and who caused the public incalculable suffering and loss because they were afraid their interests would be sidetracked if they allowed the first great rush of miners to pass by and go in over another route. This company had in its employ promoters who went so far as to give to the newspapers statements that a wagon road across the pass was nearing completion, and would be open for travel by September. The horse trail, it was declared, was excellent and passible by loaded pack trains in a day. Its length was stated to be less than thirty miles, and grades were said to be easy and footing good. The height of land was said to be 1,000ft. lower than the terrible Chilcoot summit, and many alluring rumors regarding a shorter water route to Dawson via Tootshai Lake were circulated.

The truth of the matter is that at the time the boomers were most industriously at work advertising the Skagway route there was no trail across the pass at all, and that all efforts were being concentrated in the endeavor to discover that which did not exist—a feasible route to Tagish via Tootshai Lake.

A short wagon road had been built at Skagway which was really little more than a main street for the prospective town, and from the terminus of that to the summit a trail had been opened, which was merely a makeshift for getting in supplies to the exploring party. Only the trees and bush had been cleared away, and the footing was over untouched rocks and quagmires.

Skagway had a better harbor than Dyea at the entrance to Chilcoot Pass, and the difficulties of the latter were already well known. Naturally the reported advantages of White Pass were alluring. And so it happened that nine out of ten men at the last moment decided to go in by way of the new route. The miners figured that $20 expended for a horse in Seattle, $20 for freight, and $20 for feed would put them through with an outfit in two or three weeks. Many brought knockdown boats, thinking it would be an easy task to pack them over the trail, which they believed to exist as reported. Later these boats went to build houses along the trail, or were burned for firewood.

When the vanguard of the Argonauts crossed the summit of White Pass, the trail, which they had followed that far with difficulty, gave out altogether, and they had to be their own explorers and road builders. Passengers from the Queen and Mexico fell to with a will, and finding that the Tootshai route ended among wild cañons in a towering mountain range, they resolved to make the best of a hard matter and effect a juncture with the almost forgotten Chilcoot trail. They could not take the time to pick the best and shortest route, but struck westward at a venture through wooded plateau country, between snow-clad ranges. The men marking out the line and those chopping and clearing the way were never a hundred yards apart, and the pack horses followed directly in their wake. Eventually they reached Lake Linderman and paralleled the old route for three or four miles to Bennett.

With the passage of subsequent parties the trail, which had never been good, grew steadily worse. The crust of sloughs which had supported the first horses that passed over broke through, and no bottom could be found. The fall rains washed the surface soil from the rocky parts of the trail and made them slippery and dangerous, while corduroy that had been put in in places was floated off, and fords became impossible for several days at a time. The 1st of September found 3,000 horses working on the trail, and to its natural difficulties was added the vexatious delay incident to the movement of the long columns advancing in single file.

To reach the 2,600ft. height of land the trail crossed five mountains, and climbed an estimated aggregate of 12,000ft. It swung round almost in a semicircle, and if we imagine a great letter D with the straight vertical line representing the Chilcoot trail and the curved line the Skagway trail, we have a fair idea of the relative positions and lengths of the two main gateways to the upper Yukon.

Freighting on the Chain of Lakes.

Just bevond the summit of Chilcoot Pass are three glacial lakes, Crater, Long and Deep lakes, and the chain is duplicated in White Pass by Summit, Middle and Shallow lakes. The White Pass chain affords twelve miles of navigation, with a total of something less than two miles of portaging, the carry between Summit and Middle lakes being much the longest. The last four days in August the Skagway trail was closed to permit a hopeless effort at improvement. Small groups of men with loaded rifles stood guard at intervals and effectually checked all attempts at packing, in some cases not even permitting men to get feed for starving horses. Foot passengers were held up and made to work by these press gangs, and so much bad blood was engendered by this arbitrary action that it is surprising there was no blood shed.

McKercher, Baskerville and Sheriff, of our party, volunteered for work on the road, and I put in the best part of two days assisting in the work of leveling some of the worst boulders on the hog back mountain with dynamite. During this period I managed to get time to go over to the chain of lakes and saw at once that they would give us a big lift on our journey, with the aid of our folding boats. In company with Hepburn, the White Horse Rapids pilot, who was thinking of putting scows on the chain for freighting, I looked out a practical horse route from the main trail, which did not then approach nearer than a mile to Summit Lake, and having satisfied myself that horses could be gotten across, I returned to camp. At the first opportunity we packed over four boats, and during the three following weeks most of my time was spent freighting from the head of Summit Lake to the foot of Shallow Lake with a tandem team of two boats on each side the long portage. My plan was to carry a large amount of goods across these lakes for persons who agreed in exchange to pack a small amount for us from our camp to Summit Lake. In this way we often had other men working for us, and the size of our pack train was for all intents and purposes increased.

I shall never forget those weeks of storm and rain among the barren mountains of the coast range. In occasional intervals of clear weather the eye was often puzzled to differentiate between the snowy Tootshai range and low lying cloud masses that rivaled each other for snowy whiteness.

In stormy weather eternity sat brooding with deathless serenity upon the hoary faces of snow-capped, glacier clothed pinnacles seen towering high overhead through rifts in the driving mist.

Summit Lake in particular was rarely free from fog. It is a peculiarly shaped lake, six miles long and never more than half a mile broad. In places the channel is obstructed by pinnacly islands of broken rock, and elsewhere the lake bed is driven into long narrow arms rounding north and south, parallel with the general direction of the main body. These arms are often blind channels, and in foggy weather it requires a clear head and a good knowledge of the lake to keep from being lost among them. Near the lower end of the lake on the east side is a bay from which branch off four of these channels like the fingers of a hand, with an aggregate shore line of a number of miles. The opposite side of the lake here is exposed to the prevailing south wind, which has a straight sweep of nearly five miles, resulting in a very ugly sea.

It was necessary to keep off this dangerous lee shore, but this involved the crossing of the bay alluded to, and at times when the fog was so dense that the stern of your boat was almost lost in the gloom it was no easy matter to lay one's course so as to hit the particular point with the semi-submerged "nigger head" rock at the end that marked the main channel of the lake.

One of the fiord-like passages diverging from this bay could be traversed with an unloaded boat, but the passage of heavy craft was checked by submerged rocks half a mile from either end.

Returning light one afternoon, I took advantage of this channel to avoid the wind and waves of the lake, and just above the submerged barrier came upon two men who were crouching very disconsolately over a puny fire of roots, with their boat drawn up alongside on the rocks. They hailed me and wanted to know where they were. They had spent the best part of a day in following blind channels, and were afraid to round with their

heavily loaded boat the exposed and wave-swept point separating them from the main lake.

Acting on my advice they took out about half their load and floated their boat over the shallow place in the channel and soon after reached the foot of the lake in safety.

These men were unfamiliar with the lake, and had little experience with boats. They were hired by the "cow butter" man from Juneau, who was conducting a freighting business and had contracted to make a certain number of trips a day, often working half the night to accomplish their task. Their boat was a clumsy slab sided old tub that pulled as if it was chained to the bottom, and half the round trip was always against the wind. Often the poor fellows working these boats—man killers they called them—would pull with straining muscles and gritted teeth for minutes at a time to get past some exposed point and make no headway whatever. It took every ounce of their strength to hold what they had gained till a lull came in the wind and gave the opportunity to pass. I made my way up the lake guided by the roar of the glacial stream that comes in on the west at what one of the boatmen called his park, a little patch of green in the gray expanse of rock. While keeping close in under an overhanging ledge, I saw a small pink-eyed sharp bill duck swimming beside only a few feet away, and as a wave threw my boat toward it I reached over and actually caught it in my hand. I could find no mark of injury on it, but no doubt it had been wounded by a stray pellet of shot. I threw it on the bottom of the boat and from time to time it gave a cry exactly like the "mew" of a kitten.

At the head of the lake the "cow butter" man hailed me and asked if I had seen anything of his men. I told him I had found them lost in a blind channel and given them their bearings, and the news did not tend to pacify two or three parties of men who had each been given the solemn assurance that their goods would be taken across the lake that day without fail by the boat in question.

The freighters on the chain of lakes had an unenviable reputation for dishonest dealings with their patrons and unmerciful treatment of their men.

Inexperienced men were hired and sent out to navigate unknown waters, subject to fierce winds, with boats loaded to the gunwales with heavy freight. Shipwrecks as a consequence were of daily occurrence. I left the head of Summit Lake one windy day in company with six other boats, and that night I learned that only one other boat besides my own had gotten through to the outlet. The other five had been swamped or landed and cached their cargoes. Tons of provisions were thus damaged or lost, but in most cases the men escaped with their lives, though this must not be taken to mean that drownings were not of common occurrence. In no case that I know of was any reparation had for lost goods. The worst offender always secured his pay in advance and then disappeared, leaving his irresponsible boatmen to suffer the consequences of catastrophes resulting from his method of doing business.

Boating and Packing.

From the lakes white goats could frequently be seen on neighboring mountains. Conies and marmots were plentiful, and single individuals or small bands of woodland caribou were frequently reported in the wooded country over toward Tootshai Lake, or around Middle Lake. Bears were also seen from time to time. One misty evening I saw some strange animals in the brush back from the long sand beach on Middle Lake that I took to be bears. A closer investigation, however, showed them to be stray horses that had made their way to this out-of-the-way spot over some very rough country. Some week-nerved man on the trail, rather than kill their horses when they were worn out, turned them loose to die of starvation. Such horses were a public nuisance, stealing the feed of other horses, breaking down caches, and creating confusion by running through camps at all hours of the night. One night when I was sleeping at Shallow Lake under a boat I had drawn up on the beach, a stray horse of this character came along and tried to overturn the boat to see if there was anything edible under it by mounting on it with his fore feet and pawing. The fact that the boat resisted the attack speaks well for the strength of these frail looking creations of wood and wire and canvas. The sensations of the sleeper thus suddenly aroused can better be imagined than described.

I carried in all a number of tons of provisions across the lakes during the month of September, and did not lose or seriously damage a pound. My closest shave was one evening on Shallow Lake, when, after I had my two boats loaded, the man for whom I was freighting brought down a big roll of robes and blankets, weighing 150 or 200lbs., of which he had not spoken before, and insisted on having them added. I protested that I had on all I could carry safely, but his party needed the bedding for camp that night, and as he agreed to assume the responsibility for any accident, and as the lake was calm, I finally gave in and against my better judgment accepted the additional load.

Half way down the lake a furious squall arose on our beam and at its height the bundle of bedding shifted, careening the rear boat of the tandem upon which I had placed it till the waves came in over the gunwale, a bucket full at a time. Loaded as she was, it would only have taken about ten seconds to swamp the boat. The short tow line which connected the boats made quick action difficult. There was only one course of action possible, and that was to turn the leading boat directly around, and so throw the two side by side. The boats came together in the trough of the sea, pounding each other and each shipping water, but a second later I had tipped up a 100lb. sack of bacon on the highest gunwale of the jeopardized boat and placed her on an even keel, and the worst was over. There was considerable water in the boat when I came to unload, but the bottom tier of her cargo was composed of flour, hardware, canned goods, etc., and was not seriously damaged.

The longest half of the trail from the Summit to Lake Bennett was covered much more quickly and easily, relatively to the amount of goods packed, than the first half. As soon as the last of the supplies to go through reached the head of Summit Lake I sent the horses to the shelter of the jack pine woods three miles beyond Shallow Lake, and within an easy day's journey (nine miles) of Lake Bennett. One night was spent on the way at a prearranged camping spot at Middle Lake, in a little wooded valley some distance off the main trail, where the horses had shelter from the icy winds that already betokened the near approach of winter. Arrangements had been made for packing our goods across the two portages in the chain of lakes, and in this way our horses were saved fourteen miles of the trail and the exposure at night above the timber line, which proved so fatal to many expeditions.

Horses left on the exposed summit of White Pass were seized by a deadly influenza, and even parties who double blanketed their horses and kept them in tents at night suffered loss from this source.

The man who carried our outfit across the long portage between Summit and Middle lakes lost two horses while performing the service.

Goods had been sent through so that there was no delay in the packing from the new camp. Earlier in the season the twelve-mile trip to Bennett and return had been made in a day, but the trail had deteriorated to such an extent that this was now impossible. Instead our horses made two round trips one day from Shallow Lake to camp, and the next one round trip from camp to Bennett, aggregating respectively twelve and eighteen miles per day. The horses averaged 140lbs. or so to a pack, and had all they could carry. On this part of the trail we did our own shoeing almost entirely. Blacksmiths charged as high as $2 per shoe, and I have even heard of $5 being paid, though personally we had no experience with this latter exorbitant price. Shoes came off daily on that rough trail, often miles from any farrier, but we had only to unfasten the sack of shoes and tools, and the job was done on the spot. Horseshoe nails were at all times scarce and hard to get. At one time $1 apiece was paid for these nails. Shoes, however, were plenty. If you didn't have the right shoe in your kit, there was always a dead horse handy to pull one off from. These horses, as a rule, died late in the season when cold weather was already at hand, and were not in most cases offensive. The ravens had such a bountiful supply provided that they could afford to pick and choose, and only attacked the carcasses here and there. It was a sickening spectacle to come upon these scavengers at their work. First they ate the eyes of the horses and afterward they feasted on the gall sores.

J. B. BURNHAM.

The Old Village Home.

THE writer of the following letter is a middle-aged Pawnee Indian, born and reared in the Pawnee camp, but later educated and taught to speak and write English. He recently started with his wife and one other Pawnee family from the Pawnee reservation, in Oklahoma Territory, on a visit to some relations who live with the Omahas in Nebraska. As is natural, the article on the old West which appeared in the Jubilee Number of FOREST AND STREAM appealed strongly to this man, and called out from him the following letter in reference to his trip by wagon from Okalahoma to northern Nebraska:

OMAHA, Nebraska, June 29.—*Editor Forest and Stream:* We are here once more in Nebraska. We were on the way about nineteen or twenty days, one other family and my own. I have seen your Jubilee Number and the article in it about the West as it used to be, together with the journey that I have just made, makes me think of the old times.

We passed through a great deal of the country which our people, the Pawnees, once owned, and where they roamed free. We Crossed the Smoky Hill, the Republican and the Blue rivers. All along the road are many railroads, cities, towns and farms. You can hardly get any grass for your horses, except what one can find in the lanes. At last we came on the dear old Platte River, at Fremont, Nebraska, once the home of the Pawnees. Here we encamped two days on the island under the mysterious bluff Pah-huh, where the spiritual animals are supposed to live, and where our people, the Pawnees, used to worship the Great Spirit.

During our stay there the woman of the other family with us had a dream. She said she dreamed that she was taken under the hill Pah-huk by the animals. It was a lodge. As she went in, the animals made all sorts of noises to welcome her. She was at first afraid of them, but when they did not hurt her she felt easier. After a time these animals were transformed into human beings. One of them, an old man, spoke to her and said, "Grand-daughter," and when she looked at him she recognized her old grandfather, who had died while the Pawnees lived on the Platte River years ago. He was a great doctor. The old man said: "Grand-daughter, you see me. I am living here. All these people that you see are our people. They are all doctors." Then they commenced to do these mysterious things—and when she woke up, behold, it was a dream.

You can imagine my feelings when I went to visit the old village site on the bluff about two miles below Pah-huk, on the same side (south) of the river. The site overlooks the Broad River, and a beautiful scene. One can see from the bluff where the village once stood. It was here, at this very spot, that I was born forty-three years ago. Everywhere the white men have ploughed up the village site, except one or two mounds, where the dirt lodges once stood. Even where the graves once were they now have cornfields. As we stood there on the village site, it seemed that my thoughts went back to the time when my people lived here—although I do not remember when I left, being then but about five years old. My father used to tell me that at the time I was born he had just come in with a war party from the southwest. They had gone as far as the Canadian River, in the Panhandle of Texas, and had run off a great herd of ponies from the Kiowas, or Comanches. It was from this very spot that the war parties used to start out in every direction against their enemies. Now all these old-time heroes are dead and gone—gone where no one comes back from.

We found on the village site an old tomahawk with no pipe on top—perhaps the tomahawks were once made in that way—and the barrel of a horse pistol. We shall keep these as mementoes. We crossed Elkhorn River at the place where my poor mother swam across with me on her back when the white soldiers attacked the Pawnees. I think this was in 1858 or '59. My old mother died in Oklahoma, at our present home.

As I pen this, tears come from my eyes against my will. It is sad.

Reflections.

SPRING has gone and summer is now with us. The "longest day in the year" is a memory of a few days back, and henceforth we know that every day as it passes is a wee bit shorter than was its predecessor.

The small boy disports himself in the cooling water of the neighboring creek. The woods are green, the marsh is green, and all nature seems a song. The law says: "Thou shalt not roam the field with gun in hand, lest thou destroy the birds that dwell therein," but why should this make the heart of reasonable man sad?

The enthusiastic angler has hied himself away to the brooks and streams he loves so well; but I have not gone; instead I sit here in the cool evening air and reflect.

My Remington stands in its rack, glistening with its coat of grease, while scattered about in various places are its companions, friends of mine, all of them. As I gaze at its shining form there arise before me visions of the days gone in which we have been together in field and forest, marsh and cover.

We have seen some red-letter days and some disagreeable ones too; but who is it that in memory's retrospect treasures the gloomy and has naught but coldness for the bright and agreeable—the sunny portion of existence? How well do I remember the opening of the snipe season last year, and with what eagerness I hailed the time when I could once more tramp away spare moments in seach of the long-limbed denizens of the marsh.

The day was a blank, but I cared not for that. It was sufficient for me to be once more among old haunts, to sit in the old blind reconstructed for the season, and to think of former days when things were different; when Ned sat in the corner over there and between shots discussed with me fall campaigns. Those were glorious days, but they have gone, and so has Ned. He is now in Chicago. I wonder if he can sometimes steal away to the happy hunting grounds this side of paradise, where winged things are, but there are no angels.

And thus it is. One day after another comes up, and after having been lived over is relegated to obscurity, there to remain until future occasion shall again call it forth.

Gentle reader, have you ever been there? Does your day's hunt end with the setting of the sun? If so I think there is something sadly missing, for much that might be treasured is wasted, and there is lost to you one-half the real pleasure of a day afield.

J. F. LEONARD.

ATLANTIC, June, 1898.

Natural History.

The Story of a Coon.

HE was a homely little fellow when I first saw him. My foxhound found him in a large hollow chestnut tree in an open pasture about 300yds. from my house. His mother and two brothers or sisters were with him. The little coons were about the size of large rats and as blind as bats. I left them, thinking the old coon would take them away. On going to see the next morning, I found the old one and one young one gone, one little one lying dead on the ground, and another, the subject of my story, lying on his back at the bottom of the hole in the tree and just about dead. I took him home, put him in a warm place, and he revived.

It was nearly a week before his eyes opened. I brought him up on a nursing bottle. As the days passed he grew very fast and lost the homeliness of his extreme youth. The way in which he would dispose of about half a pint of milk three times a day was a marvel. After about a month I weaned him from the nursing bottle and taught him to drink from a pan. He would always put both forepaws in the pan and bury his nose up to his eyes, and drink greedily as long as he could hold his breath; then throwing his nose in the air he would recover his breath and go at the milk again. Milk was his only food for some two months, but when he decided to change his diet he did it very suddenly. He drank his milk as usual one night; but the next morning refused to touch it, and never afterward could be induced to put his nose in a pan of it. He then took to eating almost anything which had been cooked, but did not care much for either raw fish or meat, unless it was a very young chicken.

As he grew larger he became very pretty, interesting and cunning. He was allowed to go where he chose, and would sleep under the piazza. He would follow me anywhere like a dog, and often long distances in the fields and on the roads. When getting behind out of sight, he would take my track, and when he could not find it he would call for me to come. Usually he made a soft sound, somewhat similar to the cry of a woodcock in the spring; but when he was real mad or hurt it sounded something like a tree-toad, only sharper and louder.

He had a way of always putting anything given him to eat into his pan of water and poking it about in the water with his paws before eating it. My two dogs and he were great friends, the hound not taking much notice of him, but always friendly. With my pointer he was very sociable, getting on his head, pulling his ears and climbing all over him, all of which the pointer submitted to, and seemingly enjoyed. He was not at all gunshy, and when I was targeting a shotgun he would stay near me and follow me back and forth every time I went to look at the target. When I was sitting down anywhere near him he would come and go through my coat pockets very quickly, pulling every-

thing out he could find. He could use his forepaws as well as some people can their hands, and would very cleverly catch things tossed to him.

As cold weather approached he grew very fat, and when about six months old weighed 24lbs. After snow came I put him in a box stall in the barn, and he slept a greater part of the time, eating but little. I would bring him into the house three or four times a week, and after he got warm he would prance about the room and play with the cat by the hour.

After snow went off in the spring I got a hollow chestnut tree some 18in. in diameter, and set up about 15ft. of it in the yard, covering the top and making a hole near the top for him, with a bottom about a foot below the hole, and tied him to the tree so he could climb up and down. Cooney was very much pleased with his new quarters, and was continually going up and down, or would lie in the hole, looking out to see what was going on. I had to keep him tied in this way, as we had a large brooding house near, with several hundreds of young chickens, and Cooney would kill them, although he never touched full-grown fowls. Occasionally he would get loose during the night, as with his constant climbing he would fray the cord he was tied with, but we always found him the next morning in some of the outbuildings.

Some two weeks since he got loose during the night and has not been seen since. It is but a few steps from my yard to the woods, and as Cooney gazed at them from his tree perhaps the wild spirit of his nature was aroused, and he wandered away. I was very sorry to lose him, and should he come back he will receive a most cordial welcome. If not, may good luck attend him in his wanderings.

C. M. STARK.

DUNBARTON, N. H., June 12.

A Heron Colony.

A COLONY of great blue and night herons nesting together on a small wooded island three miles from town was visited May 8, 1892. The island, containing some three or four acres, was thickly covered with black oaks and poplars, and at that time was completely surrounded by water, being about forty rods from the main shore. Finding it impossible to wade across to the island, on account of the depth of the mud, rather than of the water, we secured a skiff and paddled across.

A few birds were seen now and then rising above the tree tops as we were quietly paddling over the open water, and as we drew nearer the female great blue herons could be seen sitting on the nests, while a number of males were standing on the edge of the nests, or perched on a branch near by, with necks drawn down, apparently enjoying the genial sunshine of the beautiful morning. As we approached, with not a sound but the splash of the paddle, the herons one by one would stretch up their long necks, take a good look at us, then look around as if to see what their neighbors were doing. The landing of the skiff on the gravelly shore was the signal for flight by all. The roar of wings, and the squawking cries as they left the nests and trees, was almost deafening. The air became alive with birds of both species, uttering their hoarse quak-quak-quak, flying clumsily here and there, not knowing which way to go after having been so suddenly disturbed. After recovering somewhat from the surprise such an unusual din and sight had caused, we proceeded to examine the nests.

The nests of the great blue herons were all placed in large black-oak trees. They were 1ft. or more in diameter, and very high—40 to 60ft.—above the ground. They were made of sticks built into a large rude platform, slightly hollowing to hold the eggs, and were from 2 to 3½ft. across, and about 1ft. thick, having been repaired year after year by adding more sticks. Nearly all the nests had one to three skeletons of young birds dangling from the structure, where they had become entangled among the sticks, and had been unable to free their long legs. There were also many skeletons on the ground near the base of the trees. Some of the nests contained small perch and minnows, and parts of decayed fish, giving them a strong fishy odor. The nests and trees were bespattered with the white excrement of the birds.

Nearly every tree contained two to six nests, and in a few instances nests of the night herons were placed in the same trees, but much lower down than those of the great blue heron, on the lower branches. The eggs showed much variation in the length of time they had been incubated. Several sets of five each were quite advanced, while sets of six were perfectly fresh, and some sets of four were from fresh to advanced.

The night herons' nests were placed in smaller trees, oaks and poplars, and were usually from 20 to 30ft. from the ground. They were made similar to the others, but were much smaller, being about 1ft. across and very light, flimsy affairs, only hollowing enough to hold the eggs; the eggs in some being visible from the ground beneath. At this date a great many nests had only their foundations laid, and birds could be seen carrying sticks to and fro in their bills. There were no complete sets of eggs of this species, three being the largest yet seen, while most of the nests were empty.

May 16 we made another trip to the island. The birds in the meantime had been busily engaged, as we found many more nests. One set of six eggs was seen, but most of them were of four or five. The night herons do not seem to be as wild as the great blues, many of them returning to their nests and remaining there till frightened by a quick move on our part, when they would cramble from the nests in a hurry. Eggs of the great blues seen on this trip were fresh to advanced. One nest contained young birds, and in another the eggs were pipped and nearly ready to hatch. A few nests, from which we had taken eggs on the 8th, were examined, one of these contained three and another two fresh eggs. We counted fourteen nests of the night heron in a wide spreading oak tree on the border of the island, every one of which contained eggs in different stages of incubation.

On the afternoon of May 20 we made another visit, taking but one set of five badly incubated eggs of great blues. The night herons seemed to be as busy as ever, but many nests in the poplar trees at the lower end of the island were still unfinished, and some merely begun. Four sets of six eggs each were found nearly fresh, and many sets of four and five likewise.

During the second and third trips to the island we used a device of my own in order to facilitate reaching the most desirable sets without having to climb each tree. Taking a long fish pole, I attached a wire frame to the small end, and on the frame was sewed a shallow sack about 8in. deep. By climbing one of the tallest trees in a group, I could reach and scoop into the sack at the end of the pole many sets which would otherwise have required hard climbing to reach. While it would have been possible to take hundreds of sets, we secured enough only for a nice series of each species showing greatest variation in size and shape. As near as we could judge, there were from 600 to 700 nests of the

THE HERONRY IN WINTER.

night herons in the colony, and seventy-five pairs of great blue herons breeding here. Eggs advanced in incubation could easily be distinguished from those that were fresh by their more soiled and smoother surface, showing a gloss such as a hen's egg shows when long set upon.

I did not visit the herony again till the winter of '96, when much to my disappointment I found that the heron island had been completely cleared of its timber during the early part of that season, thus depriving the birds of their nesting place, which had been used for years. There is another small island about one-half mile north of this one, which I was told had been occupied for the past season by the birds. As the colony increased in numbers, it was probably necessary for the birds to enlarge their quarters, and they resorted to this island as being the most convenient and suitable. It is

NEST AND EGGS OF NIGHT HERON.

about the same size as the other, and is likewise covered with a thick growth of black oaks and poplars, but the trees are smaller, none larger than 6in. through. There were no nests of the great blue heron, and as nearly as I can estimate there were about 300 nests of the night herons, placed 15 to 30ft. from the ground, in the oak trees, not one being seen in a poplar. They seem to show here a preference for oaks over the poplars, as they did on the other island.

I went to the island May 10 and saw about twenty-five birds, but none of the nests had been repaired. May 17 I again visited the place, and estimated the number of birds at 500, which is very likely a low estimate. Nearly all the nests had had a few green leaves added to them, but there were as yet no eggs. On the 28th another visit was made, when two sets of four eggs were seen, while some nests contained one, two or three eggs, but most of them were empty. We waited till June 9 before we made the trip again, and then found many complete sets. Only three were seen of five, the balance having three and four, some of them well advanced in incubation.

On this island the fish pole and net was not a success on account of the many branches on the trees. Another method was resorted to, however, which was perhaps a little more dangerous. Climbing into a tree top it could be easily bent over by the weight of one's body to the next tree, and so we climbed from tree to tree, examining the sets in each as we went along, finally reaching the ground some distance from the tree ascended. One week later many of the nests contained young and eggs that were pipped, incubation beginning sometimes as soon as the first egg was laid. The young are ugly looking creatures, partly covered with brownish down, their long necks swaying this way and that, and seeming to be beyond control. Their note is similar to that of a young chicken, and can be heard while standing on the ground. At this time nearly all the sets of eggs were complete.

Where the great blue herons went to nest is still unknown to me, but on each trip we saw several birds of this species standing in the water fishing, and on one occasion I saw several together flying lazily up the lake, but they rounded a point and were lost to view. I think they are still breeding somewhere in this locality.

It will take only a year or two more to force the night herons to seek another home, as the great blues were obliged to do, for the timber on the island now occupied was being cut off last winter (1897).

The eggs of both species show little variation in coloring, being a light greenish blue, sometimes a shade lighter or darker. A few eggs show a somewhat deeper color in the middle than at the ends, and sometimes the opposite, but usually they are uniform in color all over. Frequently a chalky substance is found deposited on the surface. They vary from oval to elliptical in shape; eggs of the night heron I think showing a greater variation than those of the great blue heron.

GEO. A. MORRISON.

FOX LAKE, Wis.

Some Notes on American Ship-Worms.

[Read before the American Fisheries Congress at Tampa.]

WHILE we wish to preserve and protect most of the products of our waters, these creatures we would gladly obliterate from the realm of living things. For we have been studying and combatting them for a century and more, but we have found no adequate means of counteracting their depredations.

During the summer of 1893, while engaged in observations on the oyster at Beaufort, North Carolina, for the United States Fish Commissioner, I became interested in the various ship-worms which are found so abundantly in the waters of North Carolina. During the summer I made some observations on their natural history, and returned for periods during the two succeeding seasons to continue them. The results have been incorporated in a paper on "The Natural History, Organization and Late Development of the Teredinidæ," which is almost ready for publication.

The ship-worms were favorite objects of study during the eighteenth century, on account of their great damage to the dykes of Holland in 1733 and subsequent years. The contemporaneous observers seem to have been unaware of the observations of Pliny and others in ancient times, and supposed the ship-worms were natives of India, whence they had been brought by shipping in modern times. During these times they were considered true worms, and it was not till the time of Cuvier that their molluscan characters were recognized.

Even if the ship-worms were not recognized to be bivalve-molluscs from their adult organization, it would be easy to determine this fact from a study of the development.

The ship-worm starts in its development as an egg, which none but a specialist could distinguish from the eggs of most bivalves. In American forms that seem most abundant, at least in our Southern waters, the eggs are cast freely into the water and soon fertilized by the male element. As soon as fertilized the eggs begin to develop, and in our warm Southern climate become little free-swimming creatures in from three to four hours. It is true that these little creatures have as yet none of the distinctive features of the ship-worms, or even of bivalve-molluscs. But within a day the bivalve shell is acquired. For a few days one can rear the larvæ in aquaria, but after a time the conditions become unfavorable and they disappear. For perhaps three weeks more, in a state of nature, they lead a free-swimming life and are gradually transformed into a little free-swimming bivalve almost exactly like the little clam or oyster. But how and where, in nature, this transitional period is passed has not been observed.

The next stage which I found was that of the little bivalves, about a hundredth of an inch in diameter, crawling over the surface of the wood in quest of places for their future homes. Once they have found appropriate places they begin to change. One by one the bivalve characters are lost, and the little bivalves are transformed into the very long, worm-like creatures which are found in wooden structures in salt water the world over.

But along with the transformation the bivalve shell is preserved, though it is much modified as compared with other bivalve shells, and covers only a small part of the head end of the body. With it the ship-worm excavates the burrow in the wood in which it lives, and seems able to penetrate the hardest or softest kinds of wood with equal facility. As the wood is grated away by the shell, the small particles are taken into the digestive canal, and the debris is extruded, but whether it serves for food in any way is a question in dispute. During its life in the wood at least the larger portion of the worm's nutrition is taken in through the tube which hangs at rest in the water, and consists of small animal and especially vegetable organisms.

In thinking of ship-worms then, it should be remembered that the wood in which they form their burrows is primarily for their own protection; their long, naked, delicate bodies are perfectly defenseless.

At Beaufort all kinds of unprotected wood becomes literally riddled in a very short time. There are two kinds of worms found there in great and about equal abundance.

These are Teredo norvegica and Xylotrya fimbriata, whose mode of spawning has been already described. However, a very small proportion of specimens were of Teredo navalis, one of the common European forms. In this species the eggs are retained in the gills of the mother during a considerable period of their development, perhaps almost till time for them to set into the wood. It is apparently this last species which I have

found most abundantly in Long Island Sound, though many Xylotrya fimbriata were also found.

The breeding season in North Carolina, so far as determined, lasts at least till the middle of August, and perhaps throughout the summer. That the latter is the true period is indicated by two sets of facts. In the first place individuals are found with ripe sexual products during the early part of August, and the young derived from eggs laid at this time must continue to set till September or later. In the second place the young were setting in the wood abundantly till the middle of August, a fact which indicates that the same condition continues to some degree for some time longer. Of course, from an economic standpoint the period during which the wood is attacked is one of the most vital points to discover.

The number of young produced is amazing, being estimated in one case, from a single very large female, at a hundred million, and while the greater part are lost before the setting stage is reached, yet the number that set is very great, and this is one of the most discouraging features in dealing with ship-worms in a practical way. If the spat were of fairly appreciable size and set in but moderate numbers, it might be feasible, by the careful removal of all old piles and other old timbers, to sufficiently reduce the number to a minimum. But when, under favorable conditions, over a hundred to a square inch set where there is not room for more than one or two to reach maturity, it is easily seen what an excess is always present, and how futile it is to try to combat the larvæ before they enter the wood.

The practical way, of course, is to prevent their entrance into the wood by protecting the wood with copper paint and sheathing. With small piles and timbers it would seem to be worth while to try various means of keeping the bark on the wood, which so far as I know has not been done; for it is well known that as long as the bark is on timbers they are not attacked by ship worms.

Once the ship-worm has set into the wood it grows with amazing rapidity in our Southern waters. In twelve days it has grown to be an ⅛in. long; in twenty days about ¼in., and in thirty-six days 4in., when it is thousands of times as large in volume as when it sets. It has become sexually mature and is ready to produce a new generation. How long ship-worms may live has never been observed, though it is probable for several years, and that during this time they keep growing if there be room in the wood for growth, though when crowded the individuals become dwarfed. I have found specimens of great size of T. norvegica, some 3 to 4ft. long; and it is easily seen how destructive may be a few of these individuals, which may become almost an inch in diameter. The age of such specimens I have not been able to determine, but it is estimated to be less than two years.

In the colder waters of Long Island I have found specimens of both T. navalis (?) and Xylotrya fimbriata, the former the more abundant. They seem to set most abundantly after the 1st of July, though observations for one season cannot be conclusive. The rate of growth is much slower, and it would seem to take twice as long to attain the same sizes as in the warmer Southern waters.

Observations, to be of any considerable economic value, must cover a variety of localities under different conditions, and must extend through a period of years—observations which I have not had sufficient opportunity to make, and which for our American forms have unfortunately never been made.

CHAS. P. SIGERFOOS.

How to Name The Birds.

THIS is the title of a little volume of 115 pages, bound in limp leather and issued by Charles Scribner's Sons. Mr. H. E. Parkhurst, the compiler, calls it "a pocket guide to all the land birds and to the principal water fowl normally found in the New England States, New York, Pennsylvania and New Jersey, for the use of field ornithologists."

It is illustrated by two plates showing the distinctive areas of a bird's body, thus very clearly defining what is meant by the terms used in the text. There is also a plate showing the various forms of tails of birds, a map and an analytical key on a somewhat new plan. The descriptive list of birds is arranged in an arbitrary fashion by the colors which they show, such as "neutral list," "black list," "yellow list," which of course often places birds which have most diverse relationship next to each other on the page. We should imagine that this might prove confusing to the beginner.

Department of Agriculture Year Book.

THE year book of the Department of Agriculture for the year ending June 30, 1897, is before us. It is a bulky volume of nearly 800 pages, and is fully illustrated here and there in colors. Besides the report of the Secretary, and those of the chiefs of bureaus, it contains many papers of very considerable interest to farmers, and indeed to all persons interested in the progress of this country. The subject of "Birds that Injure Grain" is taken up by Mr. F. E. L. Beale, of the Biological Survey, who under this head discusses the crow and various blackbirds, mentioning also toward the close of his article the mourning dove, California quail, shore lark and ring-necked pheasant. The paper is not without interest, but the conclusions drawn are quite inadequate.

A Duck's Nest in a Tree.

GRANBY, P. Q., June 4.—*Editor Forest and Stream:* I was told that a duck had a nest in a tree up the river. I never heard of such a thing before, and was inclined to doubt it, so to-day I went up to investigate.

I found an old elm tree on the bank of the river. About 12ft. up a large limb had been broken off close to the trunk years ago, leaving a hub on the trunk, the inner part having rotted out. The diameter of the hole at the mouth is about 8in., the depth about 10 or 12in., but probably a little over a foot across at the bottom. Although from my information I knew about where the tree was, yet I would never have suspected a nest there; but in looking over closely I noticed a few downy feathers adhering to the entrance. I was pointing these out to my seven-year-old boy when the duck flew out, alighting on a dead birch tree about twenty rods further up the stream. She was about the size of a blue-winged teal, but a little more gray than the female of this species.

I put some sticks against the tree and mounted, finding several young ducks therein. I know they were ducks, because I took a couple of them in my hand. They had a short, flat bill and web feet. Those I took out were black on the back, lighter colored on the breast, with three downy gosling colored rings running partly up the neck and around the eyes. There must have been ten or a dozen in the nest. They were probably a week or ten days old. I left them all there, but how she proposes to get them out of there to the water is a mystery to me, as it is fully 15ft. of a drop to the water, although the tree is almost on the edge of the water.

I never heard of a duck's nest in such a place before, and if much out of the common I could get a photo of the tree, and possibly, by careful work, get a snap shot on the duck as she is leaving the nest.

J. BRUCE PAYNE.

[Not a few sorts of ducks nest in hollow trees; and geese in some localities, notably along the Missouri River, are known to build their nests on the tops of cottonwood stubs, far above the ground. The most common of the tree nesting ducks is the wood duck, whence its name; but there are others, for example the golden eye, or whistler, the butterball or bufflehead, and the hooded merganser.]

Bird Tablet for Field Use.

WITH this title an abridgment of some of the pages of Miss Florence A. Merriam's "Birds of Village and Field" has been published by Josephine A. Clark, of Washington. This is a pocket notebook, in which the student unfamiliar with birds may enter under the proper headings the characters of the different species which he sees in his walks. These headings are size, color, markings of the different parts, shape of the different parts, movements, flight, localities frequented, food and manner of obtaining it, song, habits; nest as to location, size, shape, materials, methods of construction, etc.; eggs; incubation and observations on the young. These take up two pages, and there are two blank pages for notes. The book should be useful to the class for which it is intended.

Game Bag and Gun.

Firecrackers in China.

From the Consular Reports.

DURING the year ending June 30, 1897, there were exported from China 26,705,733 pounds of firecrackers, valued by the Chinese imperial customs at $1,584,151 gold.

Of the total shipment, by far the largest part was sent to New York. A small quantity went to England. Other countries buy only infinitesimal amounts.

The exports represent only a small fraction of the amount manufactured and used in China. There are no large manufactories; the crackers are made in small houses and in the shops where they are sold. In the latter places the proprietor of the shop, his wife (or wives) and children do the work. No record is kept of the number made and sold, and no estimate is possible of their cost. The use of crackers is universal in China, and has been as far back as history records. It is most probable that in the beginning they were used to frighten away evil spirits. Now they are most frequently an expression of good feeling or of ceremonious compliment. They are used at weddings, births, and funerals; at festivals; religious, civil and military ceremonies; at New Year; to salute persons about to make a journey; and, in fact, on all occasions out of the ordinary routine.

In making crackers, only the cheapest kind of straw paper which can be produced in the immediate locality where the crackers are made is used for the body of the cracker. A little finer paper is used for the wrapper. A piece of straw paper 9 by 30in. will make twenty-one crackers 1½in. long and one-fourth of an inch in diameter.

The powder is also of the cheapest grade, and is made in the locality where used. It costs 150 to 175 cash per catty, or 6 to 7 cents gold per pound.

For the fuse, a paper (called "leather" in Shanghai) is used which is imported from Japan and is made from the lining of the bamboo. In other places a fine rice paper is used, generally stiffened slightly with buckwheat-flour paste, which, the Chinese say, adds to its inflammability. A strip of this paper one-third of an inch wide by 14 in. (a Chinese foot) long is laid on a table, and a very little powder put down the middle of it with a hollow bamboo stick. A quick twist of the paper makes the fuse ready for use.

It is not easy to persuade the Chinese to exhibit their modes of manufacture to a foreigner; but Mr. Williams, Vice-Consul at Shanghai, thus describes the work as he has seen it:

"The straw paper is first rolled by hand around an iron rod, which varies in size according to the size of cracker to be made. To complete the rolling, a rude machine is used. This consists of two uprights supporting an axis, from which is suspended by two arms a heavy piece of wood, slightly convex on the lower side. There is just room between this swinging block and the top of the table to place the cracker. As each layer of paper is put on by hand, the cracker is placed on the table and the suspended weight is drawn over the roll, thus tightening it until no more can be passed under the weight. For the smallest "whip" crackers, the workman uses for compression, instead of this machine, a heavy piece of wood, fitted with a handle like that of a carpenter's plane. In filling crackers, 200 to 300 are tied together tightly in a bunch. Red clay is spread over the end of the bunch and forced into the end of each cracker with a punch. While the clay is being stamped in, a little water is sprayed on it, which makes it pack closer. The powder is poured in at the other end of the cracker. With the aid of an awl the edge of the paper is turned in at the upper end of the cracker, and the fuse is inserted through this."

The long ends of the fuses are braided together in such a way that the crackers lie in two parallel rows. The braid is doubled on itself, and a large quick-firing fuse inserted, and the whole is bound with a fine thread. The bundle is wrapped in paper and in this shape sent to the seacoast.

A variety of cracker I do not remember to have seen in the United States, but which is popular here, is the "twice-sounding." It has two chambers separated by a plug of clay, through which runs a connecting fuse. There is also a fuse extending from the powder in the lower chamber through the side of the cracker. When the cracker is to be fired it is set on end, and fire set to the fuse. The powder exploding in the chamber throws the cracker high in the air, where the second charge is exploded by fire from the fuse extending through the plug between the two chambers. In the manufacture of these the clay is first stamped in with a punch to form the separating plug. The lower chamber is then loaded with powder and closed by turning over the paper at the end. The upper chamber is loaded and closed with clay. A hole is punched in the side of the lower chamber with an awl, and the fuse inserted through this opening.

At Canton the ordinary-size cracker (1½in. long by ¼in. in diameter) costs 1 tael (62 cents) for 10,000 for export. At Hankow the best quality of this size costs 1 tael for 5,000; while of the second quality 20,000 can be bought for 1 tael. At Chungking 15,000 of the ordinary crackers can be bought for 1 tael. At Shanghai 1 tael will purchase 5,000 of the ordinary size, while the largest sell for $5 per 1,000. These prices are probably only a shade above the actual cost of manufacture. The small manufacturers sell to Chinese compradores, who buy as agents of foreign firms and ship the crackers in bundles to the seacoast, where they are packed in boxes which cost about 4 taels ($2.50) per hundred, and hold 250,000 firecrackers.

Aside from the fact that all the material used is native and produced where the crackers are manufactured, and that transportation does not enter into the cost, the wonderful cheapness of manufacture is accounted for by the kind of labor used and the wages paid. The items of cost of plant and interest on it are eliminated by the fact that the crackers are made in the homes of the workmen and in the shops where they are sold. The hours of labor are from 6 A. M. to 11 P. M., and there are seven working days in each week. Four-fifths of the crackers consumed in China are made by the families of those who sell them; these people, of course, receiving no wages. Of the paid work, a very large proportion is done by women and children, who are paid by the piece. It is estimated that thirty women and ten men can make 100,000 crackers per day; for which work the women will receive 5 cents each and the men about 7 cents each. An apprentice is bound for four years, and during that time receives only his board. At the end of that period he will receive, if he is a fairly good workman, 150 cash per day, or 7 cents in United States money. An expert at the trade receives 200 cash per day, or 10 cents gold.

Workmen at this trade receive about the average rate of wages paid here for common labor. The trade is considered unhealthy and dangerous, and therefore not desirable.

JOHN GOODNOW, Consul-General.

SHANGHAI

Old Clubfoot.

REDLANDS, Cal., June 18.—*Editor Forest and Stream:* I inclose you herewith a clipping from the Los Angeles Herald, describing the capture of the famous three-footed grizzly bear known to all southern California for years past, and while I cannot vouch for the statements made, I should not like to dispute any of them, as "Old Clubfoot" has an unsullied reputation for ferocity.

REELFOOT.

The story runs: The great, fat, powerful carcass of "Old Clubfoot," the famous grizzly known to all old California hunters and prospectors on this coast, arrived in Bakersfield on Thursday afternoon. She was killed last Monday on the head of Cottonwood Creek, near the southern boundary of Kern county. It required a two-days' battle of three men with long-range Winchesters to bring down the monster, besides the assistance of a number of dogs. These men had been hot on the trail of "Clubfoot" more than a week. Last Sunday morning two of them came in sight of her, and the battle opened at a distance of 600yds., and ranged from that down to a few yards. It was a most desperate and thrilling encounter. Finally the hunters' ammunition gave out. Late in the evening they called off their dogs and went to camp. Early next morning they returned, and with the aid of the dogs "Old Clubfoot" was again found. The hunters opened fire on her, and the battle raged all day before the monster gave up the ghost. She weighed 1,100lbs. She was 9½ft. long, 3ft. across back, with head 18in. broad. The teeth of the animal were almost worn off, showing her great age. The plucky hunters were John A. Johnson, Jean Pool and James McKenzie, who say that "Clubfoot" has ranged the mountains of Kern, Santa Barbara and Ventura for the past thirty years. She has killed a number of men in battle, and a whole herd of cattle in her day. Eleven bullets were fired into her head and neck. Nearly a hundred shots were fired.

Death of Armin Tenner.

WE regret to learn of the death of Armin Tenner, at his home in Berlin, on June 17, at the age of fifty-two. Mr. Tenner came to America in the sixties and served in the Federal army. He was a leading spirit in the establishment of the Cincinnati Zoological Gardens, and in the enterprise of introducing European song birds into the United States. In 1873 he conducted an extensive series of tests of powder and shot.

Game in Iowa.

VINTON, Ia., June 16.—*Editor Forest and Stream:* Old settlers claim that quail were never so plently as they have been during the past year. They may be seen any day and at almost any time running along our roads, with little fear of the passer by. During the winter there were more prairie chickens than at any time for fifteen years, and they were native to this locality, to which my notes only refer. Adjoining my place was a large field of corn that had been shocked up with the corn on the stalks, and mornings from 300 to 500 chickens would obtain their breakfast from the corn on the shocks. There were smaller flocks in different directions a few miles awy. A few weeks ago, while taking a ride of five or six miles, I counted fourteen chickens that jumped up from the roadside and went strutting and clucking into the fields.

The Northern hare, as they have been called by sportsmen, or prairie hare, which I think is the correct name, are working from Minnesota down through this State, and are becoming quite common in the vicinity. The first one that I saw was two years ago, and the old settlers say they were never here before. They turn white in the winter, like the hare in the mountains in northern New England, and as I remember the latter they are smaller than the ones here. They are popularly called jack rabbits, but the jack rabbits in Nebraska do not turn white in the winter, and I believe they are not as large as our hare, yet larger than the rabbits that I saw in the mountains in Idaho and Wyoming, while they all have that peculiar way of running—sometimes a stiff-legged canter or a few jumps and a bob-up behind, when once seen never to be forgotten. This I believe is not true of the New-England hare.

Bluebirds this summer, I am pleased to see. are nearly as numerous as ever. Bobolinks are more numerous than I have previously known them to be, and I can say the same for hummingbirds, yet the last are still scarce. Butcher birds, or shrikes, are very plenty, but I seldom see them close to the buildings excepting in the winter season.

One year ago last winter a butcher bird that stayed about my buildings used to "make a great bluff" at singing. Its song would last from one-quarter to one-half a minute. Some of the notes were like those of the brown thrush, others like those of the robin; and so much so that one day my boys came in and said they had heard a robin. The song was pleasing; it was a sort of warble, and was always ended with the bird's usual war cry. I mention this because it is the only bird of the kind I ever heard sing; and some days when the thermometer was many degrees below zero I used to wonder if the bird was really happy or just singing to keep up courage.

A pair of these birds one winter stayed around one of my neighbor's buildings. He had some shocks of corn standing in his yard, and when he pulled one over to feed to his stock the mice would run to the next one. The birds soon learned to watch for Mr. D. at the regular feeding time, and when he would pull over a shock of corn they would dive down and catch the mice.

A flock of seven snowy ones established their winter quarters in a small cedar tree within a few feet of a neighbor's house the past winter, but they littered the yard so badly that he tried to drive them away by clubbing them out of the tree, which he did not succeed in doing until near spring, when they made their home in a cedar tree in my brother's yard.

One thing that troubles me is this: I used to like to see the upland plover that had their nests in our meadows alight, and while holding their wings straight up in the air give their clear, shrill notes. Last summer I saw and heard one; this summer so far none. What can be the matter?

What has become of the sandhill crane? I have not seen nor heard one for years, with the exception of two that were in the extreme northern part of the State. Are they getting scarce? If so, let's stop pounding the life out of these grand birds for a time, and give them a chance. Each spring and fall I scan the sky and listen for the old familiar sound that does not come. Can some reader of FOREST AND STREAM kindly inform me where these birds have their breeding place, and if their migratory flight is still over the State of Nebraska, as it used to be?

Cottontails are very plenty. Last summer they would fairly overrun a person. I will tell you how I know. One day I heard Shep and Mick give a few short and excited yelps, and knew that a rabbit chase was on. Up through the hog lot came the rabbit; and it was reaching right out in great shape, for rabbits around my place have lots of practice and know how to run. Old Shep was pounding along behind and Mick was following close up, and laying right down to business. The rabbit went through the partition fences, but the dogs had to go over the top, which gave the rabbit the advantage. I saw that the rabbit would lead the race along the north side of the barn and shed, and I ran to get past the corner of the garden fence to see the race when it would get beyond the shed; but the rabbit turned at the end of the shed and came straight for the same fence corner that I was running for; and right there the rabbit and the farmer met. I did not have time to say "Hello!" and the rabbit didn't have time to jump one side; so it made a frantic effort to jump over my head or through me—I have never quite made up my mind which. But I could not dodge that streak of rabbit any more than a Spanish fort can dodge one of Sampson's shells. It leaped head first and heels a-coming full tilt against the pit of my stomach, at the same time giving me a kick which doubled me up and sent the rabbit back several feet and to the ground with a broken back, and while I was drawing my hand across the contracted portion of my abdomen, just as one will after eating green apples, and the rabbit lay kicking on the ground, the dogs came up on the dead run; but I straightened up in time to stop them and put the rabbit out of misery. I can testify that if one rabbit's hindfoot in a pocket will straighten one's finances; two hindfeet in the stomach will crook his physique. MOUNT TOM.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Sea and River Fishing.

A Variation.

(After George Mirror.)

AN angler with a costly pole
Surmounted with a silver reel,
Carven in quaint poetic scroll—
Jointed and tipped with finest steel—
With yellow flies,
Whose scarlet eyes
And jasper wings are fair to see,
Hies to the stream
Whose bubbles beam
Down murmuring eddies wild and free,
And casts the line with sportsman's pride
Where the fish 'neath the bushes glide.

A shock-haired boy with birch-wand light,
Pronged somewhat like a fish's spine,
And on the end a bit of white—
The common kind of grocer's twine—
With naught but great
Ground worms for bait,
Tramps to the water full of glee,
His hat beneath,
Observe the wreath
Of smiles most beautiful to see,
While he casts in the plashing brook
A bended pin—his only hook.

The angler with the costly pole
Comes homeward full of airy grace—
If rapture fills the urchin's soul,
It doesn't blossom in his face.
The former he has twenty-three
Fishes that speckled in the sun.
The shock-haired boy
Is reft of joy—
He's caught what's known as "nary one."
The rod and reel have won to-day—
Somehow it sometimes works that way!

In the Choctaw Nation.

WILLIAMSBURG, Ind., June 23.—*Editor Forest and Stream:* Last May I was down in the Choctaw nation, and having some spare time went fishing in the Kiamicha River. It is a fine stream, with many places where the water runs over and among lumps and ledges of sandstone, and then rests in long reaches of still water, shaded by the trees. It looked as if there ought to be bass in there, and as if they would be gamy on the hook, and appetizing on the table. A trial proved that they were there, and that they were hungry for craw fish, and put up a gallant fight when hooked; as nice, clean-looking fish as ever were landed. A half-dozen were taken in an hour, all of which were returned to the water but two, and those two had their heads cut off while fully alive, were cleaned and salted a little, and put in the ice chest over night. Next morning they were nicely cooked for breakfast, but they were not eaten. They were soft and tasteless, as an August sucker from a warm creek. I spoke to one of the local anglers about it and he said, "No, the catfish is the only good fish in the river; the bass and sunfish are always soft and tasteless."

Now I would like to know if the bass in a sandstone stream are poorer flavored than those in a limestone stream. Yesterday I asked a market fisherman on the Mississippi about it. He did not know, but had heard that the fish in a sandstone stream were not good. Asked about his fishing, he said: "I follow it because I like it, and there is a good living in it. There is enough element of chance in it to make it interesting; I don't know whether it is going to be a water haul or thirty dollars' worth of fish, though I know pretty well that with my 250yds. of seines and one man to help me I will average $40 a week, and the cost of keeping the tackle in repair, and renewing it when worn out, will not cost more than 2 per cent. of the receipts from fish. The worst thing about it is that when I have a big run of luck the money is made so easy that it goes just as easy, and I've never got any money when I need it the worst.

"If there is enough water where I am going to fish, I splice the two seines together, and fold them in the boat, so it can be thrown out as the boat is rowed around. A line 75yds. long is tied to each end of the seine. One end of a line is tied to a stake at the edge of the water. We row out from the shore and sweep around in a semi-circle large enough to require the length of the 500yds. of seine, and the 150yds. of lines to surround the semi-circle and return to shore, so we have enclosed the fish on about fifteen acres of water. It isn't very hard work, but sometimes we fish when it is so cold that the seine freezes almost as fast as we draw it out of the water, and it's a pretty cold job then. We make more money out of the German carp than any other fish. We ship them to Fulton Market, New York, and get an average price of 8 cents per pound for them here undressed, just as they come from the water. The express rate is $2.25 per 100lbs. I figure that they must cost the people that eat them about 15 cents a pound. I hear that they are mostly sold to Jews and Italians. Nobody but negroes eat them here. During hot weather we can't ship them, and have to sell them at most any price."

In the fish house an old wrinkled and dried-up negro, a veritable imp of Satan, was cleaning a lot of live catfish. He hung the fish by a hook through the under jaw; two dextrous cuts with a keen-edged knife severed the skin around the neck. Catching the edge of the severed skin with a pair of pinchers, a quick jerk stripped the skin from one side of the body. A jerk at the skin on the other side, and the skin was all off except a "V" shaped piece on the belly. The pinchers snapped at the point of the "V," and an upward jerk took off the last piece of skin. A quick stroke of the knife severed the "bridle" from the head, an upward thrust opened the fish, another cut severed the visceral attachments, and the still wriggling and breathing fish was thrown upon the table to die at its leisure. I asked the old imp if he didn't think it was pretty rough on the fish to skin him alive. He scowled at me a moment and said, "I knows da' bones is pow'fu' rough on man han's, jes' cuttin' 'em all to pieces. Doan' know nuffin' 'bout de fish, an' don' keer nuffin' 'bout 'em needer."

When the catfish were finished, he sharpened his knife and began to clean carp. The knife was inserted under the scales, and lying flat on the fish quick strokes toward the head sliced off the scales and skin in pieces of 2 to 3in. wide. There was enough skin taken off to hold the scales together, but the skin on the fish showed no marks of the knife. It showed the imprint of every scale. It looked just as if the fish scales had been scraped off, except that the skin was left smoother and cleaner looking than a scraped fish. I said that was a lively way to scale fish. "Huh!" said the old darky, "I ain't scalin' dem fish. Yo' caint scale no catp. Got to skin 'em."

"Are you skinning them?" I asked.

"Cose I is. Don' yo' see de skin I done took off."

"Yes, but I see a whole skin on the fish."

"Cose yo' does. De catp dun got two skins on 'um. Ef yo' doan b'lieve dat, yo' mus' be one of dem folks dat doan' b'lieve nothin' dey hears, an' not moah'n half dey sees," and with a snort of disgust at my ignorance he threw another carp on the table and the keen edged knife sliced off the scales again.

O. H. HAMPTON

Katahdin and Big Fish Lake Regions

(*Continued from page 462.*)

THE New York angler can leave the Grand Central at noon and arrive at Boston in time to connect with the Bangor sleeper, and reach Ashland the following day in time to try the Portage Lake Inlet before dusk. If the weather looks stormy, stop over night at the settlement and make an early start next morning; this will land you at Big Fish Lake in time for the evening fishing, provided you help paddle the canoe through the still reaches of the stream.

I would advise the angler after a few casts in the early morning to stow his rod and hasten on his way to the happy fishing grounds above. Fish River is shallow and rapid, and abounds with numerous boulders that scrape an unpleasant acquaintance with the canoe at low water. There is a good spring near the lumber camp on the right bank going up. Ferguson Brook, High Landing, McCloskey's Hole, the Falls and Round Pond are passed on your eighteen-mile journey up stream to the lake. Big Fish Lake is about six miles long, and will average about one and a half miles in width. There is a lovely island near the outlet that will well repay a visit. June is the best month for brook trout and black flies. These pests abound during the early season. Their attacks can be warded off by a liberal application of fly lotion. If you object to this method, wear a head net. There are two public camps on the lake, McNally's and Orcutt's. McNally's camp, three miles up the lake, furnishes good accommodations, and the angler can profitably employ his time at Smith Brook, opposite the camp. Deer are often seen feeding near by. There is good fishing at the inlet and outlet of the lake. Carr Pond, Chase Brook, Round Pond, McCloskey's Hole and the Falls are easily reached from the camp. Ferguson and Clayton ponds are too far away to go and return the same day. In June the average angler can get all the brook trout he desires without going more than three miles from camp. Better fight shy of the camp canoe unless you are an experienced canoeman; in that case you can dispense with a guide. In September the high winds that prevail on the lake makes the fishing uncertain off the mouths of the brooks. By leaving the lake and going down stream about four miles to McCloskey's Pool, the angler can secure all the large trout he wants when they are in the humor. The canoe is left at the Falls Carry, a short distance below Round Pond.

Ferguson Pond trail is on the opposite side of the river. About an eighth of a mile from the landing is the only place in this region where worms can be procured. Don't be a fly crank; it is better to take some nice ones with bait than to return with an empty creel.

From this point a two-mile tramp along a wood road will bring you to a marked tree. Turn in here, and you will soon arrive at the best trout pool in the Maine woods. See that your tackle is in first-class shape before trying conclusions with the large trout that haunt this pool. Two and a half-pounders are quite common here. I had a bitter experience at McCloskey's one September afternoon; in the act of retrieving the fly I fastened to an immense trout, and after a long-drawn-out fight lost him. This trout would have pulled hard on the 5lb. notch. My best trout, 2lbs. 9oz., failed to console me for the loss of the big fellow. Any ordinary patterns of flies, tied on rather large hooks, will answer. Needle-eyed hooks or flies tied on flattened hooks with the sliding loop attachment are the best—no danger of slipping. Shipley, of Philadelphia, has this arrangement and everything pertaining to the fly-tyer's art. When gut is worn at the head of the fly, cut and tie on a fresh loop. Make two turns to the loop knot, same as the others; to unfasten pull on the knotted end, working it a trifle back and forth.

A rough trail leads up from the river to Ferguson Pond. This beautiful home of the trout has very poor accommodations for the angler. A good bark camp is wanted here in place of the miserable lean-to that answers well enough in fair weather, but if rainy weather sets in the sportsman will have to leave and seek shelter in the public camps on the lake. This arrangement suits the camp owners immensely. "'Nuff sed." Sportsmen will have to take their chances securing the two rafts, as parties are constantly coming and going.

September is a good month to come up here. There are then no insects to bother, the air is cool and bracing, and hunting and fishing are in their prime.

McCloskey's and Ferguson Pond furnish good sp
Smith and Chase brooks are worth trying under favor
conditions. There are unlimited quantities of hi
berries and small trout on the upper waters of
Brook. Go up the inlet to Mud Pond for deer. A
good place is opposite McNally's camp. There
a number of people camping out around the la
September. This makes sport on the lake ra

tain; there are too many camps in this region. The same remarks apply to Machias and Masungun lakes.

The best hunting grounds are far off the line of travel. To endure the hardships of such a trip the sportsman must be in the prime of life, or, what amounts to the same thing, a young old man. Be sure and take in plenty of provisions, as the public camps refuse to supply the camper out. Ashland is the best place to outfit for the Big Fish and Machias regions. See that your guide has a tent; always give the local guides the preference. They naturally know the best places. Here is a list of good guides: I. O. and Lyman Hunt, Norcross; Joe Francis, Oldtown; Chas. Hale and brothers, Millonocket Station; Fred McNally, Ira McKay, Henry Rafford, Ashland; Wm. Atkins, Clarence Peavey, Oxbow. The sportsman must be hard to please who is not satisfied with northeastern Maine. A region that combines so many attractions is difficult to discover in these modern days.

ARTIST.

On the McCloud.

AUBURN, Cal.—Last October I took a ten-days' trip to the McCloud River, at the base of Mt. Shasta, and after my return so pleased was I with the outing that all the following months I was constantly writing it up in my mind for the columns of dear old FOREST AND STREAM. But I never got so far as to put my pen at work until the 23d of May had arrived, when I found it imperative to at once go back and verify some data as to numbers and weight of trout still remaining in the river, before beginning my task. I returned a few days ago with all the facts and figures, and will now proceed to give your readers the whole business.

Old Marcus Aurelius has said, "Be not as one that hath ten thousand years to live; death is nigh at hand; while thou livest, while thou hast time, be good," to which I would add, "and go a-fishing." To this good advise I would like to add the following apothegm: Always make convenience wait an opportunity if you want to go fishing.

My opportunity came along in May, as before stated, and I embraced it as ardently as I would have done forty years ago, had it come then in the shape of sweet sixteen, all clad in pink and white, with a most alluring pout on its red lips—and nobody looking.

And this is how it came. You know it is said that "it is always the unexpected that happens." My old fishing partner B., who has held me company in all my trips for the past twenty years, threw off on me last October and left me to go alone. This spring we had our trip all planned again, when suddenly he came to the conclusion that he must transpose my apothegm, and make opportunity wait on convenience, and I had given up all hopes of a trip, when one day B. called me on the telephone, and this is the sweet song he sang in my listening ear:

"Hello, Arefar!"

"Hello, B."

"Do you want to go to the McCloud a-fishing to-morrow night? I'm going!"

"Why, you said you couldn't go this spring, and I had given up the notion, and here I am unprepared, and you spring this thing on me now like a dynamite bomb."

"Well, I know it's a little sudden, but I just got a letter from C. (this was his son) saying that he was on the upper Sacramento, and that the trout were biting finely, and that he wants us to come up and go with him over to the McCloud."

"All right, that settles it. You go along to-morrow night and I will follow in three days. If the trout are biting in the Sacramento it means that the dry winter has made an early season, and sport on the McCloud will be glorious."

And so it went. I had to arrange my business for a few days' absence; get a few flies; make up some new leaders, and on Monday, May 23, I was off after him. You see it was a case of

"Just whustle an' I'll come to you, my lad,
Though father an' mither an' a' sud gang mad,
Just whustle an' I'll come to you, my lad."

In the afternoon I took the train for Sacramento, where I await the Oregon express, which leaves that place at midnight. I tried to secure a whole section in the sleeper for myself, but could not, and with my usual luck I had a fat man over my head sawing wood all night.

"O, sleep, O, gentle sleep,
Nature's soft nurse, this snoring frighted thee,
That thou no more wilt weigh mine eyelids down,
And steep my senses in forgetfulness."
(Shakespeare, with alterations.)

At 6 A. M. I give up and crawl out of my berth, and retire to the smoking room, defeated. Of course the poor man could not help it, but why do such men travel? Why don't they stay at home and snore, where their associates are accustomed to them?

Soon the train enters the cañon of the Sacramento, where it winds up into the depths of the Siskiyou Mountains, and one's eyes are charmed with the passing views. In and out of the bends, twisting and turning like a huge snake, goes the train; now with the river on the left hand and now on the right; shooting through tunnels where the angles are too sharp; clattering over bridges, spanning the river seemingly at every mile; it is a bewildering ride. And always, either upon the right hand or upon the left, the beautiful river is in view; with its rapids and boiling pools; its swirls and eddies; all looking fishy, and appealing to the angler's senses. On and on, past the "Tavern of Castle Crags"; past Massbrae, Shasta Soda Springs, where the train stops five minutes for every one that so desires to get a glass of natural ice-cold soda water, fresh from nature's own fountain; till noon finds us at Sissons, 3,700ft. above sea level, with grand old Mt. Shasta towering to the skies a few miles away, and dominating and dwarfing all the surrounding landscape.

Every one has at least heard of Mt. Shasta. It is one of the world's celebrated mountains, and one of the most beautiful. It is a mountain with twin peaks; an extinct volcano. It rears its mighty crest 14,440ft. above sea level, clothed in eternal snow, with living glaciers crawling down its steeps. Its majestic beauties have been so often and so well described that I will say no more.

Here at Sissons, or rather at a little saw mill station a mile and a half beyond, I leave the main line and take my place in a car on a switchback lumber railway for a thirteen-mile ride to McCloud, a little sawmill town in McCloud Valley, seven miles from my destination. Here a stage awaits the arrival of the train, and at 4 P. M. I am landed at Sissons Camp, on the McCloud River, and am shaking B.'s hand.

"How is the fishing, and what luck have you had?" I demanded.

"Rather indifferent as to both," he replied. "It has been dry all winter, and has now begun to rain, just when we want to fish. My son and self went up to Big Springs and only got five trout, it was so cold and wet, and yesterday he had to return to San Francisco. To-day I caught seven medium-sized ones, and the other guests here have done even worse, with the exception of one man, and he fishes with fly, with bait, with spoon or any other old thing that will catch a trout."

This was rather discouraging for a starter, but next morning it was worse. It was raining again; a good steady downpour. About noon the skies cleared, and after giving the bushes time to dry off we started down the river, one on each side. The trout were not rising well, but I had coaxed three nice ones out, and had reached a beautiful bit of water, where I expected more. I stepped on a rock which was slightly submerged, made a cast, hooked a fine trout, and stepped on a young juicy saxifrage plant, slipped and sat down with all my weight on the rock, and "the subsequent proceedings interested me no more."

By and by I crawled out, clinging to my rod, but minus my trout and temper. I was wet to my waist, my wading boots were full of water, and was so crippled and sore that I could hardly stand, and couldn't sit down. "This is nice for starter No. 2," thinks I to myself. "Go home to camp, you blamed old fool, and give up stream fishing. You're getting too old and clumsy for that kind of work, anyhow." I meekly took my own advice as to going to camp, and got there after a painful walk, and went to bed. That evening and next day I took my meals at the mantelpiece, and spent the rest of the time in bed. It rained all the time, however, so I missed nothing.

The next day it rained again, and B. was disgusted, and said he was going home—had to, in fact, as he had left his business in too great a hurry. Said he, "We are back numbers, you and I. We are getting too old for this kind of fishing, and I'll never come here again. Why, there is Mr. C. (one of the other guests), who went out at the same time we did the other day, and he caught twenty-eight, while you got three and I only five. We're back numbers, and we may as well acknowledge it."

"Well," I answered, "it does look that way, but you must remember that Mr. C. stayed out till dark and fished with all kinds of devices, flies, spoons, salmon roe, fish pins, grasshoppers, grubs, and everything else he could lay his hands on. Of course if he likes that kind of fishing he will catch trout when we cannot, but he is welcome to them. I don't wish to criticise that style of fishing. It is all right for the pot, and if he finds pleasure in it I've nothing to say, but if he will confine himself to the fly I'll be dinged if I don't believe that you and I can keep up to him any day in the year, if we are back numbers."

But it was of no use, he refused to be comforted, and when stage time came he left for home. I would have gone with him had it not been for my "os coccyx," which was still too sore to stand a stage ride of seven miles.

On the 28th it cleared up in the afternoon, and I had so far recovered from the effects of my accident as to be able to go out for three hours, getting thirteen beautiful trout, the largest weighing 1¾lbs. On the 29th I had about three hours' fishing and got nineteen, which filled my 20lb. basket. The largest weighed 2¼lbs. and measured 17in. in length. He was a perfect beauty. The smallest weighed over ½lb.

On the 30th it rained again in the forenoon, but in the afternoon I got seventeen trout, the largest weighing 1¾lbs., but all beautiful fish. After that it started in for a steady downpour, and it was still raining at noon on the 2d of June, when I left.

On the summit, between McCloud and Sissons, where the switchback road crosses a buttress of Mt. Shasta, we ran into a snowstorm, and I had the pleasure of seeing the ground covered with a 4in. coating of new snow.

But I did not come out of that happy valley feeling that I was feeling as much of a back number as B. did. Oh, no, indeed! The old man held up his end with the best of them—and perhaps a little more—as to my credit fell the largest fish caught this season up to my departure.

But I have now reached a stage in life when I can see my score surpassed with perfect equanimity, and I will not try to swell it by any means but the fly. Unless the pot absolutely demands fish, I'll stoop to no other device to lure a noble trout.

The McCloud River is an ideal home for trout. Born at once of a great spring gushing out of the foot of Mt. Shasta, it has absolutely pure water and maintains a constant temperature. Summer and winter the thermometer indicates 45 degrees at the Big Springs, and only a rise of 2 degrees eight miles below. The water is so clear and pure that it has a blueness in it, like the blue of the sky. It is torrential in its current, and varies but little in its volume of water, being but little influenced by freshets in its first fifteen miles. There is no mud in its bed, and but little sand; its bottom is covered with rocks and gravel beds. It carries a great volume of water, about as much, if I remember rightly, as the Saranac just above Plattsburg, in the middle of June of an ordinary season.

It is a hard stream to fish, the current being so swift and the banks so brushy. The stream is wide, and the trout, especially the large ones, lie well out in the middle, and a cast of from 40 to 70ft. is needed to reach them.

But, oh, how they fight when you hook one. In and out of the water, back and forth across the current, and up and down the stream they go; their sides flashing the brightest prismatic colors as their agile bodies dart through the crystal pure water, and only yielding at last to patient skill and the most careful handling. Truly it is the poetry of fishing.

And the surroundings, how grand! Old Shasta dominates all the country. The cañon of the river is clothed, from water's edge to summit, with noble pines and firs. Under their shade is a dense green tangle of hazel and dogwood, the blossoms of the latter making banks of white in the springtime, and the foliage wrapping the mountain side in an autumnal cloak of scarlet.

Large trout are to be had in the McCloud. On one occasion I saw one caught that weighed 4¾lbs., but the largest that fell victim to my own rod was 2¾lbs. Monsters weighing 8 to 12lbs. have been caught, however, and many larger still have been seen. Strange to say, the large ones are always caught on a fly, and never on bait. Only the spring and autumn fly-fishing is good. In the latter part of June the salmon begin to run up and spawn, and no more fly-fishing is to be had until about Oct. 1, when the salmon have spawned out and have died off.

Along from the 1st to the 10th of June the first salmon, always males, begin to come up into the upper reaches of the river, and can be seen leaping at all hours. Later come the females, and about the 20th spawning commences. The spawning female is surrounded by fighting males until spawned out, when the males at once desert her for another. After the act of spawning is completed the female is so exhausted that she dies, and by the time that all the females have spawned the males that have still survived the shock of many battles die also, and the river becomes unsightly with dead and dying fish. They do not become offensive, however, as the cold water prevents putrefaction, and they simply lodge against obstructions, and gradually soften and wear away in the current, apparently without contaminating the water in the slightest appreciable degree.

The celebrated Dolly Varden trout was first discovered in this river. It is a fresh-water shark, and abhorred by all anglers. It never rises to a fly, but when it cannot get salmon spawn to live on, preys upon the rainbow trout, and destroys an incalculable number in the course of a season. He is a slimy, ill-looking rascal, with a tremendous gape and well armed jaws, and is the black sheep of an aristocratic family. No other fishes inhabit these waters besides the three species named, rainbows, Dollies and salmon, therefore the Dollies have no other food saving fish roe, young salmon, and trout. A case of a 1½lb. Dolly being caught with a pound rainbow in its throat has been recorded.

Sissons' McCloud River Camp has been a well-known anglers' resort for years, and has been offering its hospitality to all since 1881. Many of the celebrated anglers of the continent have been its guests. But henceforth, alas, it is to be shut to the fraternity. The whole of the river, from its source to the U. S. Fish Hatchery at Baird, near its junction with the Pitt River, has been taken up by wealthy men, who will strictly preserve it for their own pleasure. It seems a pity, but I don't blame the parties at all that now own it. I only envy them. Had I been a rich man I would have owned a piece of it myself, after my first visit.

So good-bye, McCloud! I will probably never see you again, but my memories of you will be ever pleasant, together with those connected with all your surroundings!

AREFAR.

New England Fishing.

BOSTON, July 1.—Mr. C. H. Fairbanks has recently returned from an extended fishing trip to the Megantic Club's preserve. With Mrs. Fairbanks he went via Megantic, and had good fishing at Spider Lake. Much of the trip was entirely new to both of them, and the enjoyment was all the more bright. They went down the preserve to Big Island Pond, where they greatly enjoyed the landlocked salmon fishing. Mr. Fairbanks is surprised at the size and gaminess of these fish, considering that the pond has been stocked with them only a few years, and that there were none in that pond till put there. None are kept, however; the invariable rule is to return all salmon to the water. This will be kept up until it is considered safe, so far as the supply is concerned, to take salmon for food. Mr. and Mrs. Fairbanks saw a great many deer on their trip; a very novel sight to them. Mr. F. succeeded in getting a very fair picture of a live deer with his camera, though the snap shot was not made when quite as near as he would like to have been. He is so much pleased with the trip that he has applied for club membership, and been elected.

Mr. D. J. Flanders and Mr. Howard Marston, of Boston, are out from a most enjoyable fishing trip to the Megantic Club preserve. They had fair fishing at Big Island Pond and at other points, but were the most pleased with the fishing in the West Branch of the Dead River. They came down in canoes nearly to Eustis. The water was just high enough, and they struck the trout just right,. The stream is closed after the first of July, but they were there before that time, and such fly-fishing! Mr. Flanders says, "Never in my life did I have such fun fishing. In the swift water we caught hundreds of trout. We threw them in and threw them in. The water seemed to be alive with them. Often we would have three on at once—one on each fly."

Mr. Archibald Mitchell, of Norwich, Conn., a most thorough devotee of the salmon angle, has just returned from the Restigouche, where he had very good success. Gorham Peters, of Boston, and Robert Bacon, of J. B. Morgan & Co., New York, have gone to Mr. Barnes' salmon river, the Grand Cascapedia. At this river success has been good this season, Miss Barnes having taken a very large salmon, already noted in the FOREST AND STREAM.

July 4.—Mr. Walter B. Farmer, of Arlington, Mass., has returned from his annual fishing trip to the Rangeley waters, where, with Mrs. Farmer and friends, he had a fine outing. He is credited with several salmon and trout at Rangeley Lake. Mr. G. C. Graves has taken salmon lately in the same lake of 6½, 6 and 4½lbs. Miss Mildred G. Sears has taken a trout of 6lbs. at the same place. Mr. Frederick Skinner, of Boston, reports fine luck at Rangeley. He invariably puts back all the fish he takes. At the Upper Dam fishing holds out remarkably well, though the weather is hot. Mrs. J. S. Doane, of Boston,

has lately taken two trout from the pool weighing 5 and 4½lbs. respectively. T. B. Stewart continues to fish there, generally returning his fish to the water. He is last credited with trout of 4 and 3½lbs.

Great brook and stream fishing is reported from the section around Plymouth, N. H., and even into the White Mountain region. Strings of twenty to fifty trout are common in the section around the Pemigewasset River. The brooks around Mt. Prospect are reported good, with great fishing at the Lost River Cascades.

Mr. L. Dana Chapman, corresponding secretary of the Megantic Club, is at the preserve for over the Fourth. Six deer were seen at one time by guests at the Mountain View House, Rangeley Lake, last week.

SPECIAL.

CHICAGO AND THE WEST.

Lapse of the 'Lunge Season.

CHICAGO, Ill., July 2.—The earlier part of this summer in this part of the country was exceptionally pleasant and favorable to angling, much beyond the average season, but within the past two weeks the weather has turned off very warm over a great part of the West, and this has brought to a sudden end the good fishing which was reported for so many waters. The shallows have become too hot for the bass, and they have taken to the deep water, to lie around and think things over with nature deliberation before they take any business action in regard to bait or fly or spoon. From now on they will not come out to make very good sport, except toward evening. I should think that the fly would be a capital thing to try just about now for bass, that is to say, in the evening after sundown. The "sand fly" made its appearance here this week in thousands, called out by the sudden hot wave, and I have always noticed that when the sand fly is on here the weather has been warm enough up in Wisconsin to start the drakes to rising, and on such occasions I have met very nice success with the artificial fly. If all goes well, I may have something to report about this within the next week or so, as J. B. H. and I have about concluded to take next week for our tenth annual camp on the lake which we discovered so long ago.

The hot weather has been especially obvious in the lapse of the 'lunge season. No one reports any muscallunge any more, and I do not doubt that the guides are busy explaining that the "bloom is on the water, so they won't bite." The truth is that the 'lunge are now shedding their teeth, and do not want to bite, as has of late been so often pointed out in FOREST AND STREAM. I have just been talking with Mr. R. B. Organ, who, with Mr. C. S. Wilcox, of this city, fished for over two weeks just past at Kabekona Camp, in Minnesota. He says that they two trolled faithfully for over a week and never got the first sign of a strike. He saw one muscallunge, taken by Mrs. W. P. Mussey, which fish weighed 14lbs., but this fish was in very bad condition. Its sides showed big patches of scaleless hide, and it was slimy and ill-looking. Examination of the mouth showed that the gums were very red and inflamed, and most of the teeth were missing, while those which remained were loose. It was not a fish to seek long or ardently after, and Mr. Organ said he did not care to fish for muscallunge after June, for he thought they were not then fit for sport, until the cool fall weather found them again in good fettle. A gentleman angling at the same point caught one of 23lbs., but it too was "mangy" and in bad condition. Had it been prime it would have weighed 38lbs., in all likelihood, in the opinion of those who saw it. On the other hand another 'lunge was taken which was bright and cleaner. The "shedding season" does not seem to be uniform as to date. No one at these now well-known waters had any fortune worth mentioning with the 'lunge last week, though Mrs. Mussey was lucky enough to hook one very heavy fish, which broke once and seemed a grand one. She played it three-quarters of an hour, and was tired out, so that she handed the rod to Mr. Mussey. The latter worked the fish for quite as long, fearing to risk the line, which was a light bass line. The fish at length got into the weeds and broke away. Messrs. Organ and Wilcox went over into one of the bass lakes and in a little while caught their limit of fifty bass. They took no more than 50, and used but three out of the lot, putting all the others back into the water. Mr. Organ says it is no fun to catch bass so easily as that, and he would rather go to the old Kankakee, where it takes a little more work.

Other Waters.

Ten days ago the bass fishing in the Miltona waters of Minnesota was very fine. Capt. and Mrs. J. H. Waite landed eighty-eight bass in three hours and fifteen minutes, and other parties also reported very nice sport.

Mr. Carrington Phelps, who has spent the winter at the old homestead at North Colebrook, Conn., passed west this week, and will this summer keep bachelor quarters on the high bluff at Phelps Park, Lake Minnetonka. Methinks many a big pickerel would do well to hie himself out of that vicinity, lest he fall foul of Mr. Phelps and his deadly spoon, which the same I have seen in action.

Mr. Ernest McGaffey and mother have left the city for a few days to escape the heated term. They go to Long Lake, Ill., and will be pleasantly located. Mr. McGaffey is a poet, author of "Poems of the Rod and Gun," and of many other good things on many lines of thought. He is not only a lover of outdoor things, but proficient in the sports of the field, so that he writes most understandingly as well as feelingly.

I have word that the State Fish and Game Commission has seized a trunk shipped from Kabekona Camp, with about 230lbs. of fish in it. I cannot learn the name of the man shipping the fish, nor any further particulars, but I am inclined to think, from certain features connected with the item, that this may be a case of something similar to the one mentioned in last week's FOREST AND STREAM, of an alleged angler shipping fish to the St. Paul market. There are all sorts of tricks going on among the game dealers to get the stuff into their fences, and this may be one of them.

A Navigable Stream.

It seems that Willow River, of Wisconsin, has been adjudged "navigable" by the courts. This lets all the public into this famous trout preserve. I recall that once when I was a small boy at school I heard of a certain stupid scholar who tried to read the sentence "The river was navigable for boats to the city of—" The boy read it as follows: "The river is navigable for boots to the city of—" The Willow is a trout stream, and not a waterway. Perhaps the learned judge meant only to say that it was navigable for boots.

At this time of the season I would recommend a try of the Fox River with the fly for bass, at points near Clintonville and Elgin. These warm evenings should show a little fun there.

Prospects.

While I believe that the present season has been above the average in the general excellence of the angling, I have heard of but very few large fish, nothing over 32lbs., I think, in 'lunge, and not over 5½lbs. for bass. We may later hear of heavier fish than these. Ten days ago this part of the country was flooded with heavy rains, which sent the rivers out of their banks for many miles in certain sections. This June rise came too late to be of much service in the spring run, but I believe that high water even so late as the last week in June is very beneficial to the angling, especially as regards the ensuing year, as it gives the young fish a wider refuge in the extended shallows, and affords a wider feeding ground for the grown fish, which also are better able to work up higher in the streams.

Tries Again.

Mr. Fred N. Peet, captain of the Chicago Fly-Casting Club, told me last week that he would go over again to the Pere Marquette River in Michigan South Peninsula, for another try at the big rainbow, on the 4th of July. While I do not hear positively that he has started, I presume that such is the case, and that duly he will return with some startling stories of that storied stream. He goes over to take lessons in fly-fishing of Mr. John Waddell, of Grand Rapids, who has a few things up his sleeve about rainbow trout which are not set down in the casting records.

Good Dope.

I have found at last the perfect fly dope, and it isn't on the market either, so far as I know. It is the personal discovery and compilation of Col. E. Crofton Fox, of Grand Rapids, who has been making it for some time, and who has the formula as his own personal information, which I do not feel at liberty to make known, though perhaps the Grand Rapids drug stores supply the article to Col. Fox's friends. I tried this dope on the Boardman River (and also on myself), and found it pleasant and effective, driving away the mosquitoes at once it was used. It is equally good for black fly, and for chigres and a thousand other biting and boring and unpleasant bugs, which Col. Fox discovered down in Central America, and against which he had hitherto found no protection. It cures the wound of all such pests, and it is a joy forever. It smells so good that I leave the cork out of the bottle in my desk, to play I am in camp. I shall try some more of it on my lily-white hands this week.

The New System of Fly-Fishing.

From the San Francisco, Cal., Daily Report, I take the following comment on my late article in FOREST AND STREAM about a new way to cast the fly for big trout:

"In FOREST AND STREAM of May 28 Mr. Hough gives a new theory of fly-fishing, suggested by the experience of Edward Taylor on Prairie River, Wisconsin. It is a good story, and the gist of it is that this business of dropping the fly softly is all rot—that a big trout is a wary old boy who can't be fooled into believing that a drowning fly or any other insect will float across a stream and then begin to float up. So Mr. Taylor whips around a likely spot until the water is in a foam, and the lazy, gorged trout gets mad and snaps at the annoying bug that is disturbing his rest and quiet. Well, Mr. Hough was converted to this view by results, he says, and now he will be glad to know that so well known a sportsman as W. J. Golcher agrees with him.

"'Do you know, I think there's something in it,' said Mr. Golcher this morning in talking to Frank Maskey and the writer. 'I have never been able to see what a trout can imagine a spoon to be. Now, up on the Van Deuzen River, in Humboldt county, near Trinity line, there are hundreds of pools that are full of landlocked salmon. There was one pool there one morning that I could see, as the light came in through the trees, was just full of salmon. Then I cast the spoon. One would rise and look at it sluggishly. Another would rise at the next cast, and so on. Finally—biff! there was a rush and a splash and a strike, three or four violent turns, and away went the line. So it was with other pools. I'm satisfied that those fish were not hungry, and they did not know or care what the spoon was. They simply knew it had no place in that pool, that it was disturbing their rest, and it made them angry, so they grabbed it to get it out of the way.'"

I fished in this way while on the Boardman last week with Mr. Harry Widdicomb, and I could not see but what I had about as good luck as anybody else had there at that time with the fly. Mr. Widdicomb is an old trout angler, and a very successful one, and he said he thought it was a good thing to make a lot of fuss sometimes when you wanted to raise a big fish. He said it didn't scare a trout to plunk a worm at him, if he wanted the worm, especially if the trout couldn't see what made the stir. Col. Fox did not think this way would do with old and shy rainbow trout, which would run at seeing the faintest ripple of a fly. Mr. Widdicomb and I discussed the matter as we fished along side by side, and more than once, after I had deliberately whipped along the side of a log or bank, making all the fuss possible with the fly, we saw a trout rush out and take the fly in plain sight, thus proving, at least in some cases, that the method was a success. I took no very good trout on that stream, but then neither did anybody else. I should certainly pin my faith to the method as earlier described, if I wanted to get big trout on that or any other stream, though I am aware that this is very rank heresy in the light of old and orthodox fly-fishing. The position I take is that the world moves, and very often we change our belief in that which was once thought inviolably true.

Proved It.

Speaking of my trip on the Prairie River and the story I wrote about it in the FOREST AND STREAM, I should like to adduce a little proof of the accuracy of the newspaper man's habits of speech. I said in the story that I had hooked and for a time played a trout which I thought was a big one—about 2lbs., I think I said it seemed to weigh. This trout escaped by the parting of the leader, getting away with a fly or so into the bargain. Well, I came away from that country, but the man I was fishing with remained for several days more, and now he has just come into my office and told me that they caught my trout up there after I left. It was a man from Dudley's place that got him, and my impression is he caught him on a worm, but I hope not. The important part is that the trout weighed 1¾lbs. dressed. He had my leader and flies still fast to him, and was in the same pool. This is the only instance I ever knew where a big fish got away without shrinkage when brought to hook, and I trust it will add prestige to the craft of newspaper men as well as the craft of anglers. But really I think the scales were wrong and that the fish I was playing must have weighed at least 4lbs.!

Wisconsin Sooners.

CHICAGO, Ill., June 18.—Mr. G. A. Buckstaff, of Oshkosh, Wis., who was Speaker of the House at the last session of the Wisconsin Legislature, who appointed the committees on fish and game for that body, and who has been distinguished in many ways in the Wisconsin fight for good game laws and their observance, writes me as below, a letter which I would rather not print for some reasons, but which ought to go to the public:

"The Union Club, Oshkosh, Wis., June 15, 1898.—Mr. E. Hough: Your issue of June 11 has a letter from Fay L. Buck giving an account of bass caught by a Mr Cathiart, of Sidell, Ill. Mr. Buck has the date wrong. Messrs. Herron and Cathiart appear registered on Mr. Buck's hotel register as being there May 14, eleven days before the law allows catching of black bass in Wisconsin. Their catch is also written in the back of the register and date given as May 14. It is also written (evidently by one of the parties) on one of the cottage doors as May 14, and the catch given. I was at Mr. Buck's resort four days, beginning the morning of May 26, and neither of these gentlemen was there at that time.

"These are the kind of men that will bring a hardship on all non-resident fishermen. Wisconsin will soon demand a license for fishing that will be almost prohibitive on non-residents. Mr. Buck, too, knew of this lawbreaking, and the parties were assisted in getting their fish out of the State in a trunk, thus violating another clause of our law. Tell the Sidell men to send us notice the next time they come, and we will have the sheriff or game warden meet them. G. A. BUCKSTAFF."

Mr. Buckstaff adds that he has evidence enough to convict the two Sidell men if they ever come back to the State. The inference from these unfortunate facts is easy and obvious. No angler and no hotel keeper ought to break the law. Anglers want to be free to go into any State as they wish. Hotel keepers want them to come again. If Fay Buck, for any cause, has been tangled up in this matter—though we have not heard his side of it yet—I shall surely write him and tell him not to allow any guest to break any State law. And I don't think he will. It isn't business to allow that sort of thing. The time for the old days and old ways is gone.

At Kabekona Camp, Minn., last week, Mrs. Dr. Frothingham, of Chicago, killed a muscallunge weighing 18lbs. Mrs. Ben Bingham was so lucky as to get one weighing 32lbs., the record fish of the season so far for any rod, and said to be the record lunge for any woman angler. Mr. J. M. Oliver and his friend, also of this city, caught a number of lunge averaging 18lbs. in weight. Messrs. R. B. Organ and C. S. Wilcox, of this city, left Wednesday night for the same point, and should meet good sport. Mr. Wilcox was at the camp last season and had good luck.

The Sunfish Club.

When I was up at Delavan Lake, Wis., last summer, I noted the big camp of a party of merry anglers who sailed under the name of the Sunfish Club, of Freeport, Ill. It seems that the Sunfish members got frightened by the too great abundance and exuberance of the famous summer girl of Delavan Lake, and resolved never to go there again when the latter named product was at its greatest profusion. This summer the club made its regular annual camping trip very much earlier, and has arrived home again at Freeport after encountering only nominal dangers on this account. They had very good fishing in Delavan Lake, where they have been making pilgrimages for many years. Their fears in regard to the summer girl are by no means groundless, for it is not safe for unprotected gentlemen to camp in that vicinity at the height of the season.

E. HOUGH.

1206 BOYCE BUILDING, Chicago, Ill.

A River Tragedy.

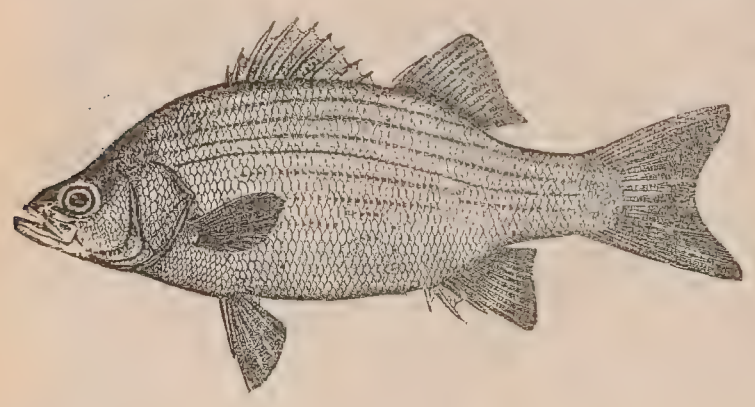
GRAND TOWER, Ill.—Two days ago a half-grown boy at Grand Tower, Ill., took a boat some one had left unlocked at the river side, and went out on the river. Away out in mid-stream he somehow fell out of the boat. There was a few seconds of desperate struggle to regain the boat, and then the relentless water closed over a drowning body, and left no mark except an empty boat and a boy's old hat drifting idly down the swift current. An hour later there was a woman on the river bank with two terrified little ones clinging to her skirts as she walked up and down along the water's edge wringing her hands in such agony as none but a mother can ever feel. The writer earnestly hopes it may never fall to his lot to witness such fearful agony again. Moral: Spare no pains to teach our boys the careful and skillful use of boats and firearms, and never trust them alone with either until they have shown themselves proficient and careful in handling them.

O. H. HAMPTON.

Fresh-Water Angling.

No. X.—Other Fishes, North and South.

BY FRED MATHER.



I HAVE already said that we have many good game fishes in our fresh waters, both north and south, that would have gladdened the heart of Walton or of any other old-time angler. John Dennys, who wrote the "Secrets of Angling" in 1613, said:

"Let me live harmlessly; and near the brink
Of Trent or Avon have a dwelling place
Where I may see my quill or cork down sink
With eager bite of perch, or roach, or dace;
And on the world and my Creator think;
While some men strive ill-gotten goods t' embrace,
And others spend their time in base excess
Of wine or worse, in war or wantonness."

I confess to a liking for that kind of fishing as well as for the more modern athletic form of fly-casting, bait-throwing, wide-awake sport, which we moderns have made of it. Walton called angling "the contemplative man's recreation," and usually practiced it alone; but the modern angler is rarely contemplative. He rushes off by rail, counts his minutes, hustles out and works like a blacksmith in order to have sport. The angling of Walton, Dennys, Berners, and others of a century ago still have attractions for thousands who go a-fishing and say nothing about it. These men are mainly philosophers, who find angling to be an excuse to get into communion with nature and away from man. That this was the case is shown by Byron's lines:

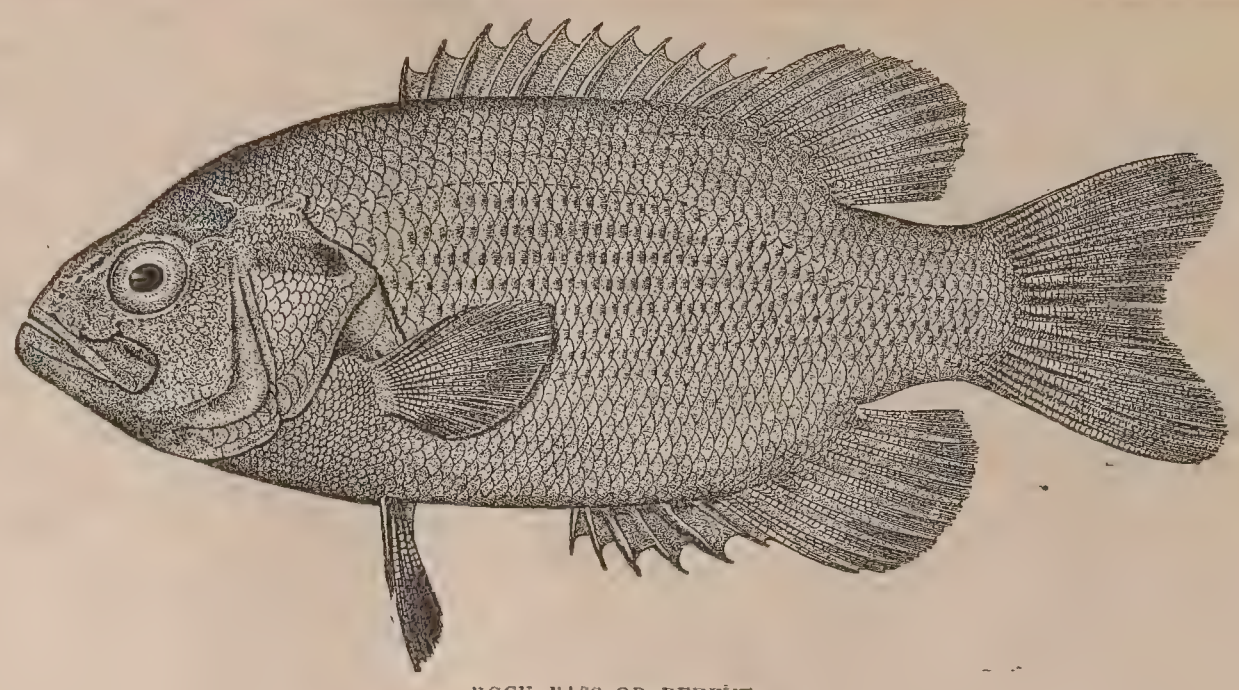
"And angling too,-that solitary vice,
No matter what old Walton sings or says;
That quaint old cruel coxcomb in his gullet
Should have a hook and a small trout to pull it."

The quotation is from memory; this for the benefit of some scholar who might discover a word or a comma out of place. Byron evidently did not care for angling and is only quoted to show that in his day, some ninety years ago, angling was a "solitary vice." There was no companion, not even a boatman, to disturb the quiet

WHITE BASS.

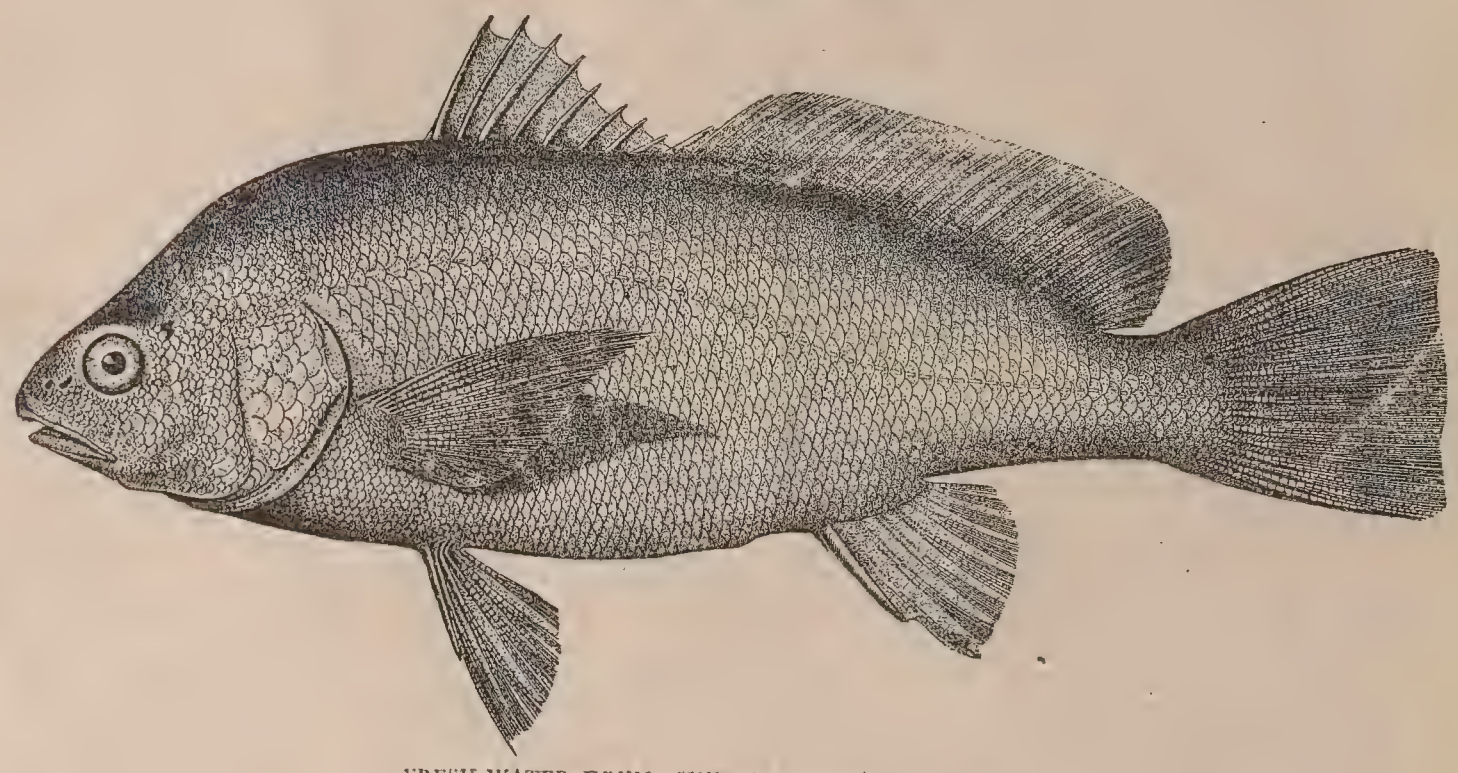
of one's thoughts, and I confess to a liking for that kind of fishing to-day. It brings one near to nature; the birds and beasts pursue their vocations and their avocations in presence of the silent immobile figure with rod in hand on the bank. With this by way of classing anglers we will proceed to consider certain of our fresh-water fishes which are not rated as first-class fishes by American anglers, but which afford sport to those who may be classed as "contemplative anglers."

Here permit me to inject a paragraph to say that in my early life I laid a foundation for observation of the habits of such animal life as might be seen on lakes and brooks by this form of angling. It made me an observant field naturalist without the advantages of a scientific training, and if I had a boy under twenty years old I would let him take the same course of angling study that his father had, before he was allowed to go to the distant trout streams. I would do this on the principle that he should be fed on simple, nourishing food while growing, and not get an appetite for such stimulants as Worcestershire sauce, tabasco, tobacco, foreign cheeses and wines until he arrived at man's estate. He would not then be a blasé angler at thirty who must have a terrible fighting fish at the end of his line, or there was no enjoyment. He would first of all have learned to love angling merely as an adjunct to a communion with nature, or in other words: "It is not all of fishing to fish."



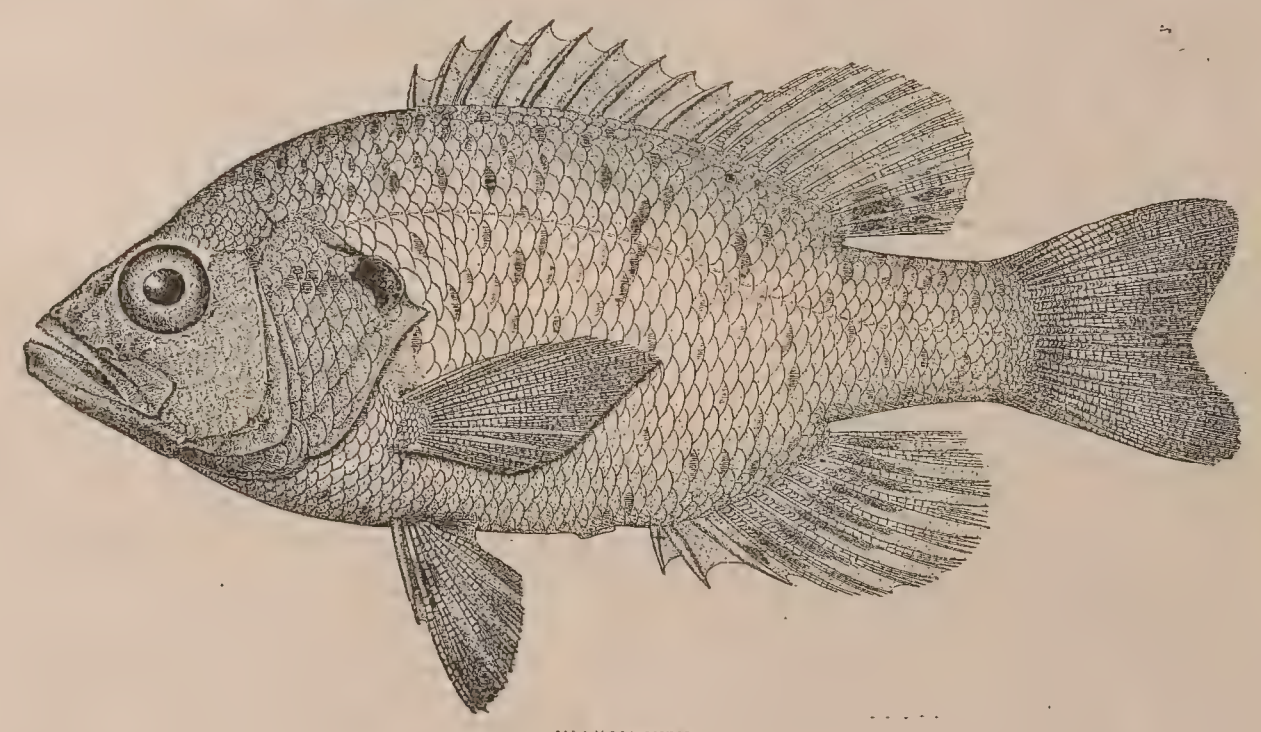
I am so much of an old-fashioned angler that if I had to decide between the sedate man pictured by Dennys and the athletic fly or bait-caster, I would to-day cast my lot with the former, because I love nature more than I love either exercise or a string of fish. The young man and boy needs exercise, I do not; let him tramp ten miles away to the lake and bring in a string of perch and I'll greet him as a conqueror. He will remember the day and the greeting years after he has taken salmon on the Restigouche and in Alaska, and look back upon it as one of the brightest days of his existence. The mill pond and the nearby streams are a paradise to the boy, and after all his triumphs with bigger game he will look back with delight on the days when he could see his "quill or cork sink down with eager bite," and will in his older days go back to the methods of boyhood and become a "contemplative angler."

Lake Trout.

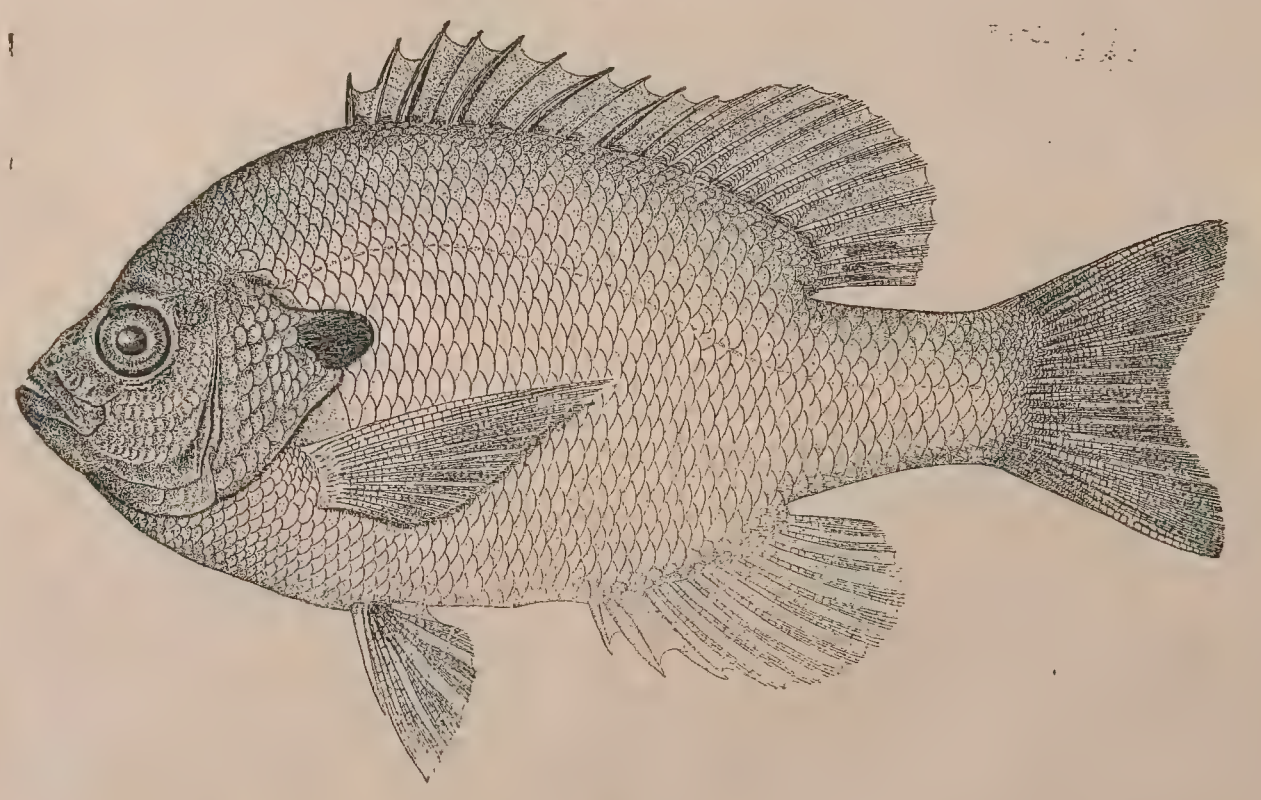


An angler who fishes in the Adirondacks writes that in this series the lake trout, which he and anglers in northern New York miscall "salmon trout," has been skipped, and he loves to fish for it. I so seldom angle for this fish that I overlooked it. The species is the *S. namaycush* of authors. It is essentially a lake fish, never migrating, but requires colder water than our Northern brook trout, and therefore retreats to waters of 60ft. or more in summer, although it will take the fly near the shores as the ice goes out.

It is found in all the Great Lakes, Lake Champlain and Otsego Lake, in New York; New Brunswick to Montana, British Columbia and Alaska. It is a char with an extreme northern range. I believe that Otsego Lake, N. Y., is its extreme southern range. A so-called variety known as ciscowet is found in Lake Superior, but its separate identity is a matter of doubt.

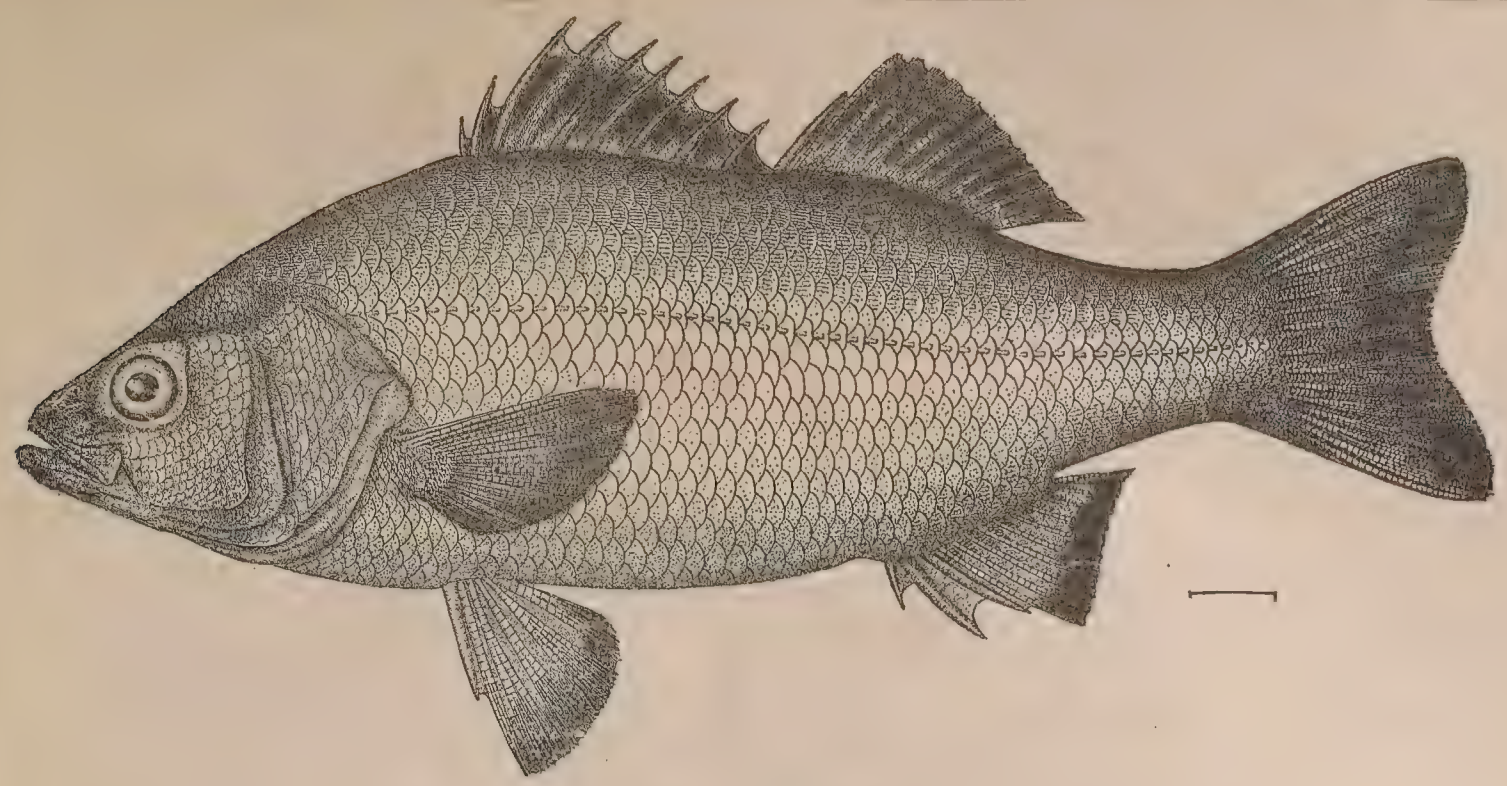


Lake trout have been taken that weighed over 100lbs. It is known as togue or tuladi by the Maine lumbermen, and is also called "lunge," while it is known in Michigan and Wisconsin as "Mackinaw trout." They vary much in color in different waters. They consume great numbers of whitefish, ciscoes, and other fishes which live in deep, cool waters.

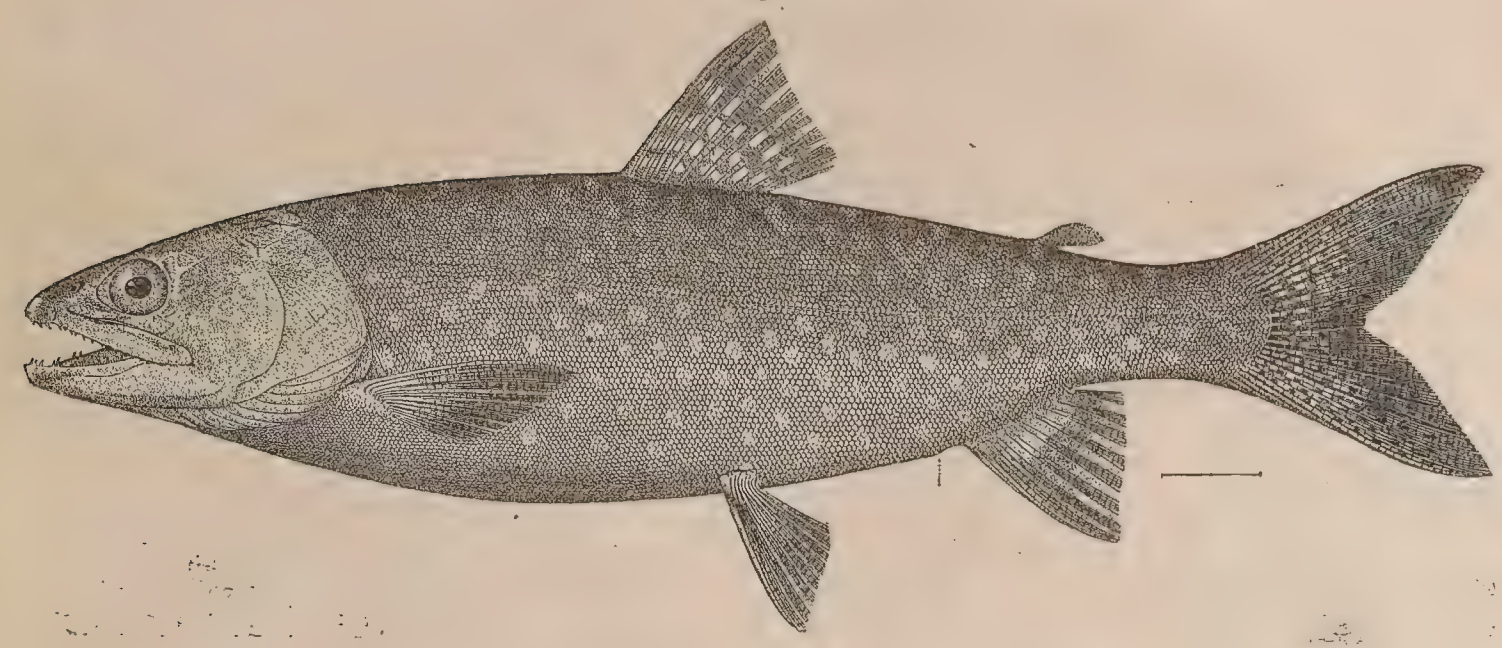


ROCK BASS OR REDEYE.

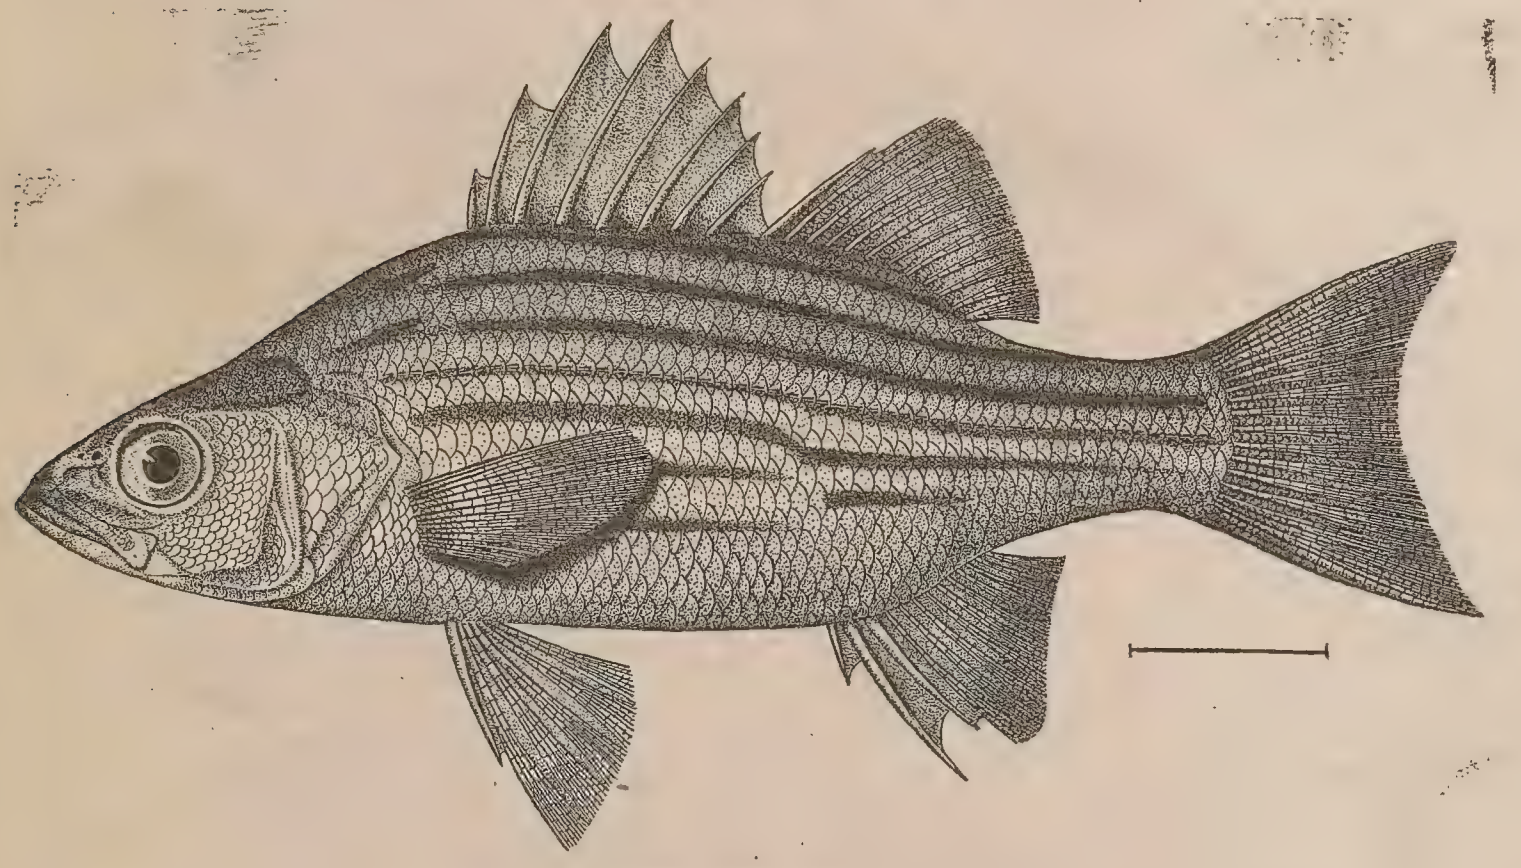
FRESH-WATER DRUM, SHEEPSHEAD OR GASPERGOU.



WARMOUTH.



BLUE SUNFISH.



While I rank this fish higher than the brook trout for the table, I seldom care to fish for it. If you troll a spoon or minnow 10ft. behind 2lbs. of lead it is suggestive of grappling in the interest of the coroner. Your sinker is a "tracing" one, i. e. the line runs freely through it and is stopped from getting down to the bait by a knot. The fish can run off with line without taking the sinker along, but when you reel in there is always a doubt if the trout is there until the lead gets near the surface, for the fish is not very gamy.

THE WHITE PERCH.
From Fishing Industries

THE LAKE TROUT OR NAMAYCUSH.
From Fishing Industries

THE YELLOW BASS.
From Fishing Industries

There is another way to angle for this fish and get more sport out of it, for you have not to troll a weight at a great depth, and that is "baiting a buoy." Get a stone and fasten a line to it and let it down where the water is a proper depth, or where you or your guide know of a good place. Keep the line taut and tie a stick to the upper end so that it will stand up and not have line enough to drift away from over the stone. Next day row out and drop half a bushel of minnows, cut in half, over the stone. Repeat this for two days, and then tie the boat to the buoy and fish with rod, reel, a ¼oz. sinker and a line minnow. Then you get all the fight there is in the fish, with no dead weight of lead. One 8-o Sproat is the best hook for this work that is on the market. I have a hook made by an Adirondack guide, which I have owned for over twenty-five years, and believe it is the best of all forms for lake trout. It follows the Sproat from barb to curve of shank, and there it broadens out. Jack Sheppard said it was one that he had bought, but had "opened," yet the shank is not as long as an 8-o Sproat, and it has a flattened head. It draws into a board well, and if I ever again fish for lake trout at a buoy, that hook will be called into service.

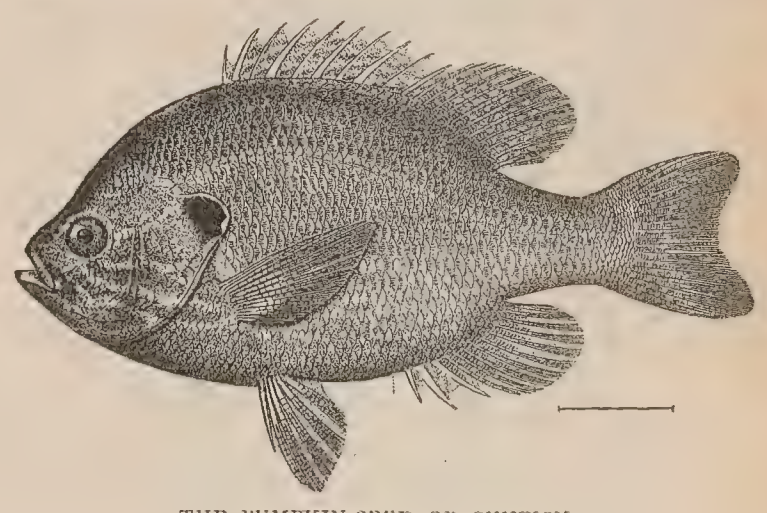
The Warmouth and the Rock Bass.

These fishes are similar in appearance and habits, and are both good fishes, for angling and for table. They are a sort of connecting link between the black basses and the sunfishes. The warmouth, called "red-eyed bream" in parts of the South, is known to science as *Chaenobryttus gulosus*, and the fact that it has survived that slander proves that it is a good fish. It has a single dorsal fin with ten hard and ten soft rays, and it ranges from Lake Michigan to Texas, and in the sluggish streams of the South it is abundant and gamy. In the North it shares the names of "big-mouth," "sunfish," "goggle eye," etc., and is an important food fish in Indiana and Illinois, and it is somewhat handsomer than in Virginia and the South, being more deeply colored with the shades of blues and copper-reds.

The rock bass, "goggle-eye," "red eye," etc., ranges alongside its relative, and is found from Vermont to Manitoba, south to Louisiana and North Carolina, being common west. It has a larger eye than the other, and its dorsal rays are XI., 10. It prefers clear waters, and is often found at the foot of dams in swift waters, but hiding among the rocks, whence its Northern name of rock bass.

Both these fishes may be taken with fly, worm or minnow. They fight well on light tackle, and are excellent pan fish. Use a No. 6 turn-down eye Pennel Limerick hook, and any of the worms or minnows that are at hand. Of course a No. 6 Sproat hook is good, and so are other hooks, but as I abominate all sneck or other hooks which have a side bend, for which there seems to be several reasons against their use and none for them, I always advise some other hook, and the Sproat seemed perfection until Pennel put his hook with the turned-down eye on the market. Good tackle, the best in the market, is a comfort to its possessor; fish may rush, sunken twigs may entangle, but the belief that the tackle will hold gives the angler a confidence that cannot be computed in the slight difference in cost between good and poor tackle.

White Perch and Yellow Bass.



These two fishes are very distant, and are put together because in the South the latter fish is called "white perch." They both belong in the genus *Morone*, which has been recently separated from the genus *Roccus*, which we will consider later, but between which, according to Jordan, the differences are: *Morone*—Dorsal fins joined; spines strong; anal rays III., 9—3 spines and 9 soft rays— * * * base of tongue toothless. *Roccus*—Dorsal fins separate; spines weak; anal rays about III., 12, the spines graduated; lower jay projecting; base of tongue with teeth.

I am aware that many anglers sneer at such knowledge because they do not possess it, and consider it to be of no account. My boy, never sneer at what you do not understand; you want to know the correct name of the fish you are catching, and its relationship, as well as its range and habits, if you have a desire to be classed as an angler, and have an interest in fishes beyond their use as food. The common names used in your locality may be absurd or erroneous, study their different anatomical variations on the lines laid down by Jordan, as above quoted, and a new pleasure will be added to the capture of fish.

The Northern white perch, *M. americanus*, ranges along the Atlantic Coast from Nova Scotia to South Carolina; it is a fish of brackish water, which ascends streams and breeds freely in fresh-water ponds. They grow to over 2lbs. weight, and are a good and gamy fish, taking fly, live or dead bait, and putting up a stiff argument against a light rod. They have no black stripes on their sides like the next species, which, as I have said, are called "white perch" in the South, but which all angling books call "yellow bass."

To avoid confusion, I must mention another fish which is known as "white perch" along the Ohio River. This is the fresh-water drum, *Haploidonotus grunniens*, also called sheepshead on the Great Lakes, gaspergou in the extreme South, croaker and thunder-pumper in the Middle Southern States. These names, like that of drum, relate to the sounds it makes. It is never eaten about the Great Lakes, where it is tough. In the South it is a better fish, if small, and is eatable, but not in the first class.

The yellow bass *M. interrupta*, gets its specific name from the broken, or interrupted, black stripes on its sides.

THE PUMPKIN-SEED OR SUNFISH.
From Fishing Industries

"It is found throughout the lower course of the Mississippi, ascending the tributaries, which are deep and sluggish, but not running past rapids or into the upper courses of the rivers. It probably enters salt water, but of that we have no certain information. * * * The criterion by which it may be distinguished from the white bass is the low membrane connecting the two dorsal fins. Its color is yellow, not silvery, and the black stripes are very prominent."

That the names "perch" and "bass" are applied to the same fish in different localities is not strange, when we consider that both are modifications of the Dutch "barsh." The name "bass" is more frequently applied to fishes in the North than in the South, where most of the spiny finned fishes are called perch, with a descriptive or qualifying front name. Hence our "yellow bass" of the North becomes a "white perch" in the South. I have had good sport with this fish in Bodeau Lake, La., where it took fly and bait well, but as it loves deep water the flies must be allowed to sink in summer time. A minnow is more killing, but it does not seem to care for the top-minnow, the little fellow with a long nose, and a broad blue-black band along its side, but the red-sided minnow is a favorite. This fish cares little for angleworms, but the angler needs some to catch minnows with.

When this Southern white perch strikes a minnow it is like the strike of a pickerel, there is no nibbling, but a line cutting through the water will be the first intimation that a yellow bass has hold of the minnow.

The White Bass and the Striped Bass.

Here again are two distinct fishes which have their popular names mixed, just as we have seen in the case of the white perch. The scientists have all the kinks straightened out, even if they have several names for one fish, for they follow the name with that of the author who gave it. Thus: The lake trout, *Salmo namaycush*, Block; *Salmo amethystus*, Mitchell, De Kay; *Salvelinus namaycush*, Nilsson, Jordan, etc., and so we know the record of names, which, by the way, are often changed in order to tack on the name of some man who thinks he has discovered a slight difference in a genera or species. The rule is that the specific name first given must not be changed if that name can be found. The specific name is the last one, but any duffer can change the first or generic name, and trust to having followers who will recognize his distinctions.

I had no intention of going into ichthyology, but having got in will try and swim out. Here is a family, the *Salmonidae*, meaning the salmon-like fishes. Then comes the genera; the *Coregonus* or whitefishes, with toothless jaws, and the graylings with teeth; the *Salmos* with certain dental formations and the *Salvelini*, which differ in teeth and scales. After this these genera are divided into species, as *Salmo salar*, the salmon; *Salmo fario*, the brown trout, etc. This is equivalent to "Smith, John" and "Smith, James" in the city directory.

The white perch and the yellow bass of the North have been shown to bear the same popular name South,

but to be very different species of the genus *Morone*, a genus formed on the fact that the two dorsal fins are joined, spines strong and not graduated, base of the tongue toothless, and the jaws nearly equal. In the genus *Roccus*, which we will glance at, the lower jaw projects and the tongue has teeth on its base. Yet these two genera have much in common. So much for science, which is "knowledge set in order" and is our only rudder and compass. The popular names of our mammals are badly mixed; those of our birds so muddled that it will take a century to straighten them out, but I throw up the sponge on the fishes.

Once I hoped to accomplish something in the line of a national nomenclature for our fishes. As I labor the mountain rises and the obstacles are more formidable. If that millennium ever comes it will be centuries after I have been put to bed with a spade and sodded over, yet I write to-day in the hope that some time in the distant future Americans may have one name for one fish and only one fish for one name.

The white bass, *Roccus chrysops* (Raf.), is a splendid fish, which ranges through the Great Lakes, the Ohio River and the upper Mississippi, weighing up to 5lbs. It may be distinguished from its relatives by this description: "Silvery, tinged with golden below; sides with dusky longitudinal lines, 4 or 5 above the lateral line, and a variable number of more or less distinct ones below it." Its specific name, chrysops, refers to its yellow or golden eye. As it is not found in the same waters with the striped bass, it cannot be confounded with that fish. In general appearance it is a handsome fish, and it is also a gamy one.

I must dissent with Dr. Jordan in regard to this fish. He says, American Game Fishes: "A quiet, handsome fish, common enough, yet never very abundant; fairly well known, yet unobtrusive, never taking a prominent part in anything. Such is the white bass. It is found throughout the region west of Lake Champlain, north of Tennessee and east of Dakota. A few white bass may be found in any pile of black bass or sunfish from the lakes, as they lie in the market stalls. Yet no one ever saw a catch of white bass, and no one ever went fishing especially for them."

It is the last statement of Dr. Jordan's which recalls that famous scene in the Boar's Head Tavern, at Eastcheap, where Prince Hal says to Falstaff: "Mark now, how plain a tale shall put you down." In 1854 there was good fishing in the Chicago River, see story of George Raynor in "Men I Have Fished With," and I took a few white bass there and off the old breakwater in the autumn of hat year. I had never seen the fish before, but was so pleased with its fighting and with its table qualities that I talked about it to every angler I fell in with. One day a young man named John Boyd, who lived near Milwaukee, told me that he could take me to a pier off that city where I could "catch 'em by the hundred." We went and fished with cane poles, no reels, but the line coiled at the feet, and running through rings was checked by a gloved hand. We used minnows for bait, and had grand sport. Three days we fished there, and gave all of our catch, except a few that went to Boyd's people, to the poor women who haunted the pier with baskets for any surplus fish that anglers would spare. Of course we took many other fishes, but we were after white bass, as the best fish that we could take from the pier. Things piscatorial have changed in that region during the past forty-four years; I write of things that were, and Dr. Jordan writes of things of to-day. What will be the change forty-four years from now? Ah, me! I fear that the greed of man will produce greater changes in the future than it has done in the past, and the changes are likely to be of the same kind. The angling writer of 1942 may mention the white bass as an extinct species; gone with the buffalo and the passenger pigeon.

The striped bass, *Roccus lineatus*, is the noblest Roman of them all. Its specific name refers to the lines upon its sides, which are usually continuous, but in the more northern specimens, from New Brunswick, these lines are often broken. The generic name is a latinization of its Southern name of "rockfish," or "rock." It is mainly a salt-water fish, where it attains a weight of 100 or more pounds. It may seem out of place in an article on fresh-water angling, but the young run up rivers and have been taken in the Hudson as far up as Albany, and in boyhood days I often angled specially for them in the river channel, where they were feeding on the eggs of sturgeon and young shad.

The striped bass, which we took with sturgeon spawn covered with mosquito netting, or tied on the hook with thread, would weigh from ½lb. to 2lbs. I once took one on a spoon in the fresh waters of the Pamunky River, Va., which weighed 10lbs., and it fought hard and long.

The Sunfishes.

There are a dozen or more of them, the number of species increasing as we go south, and they are found in most all our fresh waters, the only exceptions which now occur to me a few of the Adirondack lakes. In the South they become "sun perch" and "bream" of different sorts, although the bream of England, where the name came from, is a soft-finned fish, something like our "red-finned dace" of the North, a species in which only the male has red fins. There is the "blue bream," "copper-nosed bream," the "blue-gill," "chinquapin perch" and others.

These are boys' fishes, but what angler does not look back with pleasure at the day he caught a big one, "bigger 'n a man's hand!" Those were glorious and never to be forgotten days.

If a boy reads this I want to say to him: "When you fish for sunnies, give sunny a chance. It has a small mouth, and boys are given to using hooks entirely too large. A No. 8 Sproat, No. 6 sneck, or a No. 8 Pennel Limerick with turned-down eye, is big enough, and a size smaller is better. The last-named hook is a good one. Use a foot or two of gut, a fine line, and as light a rod as you can get, and then you are rigged to get as much sport out of the sunnies as there is in them. A float is a nuisance, unless you are fishing among weeds. The philosophy of a small hook is that the fish can take it so that the hook will fasten in its mouth, for with a large hook the sunny will take it flatwise, and so swallow it, and no angler likes to have to cut a hook from the stomach of a fish. There is an implement on sale at the tackle stores called a disgorger, which is made for this purpose, but if you use a small hook that the fish can take in without mouthing it sideways, and then give a gentle strike when the fish runs off, you will not need a disgorger. Don't be afraid to use small hooks and moderate-sized worms. Loop the worm on the hook several times, and let the tail hang. Sunny can stow away quite a lot of worm, which shapes itself to sunny's mouth better than a large hook can do. Treat the little fellow as the older angler does the larger fish, don't use a stiff pole and throw the little fellow over your head into the brush behind, but use a rod that he can bend and exert his strength against, and through which you can feel the thrill of his every movement, and then you will experience on a miniature scale the pleasures which older anglers have when they fight a good trout or bass."

The Catfish or Bullhead.

These names conjure up visions of still summer nights, a seat on a log or stone, the voices of the frogs, the night heron, the owl, the splash of the muskrat and all the visible and audible life of the mill pond, and pleasant visions they are. There was a time when I thought "fishin' fer bullheads" was great sport. Then came a contempt for it as the fly-rod came to be used, and now, as I write, I would like once more to try it, for pleasant memories float up; memories that are half a century old, and like good wine, they improve. Most sport is either in anticipation or in memory; we enjoy it more before and after than while engaged in it.

In the United States there are at least five genera, and more than three times that number of species in fresh water and others in salt water, but I will not inflict them all on you. The most familiar species is the one known in New York as "bullhead," "horn-pout" in Massachusetts, "bull-pout," etc. It is the square-tailed fish which sometimes reaches 4lbs. and loves still waters with muddy bottoms. We will skip the great "Mississippi cat," which has been known to weigh 150lbs., and its relative of the Great Lakes, which grows nearly as big, and just consider the good, old square-tailed bullhead, which is found from New England to Wisconsin, Virginia and Texas, according to Jordan, who says it is common and is the best known of the smaller catfishes, and has been introduced into California.

This catty is the one which women used to peddle in trays on their heads in Philadelphia and cry "fresh catfish" in musical voices in the early morning. Perhaps they do so to-day, but just as Boston is celebrated for its baked beans, so is Philadelphia famous for its fried catfish, and I am fond of it. In my "Adirondack Fishes" I say: "As a food fish I place this fish very high, always preferring it to brook trout, and only second in the rank of Adirondack fishes, my choice being the frostfish, *P. quadrilateralis*, as first. * * * If this be treason make the most of it." But while the bullhead is always good to me, those from Adirondack waters are supremely so. If you go to Fuller's ask for "bullplugs" from Buck Pond; if to the Antlers you will find them in Racquette. They are also in the lakes of Brown's tract, Piseco, Pleasant, Ferris, Jockeybush, and in fact most Adirondack waters.

There is nothing dearer to the bullhead palate than big, fat angle worms, "our mutual friend," "barnyard hackle," etc., but these cannot be had in the Adirondacks, and so we must tempt them with minnows or meat. They are bottom feeders and prefer to feed just after sundown. The long barbels on the jaws are feelers, and they drag them over the bottom to detect food; these being like the whiskers of the cat give the fish one of its names.

The bullhead has an exceedingly sharp spine in its dorsal fin, and one in each of its pectoral fins; all other rays are soft. It has a trigger-like arrangement to the spines of the pectorals, which the angler can let down by touching a bone behind them, but they will break before being put down by force. To unhook a bullhead without danger take its head in the left hand, the first two fingers grasping the pectoral spines from behind with the dorsal spine between the two fingers, and there is no danger. A wound from these spines takes weeks to heal. Any fish slime in a cut is poisonous, but if the fish is held as directed there is no danger.

"Catfishin'," said old Mose, a "shif'less" old darky on Bodeau Lake, La., "yassah, I does a heap o' catfishin' in de lake w'en de sign in de moon comes right. W'en it's new or ole an' lies flat awn its back 'tain't no use to try, an' w'en it's full an' comes up red I stays home, but w'en it's yallo' an' stan's up I knows de catty's look fo' ol' Mose, an' I gets de wums an' goes fo' 'em. Some dese fishamen dey takes baskets fo' to bring de fish home; I do' take no basket; I jess catches a catty an' I jabs his thawn—dey got thawns awn dey backs, you know—well, I jess jabs de thawn into a fence rail an' lets 'em wiggle 'till I gits 'nuff an' I shoulders dat rail an' goes home; den dahs da fish an' da wood to cook 'em. No, I do' want no basket."

We boys used hand lines, a ½oz. sinker and two or three hooks above it, all far enough apart not to entangle, and the upper snoods were longer in order to have all the baits rest on the bottom. When we got a bite we rushed 'em in hand under hand, and listened to them sing. The catfish has vocal powers, and when it gets out of water emits sounds which all boys have heard, but have not understood. The sounds are like those of a human being who has only been on earth a few months. I used to think they were a protest against being forcibly taken from the water, and for many years so regarded them, but after I began to study ichthyology and learned that some scientist had named this genus *Amiurus*, I began to ponder over it. He, Jordan, gave what he believed to be the meaning of this alleged Greek name. He gave it as *a*, privative, or "not," and *meiuros*, notched, or square-tailed.

This is all very well for science, but to one who has pulled in as many bullheads as I have, while listening to the voices of the night and trying to interpret them, I fully believe that when *Amiurus* is pulled in from his watery home to be partially cremated in the frying-pan he tries to articulate: "Amiurus truly," and from this imperfect articulation science took the name, but Dr. Jordan thought the catty spoke in Greek.

I Want to go A-Fishing.

Editor Forest and Stream:

At the opening of the trout season I took six trout on Long Island, and the rest of the season has been wasted. I had an invitation to fish lake Hopatcong when the bass season opened, but declined because I was busy recruiting a regiment for the war. I have worked hard, and after enrolling 1,218 men in six weeks I am not only tired, but disheartened that my men were not accepted. New York had only three regiments to furnish and a dozen regiments offered.

While waiting for the third call I want to camp and fish for a week or more around Long Island; no hotels and no hired cooks. Just a stag party of three or four to sleep in tent or on boat, and if any angler who owns a suitable boat wants this sort of a trip and will let me share the expense, will write me at 63 Linden street, Brooklyn, I will respond. Hotel life will not bring the vitality needed to take the field at the third call for troops if I can get it, and I am hungering for a camp or a cruise on quiet waters, where I can catch a fish and broil it.

It seems to me that a cruise around Long Island, running into some bay or harbor at night and either camping on shore or sleeping on board, would afford a chance for most all kinds of salt-water fishing at this time of year, and if the party was composed of the right kind of material would make a trip to be retained in memory while memory lasts. My old companions on such a trip have passed over to the majority or I would not make such a proposition.

I would not like to go with less than three nor more than five; four would be about the right number, if the boat would acommodate them, and if they were real good fellows, who would not grumble at any accident or change of weather, the trip would be an ideal one.

FRED MATHER.

Texas Fresh Water and Salt.

VICTORIA, Texas, June 16.—Ten years ago there was no better place for fresh-water fishing than western Texas, or rather southwestern Texas, but we have none now. Our streams dried up two or three years ago in a drought, and since that time we have been compelled to depend upon salt water for all our sport. Fishing parties are made up almost every week to go to Rockport or Indianola, and reports say that red fish and trout are abundant, and afford much enjoyment to the fishermen. I have not yet tried it, and cannot speak from personal experience or observation. But tarpon abound, and for the properly-equipped fisherman they will afford all the enjoyment necessary to make a trip to our coast pleasant. Up to this time our summer has been cool, and we have delightful sea breeze at night and but few mosquitoes.

TEXAS.

Friday Luck.

ESCAMBIA, Mich., June 28.—Podgers makes a good string of mishaps or unlucky events in the last FOREST AND STREAM. Fifty years ago this fall I was in New York, and while there went into a barber's shop, and while waiting my turn heard a lot of sailors telling of all sorts of bad luck from Friday sailing. A captain in the chair called attention to the history of the Constitution (Old Ironsides) and pointed out that her keel had been laid on Friday; she was closed in on Friday; launched on Friday; sailed on Friday; took her first prize on Friday, and returned to port on Friday. No bad luck about all that.

A. F. Y.

Tuna and Frigate Mackerel.

WASHINGTON, D. C., July 1.—*Editor Forest and Stream:* I regret to see the tuna copied from Fisheries Industries in FOREST AND STREAM of July 2. That plate represents the frigate mackerel and not the tuna or tunny. No one knows how the mistake was made in the plate legend, but it is a very unfortunate one. The frigate mackerel is a small fish seldom exceeding 14in. in length, and is an occasional visitor in our waters. If you think best it might be well to call attention to the error, for which FOREST AND STREAM is not responsible.

TARLETON H. BEAN.

[We shall give in our next issue a plate of the tuna.]

Weakfish by the Hundredweight.

EAST ROCKAWAY, L. I., July 4.—The net fishermen brought in over 700lbs. of fish yesterday. They were mostly weakfish and small flounders. Hook and line fishermen had good luck. They caught mostly blackfish (tautog), flounders and fluke. Experienced anglers caught weakfish and bluefish bit freely outside the Inlet. The usual 4th of July squalls and storms, however, cut the sport of the fishermen short and sent the small boats scurrying for the landings. Several yachts were capsized, but no loss of life was reported.

Snipe Season on Long Island.

INNER BEACH, L. I., July 4.—The snipe shooting season opened last Friday, but few gunners came down until yesterday. The smaller sorts of birds are as plentiful as usual, but large birds are very scarce. Baymen say that large yellowlegs were plentiful until about two weeks ago, when they left for parts unknown. There may be a flight of the larger birds later in the season. The small snipe are not bunching well, and the market gunners have considerable difficulty in getting birds enough to pay the cost of ammunition. A pleasant day's outing and a small bag of birds may be had any time by taking a train to Wreck Lead or Inner Beach, and a boat to the shooting grounds in the Great South Bay. With long rubber boots a boat may be dispensed with, but it is hard work tramping over the meadows, with constant danger of floundering into a salt pond or quicksand. It is better to take some stool and rest quietly while the birds come to you in response to your whistle, rather than chase them over the meadows.

The Kennel.

Fixtures.

Sept. 7.—Manitoba Field Trials Club trials. William C. Lee, Sec'y, Winnipeg, Man.

Salmon Disease.

BAIRD, Cal., June 4.—*Editor Forest and Stream:* Will you kindly advise me through the colums of your paper as to: First—What causes the disease of dogs known here on the coast as salmon disease? We know it comes from their eating salmon, but do not know if it is due to the fish being decomposed, piercing the intestines by the bones, or some matter contained in the fish that is peculiarly fatal to dogs. Second—Is there any cure; if so, what?

It appears that the better bred the dogs the more fatal the disease, though the Indian dogs frequently die from it. It is not due to the quantity the dog eats, as frequently a very small particle will produce fatal results. I have heard it stated by old hunters in this section that the disease is due to the bones in the head of the fish; others say that it is due to the blood that settles along the back bone of the fish when dead. There are very few wolves or coyotes in this section, though all other game is plentiful, and hunters say that they are killed by the salmon disease. Do you think this is true?

G. H. LAMBSON.

[So far as we know, there is nothing set forth in medical works concerning this disease. We publish the above letter in hope that it may bring forth the desired information from some of our readers.]

Grand Rapids Field Trials.

GRAND RAPIDS, Mich., the rattling city where the fly-casting tournament was held, is gratified at the success of that project, and is still hustling on the lines laid down, which bid fair to make it the first all-around sporting town of its size in the country. The next thing on the programme is the field trials, which will be held the week of Nov. 10 next fall. If the members of the Game, Fish and Dog Protective Association, of Grand Rapids, are able to handle the difficult task of running a harmonious and successful field trial meet, they should receive the palm of latter day amateur sportsmanship. This is a hard job they have tackled this time, but their part of the job will be done all right, it may be said in advance. The country about Grand Rapids is good for quail and grouse. The meet will be an amateur one, I take it, and one worth seeing. E. HOUGH.

Rifle Range and Gallery.

Cincinnati Rifle Association.

CINCINNATI, O., June 26.—The following scores were made in competition by members of the Cincinnati Rifle Association at their last shoot. Conditions: 200yds., off-hand, at the German ring target. Randall was declared king with a score of 217. He was also high on the honor target with a score of 69, which entitles him to the Dietrich medal for the month of June. Payne holds the Uckotter trophy for June with a score of 223. Gindele and Payne shot a 50 shot match, Payne leading by 13 points. Gindele's total was 1,033; Payne's 1,046. Owing to the members intending to attend the festival at Glendale there will be no shoot on July 10:

King target.

Gindele	23	18	23	18	25	16	22	22	23	19—209

Rifle at Shell Mound.

SAN FRANCISCO, Cal., June 13.—Yesterday was medal day at Shell Mound. The weather conditions were good, but only fair scores were made in the main. J. E. Gorman, however, and D. W. McLaughlin each made 45, Columbia target, 200yds., with target rifle—a fine score.

Scores of Schuetzen Verein:

Champion class, A. H. Pape 430; first class, John Peters 411; second class, J. D. Heise 376; third class, August Jungblut 410; fourth class, H. F. Lilkendey 376; best first shot, L. Haake; best last shot, R. Stettin.

Germania Schuetzen Club:

First champion class, F. Schuster 439; second champion class, L. Bendel 414; first class, J. Peters 394; second class, J. D. Heise 395; third class, William Goetze 374; first best shot, L. Bendel, 23; last best shot, F. Schuster, 25.

Columbia Club:

Columbia target—Champion class: A. H. Pape 60, D. W. McLaughlin 63, F. O. Young 69, F. E. Mason 71, E. Jacobson 79.

First class: O. A. Bremer 63, A. B. Dorrell 71, J. E. Gorman 86.

Second class: M. J. White 103, G. M. Barley 119.

Third class: G. Monnell 89, E. Woenne 97, B. Jones 107, Mrs. White 184.

Members' rifle medal: J. E. Gorman 45, A. B. Dorrell 62, O. A. Bremer 69.

All comers' rifle medal: D. W McLaughlin 45, F. E. Mason 51-57, F. O. Young 81.

Bushnell military medal: E. Jacobson, 47, 47, 45.

Pistol target, 50yds., 10 shots—Champion class: C. M. Daiss 49, F. O. Young 56, J. E. Gorman 59, M. J. White 75.

First class: F. E. Mason 60, G. M. Barley 75, D. W. McLaughlin 76.

Second class: Mrs. M. J. White 73.

Third class: J. P. Cosgrave 66, B. P. Jones 84, Mrs. G. Mannell 104.

Pistol, Siebe medal, open to all comers, 10 shots: J. E. Gorman, 41, 51, 43; F. O. Young, 48, 50, 51, 54, 56; J. P. Cosgrave, 57, 66.

Revolver, Colts'. Bisley trophy, 10 shots: F. O. Young, 58, 68, 75, 82; A. B. Dorrell, 85; C. Roberts, 91.

Twenty-two and .25 caliber rifle, medal and Roos trophy, for ladies: E. P. Jacobson 29, Mrs. G. Mannell 45.

ROEEL.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

July 6-7.—Meadville, Pa.—Tournament of the Interstate Association, under the auspices of the Meadville Gun Club. Chas. Stein, Sec'y.

July 7-9.—Denver, Colo.—First annual tournament of the Overland Association. Open to all. Inanimate targets. Added money. John W. Kane, Manager.

July 13.—Albany, N. Y.—Forester Gun Club's annual tournament; targets. H. H. Valentine, Manager.

July 15.—Poughkeepsie, N. Y.—Trophy shoot, Hudson River Trap-Shooters' League, on the grounds of the Poughkeepsie Gun Club. J. B. Rogers, Manager.

July 19-20.—Atlanta, Ga.—Two days' shoot of the Fulton Gun Club; targets. J. E. Avery, Sec'y.

July 19-21.—Palmyra, Mo.—Eight annual tournament of the Missouri Amateur Shooting Association, under the management of the Palmyra Gun Club. Targets and live birds. Added money announced later. W. N. Bates, Sec'y.

July 23.—Ogden, Ill.—Ogden Gun Club's third annual tournament for amateurs. Wm. McKinley, Sec'y.

July 26.—Brooklyn, N. Y.—Tournament and clam bake of the Hell Gate Gun Club.

July 26-28.—Little Rock, Ark.—Eighth annual tournament of the Arkansas State Sportsmen's Association. Paul R. Litzke, Sec'y.

July 27-28.—Meriden, Conn.—Tournament of the Interstate Association, under the auspices of the Parker Gun Club. C. S. Howard, Sec'y.

July 29-31.—Milwaukee, Wis.—Milwaukee Gun Club's tournament. S. M. Du Val, Sec'y.

Aug. 3-4.—Worcester, Mass.—Tournament of the Worcester Sportsmen's Club. Targets.

Aug. 4-6.—Baltimore, Md.—Ocean City midsummer tournament; two days at targets; last day at live birds. James R. Malone, Manager.

Aug. 10-11.—Duluth, Minn.—Central Gun Club's sixth annual tournament; targets. E. C. Maxfield, Sec'y.

Aug. 11.—Marlborough, N. Y.—Trophy shoot, Hudson River Trap-Shooters' League, on grounds of Marlborough Gun Club. J. B. Rogers, Manager.

Aug. 17-18.—Waterville, Me.—Tournament of the Interstate Association, under the auspices of the Waterville Gun Club. E. T. Wyman, Sec'y.

Aug. 17-18.—Warsaw, Ind.—Lake City Gun Club's tournament. J. S. Campfield, Sec'y.

Aug. 24.—Warwick, N. Y.—Special shoot, Hudson River Trap-Shooters' League, on grounds of Warwick Gun Club. J. B. Rogers, Manager.

Aug. 24-25.—Minneapolis, Minn.—Tournament of the Minneapolis Gun Club. G. J. McGraw, Sec'y.

Aug. 24-27.—Omaha, Neb.—Indian tournament, on grounds of Omaha Gun Club; three days targets; one targets and live birds.

Sept. 6-8.—St. Paul, Minn.—St. Paul Gun Club's twenty-first annual tournament at Minnesota State Fair grounds during fair week. H. C. Lawrence, Sec'y.

Sept. 7-8.—Kingston, N. Y.—Tournament of Hudson River League, on grounds of Kingston Gun Club.

Sept. 7-8.—Haverhill, Mass.—Tournament of the Interstate Association, under the auspices of the Haverhill Gun Club. Geo. F. Stevens, Sec'y.

Oct. 4-6.—Newburgh, N. Y.—West Newburgh Gun and Rifle Association's fall tournament.

Oct. 12-13.—Greensburgh, Ind.—Greensburgh Gun Club's tournament. W. Woodfill, Sec'y.

DRIVERS AND TWISTERS.

FOREST AND STREAM'S new Trap Score Book will admirably fill the needs of clubs and contestants in affording a means of keeping a faithful record of contests. Each book contains a generous number of sheets, so ruled as to make all the chief divisions of the shoot palpable at a glance. For instance, the horizontal spaces are numbered from 1 to 27, every sixth line being distinctly heavier than its fellows; hence the squads are distinguishable at a glance. The perpendicular spaces are numbered from 1 to 30, ample space first being left for the contestants' names and their handicap allowance. Heavy dark lines are between each five spaces, and the numerals 5, 10, 15, 20, 25 and 30 are in heavy-faced type, so that the number of targets or birds to be shot at are apparent at a glance. The heavy ruling also is an advantage in bad lights. However dark a nook the scorer may be in, no straining of the eyes or incorrect entering of scores is possible on account of inability to distinguish the lines of the score sheet. At the head are the usual spaces for current data. Each sheet is perforated, so that it can be readily torn out when manifold copies are made, and yet each sheet is strong enough to hold firmly in place if the book is desired for permanent club records. In addition, it contains the form of a club constitution and by-laws, an illustration of FOREST AND STREAM'S trap score type and the American Shooting Association rules for live-bird shooting, for double live-bird shooting, for inanimate target shooting, and also the revised Hurlingham rules for single and double rises. A neat pocket on the inside of the back cover holds carbon sheets for manifolding. The book is neatly and substantially bound in cloth, and contains a generous supply of score sheets. The price is $1.

The programme of the Missouri State Amateur Shooting Association's eighth annual tournament, to be held at Palmyra, Mo., on July 19 to 21, can be obtained of the secretary, Mr. W. N. Bates, Palmyra, Mo. Shooting commences at 9 o'clock. Target events five moneys, 25, 25, 20, 15 and 15 per cent. Live-bird events four moneys, divided 35, 30, 20 and 15 per cent. This shoot is open to all amateurs. Professionals and experts are barred. Traps will be open for practice and sweepstakes July 18. There are nine events on the first day's programme, six at 20 targets, $2, to each of which is added $15; two at 15 targets, $1.50 entrance; one at 10 live birds, $7.50 entrance, $15 added. No. 3 is the Gold Dust event; No. 5 the Cleveland Target Co. event; No. 6 the Lefever Arms Co. event; No. 7 the Winchester Repeating Arms Co. event. The programme of the second day has six 20-target events, same as above. In addition, No. 5 is the L. C. Smith cup, a two-men team race, 25 targets, $5 entrance, $25 added. No. 6 is the Peters Cartridge Co. event; No. 7 the Parker Bros. event; No. 9 is the State medal event, at 15 live birds, $10 entrance, $15 added. There also are six 20-target events on the third day, of which No. 3 is the Du Pont Powder Co. event, and No. 5 is the Hazard Powder Co. event. The annual meeting of the Association will be held in the city Hall, Palmyra, on the evening of July 20, at 8:30 o'clock.

In respect to the midsummer tournament to be held at Ocean City, Md., Mr. James R. Malone writes us as follows: "We are sparing no time or expense to make this a grand success; tournament will be held on Aug. 4, 5 and 6; first two days targets, last day live birds. This is one of the pleasantest summer resorts in the United States, and the hotels have all promised to do everything in their power to make the stay of each and every one attending pleasant. This will be as fine a point as one would wish to have for an outing, and where the different ones would care to, should be pleased to have them bring their wives, as everything will be done for their comfort. This is a noted place for shore bird shooting, and those that would like to remain over or go down earlier in the week can probably get magnificent shooting of this description. We have arranged with the steamboat and railway companies to get reduced rates from Baltimore of $2.50 round trip. We have also arranged with the hotels for reduced rates, and as stated above, all who attend this tournament will have everything done for their comfort as far as possible. There is the best of surf bathing, best of fishing and sailing, and in fact everything to amuse one that you can find at any summer resort." Programmes can be secured by addressing Mr. James R. Malone, 2671 Pennsylvania avenue, Baltimore, Md.

Lou Erhardt made a longer stay in New York than was expected. A friend who owed him $20 met him on Broadway on Wednesday, June 29, and handed over two 10 spots. This enabled Lou to last a little over sixteen hours more in the metropolis than he had calculated upon.

In the eighth trophy contest of the Garfield Gun Club, Chicago, Dr. Shaw won in Class A with a score of 24 out of 25; Stiger won in Class B with a score of 19, and in Class C Workman was the winner with a score of 18.

The scores of the 15-bird event, which took place on the last day of the Milwaukee tournament reached us too late for publication this week. They will appear in our next issue.

The fallacy of a handicap wherein amateurs shoot at known traps and angles, and experts shoot at known traps and unknown angles, was well exemplified at the Milwaukee tournament last week. The experts found quite as much difficulty in breaking targets at known angles as at unknown. The fact is a handicap consisting only of a knowledge of the angles is a fiction. It is quite as easy to catch the flight of targets at unknown angles as it is at known angles. The shooter can quite as readily see the flight of a target from one side of the trap as from another. It is the speed of the targets which is the downfall of the amateur. Targets at present are thrown too fast and far for the average shooter. At unknown angles a lucky shooter will have more opportunities to break straight from having the luck to draw many targets at easy angles. In known angles the right, left and straightaway targets are delivered after a set form, so that the shooter's weak places are tested a number of times to a certainty. In unknown angles the weak places of a shooter may not be tested at all, since the targets may not once be thrown in a direction to test them. Slower targets would be a greater concession to the capacities of the amateur. Everyone likes to make good scores, and most everyone loses interest when he finds that he cannot make a creditable showing.

The announcement made in the columns of the daily press, to the effect that the Interstate Association had decided to hold the Grand American Handicap of 1899 at Elkwood Park, is so palpably premature that it is hardly necessary to contradict it. No such selection as above can be made until the annual meeting of the Interstate Association, which takes place in December of each year. It is more than likely, however, that the great shooting event of the year will not be held during the month of March, as in the past, but that the second or third week in April will be chosen. This change is deemed advisable by many on account of the unsettled condition of the weather that usually prevails during the last week or two of the month of March.

The death of Mr. Armin Tenner is announced, relief having come to him after a long and painful illness. Some little time ago he was subjected to a critical operation, but was understood to have come out of the ordeal satisfactorily. The announcement of his death therefore came somewhat in the nature of a surprise to his friends in this country. Four years ago Mr. Tenner's experiments with smokeless powders at his testing house in Dexter Park, L. I., were watched with great interest by the shooters of this country, the results of those tests being published regularly in the columns of FOREST AND STREAM. It is safe to say that most American shooters owe to Mr. Tenner the greater part of what they know about nitro powders.

Mr. C. W. Scott, of Lynchburg, Va., is now walking about with a chip on his shoulder, the reason whereof is not far to seek. On Wednesday of last week Mr. Edward Banks shipped to Mr. Scott the pump gun Old Betsey that has stood by him so long. Betsey's place has been taken by a take-down. Mr. Scott always had an affection for Old Betsey, and wrote to Mr. Banks some time ago saying that if he was going to throw away the old gun he (Mr. Scott) would like to have it hurled as far as possible in the direction of Lynchburg. The hurling has been done; hence the chip! Messrs. Terry, Dornin, Moorman, Nelson, etc., and all other members of the Lynchburg Gun Club, see to it that the new amalgamation of Scott and Betsey earn their laurels acceptably.

The Memphis Gun Club announces a tournament for Saturday of this week, ten events, 15 and 20 targets, $1.50 and $2 entrance, $5 added to each event. No. 6, however, the main event of the tournament, is the E. C. & Schultze powder event, 50 targets, $2.50 entrance. This tournament initiates the competition in the inanimate target championship of Tennessee, of which the beautiful trophy recently presented to the Memphis Gun Club by the E. C. & Schultze Powder Co. is emblematic. No doubt there will be a keen competition for its possession, and a greater interest evoked in trap-shooting throughout that section. Mr. A. H. Frank is acting secretary.

The Central Gun Club, of Duluth, Minn., will hold a tournament on targets Aug. 10 and 11.

Pawling Rod and Gun Club.

JULY 4.—The all-day shoot of the Pawling Gun Club, held today, was not so well attended in respect to numbers as was anticipated, but for a day of good, pleasant sport, it was difficult to excel it.

To equalize the conditions between the amateurs and experts it was at first contemplated to have the men whose skill rated at 80 per cent. or less to shoot at one set of traps, where the targets were thrown slower, and the experts at another set, where the targets were thrown harder.

It was at last determined on the suggestion of Mr. Banks to give the amateurs 11 and 16 targets to shoot at in the 10 and 15-target events respectively, and 22 and 27 in the 20 and 25-target events. This was a very liberal handicap allowance, and let the amateurs into the money very generously. Banks and Van Dyke were the scratch men, and after a few events had been shot off Tallman also was added to the men on the scratch list.

The shooting was very difficult. The shooting grounds are charmingly situated on the brow of a hill, from which a delightful view of hill and valley, with a wealth of field and forest, is unfolded to the view. Slightly to the left of the shooter as he stands at the score, and down in the valley some quarter of a mile away, was Pawling, with its wealth of trees and cozy homes. The left hand quartering targets went out into the atmosphere and dropped far away down the hill. They were very deceptive as to flight, dropping faster than they seemed to, and many a miss was scored to the Dutcher House bird, as this target was called from its flight down the steep incline toward that most comfortable hostelry.

The tournament committee consisted of Messrs. J. Gerow Dutcher, Geo. S. Holmes, Geo. A. Daniels, T. E. Roberts, Otis Arnold and H. Nelson. Everyone strove to make the meeting a pleasure for all.

The weather was hot, sweltering hot, and yet everyone shot and enjoyed it. In the cool refreshment tent excellent ice cream, lemonade, sandwiches, etc., were served at very reasonable prices, so that the time was largely occupied in shooting a while and eating ice cream a while.

The shooting was exceedingly difficult. The targets took erratic flights. A 5 o'clock breeze sprung up in the afternoon, adding to the comfort of the shooters, but also adding to the difficulties of the shooting. The scores therefore show a very good performance on the whole. Banks had the highest average, .905 per cent., 194 broke out of 215 shot at; Van Dyke next with .882, 128 out of 145 shot at, while Tallman and Foster, of Millbrook, N. Y., were 86and 85 per cent. respectively. The longest run of breaks was made by Banks, he scoring 66. There were fifteen events on the programme, of which the total entrance was $21. The scores:

Milwaukee Carnival Shoot.

MILWAUKEE, Wis., June 28.—The Cream City of Wisconsin this week celebrated her fiftieth birthday, but didn't act as though she were more than sweet sixteen so far as flowers and furbelows would signify. The entire town was a mass of bunting, and the streets were lined with myriad of lanterns, which shed their light o'er brave men and fair women, all of whom were determined to break the record for having a good time. From all parts of the country, including many cities outside the State, came legions of sightseers, so that along the highways were strewn hairpins of many models, the same trodden underfoot by countless girls, many of whom were desperately pretty and all of whom were desperately in earnest. The ice cream man, the soda pop man, and the man with small red balloons were strictly in it. A monument was unveiled, or a bicycle parade was pulled off, or a flower-bedecked procession of costly equipages rolled down the streets, or a fire engine drill was held, about every half hour, so that it required effort to keep up with all the fun. The long and beautiful avenues were lined with people, and the lawns were covered with decorations, and the flag of the country floated over dome and home, and the policemen hustled, and ever and anon came the recurrent sizz of the beer that made Milwaukee famous. It would have taken several marriage bells to give any one an adequate line on the merriment. For once in fifty years the city laid aside its workaday garb and held festival. Miles of allegorical floats showed the past and the hope of the future, and a vast industrial parade betokened the busy present. By day the steady business of having a good time went on, and by night vast prismatic fountains and linked fireworks long drawn out showed the same sturdy, happy, contented, serious, orderly American crowds still hard at work enjoying themselves. It was really a great week in Milwaukee, fit to represent the development of one of the greatest of our inland cities, and not to be appreciated from any mere description in cold type.

The type may have been cold in Milwaukee, and perhaps the beer (that made Milwaukee famous) was also cold, but nothing else was. The sun was blindingly hot, and the brazen sky expected every thermometer to do its duty. Two hundred thousand shirt waists went forth with the dawn in Milwaukee to see and be seen, but when the noon came, where were they? The straw hat, the glass with a straw in it, and clothes made of towels found favor with the sterner sex, and when laundrymen looked out they smiled till apoplexy threatened. Never before did the words of the inane song of the music halls find such foundation, and at Milwaukee there was really a hot time in the old town. It was good and hot, anyway you looked at it. The Indian princess, at the Winnebago village on the lake shore (near where the Mahnawauk Indians will hold their canoe regatta Saturday evening) remarked feelingly in my hearing that she wished she had brought another shirt waist or two along, for she was afraid folks would think she was shy on civilization. The Indian princesses most all wore shirt waists and tan shoes, and spoke knowingly of bicycles, to say nothing of a just and exact appreciation of chewing gum. Others of the Indians had bows and arrows and moccasins and bead work to sell. I didn't think any Indian could sell me bead work, but one did, I discover, although I note with a pang that the sinew he guaranteed is made of linen thread. The Indian village was all right, and some of the Indians looked pretty wild, or anyhow wild enough to earn their salaries. At all such places of especial interest the crowds were thick day and night. Hotels were crowded, the humble sandwich assumed a dignity hitherto unknown, and the tiredest wienerwurst got gay.

To such a city, crowded and happy, came the clans of the shooters, summoned by the liberal programme offered by the National Gun Club, of Milwaukee, assisted by the Carnival committee of the city, who generously gave $250 out of their funds to help create good purses for the tournament. To this amount the club added $250 of its own funds. The programme paid an amount nearly equal to that, and for the remainder the club committee went out upon the highway and hustled. All in all, the grand sum of $1,000 was raised to be hung up in added money for the shooters, proof enough that Milwaukee did not mean to do any part of the week's entertainment by halves.

It was the plan of the management to bring out the experts, but not to frighten away the less skillful, and it was thought desirable to put the shooting at known traps and angles, with a set of 7 traps to keep matters moving. As in view of late records at tournaments it was believed that many of the crackerjacks could break straights whenever they felt like it with both eyes shut on known traps and angles, the management decided to handicap the experts and manufacturers' agents by requiring them to break 19 out of the 20 targets in order to get into the money, the scores of 19 and 20 straight being the only ones which would be of any use to them. This created a sort of Chinese wall about the money on the first day which was rather amusing in some regards. Rolla Heikes said it was harder for him to shoot at known traps and angles than it was to stick to the unknown game at which all the boys had had so much practice. Gilbert missed the first bird he shot at, and dropped another further along in the same event. Powers, not barred, but about as safe to go high as anybody, could not find the birds out of No. 6 and No. 7 traps and only got 17 in the first event. Dick Merrill, another regular, lost 2 out this fatal first event, Marshall retired with 17, Bingham, Heikes, Budd, Fanning and Gilbert all fell behind the money. Hallowell, classified as in the limits of the bar as an agent, only shot for the targets and did not go in for the sweep, and strangely enough he landed in the 19 hole, where it would have been good picking had he been in for it all. Out of seventy odd shooters who competed during the first day only eight made straights, and of these not one was able to repeat the performance during the day. There were wild and wondering looks among the "steadies" who have been following the trap circuit for the last fifty or sixty years, but try the best they could they were not able to get in where the grass was tallest and greenest. The very hot weather and indifferent background and the irregular height of the trap screens may have had something to do with this state of affairs—a very unusual one in these days. I never heard so much kicking by shooters about their hard luck in all my experience among the "gang." They protested there was a large and able-bodied hoodoo loose somewhere, but no one was able to solve the curves of such evil genius.

The shooting was advertised to begin at 9 A. M., but on the first day it was after 11 A. M. before the squads got into active commission, and the sport progressed rather spasmodically, so that at lunch time only one event was concluded. During the afternoon the game lagged a bit by reason of the oppressive heat, and long before quitting time it was seen that the programme could not be finished for the day. It was 7 P. M. before the last number of the day, the fifth event, was concluded, this leaving three events to be taken up on the following day. At this gait the tournament could not be promptly finished, but there is all reason to think that matters will be more rapid after the hard first day, so that the last day may be given over to the great live-bird programme which is offered, for which the handicapping committee will be Mr. Richard Merrill and Dr. J. L. Williamson, of Milwaukee, and Mr. C. M. Powers, of Decatur, Ill.

The tournament committee in charge were Messrs. E. E. Rogers, chairman; Ed Silverman, treasurer; W. G. King, John Plankinton, Jr., Jacob Muehl and W. A. Haig. Mr. Muehl acted as puller and general captain, and Mr. Haig was an able and courteous cashier and secretary. Mr. Rogers worked very faithfully all through the hot weather immediately preceding the shoot, and the smoothness of the running arrangements was much due to his management. Targets (the new "American pigeon") were shot at 2 cents, live birds at 20 cents. A. S. A. rules governed. The grounds were the well-known ones at National Park, easy of access by electric car, and Grandpa Brand was on hand at his hostelry to make things pleasant for the boys.

The following were classified as manufacturers' agents and experts: Rolla Heikes, Fred Gilbert, Charlie Budd, Eddie Bingham, Jack Fanning, J. J. Hallowell, Jr. Luckier, but almost as skillful, were such cracks as Tom Marshall, Jack Ruble, Chan. Powers, Dick Merrill, Lou Harrison, of Minneapolis; Valentine (Vail), of Norwalk, O.; Spross, of Toledo, O.; Tripp, of Indianapolis; Ernie Fish, of Eau Claire, and his running mates Churchill, Scammon and Charles, of the same city; Tom Graham, of Sault Ste. Marie, and a long list of other celebrities and old timers. Chicago sent over for the first day Messrs. W. D. Stannard and Eddie Steck, of the Eureka Club; Abe and John Kleinman, A. Verges, Messrs. Barto, Simonetti and Bacci, of the Alpine Gun Club, with others to follow later in the week; Jack Carkeek, of Waupun, acted as squad hustler, with Gus Hensen, some of the time, and served as an efficient preserver of law and order along the score. Paul Stone, of Oconomowoc, shot also, and J. S. Johnson, of New Hope., Wis., and A. Zwerg, of Sheboygan, and G. Anderson, of Waukesha, and Lawrence (Catamaran), of St. Paul, and a big string of others. Geo. A. Morrison came down from Fox Lake, and Messrs. Marsh and Graves, respectively of Spokeville and Loyal, Wis., attended for their part of the State. Among Milwaukee cracks such men as young Plankinton, Dr. Williamson and Dick Merrill will set a hot enough pace for any one at the live-bird traps, and Stephen and John Meunier, Frank Meixner and others of the target shooters will keep in the game till the end.

The regular programme is of eight events daily, at 20 birds each, $2 entry, with $25 added to each event—certainly a very attractive programme, and one worthy of the biggest shooting week of the biggest city of the big old State of Wisconsin. There being but 160 targets to the day, and the weather being not so very awful hot after all, the exercises of the day will be concluded by Chan. Powers and Dick Merrill shooting a few targets for practice, this being one of their time-honored customs. If matters do not improve before long, there will be a good many of the best ones who will begin to think they need a little practice. Thus goes the shooting game. At Omaha the gang takes everything down the line and can't miss a bird. At Milwaukee, at the forgotten style of known all, they can't hit a basswood stump with a string tied to it. Such is life in the far West. It grew cooler this afternoon, and maybe the boys will catch their gait to-morrow. It was worth a pretty thing to see them figuring on their average cards to-day and wondering where they would wind up by nightfall. "We are up against it once more," said Charlie Budd, sadly, as he wiped a hot tear from his nose.

It may be said by way of general comment that Milwaukee shoot is a big shoot. If predictions are verified and the live-bird handicap turns out big as it promises, it will be perhaps one of the heaviest all-round tournaments held for some time. It is first one thing and then another in trap-shooting nowadays, in the effort to get and please the crowds of shooters. From Cleveland to Milwaukee is something of a step in methods, but still at Milwaukee it was not made exactly easy for the paid men to get in among the lambs, the plan being to pay them all well for coming and shooting, and yet to serve the principles of fair play by keeping the business men from winning all the money. The results to-day must have been on the whole pleasing to the amateurs. What the sum total will show at the end of the week can not be told just now. That the manufacturers' agents will all be pleased is not to be expected, and perhaps it is not absolutely essential. The only thing that the "gang" can approve is a wide open shoot, with all the strings off, and about a million dollars added money hung up to induce them to come and shed the light of their countenances. Charlie says that the only good shoot is one with the whole gang on hand and no bars up. "Oh, pshaw," he added, "shooting is all going to the dogs, these days and a lot of you newspaper men sit in the office and never see a shoot, and try to tell us folks how to do things. If it wasn't for my raspberry farm I'd have to go live with my wife's folks, for there is no money in shooting any more. It's all the fault of you newspaper men. You don't know nothing nohow." With all of which the other penitents on the mourners' bench there present heartily concurred. Rolla Heikes said nothing and smiled. Tom Marshall thought a shoot without the old guard was no good, and said the poor shots took joy in coming in from the outer precincts just to look at the shooting celebrities, and they enjoyed being skun by such experts, it was done so nicely. About everybody agreed that no one could make any money by following the circuit any more. No one could tell what ought to be done, but all insisted that plenty of money ought always to be hung up, and that bars were a shame. At which juncture the band again blew "Annie Laurie," and the squad rose at the voice of Gus Hensen, hustling squads. The scores:

FRIDAY, SECOND DAY, JULY 1.

The promised cold wave did not arrive to any alarming extent, but the weather was more pleasant. The carnival kept up its gait better than most of the shooters, and the enjoyable features of the evening previous perhaps made some of the attendants a trifle reluctant to get out into the garish light of dawn with a shotgun. At any rate the first delayed event, No. 6 on yesterday's programme, which was scheduled to begin at 8 A. M. sharp, did not pretend to begin until 9 A. M., after which time there was a most harassing series of delays with the traps, so that at noon only one event had been run off. It took the rest of the day to conclude the two remaining events of yesterday and one of to-day, or but four events in all. This gives only 80 targets shot at to-day to each man, instead of 160, as per programme, or a total of 180 targets shot at instead of 320. The fourth event to-day had $50 added instead of $25, as scheduled. As to-morrow is a live-bird day, this leaves the target programme unfinished and the big added money unapportioned. Let the imagination picture what this means! It is not wished to make any harsh criticism upon the management, which has labored the best it knew and should have credit for that fact, but it is none the less true that had the controllers of the shoot been quite willing to accept the aid and counsel of men who have had a very wide experience in these complicated details of running a shoot, which seem so easy and are really so difficult, the result might have been a shade better. This is not said in any carping spirit, but in justice to other tournaments which are reeled off more rapidly and more in accordance with announcements. The traps did not seem to work so smoothly as they should have done, but the warm weather and the general laxness in interest were the main causes of delay. It should not be remembered against the Milwaukee gentlemen, for they worked very hard and gave a good account of themselves. It is not every shoot that can be as smooth as Cleveland shoot, or as big as the Soo shoot, and it should be borne in mind that neither of the above-mentioned cities had a carnival on hand to distract its attention. The weather was not good all the time, and in fact it was not sport to shoot. Everybody was a bit querulous and strung up.

To-day the shooting conditions improved, so that the scores were not so low. The number of straights did not much improve, but the 19s came out oftener. The regulars who shot through the programme were not so many, but the score pads showed seventy-nine entries all told for the day, a very large list for any shoot these times. Graham took a swift run up to the front. Budd could not land in the 20 hole, but crowded it hard. Marshall got shaky, and Bingham went to pieces a little, and Fanning could not get over the last door sill, and Heikes pounced along with the uniform road gait of 18. Gilbert caught his form a bit, and Merrill and Powers were satisfied to bang around the corners of the 18 place. It was an odd shoot, and readers who look over the scores and are told that the ragged columns were made by the best shots of the land at known traps and angles will smile in incredulity. There were some who said "ha-ha!" when the management announced known traps and angles, but it really would appear that on the whole the Milwaukee target shoot was a pretty sporty affair after all.

Barring too hot weather, which is of course incompatible with good sport at live birds at this season, the big handicap of to-morrow should also prove interesting. At night fifty-seven entries had been received, and it is thought that at least a dozen more will appear in the morning. This includes so strong a showing of the talent of the entire West at this style of shooting that I should not be surprised to see a long string of straights, unless a cool wave should come and a stronger wind to give life to the birds and to the shooting. To-morrow will close the active carnival, and will also close the last attempt at reconciling the many trap-shooting difficulties of the day. As a big modern shoot, with plenty of money and a lot of shooters ready to divide it, this tournament was a success. As a red-hot sporting meet, with close and hard conditions, and a good management to keep the wheels moving, it cannot be called a success, largely from causes above capitulated, for which unreasoning blame should not be lodged. Much dissatisfaction was expressed, it is true, and more than one prominent Milwaukee shooter freely expressed the belief that it would be a "long time before a tournament for shooters can be pulled off successfully in Milwaukee." At this writing it is not thought likely that more than one live-bird event, the 15-bird race, will be run off to-morrow, but the added purse of $250 will be largely increased. Following are the scores of to-day:

BOILING SPRINGS GUN CLUB.

July 2.—The regular monthly club shoot of the Boiling Springs Gun Club was held this afternoon on the club's grounds, at Rutherford, N. J. The weather was rather too warm for much comfort at the score, and the holiday shoot on Monday next, the Fourth of July, also had a bad effect on the attendance. Only nine shooters all told took part in the practice events and the club shoot, and of that number three were guests of the club, viz., Ed Taylor, H. Everett and Harold B. Money.

The shooting was rather too hard for such a warm day, and scores in consequence fell down to a low mark. Huck alone showed anything like his usual form in the main event, but his work in the sweeps was not so good. Below are the records in the club shoot:

W Huck, 5..1110111111011100111111101111111111101111111110111111—43
11010 — 3—46

* Guests.

The Interstate Association.

THE Interstate trap-shooting tournament, given for the Parker Gun Club, at Meriden, Conn., July 27 and 28, has its details fully set forth in the neat programme, which can be obtained of Mr. Elmer E. Shaner, 122 Diamond Market, Pittsburg, Pa., or from Mr. C. S. Howard, secretary Parker Gun Club, Meriden, Conn. The programme for each day is alike—ten events, of which six are at 15 bluerocks, four at 20, entrance $1.50 and $2 respectively. There is $50 added money each day, and a $50 silver prize cup donated to paid representatives.

The tournament will be held on the grounds of the Parker Gun Club. To reach the shooting grounds take the trolley cars at Hanover street, opposite the Meriden House, to Hanover Park. Shooting commences at 9 o'clock sharp each day.

The silver cup aforementioned is 16½in. high, is donated for competition, and goes to the paid representative making the highest score, shooting the entire programme both days. All purses divided 40, 30, 20 and 10 per cent.

Guns and ammunition forwarded to Mr. H. L. Carpenter, 26 Cherry street, Meriden, Conn., will be delivered at the grounds. A first-class lunch will be served each day at reasonable prices.

Interstate rules will govern all events. The headquarters during the tournament will be the Winthrop Hotel, $2.50 per day, and the Meriden House, $2 per day.

The badge which admits the bearer to the Interstate Association tournament at Meadville is of novel and appropriate design. A paper cartridge, which has seen use, serves as a bar to suspend a card on which is the legend "Interstate Association tournament, Meadville Gun Club, Meadville, Pa., July 6 and 7, 1898. Admit bearer."

Professionals and Amateurs.

CLEVELAND, O., June 25.—*Editor Forest and Stream:* The paid expert in target shooting has grown to be a question of vital importance to the life of the sport, and at the same time a most vexatious one for manufacturers to settle to their satisfaction.

The paid expert has been for years a feature in target shooting that would not for a moment have been toleratetd in any other sport, and the fact that he has been allowed to run riot for so many years, living in part off of the amateurs of the country under false pretense that his mission was to promote the sport, is one of the most unaccountable of things.

Years ago a few of the gun-makers had men in their employ who made the round of the leading tournaments of the country, acting both as salesmen and experts, or as experts with the gun only, and used the records made by these men for advertising the shooting qualities of their make of guns.

Then the better shots in different sections of the country were given guns for nothing, or at a nominal price, if they would use them at tournaments they attended and advise their friends to purchase that particular make of gun.

With the advent of the many different makes of nitro powders came a still greater number of experts, sent out to show the excellent qualities of the different brands on the market.

Then, to keep up with the procession, the large loading companies sent out still more men to show how much better their loaded shells were than those loaded by their competitors.

In addition to all these there was the still greater number of the best shots in the country that were furnished loaded shells, guns or powder for their services in influencing the consumption of the particular make of goods with which they were being supplied.

With this army of expert shots, supplied with free ammunition, paid for their services, and in constant practice on account of following tournament after tournament, the result has been naturally that during this year the amateur has suddenly awakened to the fact that he has not only been supporting the manufacturers who supply him with guns, powder and ammunition by consuming their goods, but, if he attends any tournaments, has been contributing to their representatives the money he has lost at the aforementioned tournaments.

The result of this awakening has been very apparent at all of the added money tournaments (and in passing it is noticeable that the added money tournament is the only one that attracts the paid expert) that have taken place this year. Taking Reading, Baltimore, Des Moines, Kansas City and Omaha as examples, you will find in the reports of these shoots very few names except those of the old rounders.

Realizing that the abuse has grown to such an extent that it was killing the interest in shooting, the Cleveland Target Co. determined this year to give a tournament on different plans from any of the others given by them in years past, in order to demonstrate that if the paid expert was eliminated from the tournament as far as competing with the amateur was concerned, the amateur would once more come out of his hole and attend tournaments, and in as large numbers as ever.

The result of that tournament was most gratifying in every respect, not only to the Cleveland Target Co., but to the representatives of other manufacturers who attended the shoot in order to show their goods, but not to win the money of their customers.

The week following the Chamberlin tournament came the Soo Gun Club tournament at Sioux City, Ia. This was also an amateur tournament, and like the Chamberlin tournament had over 200 shooters on the grounds, and with a still more noticeable lack of paid experts in attendance.

Now here were two of the largest tournaments of the year, with more than twice as many amateurs or consumers of guns and ammunition in attendance than at any other tournament of the year, and we find hardly any of the class of men in attendance who are supposed to be promoting the sport of trap-shooting, and who claim that without them the sport must die.

Why they were not in attendance at these two tournaments is very easy to understand when the system under which they are employed is known.

These men all receive a certain set sum per year, ranging from as low as $100 and ammunition furnished to as high as $2,500. Most of them are free to come and go as they please, and pay all their own expenses, of all kinds, and shoot for their own money, pocketing the losses as well as the winnings.

Traveling expenses eat up about all they receive from their employers, so they must depend upon their winnings to make a living; and for that reason tournaments where they are not permitted to shoot for the money of the amateur are boycotted, although these tournaments give them by far the best opportunity to show the goods of their employers.

Knowing that the success of the Chamberlin and Soo Gun Club tournaments meant a new era in trap-shooting, these "promoters" of the sport not only kept away from these shoots, but tried in every way possible to keep everybody else away; but with very poor success.

When manufacturers send their salesmen to tournaments and forbid them to shoot for the money purses they will find that it will perhaps cost them more per year for the services of their representatives, but they will notice a marked increase in the attendance at tournaments and in the consumption of their goods.

There is already a strong tendency in this direction, as can be seen by the fact that the salesmen of several manufacturers were present at the Chamberlin tournament, and they all expressed themselves as more than pleased with the success of the shoot.

The action of Harvey McMurchy, of the Hunter Arms Co., at the New York shoot at Rochester, in not entering any of the state events, but only shooting in the open or "wolf" events, places him on record in favor of the new departure, and at the same time makes him pretty well disliked in certain quarters. Think of Harvey McMurchy being disliked!

A large proportion of the cash purses and several of the best prizes in the merchandise event in the State events were won by paid experts who should not have been allowed to compete in the state events at all, although they were residents of the State.

To the credit of Mr. Banks it can be said that although he won the first prize in one of the classes in the merchandise event he immediately turned it over to the others who had tied him in the main event, but whom he had shot out in the ties.

State tournaments should at all hazards be strictly amateur shoots, as to the writer's knowledge several State trap-shooters' associations have been nearly if not quite disrupted by the strong professional showing at all State meets, that carries away year after year most of the prizes and money.

Tournaments can be run on the same plan as the last Chamberlin shoot, and these experts can shoot among themselves and with the best of the amateurs that may desire to compete with them, but, as one of the experts said to the writer in discussing the Chamberlin programme: "Well, that is all right, but we can only shoot against amateurs that are about as good as we are." There is the whole question in a nutshell. Without the easy amateur or "producer, as they call him, they find it hard to make both ends meet. Knowing that they were right, feeling that other manufacturers would soon adopt the same views, realizing that they would incur the ill will and opposition of the paid expert, but depending upon the support of the consumers of its manufactures, the Cleveland Target Co. ran its last tournament for amateurs, and announces that its sixth annual tournament, June 15 to 16, will be run on the same principle.

PAUL NORTH.

Buffalo Audubon Gun Club.

BUFFALO, June 23.—The attendance at the regular weekly shoot of the Audubon Gun Club yesterday was slim. There was no badge shoot and the feature of the day's sport was the monthly cup shoot, which was won by C. S. Burkhardt, who scored 24 out of 26 possible birds. This was remarkably good shooting considering the heavy wind. Following are the scores:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	15	15	*	20	Targets:	15	15	*	20

* Club shoot.

Mr. C. O. Gardner, secretary of the Bergen County Gun Club, writes us that "the Bergen County Gun Club will hold a handicap shoot for a cup on Saturday of this week at 1 o'clock, 25 birds, $1 entrance. There will be in addition to the regular shoot a novelty event for another cup, both prizes to become personal property of the winner. A good attendance is expected."

Dupont Gun Club.

OMAHA, Neb., June 25.—The regular shoot of the Dupont Club was held to-day in the presence of a large number of spectators. The interest and the number of participants in the regular shoots are increasing with each succeeding week, and part of the credit for this is surely due to the efforts of Parmelee and Hallowell, who are regular attendants and "jolliers." Mr. Charles North, a brother of Paul North, of Cleveland, looked after the traps and had them in fine order, which added much to the pleasure of the shooters. Of the 2,500 targets thrown less than one per cent. was broken by the trap. The club is formulating plans for a strictly amateur tournament, to be given in September. The intention is to add considerable money. A large attendance is anticipated.

The score of the shoot follows: Event No. 1 was the club score. Nos. 2 and 3 were team races, $5 per team:

Snapper No. 1	11111111111111111111—20
(Back score)	11111111101111111111—19
Townsend	10111011111111111111—18

Parmelee	2112222222—10		

Pine Bluff Gun Club.

PINE BLUFF, Ark., June 23.—To-day was an ideal shooting day with the exception of the heat, and the magautrap worked to perfection. Coles, who has been bringing up the rear in general average, jumped to second place and seemed to be at himself again. John Speers has deserted his shooting friends, and says he don't intend to shoot over the trap any more. The trouble with John is he is too easily discouraged, and I would advise him to get his gun and join us. It takes practice to make a good performer with the gun, and John is too good a shot to become discouraged because he makes a poor score twice in succession. J. A. Coles won to-day's contest for A medal, breaking 22 out of 25. Clements and Coles defeated Lloyd and Clements for Keely cup on following score:

Clements	19	Lloyd	16
Coles	18—37	Howell	16—32

The following scores were made:

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
Clements	50	45	.900	Ornold	50	37	.740
Coles	50	44	.880	Sorrels	50	36	.720
Lloyd	50	40	.800	Williams	50	25	.500
Howell	50	39	.780			SEC'Y.	

Wm. T. Smith Gun Club.

PHILADELPHIA, June 25.—The regular monthly shoot of the Wm. T. Smith Gun Club was held to-day on their grounds, Rope Ferry Road and Magazine Lane. Gold and silver badges are offered to first, second and third man each month, to be contested for. Twenty-five bluerocks per man, known angles. The scores were:

Wm T Smith	11011111111111111111111111—24
J O'Brion	11110011111010110011111111—19
J E	11100110001110101111111111—18
J Lewis	10101100011110011111100111—16
Dr Devine	01010111111101011011011110—16

After the club match Smith and J. E. shot a private match for a small purse, same conditions as above. Each broke 19 out of the 25 and shot it off at 5 birds, when they broke straight, and it was postponed until next Saturday. The scores were:

Smith	10101111111011111011110101 -19
J E	11110101111111011111110100—19

Tie, shot off at 5:

Smith .....11111 J E 11111

GREENER.

Hingham Gun Club.

HINGHAM, Mass., June 25.—The silver cup having been now won three times by Higgins, now becomes his personal property. A high wind made good scores difficult to make.

The Union Metallic Cartridge Co.'s new catalogue is a model of typographical neatness and concise information in respect to its products. It is far from being exclusively an enumeration of munitions of war. U. M. C. loaded and paper shells occupy a conspicuous place. Cartridges of every description are so classified that any information concerning them can be obtained in a moment. Among the new goods announced are grease-proof and smokeless card wads of improved material, for use over nitro powders, smokeless powder cartridges in a larger variety of caliber and styles. The catalogue will be mailed on application to the Union Metallic Cartridge Co., 313 Broadway, New York.

The third monthly shoot of the Greenfield Gun Club, Pittsburg, will take place on July 12. There are ten events in the programme, each at 15 targets, entrance to each $1.30. Shooting commences at 1 o'clock. Moneys divided 40, 30, 20 and 10 per cent. Targets 2 cents each, and any one who so pleases may shoot for targets only. John C. Knode, secretary, Greenfield avenue, Pittsburg.

Seattle Rod and Gun Club.

SEATTLE, Wash., June 28.—The Seattle Rod and Gun Club won a glorious victory over Tacoma yesterday afternoon at the West Seattle traps, making the third consecutive victory for the Hunting and Fishing challenge trophy in five years. Each team was composed of five men, who shot down 25 birds at a time, with 50 birds to the man. Seattle's team was composed of Messrs. Ruppe, Ellis, Stevens, Chellis and Hood, and that of Tacoma of Messrs. Young, Ebberly, Pierce, Cormen and Smith.

Considering that there was a good wind blowing all the time the scores made as a whole were good. Seattle scored 197 to 187 for Tacoma. Hood, of Seattle, led with a total of 45. Young, of Tacoma, was second with 44. Young got 24 out of his last 25, making the best run of the day. Ellis and Ruppe both shot well, and considering that Ruppe has not shot at all lately he made a very good score; but Jack always gets down to work when it comes to hustling those Tacoma boys for the cup. Stevens in the race shot nothing like his form, only getting 33, for right afterward he had 20 straight chalked up to his record. He is generally good for 42 or 43, but yesterday must have been his off day in the race. Pierce, of Tacoma, did not shoot as well as he is expected to, for he is counted among the best shots in the Northwest; but the best of them fall down sometimes. His shooting yesterday though was much better than at the last meeting. Ellis also improved on his work of the month previous. Ebberly, one of Tacoma's oldest shooters, got back into the game yesterday, and got 35. In the sweeps though he was right there every time, and in the last event of 10 singles, reverse, and 5 pairs, he got 17—8 out of 10 reverse, and 9 out of 10 in the pairs. Chellis was pushing Ruppe and Ellis along, and got a total of 38. Carmen, of Tacoma, was low man with 30. He shot well in his first 25, but fell down on the last string.

All the boys are impatient now for the Vancouver shoot, which starts on the 29th and lasts four days.

There is $1,444 added money, besides about $1,500 in medal and prizes, making a grand total of about $3,000. It is only open to the shooters of the Northwest Association. Seattle hopes to bring back some of those trophies, and also hopes to separate the boys from their cash up there in a fair and sportsmanlike manner, and may the best man win, whoever he may be. The scores:

Seattle.

Answers to Correspondents.

No notice taken of anonymous communications.

C. S., New York.—The record you mention does not make the party a professional. So long as he does not follow trap-shooting for a livelihood in whole or in an important part, he is an amateur.

J. E., Des Moines, Ia.—Paper shells are the most convenient and are sufficiently efficacious for all purposes. Brass shells may be reloaded, therefore have an advantage on the score of economy. The proper load for a young boy at targets is 2½ or 2¾drs. of powder and 1⅛oz. of No. 7½ shot. The gun you mention is excellent for the purpose.

J. W. F., Aramosa, Ia.—I have been watching the columns of your paper for something in regard to frogs. Will you kindly tell me where I can get bullfrogs for breeders, or where I can get young frogs, tadpoles or spawn, with which to stock my ponds? Ans. From local waters, we should say. The only frog farming yet achieved in this country consists of the capture of wild frogs in a time of plenty and keeping them for market.

PUBLISHERS' DEPARTMENT.

Unique Long Island.

UNDER this title the Long Island Railroad publishes a collection of half-tone views of picturesque and inviting Long Island, the great pleasuring ground of Greater New York. It is a delectable country of shady groves and silver beaches, of fishing waters fresh and salt, and famous hunting grounds, with manifold and inestimable resources for every taste. Just to look through the pages of "Unique Long Island" gives one a desire to prove in person the delights pictured in its pages. The little work will be sent (for five cents to prepay postage) by the Long Island Railroad Co., Long Island City, N. Y.—*Adv.*

OCTOBER.

14. Miramichi, Watt cup, Chatham.

THE most interesting yachting event of the present week is the performance of the late flagship of the New York Y. C., Corsair II., now the U. S. S. Gloucester, of the blockading squadron off Santiago. Lieut. Commander Richard Wainwright, second in command of the Maine at the time she was blown up, is now in command of the Gloucester. When Admiral Cervera made the desperate dash out of Santiago harbor last Sunday morning, the Gloucester devoted herself to the two Spanish torpedo destroyers, Furor and Pluton, attacking the pair directly under the guns of Morro Castle and the fire of the big Viscaya. From the accounts thus far at hand, the Gloucester did the most of the work of disabling these two vessels, both of which were beached, one blowing up. Later in the day the Gloucester turned up to the westward in time to send a boat to the burning Spanish flagship, in which Admiral Cervera was taken ashore, and on immediately surrendering was taken off to the Gloucester, being received at her gangway by Lieut. Com. Wainwright. The work of this little ship under extreme conditions, for which she was never intended, reflects the highest credit upon her designer, Mr. J. Beavor Webb.

ON Monday, July 11, and the two succeeding days, the Seawanhaka C. Y. C. will hold its trial races for the selection of a challenger in the match with the Royal St. Lawrence Y. C. As usual, but little sailing has been done thus far by the 20ft. fleet, though the races are but five weeks off, and much of this time must necessarily be wasted in transportation. Two of the proposed challengers, one new and one old, have sailed a few races on the north shore of the Sound, but there has been none of that thorough and systematic racing on the part of the class as a whole which is the only thing that can develop the best speed of the boats. The final trial races, in default of such preliminary work, merely serve to show the defects inherent in every new boat, and there is not sufficient time between them and the cup races for putting the boats into the best possible shape. The defending fleet began its work later than usual this year, but it has already sailed several races, and in addition it has the time for final preparation which is lost by the challenger in transportation.

Girth as a Factor of Measurement.

THERE has been for several years past a general agreement on the part of all interested in the improvement of the measurement rule on one point: that the main end to be attained by a new rule is an increase of displacement and area of midship section. It has been generally recognized that, however correct the main factors of the existing rules, length and sail area, may be, when brought to bear on the fin-keel type they discourage the use of displacement; and that a very weak point has been developed in the rules that can only be removed by the addition of a factor directly related to displacement. Numerous proposals to this end have been advanced, including the use of displacement and area of midship section as divisors, the use of the depth of midship section at one-quarter of the beam, and of the inclusion of both beam and draft in the formula as direct taxes upon extreme dimensions.

The use of girth as a factor of measurement dates back many years, though it has never become general in America or England. It has had advocates in this country, it has been used locally in England, as at Liverpool, and on the continent it has been quite widely used, being an important factor of the French rules for some years. It was suggested by the conference of British designers held in 1895-6, and adopted as an important factor of the Y. R. A. rule in the latter year. We have repeatedly published this rule, and it has been brought directly to the attention of American yachtsmen of late through the visit of Mr. Jarvis to England.

While the evidence thus far, after two years of trial, is in favor of the new rule in British waters, there are good theoretical reasons against the use of girth as a factor; reasons which are not disposed of by the evidence of existing British boats.

Bearing in mind that the direct end in view is the inducement of the designer to take a larger area of midship section, at the same time leaving him free as to the proportions and form of this area, we are met with the fact that girth is of itself in no sense a measure of the area included within it, unless the character of the section is the same; there is no essential relation between the perimeter of a figure and its superficial area.

This much in theory, now in practice the corrective effort of girth as applied to any form of yacht section must be limited to the filling out of some part of the space a. a., which lies inside of a line A B, drawn from the end of the beam at L.W.L. to the bottom of keel, Fig. 1; by the substitution of curves, as b or c, for the angle d, of the fin type. In doing this, its direct tendency is to produce the triangular section, A, B, C, an impossibility, owing to the lack of stability of this form. When the designer attempts to improve the section by adding a bilge at b, b, outside the line A, B, the girth measurement at once steps in to penalize him. Of the relation of girth to bulk, it may be said that bulk is, on principle, and most manifestly, penalized and discriminated against, and where its use is encouraged at all it is only capriciously and indirectly, as in the case above, where the inducement to cut the bilge at b is quite as strong as that to fill the hollow within the line.

The conditions under which the rule has been tried in England are somewhat limited, and by no means the same as those existing on this side. The tendency of girth as used in the Y. R. A. rule is to produce a section in which beam and draft are approximately equal, the section of Vanessa, Minerva and many other excellent yachts of different eras. In that it has in a measure displaced the fin-keel and restored this form of section, as shown in the FOREST AND STREAM of March 19, it has been of immediate benefit to yachting. At the same time we believe that any well-informed yachtsman will, upon examination of many of the sections, and a study of the dimensions of the yachts, come to the conclusion that the draft is very light for good windward work, a complaint already made against the new boats. As concerns these sections, it may be said that none of them could be symmetrically enlarged, thus giving more displacement, without incurring a penalty under the rule; and on the other hand, any symmetrical reduction of area (and displacement) would receive a premium under the rule.

The question of the effect of the rule as applied to the centerboard yacht, a vital one on this side of the water, is disposed of in England by the very simple process of barring the entire centerboard type; so that practically the rule, as in actual use in Great Britain, limits designers to the keel type of yacht and one general type of midship section.

This of itself is a sufficient argument against the adoption of the Y. R. A. rule as it stands by American yacht clubs, as the designer must be allowed a larger liberty of choice both as to the use of the centerboard or keel, and the form of section. While any new rule

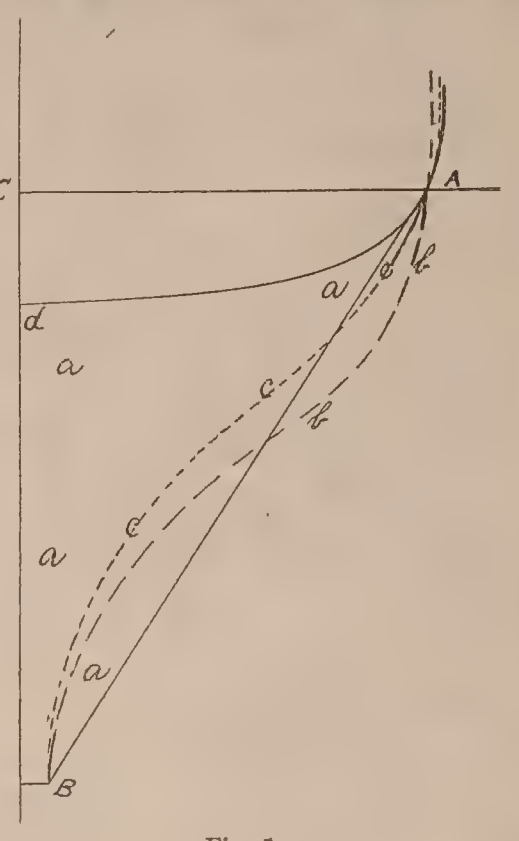

Fig. 1.

to be satisfactory in this country must discriminate against such yachts as Dragoon and El Heirie, it must leave a free field for the development of the moderate centerboard type.

The influence of the British Y. R. A. rule on Dragoon and El Heirie is shown in Fig. 2. Assuming the beam, the depth of keel outside of hull proper, and the center-

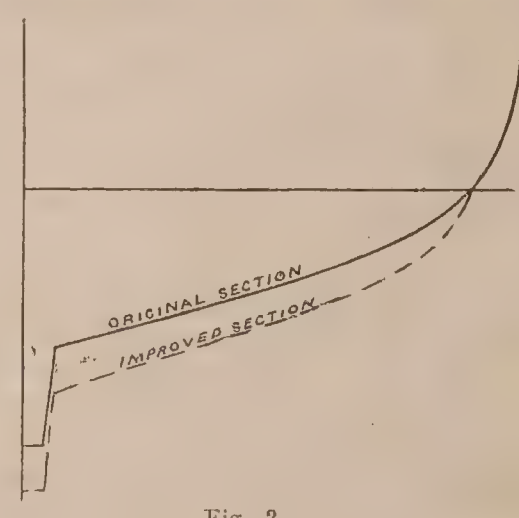

Fig. 2.

board, to be constant for all chances of section, it will be plain that any attempt to improve the original shoal section by deepening it, as shown by the broken line, must increase the girth, and consequently the final measurement; directly encouraging the slab type as compared with a yacht of useful depth.

Under the Y. R. A. rule the measurement may be in-

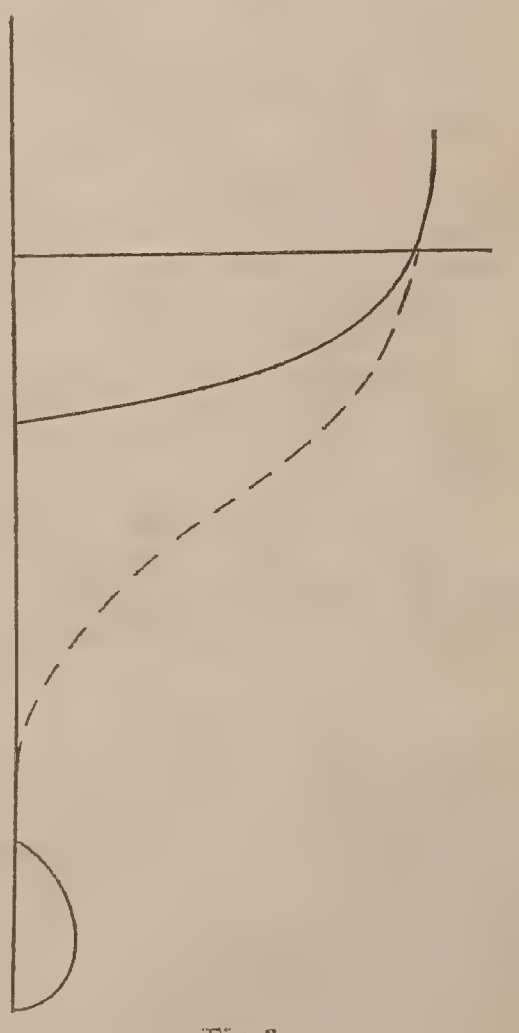

Fig. 3.

creased by two essentially different causes, by the increase of the dimensions, beam and draft, both of which constitute levers which give power unassociated with bulk; or by the simple increase of bulk, without increase of the levers, thus involving an increase of the work to be done, with no increase of the power to do it. The rule fails utterly to discriminate between power and effect, the length of the levers and the work accomplished.

The formula proposed by Mr. Hyslop has for its

foundation this relation between the power, as derived from the two levers, beam and draft, and the work done in driving the greatest possible area at the required speed. It leaves to the designer the largest possible liberty in choice of keel or centerboard type, of proportions of beam and draft, and of form of section; at the same time it makes it compulsory that he should pay to a certain extent for the power gained by long levers, through a proportionately large area of section to be driven. How much he shall pay, in other words, just what combination of speed and accommodation yachtsmen desire, is fixed by the constant or multiplier decided on for the factor, the square root of the midship section.

The effect of this rule with the constant proposed by Mr. Hyslop (3.33 $\sqrt{M.S.}$) is also shown in Fig. 2. The original shoal section would be taxed under the rule by an increase of the yacht's racing measurement, but if enlarged to the broken line the tax would disappear and the measurement would be precisely the same as it is to-day under the Seawanhaka rule.

The effect on the fin-keel is shown in Fig. 3, the original fin section would be taxed under the proposed rule by an addition to the present measurement, but if the section were filled out to the broken line, giving a yacht of good internal accommodation instead of a mere hollow shell, the tax would disappear, and the yacht would race at her present measurement by the Seawanhaka rule.

Under the Y. R. A. rule beam and girth are taxed directly and draft indirectly, as we have shown, with unsatisfactory results, at least as applied to American uses. Under the proposed rule neither of these elements is a subject of direct tax; but at the same time there is the strongest possible bar to the abuse of extreme dimensions, unaccompanied by a reasonable amount of displacement.

There are two important points to be considered in connection with this latest proposal; in the first place, is the principle correct in theory and likely to work well in practice? In the second place, if the principle is correct, what constant shall be selected? It is the opinion of the originator of the formula that even with the constant proposed by him (3.33, or 6.66, when factored over the present divisor 2 of the Seawanhaka rule) the fin-keel type will have a fair chance beside new yachts built under the rule. It will be obvious that by altering this constant the rule can be made to encourage any type, from the extreme fin to the equally extreme cruising tub. The figure suggested will, we think, produce what yachtsmen profess to want, a moderate type of yacht, keel or centerboard at will, and if it does this nothing more can fairly be asked. If, at the same time, it gives a fighting chance to the fin-keel to race with the new yachts, so much the better.

Kennebec Y. C.

Bath, Me., Kennebec River.

Saturday, June 25.

FROM club house to Bath Iron Works buoy, thence to Lebanon Bluffs buoy, then to Winslow's Ledge lower buoy, thence to club house, all buoys to be left to port. Distance, four miles. Weather fair, with threatening clouds, which did not materialize. Wind S.S.W., fresh, then very light. Tide, end of ebb and start of flood.

Both classes same course. Summary.

	Length.	Finish.	Elapsed.	Corrected.
Dewey, Harrington	20.11	4 08 45	0 56 15	0 56 15
Marguerite, Hutchins	20.04	4 24 26	1 09 46	1 09 23
U. C., Silsby	19.10	4 23 35	1 09 55	1 09 24
Woodcock, Percy	20.02	4 24 55	1 10 55	1 10 23
Glide, Brooks	18.08	4 28 15	1 13 15	1 11 41
	Fourth	Class.		
Ultra, Besseliene	17.10	4 39 40	1 14 40	1 14 40
Ceila, Cook	15.00	4 38 50	1 18 30	1 17 24
Alma, Silsby	17.01	4 41 29	1 18 07	1 17 51

There were a number of boats that did not start on account of the lack of wind. The race for second place in the third class was a very pretty one.

Winners of Prizes.—First prize, Class 3, Dewey; Class 4, Ultra. Second prize, Class 3, Marguerite; Class 4, Ceila. Third prize, U. C.

Glide was handicapped 2m. 40s. in the third class, and Ultra won with 1m. 22s. in the fourth class. The handicap of Glide deprived her of second place, there was no prize for this one race, it being best two out of three races for a challenge cup offered by the club.

Regatta Committee—E. S. Hutchins, A. A. Percy and Dr. H. A. Bates.

Judges—W. A. Potter and S. C. Greene; timer, E. R. Wittekind.

Dorchester Y. C. Annual Regatta.

Dochester—Boston Harbor.

Saturday, June 25.

THE Dorchester Y. C. sailed its annual regatta on June 25 in a lively S.W. breeze, but with a rather small fleet of starters. The times were:

25ft. Class.

	Elapsed.
Eleanor, D. B. Clapp	1 50 08
Tantrum, F. Coleman	1 54 39
Beatrice, J. Cavanagh	2 00 01
Little Peter, H. Moebs	2 25 03
21ft. Class.	
Tacoma, Elmer Prior	1 57 55
Elsa, H. M. Crane	. . . .
21ft. Class.	
Privateer, A. E. Schaaf	1 44 09
Arab III., C. D. Lanning	1 51 31
Omeme, W. P. Barker	1 54 46
Knockabouts.	
Jilt, W. O. Gay	1 44 23
Dafila, W. D. Turner	1 46 23
Spindrift, W. H. S. Lothrop	1 48 44
18ft. Class.	
Alpine, C. J. Blethen	1 21 50
Vamoose, R. M. Benner	1 22 48
Perhaps, J. E. Robinson	Withdrew.
15ft. Class.	
Katydid, J. F. Small et al	1 22 14
Glide, G. D. Silsbee	1 24 34

The judges were Messrs. George H. Collyer, Coolidge Barnard, Hartford Davenport and O. F. Davenport.

The winners were: First prizes, Eleanor $15, Tacoma $12, Privateer $12, Jilt $12, Alpine $12, and Katydid $10; second prizes, Tantrum $10, Arab III. $8, Dafila $8, Vamoose $8; third prize, Beatrice $5.

Small Yawls and Schooners and Mixed Classes.

WE have already mentioned the question which has recently arisen about Boston through the advent of a racing yawl and a racing schooner in the very small classes, and the proposed entry of the latter for the Quincy challenge cup. The following extracts, from recent issues of the Boston Globe, give further particulars of two very interesting boats:

The Memorial Day race was noticeable for the appearance of the yawl rig among the racing craft in competition with the faster jib and mainsail. The yawl rig was carried by John F. Small's Katydid, his new boat in the 15ft. class, and captured second place to last year's champion Vitesse. The yawl is an outcome of the present Y. R. A. rules and of the desire of Katydid's owner to test the respective merits of the rigs in actual practice. It is not a "trick" to win races, but a legitimate experiment under the rules. Its possibility comes about in this way:

The inferiority of the yawl or of the schooner rig to the jib and mainsail in the matter of speed has been so commonly conceded that schooners and yawls have for years been allowed to race at seven-eighths of their racing measurement. This was when time allowance was given, and when rating for classification was on a different basis from that for allowance. The present Y. R. A. rules say that schooners and yawls shall be rated at seven-eighths of their racing length. Since there is no time allowance, the boats are "rated" only for classification. "Racing length" is waterline with crew on board. It follows then that a man who has a yawl which he wishes to race must have one longer than the class limits, just enough longer in fact to make seven-eighths of her racing length fit the class for which she is intended.

This is what Mr. Small has done. His boat is just under 17ft. racing length, seven-eighths of which is just under 15ft., the class limit. What he loses in speed by the yawl rig he expects to more than make up on the extra length and size of his boat. His boat is "rated" for classification just within the class limits, and there you are. The position seems to be a sound one.

But how about its effect on the racing? Well, that remains to be seen. A yawl like Katydid seems to be perfectly allowable under the rules. The rig is confessedly a handier one for squally weather than the jib and mainsail, and if Mr. Small has produced a faster yawl under the rules than the jib and mainsails of her class, it simply remains to adopt the yawl rig or to bar it out altogether.

As it is too late to change the rules this season, the prospect is that Mr. Small's experiment will be given a fair trial, and that the Association can govern itself accordingly. The experiment is indeed an interesting one, and judging from her performance on Memorial Day Katydid will be heard from with no uncertain sound in the racing to come.

The yawl has already appeared as a racing rig under the rule of the Yacht Racing Association of Massachusetts rating schooners and yawls for the purpose of classification at seven-eighths of their racing length, and within a month the schooner too will have made its appearance. The yawl rig is carried by John F. Small's Katydid in the 15ft. class, and the schooner rig will be carried by S. N. Small's challenger for the Quincy cup on behalf of the Savin Hill Y. C.

Katydid is about 17ft. racing length, but rates at 15 under the rule. The new challenger will be just under 24ft. racing length and will rate at 21ft., or just within the class in which the cup is offered. The brothers appear to be bound to test to the limit the usefulness of the rigs as racing ones under the allowance for rig given by the rules, and their experiments will be watched with more than usual interest.

But it may be said right here that neither of these designers has gone in any way to an abnormal rig or to one in which handiness is sacrificed for the sake of securing the allowance. They are simply trying to work out the question of the relative speed of the rigs as against the jib and mainsail, with of course the belief that the schooner or yawl now has a fair chance of winning, because of the extra length allowed her. The experiment is a perfectly legitimate one and was considered even under last year's less favorable rules. It has now become a certainty and the result is in doubt.

Katydid is a yawl under any reasonable definition of the rig. Her main boom swings clear of her mizen, while the mizen itself is of sufficient size to work the boat in connection with the jib, even when the mainsail is down. The other small boat will be no less of a schooner. Her masts will indeed be rather close together, but the foresail will be no "baby" of a sail, but will do its full share of work either close-hauled or in reaching. She too will class as a schooner as easily as does Katydid a yawl. She is now building by Higgins & Gifford, at Gloucester, from her owner's own design.

Bud, as Mr. Small will name his new boat, is 37ft. over all, 9ft. beam and 9in. draft, with a waterline length in racing trim of just under 24ft. Seven-eighths of this racing length will bring her just within the limit of the 21ft. class. Her mainmast will be stepped 4ft. forward of the middle of the waterline, and her foremast a little over 6ft. further forward, bringing it within a foot of the forward end of the waterline. The bowsprit will not be a long one, nor will the main boom project very far over the stern. About 900sq.ft. of sail will be carried in three lower sails. For light sails there will be a gafftopsail, balloonjib and spinaker, bringing the total sail area up to between 1,600 and 1,700sq.ft.

The masts will be hollow. The mainmast will be the heavier, since it will practically carry all the strain of the sails except the foresail. It will be a pole mast, with the usual shrouds and spreaders, but the stay from its top will lead directly to the end of the bowsprit. The foremast will reach just up to this stay, and will be supported by rather than support it. The jib halyards, as well as those for the balloonjib, will be led to maintopmast head, although the jib will not set abaft the foremast. Balloonjib and spinaker will, however, be set to the full height of the mainmast. The foresail will have the usual gaff, but will have a loose foot, and will trim several feet abaft the mainmast.

In construction the boat will be built on the light yet strong plan of the seine boats used in mackerel fishing. Her planking will be ⅜in. cedar, clinched with copper nails to ¼in. inside battens, thus doing away with the necessity of caulking. The oak frames, ½×¾in., go inside the battens, while the whole structure is braced and strengthened by proper floors, bilge stringers and struts to the deck beams near the masts. The frames will be spaced 10in. on centers. The deck will be canvas-covered. There will be two cockpits, a small one aft for the helmsman and a larger one amidships for the crew. A dagger centerboard will be carried, and there will be an iron shoe on the keel, which will give about 100lbs. of outside ballast well in the center of the boat.

In model the boat shows a flat floor, an easy bilge and a carrying of the long floor lines well into the overhangs. She ought to utilize a large proportion of her overhangs when needed, although she is by no means on the "scow" type. She looks from her lines as if she would be an easy boat to drive, as well as one with good sail-carrying power.

Looking over the design of Bud for advantages and disadvantages as compared with the jib and mainsail rig, it is surprising how many of the former and how few of the latter can be found. The mainsail lacks only about 4ft. in length of boom of that of a jib and mainsail rig, and so retains a large proportion of its driving power. The jib is of good size, while the foresail is big enough to do good work. If the boat cannot point quite as high as a jib and mainsail, she ought nevertheless to make up in footing what she loses in pointing, since she has 4ft. more waterline length than her single-sticked competitors.

But it is in reaching that Bud ought to be specially heard from. The spread of her balloonjib is enough larger than that of a single-sticker to pull her faster, even if it were not for the greater effectiveness of the other sails, while in work down the wind the big spinaker should perform a like office. The foresail sheet is the only additional one to handle, while when it comes to reducing sail, the dropping of the foresail is equal to turning in a couple of reefs in the ordinary mainsail, to say nothing of the greater ease with which it can be done.

All this is of course on paper as yet, but it looks well in the design and sounds well in discussion. Whether or not Bud will come up to her designer's expectations remains to be seen, but everything has been carefully thought out, and the design and its details are certainly attractive and promising ones. Provision is made for turning Bud into a yawl if she does not prove fast as a schooner, and again into a jib and mainsail for the 24ft. open class if she will not take kindly to the other rigs.

The first formal decision against the yawl or schooner, which, rated at seven-eighths of her racing length, comes just within the limits of the Yacht Racing Association class in which she is intended to sail, has been made by the executive committee of the Quincy Y. C. in connection with the declaration of trust for the Quincy challenge cup for 21-footers. The committee has decided that cup was offered for boats of 21ft. waterline or under, and that no yawl or schooner over that length is eligible to compete under the allowance for rig now given her by Y. R. A. of M. rules.

This action by the committee was the result of a request for a decision from S. N. Small. Mr. Small had received informal assurances from prominent racing men in the Quincy Y. C. that his boat would be considered eligible to compete if she was eligible to the 21ft. class under Y. R. A. rules. Acting on these he ordered his boat, and she is well toward completion. Now comes the formal decision of the committee barring him out, and naturally he is wondering how it happened.

The action of the committee was expressed in the following vote: "That the secretary be instructed to notify the Savin Hill Y. C. that inasmuch as it has been called to our attention that their possible representative in the race for the Quincy Y. C. challenge cup was to be a yacht exceeding 21ft. waterline length, that the races for the cup are open only to sailing yachts measuring 21ft. or less, according to Article I. of the Declaration of Trust."

Article I. of the declaration of trust is as follows: "Contests shall be open to yachts of any country, representing any organized yacht club in good standing, provided the sailing length, measured by the rule of the Yacht Racing Association of Massachusetts, is 21ft. or less."

Mr. Small naturally feels aggrieved at the decision, and has so informed the Quincy Y. C. in a letter to the executive committee, but he is going ahead with his boat, and will try her out in the races of the Association in which she is eligible to race. He thinks his experiment too interesting a one to be abandoned just yet.

In Mr. Small's view of the interest of his experiment the writer heartily concurs, and at the same time doubts if the executive committee of the Quincy Y. C. has given the most logical interpretation of Article I. of the declaration of trust, even if it has not exceeded its rights in the matter.

Article I. distinctly says, "sailing length" under the rules of the Y. R. A. of M., without any reference to what that rule is at present or may be in the future. "Sailing length" at present is waterline with crew on board. A yawl or schooner is rated for classification at seven-eighths her sailing length to make up for the admitted fact that her rig is slower than that of the sloop. No one in the Association seems likely to question this interpretation of the rules as not being the correct one. Hence the logical conclusion to draw from Article I. is that any boat declared eligible to the 21ft. class in Association races is eligible to compete for the challenge cup.

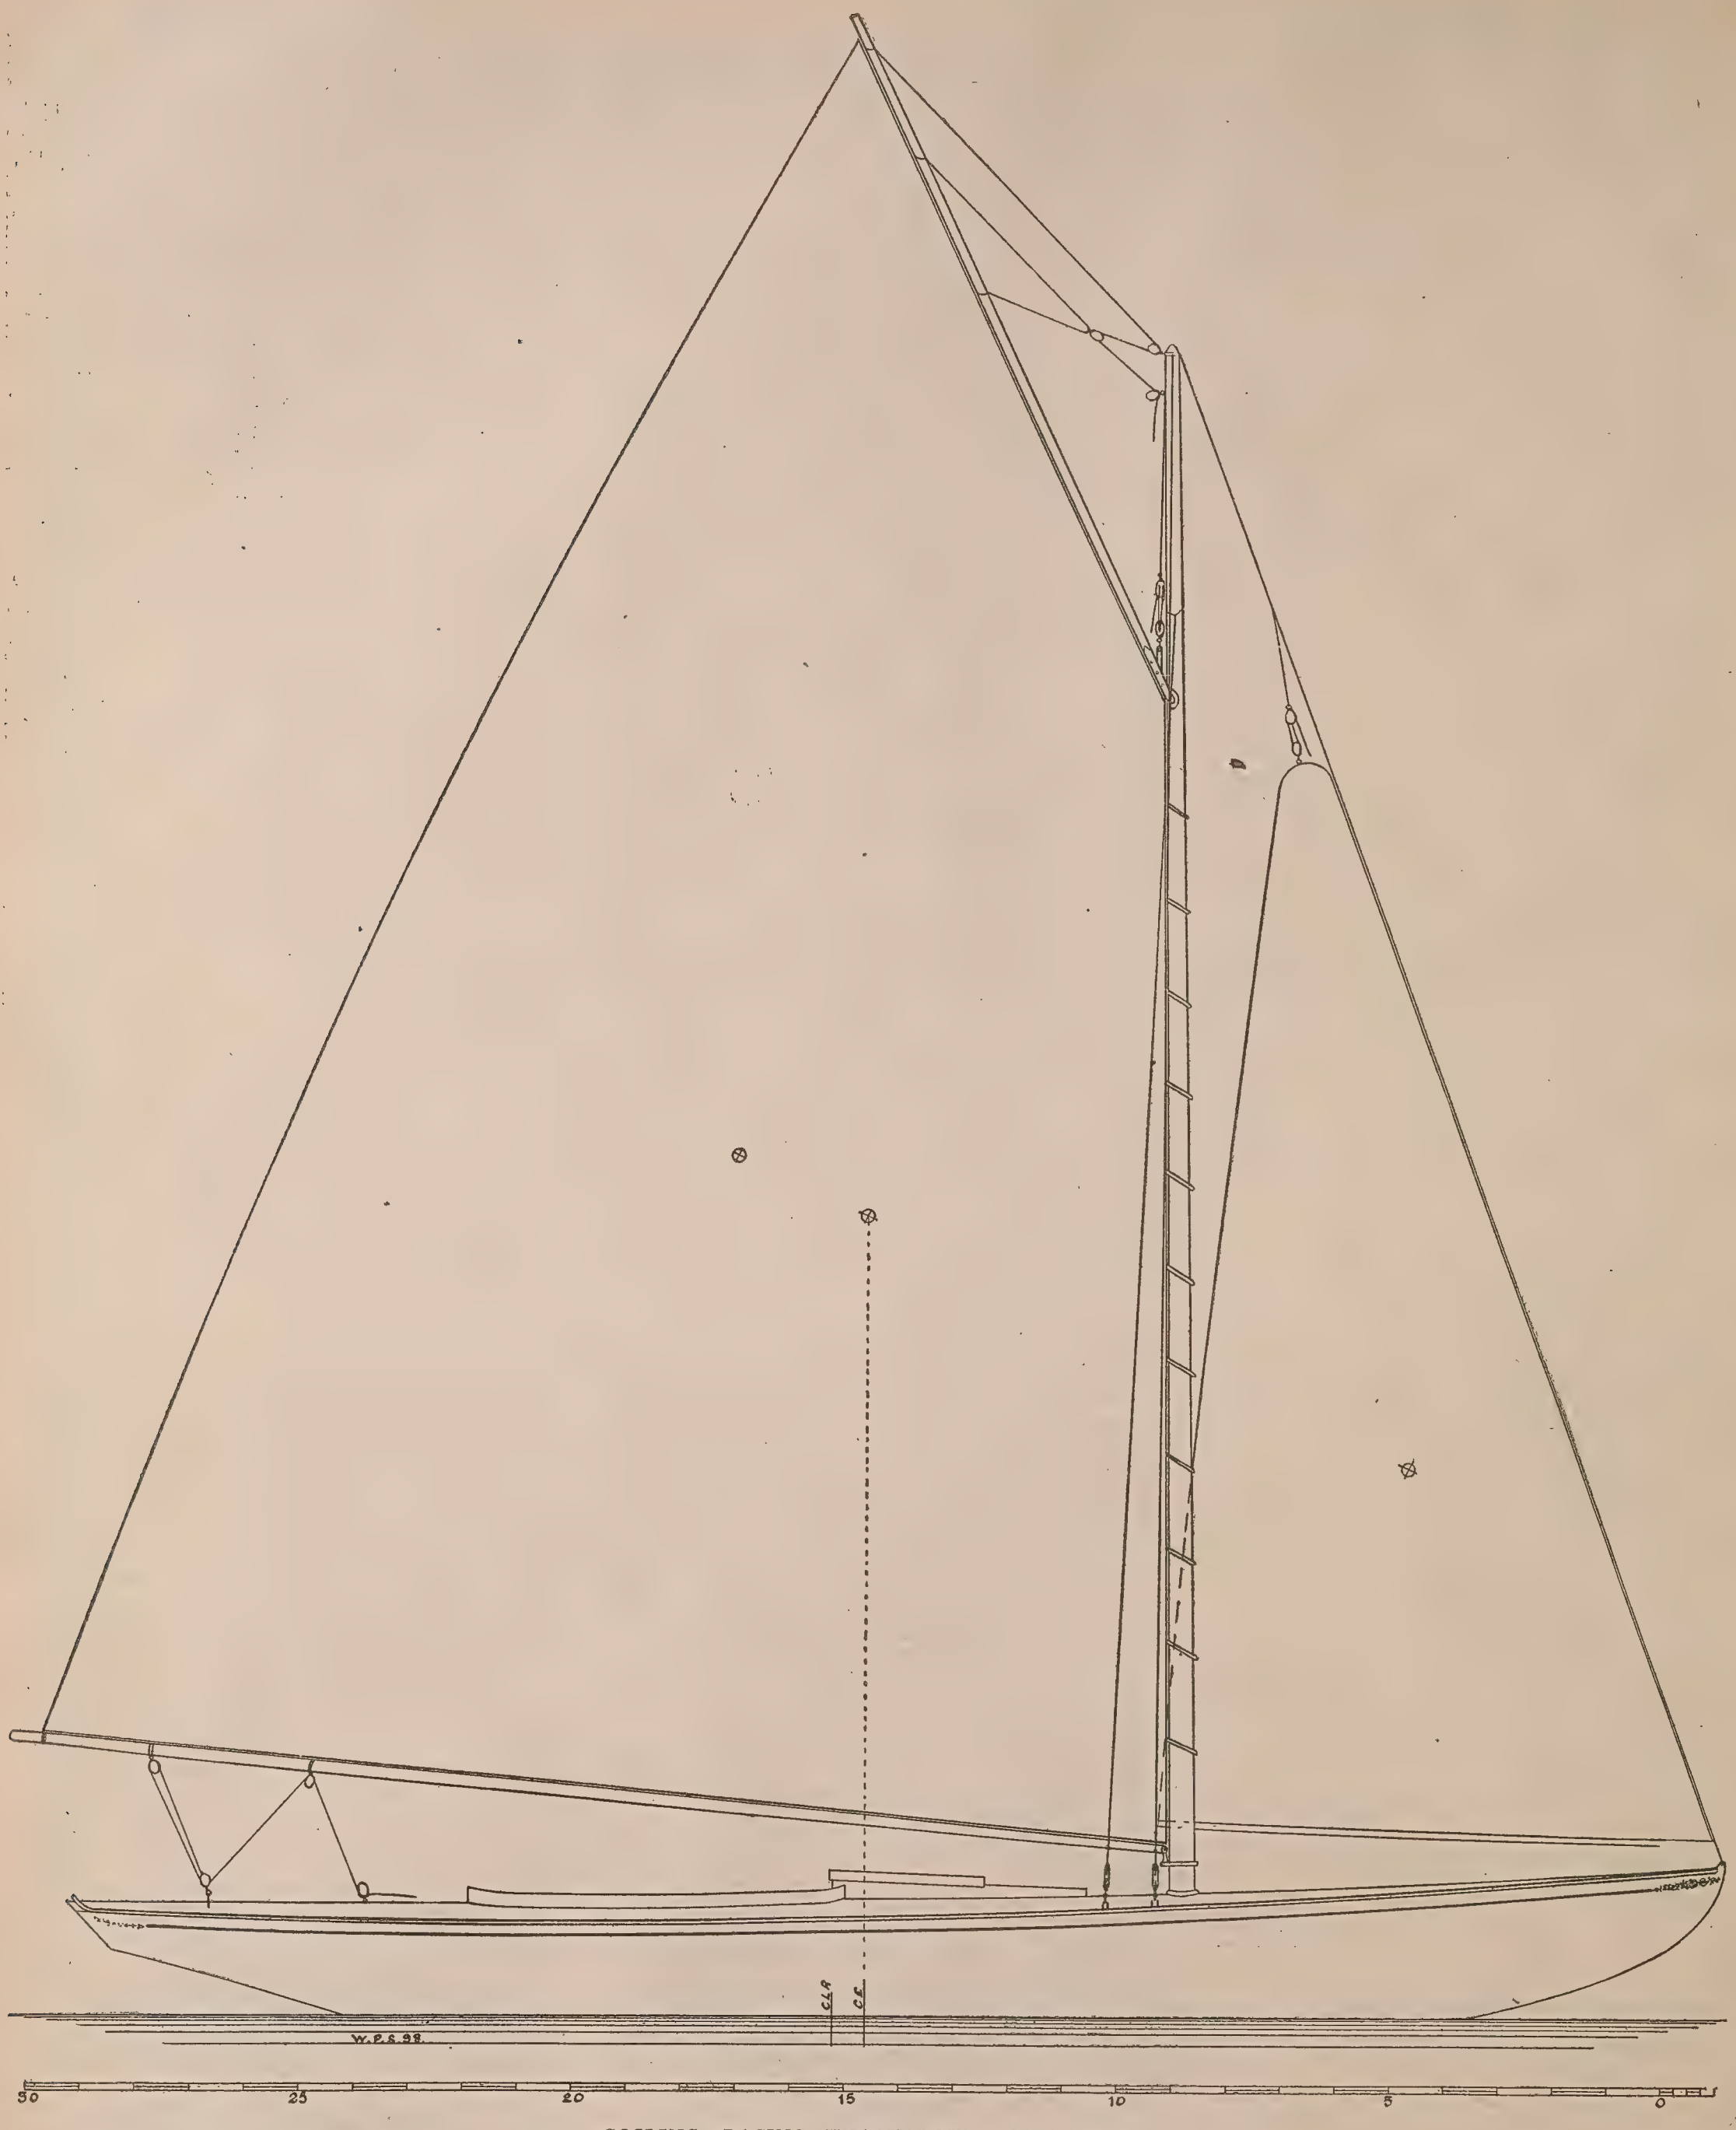
But on the supposition that the interpretation of the committee is the correct one, the question may well be asked whether or not such interpretation is in effect a modification of the declaration of trust, and whether or not the executive committee has power to make such a modification.

Article VII. says: "The terms of this instrument may be modified by the Quincy Y. C. while the cup is in its possession, and when not in its possession by agreement between the Quincy Y. C. and the club holding the cup; but no modification shall be made during pendency of any challenge, unless consented to by all challengers."

If the action of the committee is a "modification" it cannot be made without the consent of all challengers. If it is not a modification, but simply an interpretation of the provisions of the deed, then Mr. Small has an appeal to the executive committee of the Y. R. A. of M., under Article VIII. of the deed, which is as follows:

"All conditions of any competition not covered by these articles or by rules of the Yacht Racing Association of Massachusetts shall be left to mutual agreement, and in case of failure to agree the executive committee of the Yacht Racing Association of Massachusetts shall act as arbitrator."

Which would seem to show that Mr. Small and the Savin Hill Y. C. have an appeal from the decision of the executive committee, and would be well within their rights in making it. Such an appeal need not be made in any unfriendly spirit, and should not be regarded as otherwise than in the interests of sport and in the determination of the values of the various rigs as now allowed under Y. R. A. rules. The writer has no interest in the matter save that of promoting the sport of racing and of determining by experiment the value of present rules with a view to securing possible improvement in the future, but he would certainly appeal were he in Mr. Small's position, and would hope for final ruling from the Association's executive committee, regardless of what his own opinions might be.



There is another point in connection with this question, in addition to that which we urged last week, which is quite important. By all yachting usage and by the rules of the majority of yacht clubs and associations, the allowance for rig is merely what may be called an emergency measure, and to be employed only at the discretion of the club giving a race. The rules of the British Y. R. A. say: "As mixed races are no satisfactory test of the relative speed of yachts, the different rigs should, whenever practicable, be kept separate; but, when mixed races are unavoidable, the following rule shall be observed," etc. The American form of the rule is derived from this, the common wording being: "In mixed races." In the American and British rules there are no intimations that all races shall be "mixed rig" races; on the contrary, both by the rules and by universal usage the different rigs are raced separately unless special provision to the contrary is made in individual cases.

No one would for a moment recognize the right of the owner of a large cutter to enter her in the schooner class against Colonia or Emerald; nor of the owner of a small schooner to enter her against Wasp, or, if small enough, against the 30-footers. As a rule mixed rig classes are made by special announcement at times, and failing such announcement, the ordinary class rules govern, and each rig races alone.

The rules of the Y. R. A. of Massachusetts are different from those of all other large clubs and associations, in that they take cognizance only of yachts in the classes of 35ft. l.w.l. and under, in which sizes there are no schooners; and the rules name no schooner or yawl classes; the inference being that only the cutter and sloop, the knockabout and the cat rigs are included under them. The only mention of the difference of rig is as follows: "When yachts of mixed rigs race together, schooners and yawls shall be rated at seventh-eighths of their racing lengths." This rule has been in the Association book from the start, but the following one, relating to sails, and mentioning schooners and yawls, was adopted last fall, solely as a matter of form, it being then in use by the Long Island Sound Y. R. A. Under the rules of the latter body, of the British Y. R. A., and the Y. R. U. of N. A., we should say that the owner of a yawl or a schooner had no right whatever to enter her in a class of sloops and cutters unless it was specifically stated that the race was open to all rigs. We do not, however, feel inclined to interpret the rules of the Y. R. A. of Massachusetts; though in our opinion they do not confer any positive right to a schooner to enter the regular single stick classes.

As an interesting and possibly useful experiment, we should like to see the two new boats allowed freely in the regular class races of the Y. R. A. of Massachusetts; but not in important special matches where other issues than the efficiency of the various rigs are to be decided.

The Seawanhaka C. Y. C. was forced to postpone its annual race, set for June 29, in consequence of the death of Vice-Com. Cruger. It will be sailed on Thursday, July 14, under the conditions already announced.

GOSLING, RACING KNOCKABOUT—SAIL PLAN.

Royal St. Lawrence Y. C.

Dorval—Lake St. Louis.

THE Royal St. Lawrence Y. C. opened its season somewhat later than usual this year, the first race being held on June 11. On June 4 the two 20-footers, Glencairn II. and Avoca, sailed an informal race, each with a crew of three in addition to the helmsman; Mr. Duggan sailing the former and Mr. Shearwood the latter. The times were:

Glencairn. .....4 24 20 Avoca 4 24 55

The club has three new boats in the 20ft. class, Strathcona and Speculator, designed by Mr. Duggan; and Manitou, designed by Mr. Huntley Drummond, an amateur also. They were built by the St. Lawrence Boat Company, at the club station, Dorval. The morning of June 11 was rainy and foggy, clearing by noon with a light wind. The starters were:

Twenty-footers, First Ross Series.—Avoca, F. P. Shearwood; Glencairn II., G. Herrick Duggan; Glenowen, Campbell Davidson; Manitou, Huntley Drummond; Speculator, Arthur Hamilton; Strathcona, J. C. C. Almon.

Fifteen-footers, Club Prizes.—Fidget, Count C. de Villers; Missie, L. M. Ogilvie; Habitant, D. R. Hemsley.

The crews were:

Glencairn—Messrs. G. H. Duggan, J. Bolton, T. H. Prissick and H. Paton.

Avoca—Messrs. F. P. Shearwood, C. C. Smith, C. H. Routh and H. B. Young.

Manitou—Messrs. Huntley Drummond, A. E. Abbott and Allister Mitchell.

Glenowen—Messrs. C. Davidson, Graham Drinkwater, Harold Eadie and Thornton Davidson.

Strathcona—Messrs. J. C. C. Almon, A. F. Riddell, Travers Allan and H. Morris.

Only two rounds were sailed, in consequence of the light wind, the times being. Start 4:50:

Speculator	5 01 30	5 37 40
Strathcona	5 02 45	5 41 10
Glencairn II.	5 03 15	5 42 30
Avoca	5 05 00	5 47 15
Glenowen	5 06 35	5 55 20
Manitou	5 06 45	5 54 00

Dorval—Lake St. Louis.

Saturday, June 25.

THE spring regatta of the Penataquit Corinthian Y. C., of June 25 in a light N.E. breeze, the boats and crews being:

Avoca—Messrs. F. P. Shearwood, A. Shearwood, C. Routh, and H. B. Young.

Glencairn—Messrs. H. Duggan, T. H. Prissick, J. Bolton and H. Paton.

Glenowen—Messrs. C. Davidson, Marler, T. Davidson and G. Drinkwater.

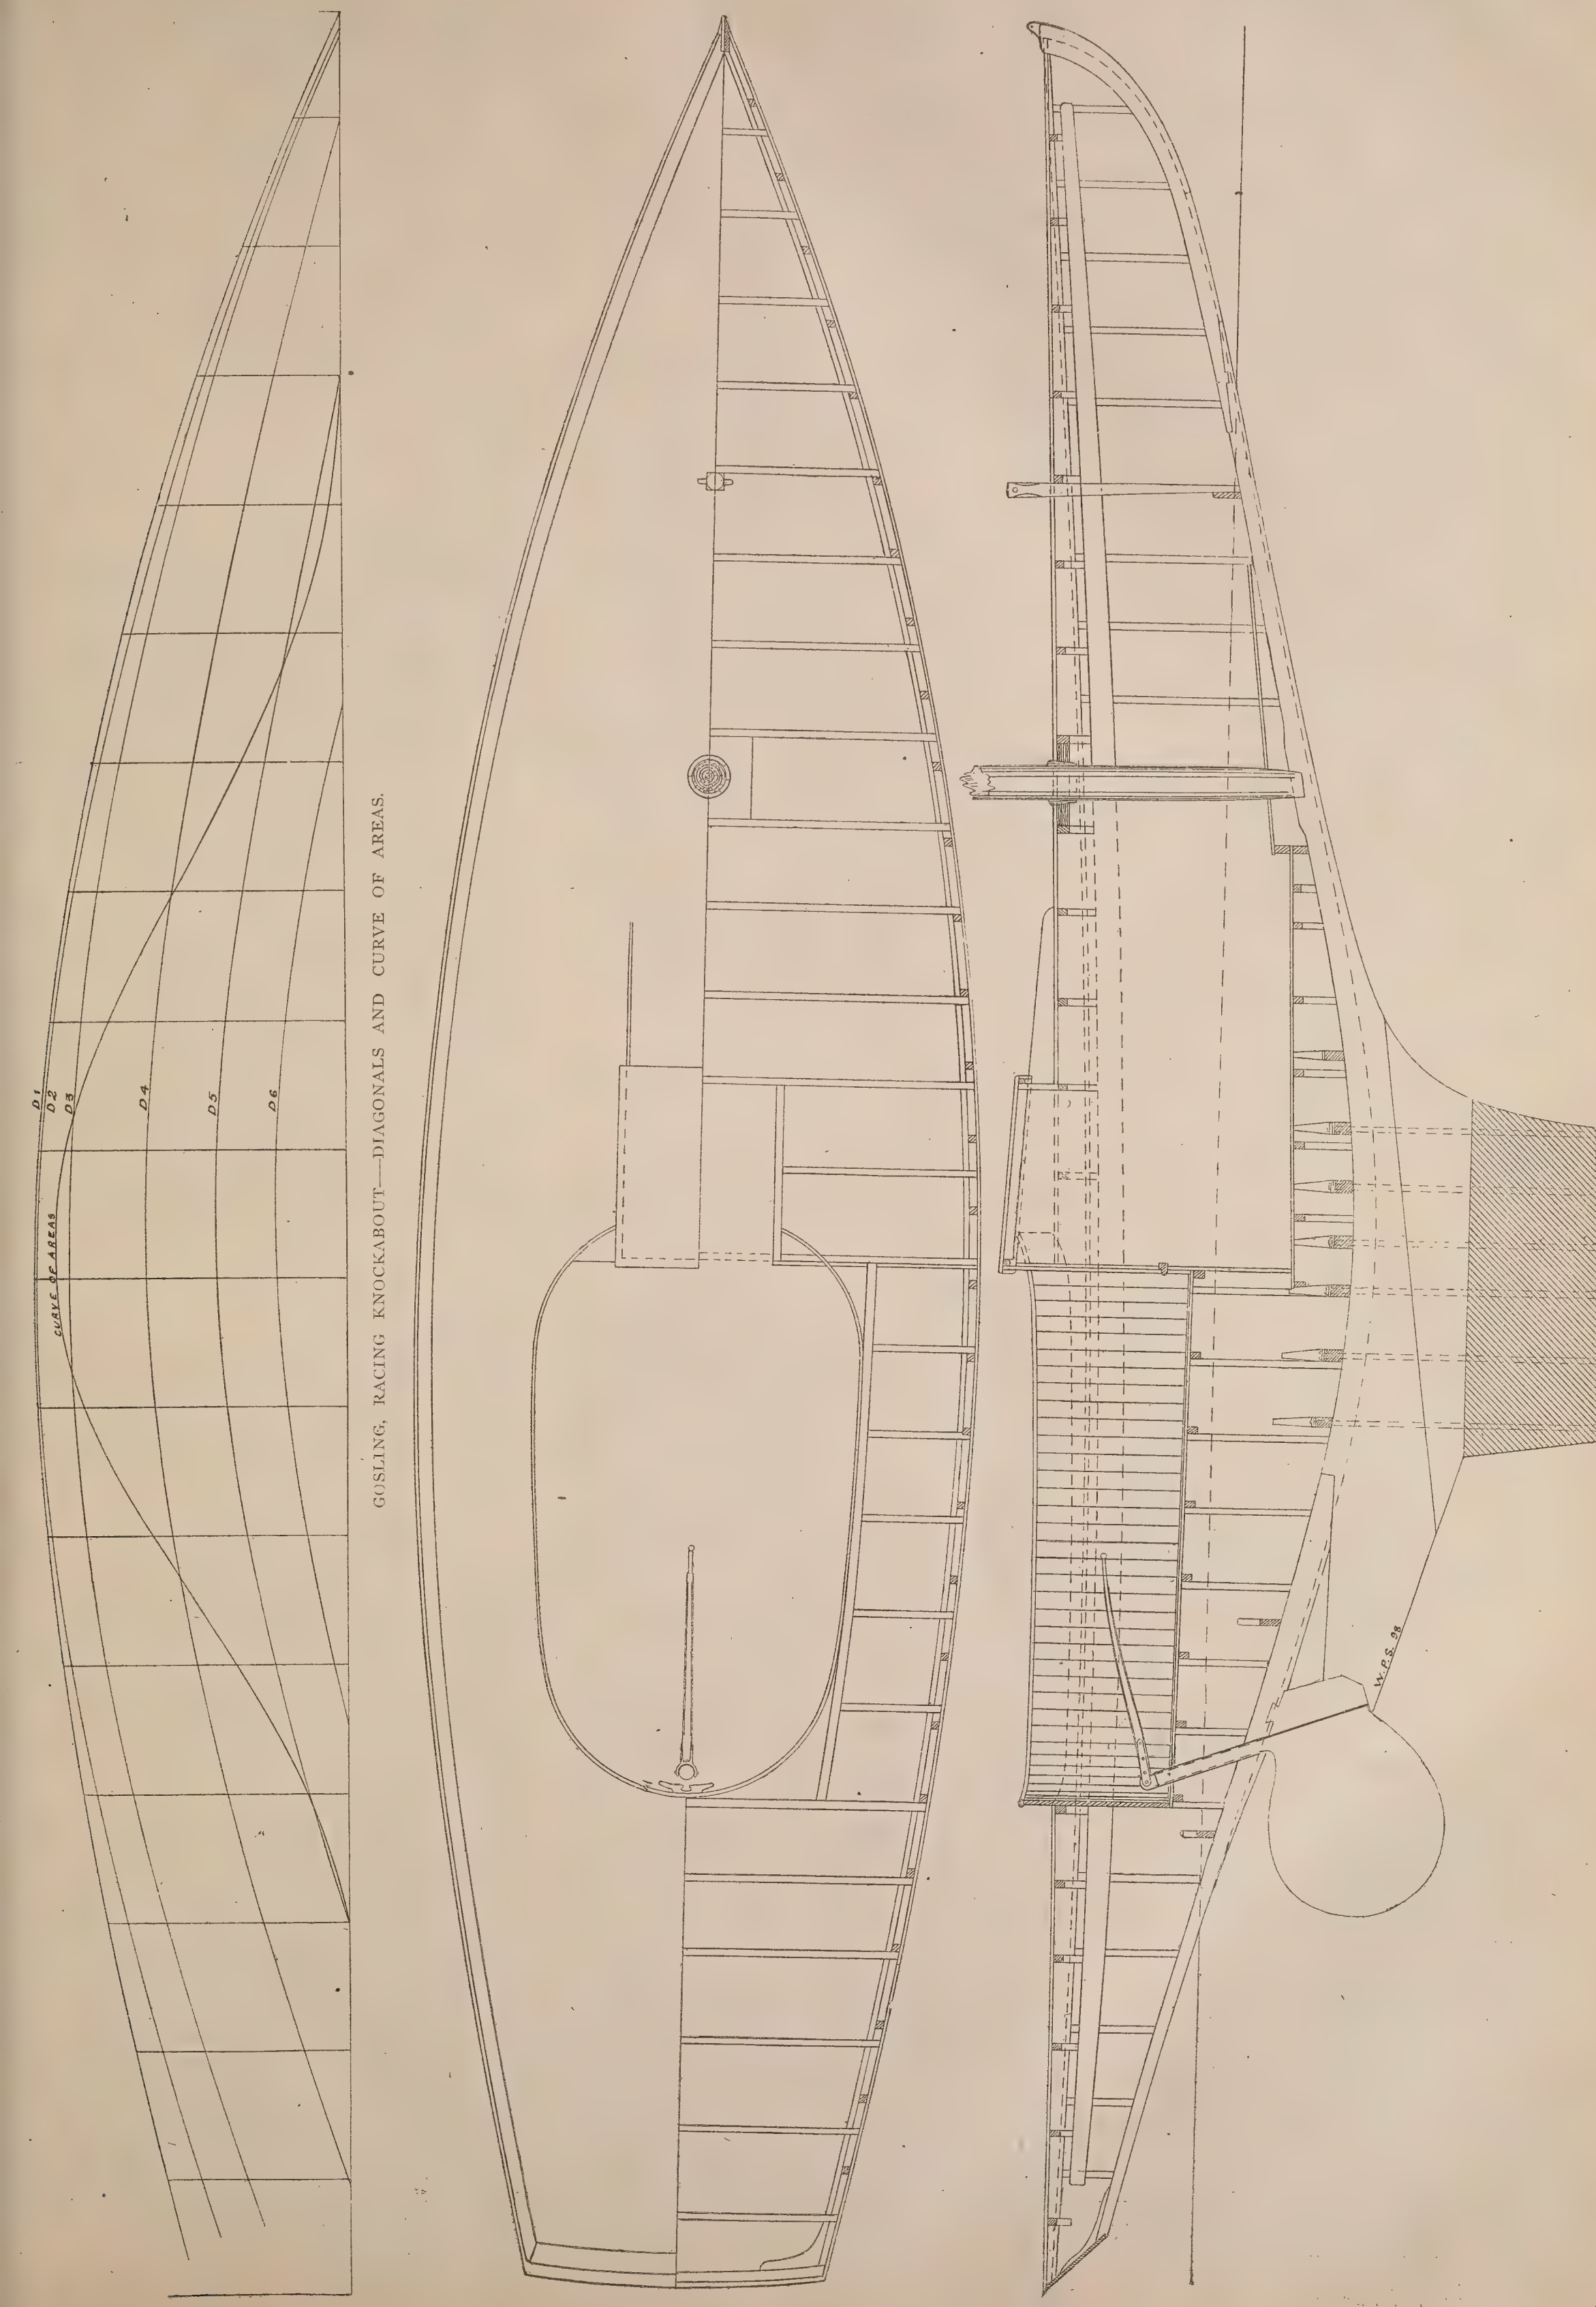
Manitou—Messrs. H. Drummond, P. Doucette, A. Mitchell and W. Robertson.

Speculator—Messrs. A. Hamilton and F. C. Fairbanks.

Strathcona—Messrs. J. C. C. Almon, Martin, Travers Allan and H. Morris.

The rounds were timed:

I.



Glencairn II.	4 27 10	Glenowen	4 30 00
Manitou	4 28 50	Avoca	4 30 15
Speculator	4 29 10	Strathcona	4 31 30

II.

Glencairn II	4 56 50	Strathcona	5 04 25
Speculator	5 01 40	Avoca	5 06 20
Manitou	5 03 00	Glenowen	5 06 30

III.

Glencairn II.	5 28 35	Manitou	5 36 15
Speculator	5 34 00	Avoca	5 38 10
Strathcona	**5 34 20**	Glenowen	**5 39 10**

GOSLING, RACING KNOCKABOUT—DIAGONALS AND CURVE OF AREAS.

GOSLING, RACING KNOCKABOUT—CONSTRUCTION PLAN.

The Cruise of the Seawanhaka Knockabout Fleet.

Oyster Bay to New London and Return.

June 20 to 25.

Up to the time of starting there was a feeling very freely expressed on the part of some that the proposed racing cruise of the new Seawanhaka knockabout fleet, from Oyster Bay to New London, would prove anything but a success. So far from this anticipated result, there are very few yachting events that are marked by the display of such racing spirit, by such excellent planning and carrying out of all arrangements, or by the participation of so large a fleet of perfectly matched boats. That the cruise was in all respects so successful is due to the liberality and spirit of Commodore Rouse, who first suggested the idea, and who personally attended to its carrying out. In addition to providing all the prizes, the original offer of six being increased to ten, the Commodore personally chartered the big tug C. P. Raymond for the entire week to accompany the fleet. It was desired to have such aid at hand in case of any mishap to the racing boats, and also as an aid in managing the races. Under existing war conditions it was necessary that the fleet should find its way into the harbors before the hours for early closing, and the tug was at hand ready to tow all the yachts, if necessary, which was fortunately not the case, owing to the liberal supply of wind throughout the week. The tug made herself useful, however, her first task in the morning being to pick up the dinghies of the fleet, stowing them all on her deck, then she went out and set one of the new Seawanhaka markboats, and took her own position to mark a starting line. After the yachts were away she took the markboat on board, and started in to convoy the fleet, a duty which she shared with the flagship Iroquois, the two taking different courses when the fleet scattered across the Sound, as sometimes happened. Toward the end of the run the Raymond ran ahead, anchored the markboat and established the finish line, then after all had finished she followed the fleet into harbor and distributed the dinghies.

The programme of the cruise, as issued in advance, was as follows:

Prizes.—Commodore Rouse has offered the following prizes for this cruise for the Seawanhaka knockabout class: First prize, value $150; second prize, $100; third prize (provided 15 or more yachts start), $50. These three prizes will be awarded according to the cumulative time for all the runs of the cruise: First prizes for daily runs from port to port, each $40; second prizes for daily runs from port to port (provided twenty or more yachts start), each $20.

All yachts in the Seawanhaka knockabout class, whether owned by members of the club or others, are eligible to participate in this cruise. While the formal racing for prizes will be confined to this class, all yachts belonging to the club are invited to make the cruise.

Rendezvous.—As directed by the commodore in the accompanying General Order No. 3, the rendezvous will take place at Seawanhaka Harbor, Oyster Bay, on Saturday, June 18, and in the afternoon of that day a race of the series for the Benedict prizes will be sailed.

At the meeting of captains, on the flagship, on Sunday afternoon, details of the runs to New London will be decided upon, and the necessary regulations announced.

Subject to change, the following is the probable programme: Monday, June 20—Run from Oyster Bay to Morris Cove, anchoring off the Yale-Corinthian Yacht Club. Tuesday, June 21—Run from Morris Cove to New London. Wednesday and Thursday, June 22 and 23—The squadron will lie at anchor at New London to afford an opportunity of seeing the Yale-Harvard-Cornell boat races. Friday and Saturday, June 24 and 25—Return runs to Oyster Bay.

A tug will accompany the squadron for its protection and to insure prompt arrival at New London.

In view of the value and character of the prizes offered and of the interest attaching to a visit to New London at the time of the college boat races, it is confidently expected that not less than fifteen knockabouts will start. Should there be less than ten, however, the committee reserve the right to modify this programme as they may think proper. All captains, and especially captains of the knockabouts, intending to participate in the cruise, are requested to notify the secretary of the committee at their earliest convenience.

Oliver E. Cromwell, Chairman,
C. W. Wetmore,
W. C. Kerr,
D. Le Roy Dresser,
C. A. Sherman, Sec'y,
Race Committee.

General Orders No. 3. On Board Flagship Iroquois, S. C. Y. C., Seawanhaka Harbor, June 10, 1898.

I. All knockabouts entered for the racing cruise to New London, and accompanying yachts, will rendezvous at the club anchorage in Seawanhaka Harbor, Oyster Bay, on Saturday, June 18.

II. At five o'clock on Sunday afternoon, June 19, a meeting of captains of knockabouts, and all other yachts intending to accompany the squadron to New London, will be held on board the flagship, when the hour of starting for the run to Morris Cove on Monday, June 20, will be determined.

III. Regulations to govern the daily runs will be announced by the Race Committee.

By order of Commodore Rouse.

H. L. Satterlee, Fleet Captain.

The fleet included eleven of the new knockabouts, one, Midge, of the Atlantic Y. C. fleet, the others all Seawanhaka. Only one of the boats in the last division received from Marblehead was ready in season for the cruise.

Y. R. A. Number.	Yacht.	Owner.	Skipper.
117	Mistral	Com. H. C. Rouse	Johnston De Forest.
118	Kewaydin	R. C. Wetmore	C. W Wetmore.
116	Midge	F. W. Boyer	E. M. Maclellan.
109	Golightly	E. H. Norton	Owner.
125	T ifu	Geo. Bullock	Owner.
124	Stella	John S. Hoyt	Sherman Hoyt.
119	Nakodo	John T. Sherman	Owner.
122	Senta	Daniel Bacon	Owner.
——	Tosto	Lloyd M. Scott	Owner.
104	Bee	Nelson M. Burr	Woodruff Leeming.
137	Heron	W. R. Garrison	Bart. Jacob.

Each yacht carried a crew of three, all told, skipper, one Corinthian and one professional.

The fleet assembled off the club house, Seawanhaka Harbor, early on Monday morning, the starting gun being given from the bluff at 8:45. Within 1m. 30s. the entire fleet was over the line, with a light W.N.W. breeze. The flagship Iroquois, steam yachts Oneida and Linta, the schooner Ariel, sloop Mirth, and the yawls Audax and Escape accompanied the racing boats. The day was clear and pleasant, and the wind, averaging about eight knots, was W.N.W. until 1:15, making an easy run down the Sound. At that time it shifted to S.W., after an hour back to the old quarter, and then to S., being variable to the finish. There were many shifts and changes of position throughout the run of thirty-five miles, but the finish covered only fifteen minutes, the times being:

First Run—Seawanhaka Harbor to New Haven Light, thirty-five miles naut.

Start—8:45 A. M.

	Finish.	Elapsed.	Position.
Mistral	3 20 10	6 35 10	3
Kewaydin	3 31 00	6 46 00	7
Midge	3 31 15	6 46 10	9
Golightly	3 26 02	6 41 02	4
Taifu	3 31 00	6 46 00	6
Stella	3 13 58	6 28 58	1
Nakodo	3 31 38	6 46 38	10
Senta	3 16 50	6 31 50	2
Tosto	3 30 38	6 45 38	5
Bee	3 35 12	6 50 12	11
Heron	3 31 10	6 46 10	8

Stella, first to finish, ran thirty-five miles at a speed of 5.4 knots.

Bee, last to finish, ran thirty-five miles at a speed of 5.1 knots.

The start for New London was made at 7:25 A. M. on Tuesday, the line being just outside of the New Haven breakwater; the wind was still westerly, making another run, close along the Connecticut shore. Mistral was first over the line, with Stella second, seven others crossing very shortly after gun. The eleventh boat was 2m. 45s. after the gun. Stella, the winner on Monday, was pushed very hard by the second and third boats on that day, Senta and Mistral; the latter finally winning. After the three had finished the wind drew ahead, the others crossing the line closehauled on port tack. The times for the day were:

Second Run—New Haven Light to New London Light, thirty-nine miles naut.

	Finish.	Elapsed.	Cumulative.	Position. Run.	Cum.
Mistral	1 43 44	6 18 44	12 53 54	1	3
Kewaydin	2 05 02	6 40 02	13 26 02	11	11
Midge	1 52 45	6 27 45	13 14 00	7	7
Golightly	2 04 58	6 39 58	13 21 00	10	10
Taifu	1 50 51	6 25 51	13 11 51	5	5
Stella	1 46 17	6 21 17	12 50 15	3	1
Nakodo	1 51 20	6 26 20	13 12 58	6	6
Senta	1 44 02	6 19 02	12 50 52	2	2
Tosto	1 47 29	6 22 29	13 08 07	4	4
Bee	1 55 08	6 30 08	13 20 20	8	9
Heron	1 58 10	6 33 10	13 19 20	9	8

Mistral, first to finish, ran thirty-nine miles naut. at 6.2 knots.

Kewaydin, last to finish, ran thirty-nine miles naut. at 6 knots. Kewaydin ran a longer course out in the Sound against more tide.

Columns 4 and 6 of the table give the results, in time and position, by the system of cumulative results introduced by the Seawanhaka C. Y. C. in 1893; and since tested very satisfactorily. By this method, of adding the results of a series of races, a much more extended range of condition is covered than by results derived from individual races.

Two days were spent very pleasantly in attendance on the intercollegiate boat races, and on Friday morning the fleet lined up off Bartlett's Reef Lightship, for a start at 9 o'clock for Morris Cove, thirty-six miles to windward; there being a wind from the west that registered seventeen knots by the anemometer on the flagship. It is needless to say that this meant a pretty heavy sea for small boats off New London, but with two reefs in the fleet started, all but two crossing within thirty seconds. Mistral, Senta, Stella and Nakodo stood over to the Plum Island shore at the start. The wind lightened toward noon, and some shook out both reefs, but it soon breezed up, so that all were glad to come to a single tuck. It held west nearly all day, but finally shifted to the south, and at 6 P. M. was blowing fresh from S.W. The little boats had a pretty hard hammer of it for nearly nine hours, much of the time in a heavy sea, but no damage was reported. Midge left the fleet at the Thimbles, the others being timed:

Third Run—Bartlett's Reef Lightship to Morris Cove, thirty-six miles naut.

Start—9 A. M.

	Finish.	Elapsed.	Cumulative.	Position. Run.	Cum.
Mistral	5 35 46	8 35 46	21 29 40	1	1
Kewaydin	6 11 20	9 11 20	22 37 22	6	8
Golightly	6 19 20	9 19 20	22 40 20	9	9
Taifu	5 43 32	8 43 32	21 55 23	2	4
Stella	5 44 38	8 44 38	21 34 53	3	2
Nakodo	5 52 24	8 52 24	22 05 22	4	5
Senta	6 00 10	9 00 10	21 51 02	5	3
Tosto	6 18 10	9 18 10	22 26 17	8	6
Bee	6 14 34	9 14 34	22 34 51	17	17
Heron	7 13 55	10 13 55	23 33 15	10	10

Mistral, first to finish, beat thirty-six miles naut. at 4.2 knots speed.

Heron, last to finish, beat thirty-six miles naut. at 3.5 knots speed.

Average time for fleet, 9h. 19m. 49s., or an average speed of 3.9 knots.

Speed through the water, 5.94 knots.

The start for the final run was made on Saturday morning at 8:30 off New Haven Light, the weather being fine, but with a haze, with a west to southwest breeze of 12 to 15 knots. The fleet crossed within 45s., all closehauled. Kewaydin and one other boat started for the Long Island shore. The day was pleasant until about 5 P. M., when a thunderstorm threatened in the west, but passed over the fleet, then nearing Lloyds Neck; the tug having made the finish line off Cold Spring Light. The wind fell light after the passing of the squall, but Mistral finished at 5:27:07; shortly after the wind came in N.N.W., and at 6:40, before the other boats could reach the line in the light breeze, a second and very heavy squall from the west struck the fleet, rain first, followed by a violent gale. It only lasted twenty minutes, but that was quite enough. When it struck Stella, Senta, Kewaydin and Bee were west of Lloyds Neck, with the other five scattered off the mouth of Huntington Harbor. The markboat was capsized by the squall, the big tug dragged for some 200yds., and one of the dinghies on her upper deck was blown away into the water. Kewaydin, close under Lloyds Neck, took the ground, and was hung up until 3 A. M., when she was hauled off by the club launch Seawanhaka, without damage. The others all weathered the squall safely, their skippers reporting that they behaved perfectly in the blow. No attempt was made to re-establish the line and time the finish, but the probable order of finish was closely known up to the time the squall struck, the leading skippers agreeing on the order as given in the following table. The tug was sent out to offer assistance, but none was needed, though the two most distant boats, Tosto and Heron, accepted a tow in. The others made the harbor unaided. The times were:

Fourth Run—New Haven Light to Cold Spring Light, thirty-five miles naut.

Start—8.30 A. M.

	Finish.	Elapsed.	Cumulative.	Position. Run.	Cum.
Mistral	5 27 07	8 57 07	30 26 47	1	1
Kewaydin	.. .. ..	.. .. ..	.. .. ..	10	10
Golightly	.. .. ..	.. .. ..	.. .. ..	6	7
Taifu	.. .. ..	.. .. ..	.. .. ..	7	4
Stella	.. .. ..	.. .. ..	.. .. ..	2	2
Nakodo	.. .. ..	.. .. ..	.. .. ..	5	5
Senta	.. .. ..	.. .. ..	.. .. ..	3	3
Tosto	.. .. ..	.. .. ..	.. .. ..	9	8
Bee	.. .. ..	.. .. ..	.. .. ..	4	6
Heron	.. .. ..	.. .. ..	.. .. ..	8	9

In the morning the skipper and crew of each yacht had received a formal invitation to dine with the Commodore at the club house that evening, but on arrival the fleet was met with the news of the death of Vice-Com. Cruger; so the formal dinner and presentation were countermanded. All hands, however, dined at the club house, and the prizes were awarded in the evening.

The first prize was a $150 silver cup, for the best cumulative time of the whole cruise, won by Mistral, Com. H. C. Rouse. Com. Rouse at once turned the prize over to the Race Committee, to be raced for again by the knockabout fleet, at the pleasure of the committee. The second prize was a very elaborate cabinet for cigars and liquors, won by Stella, John Sherman Hoyt. The third prize for cumulative time, a cruising lunch basket, was only offered in the event of fifteen starters, but the Commodore decided to present it to Senta on account of her excellent showing. A special prize, a handsome jar, was presented to Kewaydin for her cumulative bad luck. The run prizes were for first run, a barometer, won by Stella; second run, a silver cigarette case, won by Mistral and presented by Com. Rouse to her skipper, Mr. De Forrest; third run, belt with knife and silver whistle, Mistral, presented by Com. Rouse to Mr. Johnston, the "crew"; second prize, flask, Taifu; third prize, stop watch, Nakodo. The prize for the fourth run was a pair of handsome marine glasses, won by Mistral. Com. Rouse presented them to Mr. Walter C. Kerr, of the Race Committee. Only two of the committee were able to accompany the cruise, and as Mr. Wetmore was anxious to sail one of the boats, Mr. Kerr undertook to manage the races alone, accompanying Com. Rouse on Iroquois, and joining the tug for the starting and finishing. At the same time, in the absence of Fleet Captain Satterlee, he filled that position. Much is due to him for the skill and labor which contributed to the smooth running of all the details of each day's work.

On June 18 the knockabout fleet sailed its second race, over the inside course, the times being:

	Finish.
Kewaydin, R. C. Wetmore	5 29 50
Taifu, George Bullock	5 29 30
Bee, Nelson Burr	Withdrew.
Mistral, H. C. Rouse	5 27 05
Midge, F. C. Boyer	5 29 40
Senta, Daniel Bacon	5 30 00
Nakodo, F. D. Sherman	5 30 50

A race was scheduled for the 20ft. class, two boats starting, Akabo and the new Crane boat Seawanhaka. The latter broke the bolt of her centerboard and withdrew, so that Akabo did not finish.

Penataquit Y. C. Spring Regatta.

Bay Shore—Great South Bay.

Saturday, June 25.

The spring regatta of the Penataquit Corinthian Y. C. of Bay Shore, L. I., was sailed in a piping southwester, which compelled all hands to tie down close and face a heavy sea in a two-mile beat to windward and back. It was three times around the course, making twelve miles in all, of as hard sailing as one usually finds in a season, and this fact prevented many of the boats entered from appearing at the starting line. Only Gayety and Muriel—the Boston crack—appearing in Class L, and in Class M Squaw—her first race as a sloop—and Maysie, while in Class N the showing was good and it furnished the excitement of the day. The only capsize was Giggle. Gayety made a fine race, and but for the giving out of her steering gear would undoubtedly have defeated Muriel by a large margin.

Maysie after the first round gave up, leaving Squaw alone to sail out the race, which she did in good style, defeating Muriel in the class above by 3m. 5s. actual time. Champion and Beulah won in their respective classes, the former by a very narrow margin over the Surprise, which went to sleep.

The times were:

	Allowance.	Finish.	Elapsed.	Corrected.
Class L—Start, 2:05.				
Gayety, Richard Hyde	....	Disabled.		
Muriel, Frank Camp	1 22	3 56 26	1 51 26	1 51 26
Class M—Start, 2:05.				
Squaw, H. S. Jewell	....	3 52 22	1 48 22	1 48 22
Maysie, F. L. Adams	4 10	Withdrew.		
Class N—Start, 2:10.				
Champion, Edwin Thorne	....	4 14 38	2 04 38	2 04 38
Surprise, J. O. Lowe	6 16	4 21 09	2 11 09	2 04 53
Class S, Cats—Start, 2:10.				
Beulah, C. H. Southard	....	4 08 37	1 58 37	1 58 37
Sweetheart, R. A. Bachia	3 05	4 19 44.	2 09 44	2 06 39
Snapper, G. A. Schieren	8 08	Withdrew.		

The Forest and Stream *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much arlier as practicable.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JULY 16, 1898.

VOL. LI.—No. 3. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

Not only does a thorough love and enjoyment of traveling by no means interfere with the love of home, but perhaps no one can thoroughly enjoy his home who does not sometimes travel. They are like exertion and rest, each the complement of the other; so that, though it may seem paradoxical, one of the greatest pleasures of travel is the return, and no one who has not traveled can realize the devotion which the wanderer feels for Domiduca, the sweet and gentle goddess who watches over our coming home.

Sir John Lubbock.

PRIZES FOR AMATEUR PHOTOGRAPHS.

THE sportsman tourist of to-day is an amateur photographer, and the camera has a recognized place in the outfit of the field. The results of successful snap shots often constitute the most cherished mementoes of an outing. In recognition of the important place held by amateur photography in its relation to sports of the field and prairie and mountain and forest and stream, this journal in 1892 gave a series of prizes for meritorious work with the camera, and the result was an interesting collection of photographs, many of which were reproduced as half-tone engravings in these columns.

We propose now to renew the offer of a series of cash prizes for such work, the prize list being more liberal than of those given before. The conditions are as follows:

The prizes will be divided into three series: (1) for live wild game; (2) for game in parks; (3) for other subjects relating to shooting and fishing.

(1) For live game photographs three prizes are offered, the first of $50, the second of $25, and the third of $10.

(2) For live game in parks, for the best picture, a prize of $10.

(3) For the best pictures relating to FOREST AND STREAM'S field—shooting and fishing, the camp, campers and camp life, sportsman travel by land and water, incidents of field and stream—a first prize of $20, a second of $15, a third of $10, and for fourth place two prizes of $5 each.

There is no restriction as to the time nor as to where the pictures have been made or may be made.

Pictures will be received up to Dec. 31 this year.

All work must be original; that is to say, it must not have been submitted to any other competition or have been published.

There are no restrictions as to the make or style of camera, nor as to size of plate.

A competitor need not be a subscriber to the FOREST AND STREAM.

All work must be that of amateurs.

The photographs will be submitted to a committee, who, in making their award, will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities, and other things being equal, the unique and difficult nature of the subject.

Photographs should be marked for identification with initials or a pseudonym only, and with each photograph should be given, answering to the initials, the name of sender, title of view, locality, date and names of camera, and plate or film.

SOME MAINE SCHEMES.

IT is manifest that we shall look to Maine for innovations and developments in game protective methods; Commissioner L. T. Carleton demonstrated as much in his address at Kineo last Tuesday. Mr. Carleton's brain teems with ideas in this field. He has recently sent out to the guides for their consideration a series of proposed measures embracing a close time on moose for a term of years; a prohibition of killing cow and calf caribou at any time; a law restricting the killing of deer to a single one for each hunter in a season; prohibition of the sale of partridges; a non-resident license fee for big game hunting, the proceeds to be devoted to protective purposes; a restriction of fish taken in a day to less than the present limit of 25lbs.; a law compelling sportsmen from out of the State to hire licensed guides for big game hunting or for fishing; a law permitting the killing of one buck deer for food purposes in those remote sections of the State where they are not hunted during the season, the places to be named by law, during July, August and September, on payment to the game fund of a fee of $10 for each deer; a division of the fish and game commission, to make one game commissioner and two fish commissioners; a reservation of Mt. Katahdin and surrounding territory to be closed absolutely the year round, as a breeding ground for moose and caribou. Add to these a plan to compensate farmers for damage done to their crops by deer, and another to give sportsmen the privilege on payment of a fee of shipping game unaccompanied by the owner.

Whatever may be the immediate outcome of these projects, all and singular, their discussion demonstrates that game protection in Maine is in the control of those who are alive to its importance, and that it is an interest which has an assured and secure place in the domestic economy of the State.

If the licensed guides are human they may be depended upon to endorse most enthusiastically the proposed regulation that every visiting sportsman shall give one of them employment. This requirement and the one which calls for non-resident licenses are in line with the important place designed for the licensed guide in the perfected protective system. Every guide is to be a game warden, and every visiting sportsman, however innocent he may be of wrong intent or incapable of going astray, will then have in the person of his guide not only a master of woodcraft to lead him on the game trail, but a moral guardian as well to keep him in the straight and narrow path of rectitude, as blazed by the game law. In short, the visiting sportsmen will be under surveillance from the time he crosses the Maine line until he emerges therefrom.

The scheme of compelling non-residents to take out hunting licenses in order that the shooting may be under more direct control by the authorities is an application to the wilderness of certain metropolitan café systems. In one of the gorgeously appointed noonday lunch establishments of New York it was formerly the custom to lay out on the counters in tempting array the sandwiches and cakes and pies and slices of watermelon, to which each patron helped himself and for the portion of which consumed by him he was supposed to pay the reckoning as kept only by himself, and with no other watching than his own conscience. A fair trial of the method demonstrated that under such conditions not all the food consumed would be paid for, and when the loss by dishonesty became too large to be borne the system was abandoned, and each patron was checked, the honest man along with the thief.

Human nature is very much the same in the city and in the woods; if there were not dishonest men to abuse the confidences respected by their honest fellows, we could reduce our police force, dismiss our game wardens, do away with restaurant checks and go hunting without licenses. In fact, human nature is more so in the woods; for persons who would not dream of cheating when put upon their honor in a city lunch room, who would give up their car fare when overlooked by the conductor, and square themselves with the world to the last cent in the ordinary routine of life, will go into the woods on an outing and thieve without compunction. This is, of course, largely a matter of education. We have not all been taught to think of the rights of others in the game and the fish; and the wrong action is more often thoughtless than a deliberate intention to defraud. The more clearly the taking of fish and game shall come to be recognized as being what it actually is, a privilege and not a right, so much the more adequately shall we realize the obligations which limit our enjoyment of the privilege; and so much the more careful shall we be to observe while gratifying our own pleasure the obligations we owe to others.

ADIRONDACK FLY CASTS.

THE angler who strikes the happy medium in the use of artificial flies usually carries something like fifty varieties—a sufficient number to make an excellent assortment possible—and believes in adding to them whenever a new fly of probable merit is found. He concedes that there is truth in what extremists on both sides claim, and acts accordingly. He usually has a few flies which are prime favorites, and under ordinary circumstances these are given the preference at the outset. If there are no natural flies on the water, the cast which he originally selects is retained until a valid reason for shifting is discovered, and the capture of a single trout will be considered a sufficient indorsement of the fly taken to cause its retention for hours. Of course, if the trout are feeding on any particular kind of flies he notes the fact as readily as any one, and hastens to match them as nearly as possible; but he objects to experimenting too much and dislikes to change his combination unless the advisability seems very plain.

Every experienced fly-fisherman realizes the fact that the exercise of caution and the manner in which flies are handled are of even greater importance than the flies themselves. A poor fly well cast is sure to be more effective than a good one awkwardly placed. Some anglers have certain flies for certain seasons, while others have favorite combinations for different times of the day, state of the weather, direction and force of the wind, roughness of the water, etc. The matter of locality too is one which sometimes forces itself upon the attention. The trout in some of the Adirondack lakes are remarkably fond of the May fly, shad fly, day fly or eel fly, as it is known locally, and the angler who has by observation discovered their weakness tempts them with the flies known as the drakes. There are times when they will scarcely look at another fly, and it is rarely during the summer season that they will decline to rise to a drake. In one of these lakes the green and yellow drakes are especial favorites, and the writer has repeatedly had excellent success with these flies when others have utterly failed.

Small flies like those of the English make are not the best for use in Adirondack waters. The wilderness trout seem to prefer something more substantial, and a fly of good proportions will almost invariably do better work than a diminutive one. Many anglers use the very largest size that is made for speckled trout fishing. Salmon and bass flies are of course too large for brook trout, but something perhaps half or two-thirds that size will frequently come in play for big fish. Among the most popular artificial flies used in the Adirondacks are the coachman, professor, red or scarlet-ibis, black-gnat, March-brown, yellow-May, white-miller, grizzly-king, Montreal, green-drake, Seth-Green, Reuben-Wood, queen-of-the-water, royal-coachman, alder, Puffer, great-dun, Proctor, soldier-palmer, and the red, brown, black and gray hackles.

Notwithstanding all that has been said or can be said regarding the effectiveness of the various artificial flies there is nothing that will induce a trout to bite if he does not want to, and if he is real hungry and unsuspicious he will rise to almost anything that imagination can stretch into the semblance of a fly or bug. It is only when his appetite is not really acute, and he is a trifle undecided whether to rise or not, that the advantage of a large assortment of flies is likely to become most apparent, for among the many one may be found to tickle his fancy.

While the artificial fly is considered to be quite the thing for taking the trout of Adirondack waters, and there are many successful anglers who disdain to use any other lure, it is probably a fact that the eclectic fisherman, or the one who, throwing prejudice to the winds, does not hesitate to utilize bait or fly as circumstances seem to warrant, will in the long run take the greatest number of trout and the largest ones as well.

The Sportsman Tourist.

Trouting at Carlsbad.

"Is there any fishing around here, Mr. Proprietor?"

"Fish? Fish! Oh, tousands, tousand," exclaimed the gracious landlord of the Koenigs Villa, bowing low with clasped hands, and then adding with a waive of his outstretched palms: "All of zee rivers trouts and zander, viele trouts—you catch many."

Being thus assured, I prepared myself for fishing. In the first place a permit from the authorities was necessary. At the mayor's office a permit was granted by a high public functionary authorizing me, "a well-born citizen of America," for two weeks to fish in any of the open waters of the township with a rod and line, under the restrictions provided by law. For this was charged two gulden. Next a guardian was required to accompany the fisherman, to see that he did not take an undue quantity of fish, and thus deplete the waters. Whatever doubts we had before as to the certainty of catching trout were dissipated by this official caution. The guardian was procured.

Next a carriage and driver were hired, as we learned that the further from Carlsbad one fished the larger the fish and the greater the quantity.

Then with a lunch basket, a bottle of Austrian wine and a split bamboo American rod we drove hilariously out of the grounds of the Koenigs Villa, saluted by Max and other attendants, down the Alte Wiese, past the Post Hof and the Kaiser Garten, for our joyous day's fishing.

The Tepl empties into the Eger at Carlsbad. Both are rapid streams, the Tepl being the smaller, and it winds with many sinuosities among wooded hills and through pleasant pasture lands. Where it curves to the hillside it is overhung with beach and hemlock, and shady pools lie under their roots. When it rambles in the open meadows it sings over pebbles and shallows, and long grasses conceal its undermined banks. Once in a while a rude bridge of logs indicates a footway across it. Now and then heavy rocks confine it so it chafes and foams, and evergreens grow in the crevices of the rocks, and ferns hang pendent from them. There

> "Dark foliage intervenes
> In one unbroken roof of leaves,
> Underneath whose sloping eaves
> The shadows hardly move."

No prettier stream for a trout—no fairer footway for an angler.

After driving out five miles on the road to Marienbad we left the horse and driver to slowly follow us back, and the guardian and I took the Tepl's banks. The guardian had a dress of Lincoln green with yellow stripes, which indicated his official position. His little, round hat was adorned with a capercailzie feather. He carried a green painted tin herbarium slung over his shoulder by a strap. This, I assumed, showed his taste for botany. His language was German, his manners bucolic, his dress artistic. He inquired if I kned a certain Herr Rhinelander, "ein grosser Amerikaner," and obtaining my assent he would stop, while pointing to some pool in the river, and exclaim: "Da, da, Herr Rhinelander hat einen grossen Forellen gefunden."

It is pleasant at times to hear of another's successes, but a constant repetition of the tale becomes tedious when you do not meet with like success. This was intimated to the guardian, but it did not deter him from rehearsing the tale: "Himmel, that is the spot last year Herr Rhinelander caught zwei grosse, sehr grosse, Forellen." The next time he began: "Right here, Herr Rhinelander." "Shut up!" I shouted, jabbing at him with the butt of my rod. "Och, it's true," he replied, "it was right here, I am not telling lies; two trout that weighed—"

At this instant a trout rose and was hooked. "There, there, ick sagte dat Herr Rhinelander," etc. I heeded not his monologue, but the trout presently broke away and a chub was caught instead. The guardian praised this catch as if it was of great value. These chub are bright, active fellows, some weighing three-quarters of a pound; pretty to look at, but worthless as food, their flesh being white and soft. They were so numerous as presently to interfere with the trout. They were thrown scornfully in the grass when taken, but still they came and their advent was hailed by the guardian with praise and joy. Each dark pool that should have held a trout was peopled with hungry chubs, taking the fly with avidity and meeting their fate in the grass.

I had not heard from my guardian's reminiscences for some time, and presently saw him sitting on the bank with his head bowed. Fearing he was ill, I walked up behind him and found he was busily cleaning the discarded chubs and stowing their bodies away in his pocket for his evening meal. Hence his praises of my catch. Finally a large trout was hooked. This was only the second I had seen that day. He swayed lazily back and forth a few times in the current and was being drawn quietly to the gravelly shore when the guardian rushed in behind him, scooped him up in his arms and carried him triumphantly to land. Nothing I could say prevented him. He then filled his herbarium with water, and placing the trout alive in it, strapped it on his shoulder and valiantly followed me.

But fishing had lost its charm. I watched the mowers in the fields for a few moments and the gayly kirtled girls driving home the cows for the evening milking, and then mounted my carriage and with the guardian and his herbarium before me drove homeward.

On reaching the hotel the guardian exposed the trout, still alive, to the customary evening crowd on the porch.

"Gott im Himmel, eine Forelle," exclaimed the fat man in the arm chair. "Och, wohin haben Sie das gemacht?" exclaimed another. "Hoh! Josef, kommen Sie gleich die trout zu sehen," called a father to his son. "Are you the man what catches this trout?" inquired another. "Pierre, tiens voila ton affaire un gros poisson!" "Did you him kelch mit dat kleine stick?" asked a Wurtemberger. "Does you wants for to shell him?" inquired a man with a forked beard and a long black overcoat.

The crowd gathered fast and I retreated to the office. Scales were brought and the fish was carefully weighed and the weight noted in the guardian's book, 2¼lbs. of German brown trout, being about the largest size taken in the river. Then I paid the city for it. "But it was your trout," I hear you say; "you caught it." No matter, I paid only for the privilege of catching it, and now had the privilege of buying it. The purchase was made and the fish consigned to the head cook to be served at the dinner on the following day.

Somehow the fame of that trout got abroad. Several persons called to see it. The cook realized many trinkgelds for showing it. I never passed the front porch but I heard: "That is the shentelman dat caught de big trout." I shunned the front porch, and came in and out by the side door.

Knowing we had a trout for dinner, I ordered a bottle of Marcobrunner and invited a friend. The trout was brought in the dining room on a silver dish, garnished with greens and with a rose in its mouth. The head cook in his white cap carried it aloft, causing all the guests to stop their dinners, crane their necks, and exclaim "Ein grosser Fisch!" A convivial gentleman at the next table raising his glass called out, "I vill drinks your health, sir." The landlord smiled continuously. The waiters spilled the soup they were passing while they ogled the trout. Then and there I abandoned forever fishing in the waters of Austria.

The next day I added up the cost of my experience, and it ran thus:

	Florins.
Permit of the mayor to fish	3
Pay of the guardian	3
Carriage to drive up the Tepl	10
Charge for the fish caught	4½
Dinner to eat the fish	20
Douceur to the cook for cooking it	4
Total	44½

Equivalent to $17.80, being about $2 a pound.

This was nearly as bad as my Quebec friend, the owner of two salmon rivers, who told me his salmon cost him $5 a pound. But he had salmon. I only a German brown trout. But then it was a new experience. Experience always costs. C. E. WHITEHEAD.

The Headwaters of the Yukon.

THE Yukon has a peculiarity which distinguishes it from all the other world's great rivers, in that its headwaters take their rise within fifteen miles of the ocean it travels 2,600 miles to reach. Fifteen miles below its source is Chilcoot Pass. At Lake Bennett the river becomes navigable for boats 50ft. in length, and with an average drop of 10½in. to the mile affords a down-hill journey for a distance equal to one-tenth the circumference of the globe.

Suppose the surface of the river in winter was smooth, glossy ice, and that Bering Sea and the North Pacific Ocean were similarly coated, also that friction and the resistance of the atmosphere were greatly reduced, what a grand toboggan slide might be devised. It is not beyond the realm of imagination to conceive of such a slide, oval in form, over which the momentum gained during the 2,200ft. drop in the first half from Lake Bennett to the mouth of the Yukon would carry a coasting party the level second half across a part of Bering Sea and the North Pacific back to Skagway by a route considerably more than 5,000 miles in length and involving a climb for only thirty miles at the start.

The Yukon runs in a great bow, first north, then west, then south. Its mouth is further south than Fort Selkirk, and only a little more than three degrees of latitude north of its most southerly source, though where the river touches the arctic circle at Ft. Yukon it is more than seven degrees north of its source. East and west the river crosses thirty-six degrees of longitude, though it must be borne in mind that degrees of longitude here are only about half as long as degrees of latitude.

The peculiar formation of a part of the northwest portion of the North American continent is responsible for bringing the two ends of the river so close to the parent ocean. Instead of having its roof tree inland, the most elevated continental land masses are on the edge next the sea, culminating in the lofty coast range of British Columbia and southern Alaska, and sloping off northward hundreds of miles from the sea.

Here are the loftiest mountains in North America and the greatest rainfall. In a country where it rains or snows 300 days in the year it is no great wonder that a respectable river should develop within fifteen miles of its source, nor that despite the fact that this river flows further down through an arid country, requiring irrigation to raise vegetables, the Yukon discharges through its hundred-mile wide deltoid mouth a volume of water comparable with the world's great rivers.

Special agent Ivan Petroff in his report to the Government on the population, industries and resources of Alaska, which is quoted by a recent publication of the Bureau of American Republics, says that the Yukon discharges every hour one-third more water than the Mississippi. This statement, however, is generally disproved, though apparently no reliable measurements have been taken.

The principal source of the Yukon relative both to the volume of water discharged and length is probably that affluent of the Lewes which is marked upon the latest U. S. Coast and Geodetic Survey map as Pike River, though according to Dawson this stream and not the larger one now known by the name should be called the Hootalinqua.

The Pike River takes its rise in the elevated mountain country east of Skagway and north of Juneau, and empties into Lake Atlin, which in turn discharges its waters into the Taku Arm of Tagish Lake, forty miles below the head of Lake Bennett.

The drainage of White Pass also flows into the Taku Arm of Tagish Lake, but no part of this region has been surveyed or thoroughly explored, and maps are based chiefly upon Indian reports. The region is easily accessible and presents an attractive field for geographical research.

I climbed one afternoon over a glacial moraine on a mountain at the inner end of White Pass up to the everlasting ice, and just before dark secured a very good view of the country to the east, north and west. The Skagway trail could be traced in a great curve through the jack pine flat and across beaver meadows by the smoke of evening camp-fires, till in the distance it reached the trough-like strip of milky blue that marked the glacier-churned waters of Lindeman.

Far to the north, over the shoulder of one mountain and lying at the base of a precipitous snow-clad range, another bit of blue indicated a lake which I took to be Tootshai, while at my feet and extending to the north and east was Shallow Lake, with its various ramifications, splotches of blue or brown caught in glacier-scooped channels, and looking more like puddles left by a receding flood than anything else. The blue splotches indicated parts of the lake connected by channels, which permitted the glacier water to circulate, while the brown or amber-colored lakelets were fed directly by springs or streams rising below the line of perpetual snow, and were separated from and on a higher level than the main body of water.

From this trail only a small part of the lake can be seen. The larger portion stretches to the north and east like the letter S, concealed by a low wall of rock. The outlet of Shallow Lake is a broad sinuous stream, with grass-fringed banks, running generally north instead of east, as shown on the maps, till lost to sight, where it enters a gorge six or eight miles from the lake. From the east another tributary stream can be traced for a distance of five miles or more.

For ten miles to the eastward and almost as far to the west the principal feature of the landscape is the broad valley, bounded by high mountain ranges. In general this valley drains to the north, though at its western edge it falls off rapidly to Lake Lindeman. The White Pass chain of lakes enters from the south almost on a level with the plane of the valley. Between Shallow and Middle lakes there is a fall of about 20ft., while in the mile and a half of stream separating Middle and Summit lakes the drop is certainly not in excess of 100ft.

Boats were taken through both the connecting streams last fall, though they were badly battered up as a result.

As Summit Lake lies within a few hundred feet of the headwaters of the Skagway River, emptying into Lynn Canal, and only 50ft. or so below the highest point of the pass, it will be seen that the difference in elevation between Shallow Lake and the summit of White Pass—fourteen miles to the southward—is very trifling. Probably it does not exceed 200ft. The same level continues six or eight miles further north, and if any feasible descent to the lower level of the navigable waters of the Yukon could have been found this route would undoubtedly have proved vastly preferable to any other.

As it is, however, I believe the White Pass trail, under the most favorable conditions, to be more difficult to cross than Chilcoot, and with the crush of last fall it was 100 per cent. worse.

By availing one's self of Lake Lindeman, which so far has been practical in most cases, the Chilcoot route is shortened to twenty-six miles, and of this only about four miles is very bad, and except for the half mile south of the summit horses were used for packing the entire length of the trail. In February we walked from Lindeman to tide water in a little more than seven hours, whereas it was then said to require two days to cross White Pass.

At Lindeman I ran upon Tappan Adney, of Harper's Weekly, brown, rugged and looking more like an Indian than a white man in his red toboggan cap and moccasins. Adney had the wisdom to pack over Chilcoot, and was rewarded by reaching Dawson. He and his companion, Brown, who is a Pacific Coast champion oarsman, shot the rapids between Lakes Lindeman and Bennett with great eclat the following day, taking the bad drop at the end that even the Indians, who are familiar with the stream from time immemorial, portage round. Adney and Brown stood erect in either end of their dory-shaped craft, each with an oar used as a paddle, and guided their boat through a slather of foam past boulders that permitted only the narrowest margin with a nicety of judgment and execution that gained them the enthusiastic regard of the miners watching the performance.

Retrospective.

We had mementoes from the remaining members of the party on leaving. Herington gave us some tinned meats, Sheriff supplied one or two important tools which were lacking in our outfit from his very complete kit, and Billy Baskerville baked us a big batch of biscuits, the kind that only Billy could make.

Billy was the privileged member of the party. He could point out individual shortcomings in the plainest and most unvarnished language, and no one would take offense. It was impossible to get mad at the great big good-natured six-footer, for no one ever suspected him of a personal or biased motive.

His good nature was unfailing, and he laughed at times one would rather have expected tears, and when he complained there was never any bitterness about it. The time he was lost on the Summit and slept all night in a mud hole in company with the little white horse that had fallen into it, and I came upon him half-starved and soaked with mud up to his ears, he remarked in his big hearty voice: "Well, this ain't like going to Coney Island."

After living a while on some particularly bad grub Billy said: "Bet a fellow would make himself sick eating if he got out into civilization and had the money; hope we get money enough to live well and die of the gout."

He was a man who won instant popularity, and every one on the trail knew him. He and McKercher have since joined forces and are probably in Dawson City at the present writing.

McKercher was the latest addition to our party, and a word about my companion on the river trip may not be out of order. He is a Canadian of Scotch ancestry and a graduate of Toronto University. His chief characteristics are persistence, grit and a desire to deal squarely with everyone. He is a fellow who will never accept an iota more than his share in a division, or in a matter of work or danger permit any one to do a stroke more than himself. It is his pride to always

do a little more than the next man, and he would face death a dozen times over rather than do less.

Mac has a strong character, and like most strong characters it is somewhat one-sided. It is possible at times for his persistence to become stubbornness, and his pride a stumbling block. However, such occasions are rare, and in proof of it we got along together six months without a quarrel.

I doubt if I ever saw a more plucky fellow. He was raised in a country lacking lakes or rivers, or even ponds, and had never been in a boat, with one or two possible exceptions, yet he braved fierce storms on the lakes at a time when, owing to low water, their perils are far above the common. Mac was a quiet fellow, and uncommunicative about himself. We were attracted to him by his self-control and courage on the train going west. We were traveling by the Canadian Pacific, and a big gang of railroad laborers had taken possession of the train. A postal card which Herington indicted from dictation for Red Bill, one of the crew, will give an idea of their morals and manners in general. It was directed to his wife and ran: "Boys all right; having good time; all having their whisky. With compliments to their creditors, Wm. Hewitt."

Some of the car windows had men's feet projecting out of them. One fellow at stations flourished a salute with a pair of gray socks that had once had white toes. Scrapping was the order of the day. The air was full of vile insults. Some one of Red Bill's companions would stumble down the aisle and perhaps fall against another man. "You blank blank son of a blank, get off my feet or go to blank," etc. To which the other responded with offended dignity, "Lemme tell you, pardner, me mother was a lady, and if you call me —— —— —— —— I'll let you know I'm a gentleman." Such encounters generally resulted in a scuffle, and the mutual friend and peace-maker would appear on the scene, hustle the men apart and swear roundly at both, favoring neither in his choice of epithets. "If I was as drunk as you are," he says to number one, "I'd thank anybody to swat me on the nose;" and to number two he suggests a special train to carry his feet and give room for other people. Several of the meanest drunks of the lot got up some fancied grievance against McKercher, but he had the moral power to silence them, and in so doing won our sympathy. The ice was broken, and soon all five of us were discussing plans and projects, and a mutual understanding was reached.

Mac was added to the party, and soon won a first place in the esteem of all.

A Gale on Lake Bennett.

Owing to Mac's disinclination to speak about himself I was not thoroughly aware of his complete ignorance of water craft. I had an idea that he knew how to row, and that while not much of a sailor he would have no difficulty in handling his tandem boats in a fair wind.

Clad in heavy Mackinaw clothing and hip boots we stood in water half-way up to out thighs, while the icy wind from the summit of Chilcoot hurried the clouds across the face of the moon, and held our final consultation before committing ourselves to the tender mercies of Lake Bennett. It was midnight and October, and crackly fragments of ice were sailing with the current and hitting against our legs. The sail was raised on Mac's boat, and flapped and slatted and banged at the rate of a thousand a minute, making the little craft to which it was attached quiver from stem to stern. My own boats were anchored near by. At the last there was a moment of hesitation, and Mac suggested a trial trip with the two of us together, so that he could get an idea of how the boats handled.

Off we went into the spray-laden darkness, the little 12ft. leader tugging at the other boat with a taut tow line and churning the water under her bows. There was a strong weather helm that made steering very difficult, and at times it was necessary to jibe the sail to do anything at all with the boats. The deadening of the steerage way, caused by the drag of the towed boat, made the trouble.

We sailed down a few hundred yards to the opposite shore of the lake, which here is very narrow, and there made a reach back nearly to our starting point.

Finding that we could not row effectively against the wind we got out and lined the boats the remaining distance.

Mac was nervous, but he would not listen to a postponement of the start. I gave him what suggestions I could with regard to steering, and after having helped him off followed with my own boats.

The boats were loaded heavily, and though the little sails pulled like a team of horses they did not move through the water at a rate of more than three or four miles an hour. This was plenty fast enough, however, for Mac. In less than five minutes he found himself in difficulties. His boat persistently sheered over toward the west shore of the lake, and out of the misty gloom ahead an old wreck on some very jagged rib-like rocks loomed up. Do what he would, he could not make his boat point elsewhere than at this black obstacle, upon which the waves were breaking in a way suggestive of wetness and unpleasant consequences in general. At the last moment, however, he succeeded in jibing, and passed the danger by an appallingly small margin.

We were soon out in a wider part of the lake, and the waves momentarily increased in size. A bend in the lake made the east side a lee shore, and toward this some inscrutable power drew Mac's boats. Becoming aware of the danger, he tried running free toward the opposite shore, and got his boat broadside to the waves, which washed completely over her at times. Next she came around head to the wind, pointing for Skagway instead of Dawson City.

It was all I could do to keep Mac company in his evolutions, and I began to realize that he was battling with a new and untried art. I shouted to him directions, but the wind carried away much of what I said, and though he got his boat before the wind again I saw that he was bound to go on the lee shore. Near us the prospects were a little more favorable than further down the lake, and I decided that the only thing to do was to get ashore and reorganize our demoralized forces before we were drawn under the beetling crags below, where shipwreck was inevitable.

By some lucky chance we managed to gain the shore under the lee of a slight projection. The shore was a precipitous cliff, running down into deep water, but we got footing on a narrow ledge, and with oars and pieces of driftwood managed to keep our boats from pounding to destruction on the rocks.

This thing could not continue indefinitely, however, and I asked Mac if he thought he could row across the lake to the protection of a bay dimly discerned on the opposite side. Then I learned that he had never had a pair of oars in his hands, and that he was no better oarsman than sailor.

Here we were in the tightest kind of a fix; in danger of losing our provisions and outfit, and ignominiously ending our expedition at the very beginning, simply through lack of information on a question that any one would have thought would have been thoroughly discussed before starting. Undoubtedly I had taken too much for granted, but then Mac and I had been much separated on the trail, and our opportunities for conversation had been few and far between. Not till that morning had we known what provisions the other members of the party had assigned us in the division, for the appetites of the party had made big inroads into the individual purchases of supplies, and the deficit had to be borne by all alike. Many things had to be taken on faith in the rush of getting off, and our present difficulty was one of the direct consequences.

We could not stay where we were, for the boats were in danger any minute of pounding a hole in their sides and going to the bottom. It was necessary to cross the

DICK AND GILL.

Clinging to the wire fencing is seen a pet otter, of which Mrs. Willson will write in a later sketch.

lake, and as no help could be expected from Mac in rowing it devolved upon me to pull all four boats over to some place of safety.

The two tandems were made fast to each other, and off we started with 48ft. of boat arranged in a very limber jointed construction. It was impossible to make any headway against the wind, so I laid a course parallel with the waves, and it required quick work to keep my oars submerged. Fortunately we had covered with canvas the cockpits of both passenger boats before starting, and this kept out a large portion of the water which continually swept over the boats. Mac lay flat on one of the boats and had all he could do to keep from being tossed overboard. Occasionally it seemed as if the boats would roll clear over.

The first few hundred yards was the hardest tug. It was plain that we were going to leeward, and decidedly uncertain whether or no we were making enough headway to clear the point below. Moreover, I was afraid of breaking my oars, and there were other reasons why the moonlight row was not altogether pleasurable.

About 3 in the morning, however, twenty-four hours after the time of last arriving, we pulled into a beautiful little landlocked bay, with sandy beach and limpid water that looked as if it had been especially created for tired wayfarers like ourselves, and anchoring out our boats we spread our sleeping bags just above high-water mark and turned in for a much needed rest.

J. B. Burnham.

A Train's Race with Two Deer.

Saratoga.—On the Adirondack Railway the New York express train had an exciting race with two deer. Near the station known as the Glen the deer jumped across the track, plunged into the Hudson River, and swam to the opposite side. The contest of speed was highly enjoyed by the passengers.—New York Evening Post.

A Double Resemblance.—Farmer Oatbin (sadly)—"Children are jest like a brood of young quail. As soon as they get old enough, away they go from the old nest in every direction." Farmer Corncrib (more sadly)—"Ya-as; jest like quail. As soon as they mate, away they come back to the old feeding-ground again."—Judge.

Natural History.

Florida Pet Cranes.

There is a charm—a picturesqueness—in a scene taken from the south land. It is evening; and we see a tropical yard, graced by tall live oak trees, from whose branches trail the sweeping Spanish moss. Here and there is an orange tree, from whose boughs chirp the mockingbirds. On the grassy lawn the Irish setter pup plays with a rug he has purloined from the doorway. A maltese cat sits tiger-like, cautiously moving her tail to and fro, intent upon a bird on the limb above her. In the background, cut off from the large lawn by a wire netting, are two quaint, winsome otters. As they dart hither and thither, peering through the netting, now up, now down, now into the bath and out again, rolling and tumbling, they add life and zest to the picture.

Central in the scene are two large whooping cranes, one pluming himself, as is the custom of birds at even time; the other, more laggard, is finishing the day's play—dancing and bowing at an imaginary plaything he sees in the grass.

One morning a countryman brought an ungainly, frightened and half-starved young whooping crane to the door, and out of pity for the innocent thing we bought it and turned it loose in the yard. Imprisonment to this unreconciled bird was painful, and he kept up a constant cry—his gosling voice being little but a "squeak, squeak, squeak." For the first few weeks the bird was a constant care, but when the period of homesickness wore off he began to show intelligence, each day developing new traits until he became the greatest pleasure as well as a delightful study. In his youthful stage he wore such a dejected, crestfallen appearance that it was a surprise to see him now develop into a proud, independent bird, carrying his head erect and moving with a stately but most Indian-like gait.

Soon the mind of this untamed bird seemed to unfold and grow, and an intelligence equal to that possessed by the high-bred dog manifested itself. He courts companionship, following us like a dog about the grounds. Where the negro is at work there Dick appears, digging with his long beak like a sexton. Early in the morning he regularly appears at the bedroom window, turning and rattling the slats of the shutters, and with a soft, coaxing chirp seems to urge the inmates to arise. Breakfast hour finds him on the dining room piazza, and if permitted he enters the room and helps himself to cakes or bread from the table. On Sunday afternoons he finds his greatest enjoyment, for then it is that his master is present and permits him to make himself "very much at home." He stands at one side by the hour, just pluming himself, then gently picking at shoe buttons and finger rings. Occasionally he is indulged in a favorite pastime—that of taking the hairpins out of his mistress' hair.

In nature he is as gentle and affectionate as a kitten, and as he has never been teased he has no enmity for anything except a dog. One night he was attacked by a strange dog, and since then his hatred for any canine other than the home dog is intense, and as soon as his eagle eye detects a strange dog he gives a cry of alarm, and in the most quiet, sedate, but stately way walks out of range into some retired corner. He is more valuable than a watch dog, for at night, should any strange object intrude the premises, he quickly gives a warning in a voice so loud and clangorous as to wake even the "seven sleepers" themselves.

Dick has always been inordinately fond of his master, whom he makes every effort to please. It is at his command that he will dance, bowing and twirling in the most graceful manner; then circling with wings distended around the yard and back again to bow and courtesy as before. Another very pleasing recognition of his intelligence is the manner in which he always welcomes his owner. He recognizes the horse and carriage as far as his eye can reach, and long before the bird is in view his voice is heard trumpeting a greeting, which is continued until the master reaches the gate, when at the single command, "Louder, Dick!" he throws his head back and gives forth a long, gurgling note, indicating joy and pleasure. To no one else will he give this welcome. It is unique and peculiar—for his owner alone.

When Dick had grown into a handsome, stately bird, the monarch of the lawn, we were fortunate in procuring a mate for him—a timid, shrinking, soft-eyed bird. It was touching to see this young thing cuddle up to the large bird, who treated it with supreme indifference until his presence grew monotonous. With stately tread Dick would move away, but the young bird would follow after. At length "patience ceased to be a virtue," and becoming exasperated with that young, chirping-voiced creature ever at his side, Dick drove him off, repeating it until the little crane grew shy and frightened of him. But as the new bird had been gotten for Dick's edification it was decided that he must yield his supremacy and allow the young bird the privilege of the yard. A good whipping with a keen switch conquered Dick, and within a few days the two birds were enjoying each other's society, going about the yard neck and neck, digging the grounds with heads together and roosting side by side at night.

The power of imitation was strong in the young bird, whom we christened Gill. Gill not understanding that Dick's welcome greeting was for his master alone, soon in his baby voice joined in, but did not know to make the distinction, and so greets all passers-by.

In character the crane is very much like the dog; he is easily controlled, has much sense and affection, and courts friendly recognition. He is fond of music, and comes up on the veranda and through the French window, and with a contented "chirp, chirp," listens to the piano, while he occasionally plumes a feather. In disposition these pet birds are very different. Dick shows more affection than Gill, who is inclined to be pugnacious. A stranger's appearance in the yard causes Gill to seat himself flat on the ground, which, with beak digging the sand in a nervous manner, indicates his anger. The visitor, all unconscious of offense, passes by, when

the bird, discovering that no notice has been taken of him, quietly arises and stalks off like a pouting child. He is inordinately fond of playing with the dog, who leaps and bounds about the bird, the pair going through all sorts of gymnastics. The pony too receives his full share of attention, and as he browses in the lot the bird walks close by his side, with head erect, taking a step as the horse takes one.

The intelligence of the inferior creatures ought to make man adored by them, if he would but show that sympathy that is due to the animal. They ask peace of us, and are all in need of our protection and gentleness. The shy and wary crane under kind treatment develops a trustfulness and love for human society, and the human heart necessarily receives a special blessing in the reflex influence.

The sandhill crane is the most imposing and picturesque of all Florida birds. He will measure across the expanded wings 6ft., and while flying with neck and legs extended attracts the eye at a great distance. A few years ago it was no uncommon sight to see a large flock in numerous districts of Florida, and their loud trumpet-like cry could be heard for miles; but the march of civilization has made sad havoc with them, and it is only occasionally one is seen now.

The crane makes her nest on a little knoll, among marsh lilies and tall grasses. She lays but two eggs, and at the end of four weeks the most cunning yellow-legged birds appear. As soon as they are out of the shell they are able to run, and from this time until they are old enough to take care of themselves both parents are kept busy supplying them with food. The male bird takes one under his protection, while the mother takes the other, and thus from morning until night they wander over the prairie, continually digging for bugs, worms and tender roots. When full grown the crane has changed from a yellow, downy bird to a most exquisite steel-gray color, his yellow legs and beak have turned to a black, his soft, dove-like eye has become keen and piercing, and his head is surmounted with a brilliant red crest.

In its wild state the crane is a most wary bird, and makes an excellent picket for the timid deer. When the deer, feeding on the plains, hears the warning note of the crane, he knows some enemy is near, and bounds away into safe retreat. The crane selects his roosting place far from bushes, rocks or other spots which might serve to conceal an enemy. Such a careful watch do they keep during the night that it would be difficult for any one to approach without being discovered. In captivity he follows the same instincts, sleeping on one foot, with his head under his wing, and yet detecting the most delicate sound. He is noisy on the wing, continually uttering that loud, clangorous and penetrating sound. The peculiar voice is caused by the windpipe undergoing several convolutions before reaching the lungs; it also enlarges to a great chamber within the breast bone, which serves as a sounding board.

In a wild state the bird feeds on bugs, worms and tender roots, but under the influence of civilization he soon learns to eat anything that would be fed to the chickens, and feeds with them as complacently as if he were one of them. He is æsthetic, however, and what he eats must be clean. Bits of meat and bread he carries to the water, where he washes them off before eating.

The parents are devoted to their young, and should a dog come upon them he is in danger, for they stand guard with their long bills and wound at every blow—always striking for the eye. It is said that even the wildcat leaves them in peace.

Last summer a prominent New York banker came to Florida to hunt "big game." The first day he was out he shot a sandhill crane, only wounding it in the wing. It came at him with all the fury of a tigress, jumped on him and stamped and prodded until driven off by the guide. The New Yorker refused to hunt "big game" after, saying, "If your beasts are as dangerous as your birds, I want none of them."

MINNIE MOORE-WILLSON.

KISSIMMEE, Florida.

Honey Dew.

THE sticky substance found on some leaves is a secretion from the aphis, an insect often destructive to various species of vines. The aphis is called by Linnæus "the ant's cow," almost all species of ants habitually domesticating and defending them in return for their honey.

Sir John Lubbock's book, "Bees, Ants and Wasps," contains a most interesting description of the friendly relations between the ants and aphides. The whole book is one that any sportsman-naturalist would enjoy.

If one notices on a plank sidewalk under elm trees spots apparently dry during a light shower of rain, it is quite probable that the trees will be found to be infested by aphides, the dry looking spots being caused by the honey dew dropping from the insects above, and protecting the wood from moisture for a short time.

That honey dew should be poisonous to animals, as reported by Mr. Kennedy, is news indeed. Can't we hear more on the subject? JOS. S. WALTON.

The product of the aphides is one form of honey dew; another is a vegetable exudation from the leaves. We extract from Sir John Lubbock's work on "Ants, Bees and Wasps" these paragraphs relative to the aphides and honey dew:

"The food of ants consists of insects, great numbers of which they destroy; of honey, honey dew and fruit; indeed scarcely any animal or sweet substance comes amiss to them. Some species, such, for instance, as the small brown garden ant, ascend bushes in search of aphides. The ant then taps the aphis gently with her antennæ, and the aphis emits a drop of sweet fluid, which the ant drinks. Sometimes the ants even build covered ways up to and over the aphides, which, moreover, they protect from the attacks of other insects.

"It has long been known that ants derive a very important part of their sustenance from the sweet juice excreted by aphides. These insects in fact, as has been over and over again observed, are the cows of the ants.

"The different species of ants utilize different species of aphis. The common brown garden ant devotes itself principally to aphides, which frequent twigs and leaves; *Lasius brunneus* to the aphides which live on the bark of trees, while the little yellow ant keeps flocks and herds of the root-feeding aphides.

"The ants may be said almost literally to milk the aphides; for, as Darwin and others have shown, the aphides generally retain the secretion until the ants are ready to receive it. The ants stroke and caress the aphides with their antennæ and the aphides then emit the sweet secretion.

"As the honey of the aphides is more or less sticky, it is probably an advantage to the aphis that it should be removed. Nor is this the only service which ants render to them. They protect them from the attacks of enemies, and not infrequently even build cow sheds of earth over them. The yellow ants collect the root-feeding species in their nests, and tend them as carefully as their own young. But this is not all. The ants not only guard the mature aphides, which are useful, but also the eggs of the aphides, which of course until they come to maturity are quite useless. Our ants may not perhaps lay up food for the winter, but they do more, for they keep during six months the eggs which will enable them to procure food during the following summer, a case of prudence unexampled in the animal kindom.

"The nests of our common yellow ant contain in abundance four or five species of aphis, more than one of which appears to be as yet undescribed. In addition, however, to the insects belonging to this family, there are a large number of others which live habitually in ants' nests, so that we may truly say that our English ants possess a much greater variety of domestic animals than we do ourselves. Markel satisfied himself that large nests of *Formica rufa* might contain at least a thousand of such guests, and I believe that the aphides in a large nest of *Lasius flavus* would often be even more numerous. Andre gives a list of no less than 584 species of insects which are habitually found in association with ants, and of which 542 are beetles.

Game Bag and Gun.

Maine Guides and Moose.

AT the annual excursion of the Maine Sportsmen's Fish and Game Association at Kineo, last Tuesday, Commissioner L. T. Carleton delivered an address, in part as follows:

The Guide Registry Law.

In the various places where guides meet, such as Kineo, Greenville, Rangeley, Ashland, Jackman, Stratton, Dead River and hundreds of other places, there is always a great comparing of notes of the many things said and done, of the supply of fish and game, of the game laws, and desired or proposed changes.

Two things have been discussed probably more than all others during the last year and a half, to wit, the law requiring guides to be registered, and the change that was made in the moose law at the last session of the Legislature.

I shall take but little of your time to discuss the guide's registration law. A year and a half's trial has conclusively demonstrated its wisdom and its usefulness; it has most certainly come to stay, crude it is in some respects and needs, and will receive wise amendments; but nevertheless—it—is—the rock, the sure foundation upon which we must build for fish and game protection in this State.

If we are to have protection in fact and not in theory only, if we are to have the laws enforced which we ourselves have made, as we all admit the laws of the land should be enforced, it must come through this channel.

If the Legislature of this State is to make in the future large appropriations for fish and game, it will be because of the fact largely that the guides are registered and are in fact protectors of the fish and the game; repeal this law and you might as well stop taxing our people for fish and game interests—repeal this law and the big game of Maine is doomed to speedy extinction; because, if the guides of Maine are not willing to have themselves known, are not willing to have their post-office addresses known to the State officials, are not willing to make a report annually to the State of facts coming within their knowledge and of general interest and importance, and to aid in enforcing the game laws of the State, then in that event we may as well stop taxing our people, stop appropriating money for fish and game laws and give every man an equal chance to take the fish and the game while it lasts, and it would last under these conditions but a mighty little while.

And so it seems to me that the sooner the guides of Maine as a body realize this the better it will be for all concerned.

Instead of putting forth efforts to destroy this law in my judgment you should unite to help make it better. We welcome your assistance and your suggestions, and they will always receive all due consideration.

The registered guide will in the future come more and more into prominence as an important personage.

Theirs is a great field of usefulness; under their influence and example and effort vast good or vast harm may be done.

While at Rangeley this spring on a brief trip, I observed that the "fish hog" is no longer considered a desirable personage; his room is considered more desirable than his company, though he may be clad in fine broadcloth and possess a long purse—and in many instances the fish caught were returned to the waters, the excitement of catching them being deemed sufficient.

No more should the "game hog" have any standing among true sportsmen. Here the hand of the guide can be made powerful.

I am no prophet, but I venture the prediction that the time is not far distant when all of the fish and game laws will be administered through the instrumentality of the first-class, registered guides.

Something is being said nowadays not only about registering guides, but also about registering or licensing hunters and fishermen. What the future will bring forth in this direction I cannot tell. The only proposition in this direction that I know of that is likely to get before the law making power in the near future, is this, to allow sportsmen who have lawfully killed game or fish to transport it to their homes without accompanying it by paying a small fee—not compel them to do this, but give them this privilege if they wish to avail themselves of it.

I venture the prediction that not a great while will elapse before legislation will be demanded by guides and all true sportsmen to remedy a state of affairs that now exists, and is disclosed in the following extracts from letters received from guides and wardens recently. This is a fair sample of many received:

"Dear Sir: At —— Lake, June 18, there was a party of three Boston gentlemen—came without guides. When near my camp fired seven shots at a deer. I quickly went to see if the deer was killed, but they said he went away all right, and said to me, 'I suppose you don't go hungry for deer meat.' I told them it was too bad to shoot an old doe and leave the fawn to starve, and that the deer was not fit to eat this time of year. They thought everybody shot everything they saw. Now what are guides going to do, pay a license fee and let students shoot all the game in close season and trappers using deer and moose for bear bait?"

You notice this guide asks: "What are guides going to do under such circumstances?" I answer, report them to me, with their names, and the wardens will do the rest.

I will tell you what I would do if I had the power. I would make every man who goes into the game region in close time, at least, with a Winchester rifle for a fish pole, hire a registered guide and take him along with him, and I would have the registered guide see to it that no game was slaughtered.

The game of Maine is too valuable, in my judgment, to allow indiscriminate roaming among our forests in close time, and in open time they should either hire a registered guide or pay a gun tax to shoot game.

Game and Crops.

Another question we have got to meet, and we should meet it fairly, equitably and in a spirit of fairness and candor, and do exact justice. The farmer whose crops are injured or destroyed by game must be fully remunerated, and legislation must be had to this end. It is a fact that deer do, in certain instances, damage crops, and the commissioners invite the co-operation of anybody who will aid in bringing about a just law to this end, and the commissioners say to all farmers of Maine who are thus injured, "Let your injury be known to us, and aid us in bringing about just legislation in your interests."

The Moose Season.

Now briefly I wish to allude to the change in the moose law at the last session of the Legislature, making open time from Oct. 15 to Dec. 1 on these animals.

It is said that confession is good for the soul. I was the author of this law, and urged its passage with all the vigor I was capable of, and it was about to be made a law, when at the very last days of the session, at the request of the attorney of the Guides' Association at Greenville, who said "there would be no kicking over the guide law—provided the open time on moose was left from Oct. 1 to Dec. 1."

My associates and myself, and others interested in the matter, in consequence of this, consented that the moose law should so remain—open time from Oct. 1 to Dec. 1—and Brother Hudson made the desired change by having an amendment to this effect introduced, which was adopted; but by an error of a clerk the last day of the session, an error for which I and my associates, or any member of this association, were not in any way responsible, the moose law was after all changed.

This practical question now faces us in view of the approaching session of the Legislature. Do you want to go back to the old law—is it wise so to do? Why is the first half of October desired as a hunting season for moose? Principally, I think, for moose calling.

A prominent sportsman thus describes moose hunting as it was before this change:

"In the latter days of September and the early weeks of October the moose is mating." (Before the change in the moose law.) "Then it was that the woods of Maine were traversed by thousands of sportsmen with their guides, all in search of one thing, a chance to kill a bull moose. Now the female moose in one particular is very like some other female of the animal kingdom; she is coy and capricious, leading her lover a merry dance 'o'er moss and fell,' through bog and swamp, along the margins of lakes, and ponds and lagoons. At night she comes down to the water to feed on the roots and tops of the lily pads which grow so abundantly in sluggish waters.

"If her mate be her escort he usually stands on the bank eyeing his spouse tenderly as she feeds, and with ears cocked ever ready to protect her from all danger real or fancied.

"If the bull moose has no cow of his own, but is merely ranging and scouring the country to find a mate, then is the time he falls into the moose caller's trap, and a very sure one."

My guide and I are paddling—(the guide alone paddling) in a big bog. We hear a branch break, we stopped and listened. A deer, we both thought as another and another branch broke. Then came the sound of heavy footfalls and we knew a moose "was coming to the water." We listened intently, so intently that I could hear the ticking of my watch, though it was buried under a sweater, a coat, and an overcoat, nay more, I heard, perhaps it may have been fancy, the stretching of my elastic suspenders as I breathed. Soon we distinguished through the dark of the moonless night a great object, big as a hippopotamus, move down the bank and step into the water.

The guide pushed the canoe up deftly and silently. It was so dark I could not see whether the big object had horns or not, but the guide settled that problem with "be quick; that's him on the bank—now down him." I raised my rifle and downed him and had a 1,000lb. moose dead in the water. A nice head and a few steaks was all I got.

Now have I not fairly described the hunting of moose up to Oct. 15, when it used to be lawful to do so, as it was mostly done?

Does anyone want to return to that method of killing moose at that season of the year under all circumstances?

My own judgment is that we would better let the law remain as it is for a few years at least, still I am disposed to fall in with the suggestions of those who are deeply interested, such as hunters, guides, hotelkeepers, railroad owners, and others directly interested.

Now a word in conclusion. I fear I have taken altogether too much of your time.

These fish and game matters are of great interest to our people. We have a goodly heritage, the greatest and best fish and game preserves in the world. They belong to all our people in their sovereign capacity—the poor man and the boy have equal rights and equal ownership in them. Nobody can take our fish or our game of right, but only because all of the people through their legally elected representatives have given the right, and any restrictions or limitations or conditions that the people, through the Legislature, see fit to impose are constitutional and must be obeyed.

When a hunter takes a moose he takes some of my property, some of your property that all the people own jointly, because all the people have said he may take it in a certain way at a certain time, and if these joint owners, the people, see fit to say you shall take registered guides along with you when you kill moose or deer, or shall say you shall pay a license fee to hunt at all, there is no power on earth to say nay.

A country doctor, born in a far away foreign land, and who came to this country to find a home, wrote and had it published that our game laws were unconstitutional, and wanted to discuss that question with the commissioners. We sent him a copy of the famous decision of the U. S. Supreme Court, drawn by Chief Justice Fuller, wherein this highest court of the land had just declared that these laws were all constitutional, and requested him to shed the beams of his intellectual light upon the justices of the Supreme Judicial Court of the United States of America, and enlighten them in constitutional law.

Let us work in unison and in harmony, my friends, for the greatest good to the greatest number, and make Maine what nature intended it should be, the greatest recreation and pleasure ground of the nation—the paradise of the sportsman, the Mecca to which all will go who are seeking health, pleasure and happiness.

CHICAGO AND THE WEST.

Yellowstone Park Poachers.

July 6.—I am in receipt of an interesting communication from the Yellowstone Park touching on protective matters in and about the park, and showing some of the evils and annoyances with which those in charge of this national playground and wonderland are obliged continually to contend. The matter comes from a gentleman of responsibility and full information, who has had full opportunity to obtain his facts. This gentleman writes personally commending the manner in which FOREST AND STREAM has "turned the white light" on Wyoming protective matters, and goes on to add:

Last Sunday afternoon, the 26th inst., Dick Murray, of Henry's Lake, Idaho, came to Fort Yellowstone, and was stopped by the guard and sent in to register, as all parties passing are required to do. Lieut. Lindsay happened to see him, and at once put him in the guard house.

The next morning he was arraigned before U. S. Commissioner J. W. Meldrum; pleaded guilty to a charge of hunting in the northwest corner of the park last September, and was fined $50. He had some money and pawned a saddle for the required balance, paid his fine and thought he was going to depart in peace, but to his surprise he was sent out of the park under the escort of a trooper, and when he reached the park line was given a written order signed by the superintendent, forbidding him to return without permission in writing from the Secretary of the Interior, or superintendent. This was in compliance with paragraph 11 of the rules and regulations. The history of this case is a rather interesting one to friends of game protection in the park, and is as follows:

Last September a party of Eastern gentlemen came to this country on a hunting trip. They had made arrangements with a man named Patt, who lives in the Madison Valley, just west of the park, to take them out after elk and bear. Armed with letters to Gen. Young, then superintendent of the park, they were allowed to carry their guns through the park to Patt's place.

Mr. Patt was unprovided with the necessary outfit, so employed two friends of his to assist him with his party. They were Dick Murray and Jim Courtney, of Henry's Lake, both leading spirits in the old organized gang of buffalo poachers, the worst and most daring and desperate gang of poachers who ever defied the park laws and the vigilance of the authorities.

Courtney is the man who, during Capt. Anderson's administration, was arrested in Butte, Mont., with a wagon load of buffalo hides and heads, and was brought to the park and tried, but escaped conviction by bringing the other members of the gang to swear that they had seen him kill the buffalo in Idaho and outside the park.

This delectable hunting party journeyed from Mr. Patt's ranch to the head of the Gallatin, and camped very close to the park line.

Soon after this, two of Gen. Young's scouts, F. M. Scott and N. J. Malin, were making camp one afternoon in the Gallatin country, when they heard shooting near at hand. "Marching to the sound of the guns" they struck the trail of a band of elk which was being followed by several horsemen. They soon came up with two of the Eastern sportsmen and the two precious guides, Murray and Courtney. The Eastern gentlemen expressed themselves as much surprised and mortified on learning that they were in the park, and said they had cautioned Mr. Patt against sending them even near to the park. They readily submitted to arrest, but requested the scouts to accompany them to their camp that they might get their baggage and bedding, etc., promising that they would all go to Fort Yellowstone and have the matter officially settled.

Arrived at their camp a hard storm came up, and they proposed to the scouts to remain in their camp all night and go to the post the next day.

Mr. Patt seemed much shocked and grieved to learn that Murray and Courtney had taken his guests into the park, although he well knew their predilection for hunting inside the park lines, where game is most plentiful and least wild.

The next morning, after an early breakfast, Murray and Courtney went out to round up the horses and bring them in, so they could all go to Fort Yellowstone. Courtney has not come back yet, and Murray only came back last Sunday.

The Eastern gentlemen expressed to Gen. Young their chagrin at being found in the park, and Mr. Patt corroborated their statement that they had warned him not to take them near the park. He also stated that he had directed Murray and Courtney, on the morning of the arrest, to go west away from the park.

The gentlemen were therefore allowed to go home, and a complaint was made before Commissioner Meldrum against the two real offenders, Murray and Courtney. In due course of time the warrant was returned by the deputy marshall for the park, with the endorsement that the parties were not to be found in this district. On Dec. 20, 1897, the warrant and complaint were sent to Mr. Gibson Clark, U. S. Attorney at Cheyenne, with the information that the defendants were at their home at Henry's Lake, Idaho. Nothing more was heard of it until about the middle of February, when Capt. Erwin, then acting superintendent, addressed a letter to Attorney Clark, requesting information as to what had become of the warrant, or why the parties were not brought to trial.

To this the U. S. Attorney replied that he had examined into the case, and from what information he could obtain it seemed unlikely that the case could be successfully prosecuted, and that he would not be justified in incurring the expense incident to proceedings in Idaho to have these parties removed to this district for trial. How searching an examination the District Attorney made into the case, how reliable was his information or how correct his conclusion that the case could not be successfully prosecuted, is shown by the fact that Murray knew there was an absolutely clear case against him and therefore plead guilty. It is also to be noted that after he was sentenced Murray expressed to the deputy marshal his surprise at getting off so easy. Just what examination Mr. Clark made into the case is not known to the writer, who is in a position to have known, had he made any proper examination. It is known positively that he had no communication with the acting superintendent upon this subject, nor with any soldier, officer or scout under the superintendent's orders. Neither had he any communication with Malin or Scott, who were the principal witnesses in the case.

It is hardly to be supposed that he gathered his learned but peculiar and erroneous opinion, expressed above, from an interview with the U. S. Commissioner, whose duty it is to express an opinion in such cases only when the evidence is all in; and any such supposition is successfully negatived by the fact that Commissioner Meldrum issued the warrant for Murray last fall and by his action when the case finally came up for trial.

Again, as to Attorney Clark's theory that the United States cannot afford the expense necessary to enforce its laws. If this theory is to hold, the two troops of cavalry now stationed in the park might as well be sent to the Philippines, where they can do some good. It is evidently impossible for two troops of cavalry to so thoroughly cover more than 5,000 square miles of this rugged mountain country as to keep poachers out or to make their capture, in flagrante delictu, certain. Perhaps twenty regiments of 1,200 men each could form a skirmish line around the park and keep poachers out. They might be armed with rosewood clubs, like the policemen in Central Park, and gently, but firmly, enforce the signs posted upon the trees, "Dangerous animals; keep away."

But with a smaller force than this the only way to protect the game in the park is to catch offenders as often as possible, and when one is caught to make him realize that he has offended, not against county or State law, but against "the peace and dignity of the United States." In other words: to teach the people who live about this park the same respect for the park laws that they have for other United States laws. Take the United States revenue laws, for instance; how often one hears of people violating city ordinances and State laws regarding the sale of liquor and tobacco, but how seldom it is that a man presumes to violate the United States revenue law. He feels that he cannot afford to take any chances with his Uncle Samuel.

There is another very good effect that this case would have had had it been prosecuted. Many poachers labor under the impression that if they can once get outside the park with their trophies they are safe, and if Attorney Clark's dictum is to stand they are correct. But once send into Idaho and arrest these parties in their stronghold, where they think they are absolutely safe, and they would learn that an offender against United States law is never safe.

And this lesson, even if it did cost this billion dollar country a few hundred dollars, would, by its moral effect, do more good than could be accomplished by the expenditure of as many thousands of dollars in hiring scouts.

To err is human, and perhaps United States Attorney Clark made an honest mistake in not prosecuting these men. If so, he will now doubtless take immediate steps to rectify his mistake by beginning proceedings for the removal of Courtney to the park for trial.

Minnesota Indians and Game.

A year ago the Minnesota Fish and Game Commission carried to the Supreme Court the Indian case, which had been passed upon by Judge Baxter of the District Court, the latter holding that the Indians could do as they wished with all the fish and game they took, and were not amenable to the law. The Supreme Court, as was lately reported in the FOREST AND STREAM, gave out the good law that the Indian was no better than a white man in matters outside his reservation. This decision had much to do with the three indictments brought by the Commission against a dealer by name of Davis, an arch conspirator who has made the wardens and commissioners much trouble. Now comes Judge Baxter again, and ignores the decision of the Supreme Court, so that Davis is free of the law. This postpones the case till the fall term of court, when it is very likely that another judge, Judge Searle, will be on the bench.

E. HOUGH.

1200 ROYCE BUILDING, Chicago, Ill.

Trespass in New Jersey.

JUST as if the old law were not severe enough, the last Legislature proposed further protection for the owners of land; the Legislature wanted to be very severe, but in its endeavor to be so overstepped the limits and passed a law which is practically nugatory. The new law provides that any person who enters the occupied lands of another for the purpose of taking any fish and game enumerated in the statutes shall be deemed guilty of a misdemeanor and shall be punished by a fine of $100 or ten days' imprisonment, or any part of either or both, at the discretion of the judge before whom the case is tried. Notices warning trespassers to keep off are required to render the law applicable. A glance at the provisions of the law shows what a foolish piece of legislation it is.

The first question which will arise will be as to the definition of "occupied" lands. It is hardly to be presumed that mere possession means occupation, for if that definition were accepted there are no unoccupied lands in this State. If the lands intended to be protected are the holdings of farmers, how far does the restriction implied in the word "occupied" extend?

The next interesting point in the law is the intention of the supposed violater. The law applies only to persons who with a purpose to take fish or game enumerated in the statutes go on the posted property of another. It is consequently necessary to show the intention to take a certain kind of game and fish. A farmer may have his lands overrun by persons gunning for woodchuck or chipmunks or fishing for hornpouts or pike and the law would not reach the trespassers, as the animals mentioned are not included in the list of fish and game enumerated in the statutes. It will be a difficult matter to ascertain the intention of a gunner or angler, especially if he knows of the provisions of the law. He might accidentally shoot a few rabbits and quail and still his intention may be to kill only woodchuck, or he may take a creel full of trout when his intention goes no further than a few pike.

The method by which the law is to be enforced is rather amusing under the circumstances. The law provides that trespassers shall be deemed guilty of a misdemeanor. Now to be tried for misdemeanor means indictment by a grand jury. Consequently it will be necessary for the land owner first to ascertain the name of the trespasser and then to make a complaint before some justice of the peace where the offender will be held to bail to await the action of the grand jury. If all these formalities, rather difficult under most circumstances of trespass, have been gone through with, then after the county has gone to an expense of forty or fifty dollars the accused may be tried.

Such nonsensical enactments as these generate a disrespect for law, but then the new trespass law may catch a few farmer votes next fall, and if it does this its purpose will have been accomplished.—Paterson Chronicle.

Currituck Game and Fish.

CURRITUCK SOUND, N. C., June 30.—While walking across the meadows to-day I flushed a large flock of yellow-legs of the summer variety, or small-sized yellow-legs; there were perhaps 150. I was very much surprised, as it is fifteen days sooner than I ever saw them before. The tail end of the northern flight passed here on June 15, and to-day, June 30, they are back. I know they are not the same birds of course, but as the small yellow-legs do not pass here going north until about May 15, where could they have raised there little families and returned so soon?

Bluefish have been caught in larger numbers off the Currituck coast this spring and summer than ever before, while large-mouth black bass and white perch are abundant just now.

I saw nine black ducks yesterday, two old ones and seven young ones about two-thirds grown. This is unusual. Wood ducks formerly visited us in large numbers in June and July, but are seldom seen now; I think it is owing to the salt water in the Sound.

I saw hundreds of green turtles dead along the Carolina coast this spring, and cannot account for such large numbers. They weighed from 50 to 500lbs. each; there must be an epidemic among them.

MORE ANON.

Indiana Season and Game.

WILLIAMSBURG, Ind., June 23.—I was out for woodpeckers in the cherry trees yesterday, and I notice that there are a lot of them this year. I have also noted that every year when there are a great many quail the woodpeckers too are very thick. This I attribute to the winter having been very mild and few of them having been killed by the cold, and also to the fact that there is abundant food for both birds in the shape of berries and insects.

I have seen several local sportsmen who report from six to a dozen gray squirrels for a half-day's hunt in this neighborhood, but no fox squirrels at all. Last year there were a good many fox squirrels, but there are very few this year.

There are no very good bass streams here, and very few have been taken this spring. I hope to take a fish in a few days, and will report my success. I hear that a lot of dynamite has been used in some of our streams of late, and I trust that the rascals will meet the fate they deserve for such contemptible work. A 25lb. German carp was caught in Nolan's Fork last week, and one 15lb. one, but as is usual with that fish it is not fit to eat.

J. B. HAMPTON.

Condensed Milk in Tubes for Camp.

BOSTON, June 13.—*Editor Forest and Stream:* Experience in the woods has convinced me that if condensed milk were put up in collapsible tubes, sportsmen would demand that that part of their supplies should be in that form. Condensed coffee (with milk and sugar) in the same way would also have a good sale.

The demand from the army for condensed milk is large, but only while the soldiers are in camp. When they take the field they go without because a can once opened cannot be carried. But nearly every man would have a tube of milk, or coffee, in his haversack.

Even in camp the tube has its advantages. First, there is no waste; second, flies or other insects cannot invade; third, the sensitive man would not be shocked by seeing some one wipe his spoon on his tobacconized tongue, then dip it into the milk can to take out what he wants for his coffee; fourth, after squeezing out what is wanted, restore the cap, and the balance is as hermetically sealed up as though the package had never been opened.

I also believe that many families would keep tubes in the ice chest, while they will not keep cans. The former would be good until exhausted, no matter how infrequently drawn upon; while the latter once opened must be used or there is more or less waste.

I have had some correspondence with one of the largest manufacturers of condensed milk, and the reply is that, first, there is no demand for it; second, that the cost would be so much greater that they think it would not meet with a ready sale.

Now, if those who would like to have milk or coffee in collapsible tubes would tell their grocers, I think the demand will be met. And the first condensed milk company that meets the demand will reap the reward.

Pheasants on Long Island.

LAST week for the first time we saw the text of the law (chap. 409, laws of '98) which amends the game law relative to Mongolian ring-necked pheasants so as to "protect" them in Suffolk county to their death; in all the rest of the State they are not to be shot until the year 1900. It is, speaking plainly, an outrage; and we cannot understand how any representative from this county could have consented to it. In brief, it permits those birds to be shot in this county from Oct. 1 to Jan. 31, both inclusive. The wrong and harm in this consist, not so much in an extended opportunity to kill these beautiful game birds before they have spread over the island and become plentiful, as in the virtual destruction of the whole scheme of restrictive legislation for land birds and animals, which for many years has been confined to the two months of November and December. This vicious pheasant law opens the fields and woods to pot-hunters who, under pretense of hunting pheasants, can and will pursue any other kind of game that they can find—woodcock, chicken partridge, half-grown quail, young rabbits and squirrels, etc., perhaps also robins, larks and other song birds. The month of October is one of active farm operations, and farmers will bitterly resent the intrusion on their premises or in neighboring woods of gunners as reckless and unscrupulous as many of those who come from the cities to tramp over Suffolk county land. In January, if at all, deep snow may be expected, and there ought not to be any pretext for men or boys with guns in hand to go out in nominal pursuit of pheasants, but actually to shoot whole bevies of quail if they can find them, huddled under bushes. This pernicious law ought to be amended at the next session by making the open season for pheasants Nov. 1 to Dec. 31, inclusive.—Greenport (N. Y.) Watchman.

Our Jubilee Number.

ASHEVILLE, N. C., June 27.—*Editor Forest and Stream:* I have received your superb Jubilee Number. It is delightfully reminiscent. The familiar names of Ogden, Bulkley, Mather, Robinson and the rest carry me back to the beginning. They seem to bridge the twenty-five years' interval and help us to rejuvenate. Let us rejoice! It is an enviable record which the old journal carries.

CHARLES HALLOCK.

OUR much esteemed contemporary, the FOREST AND STREAM, this week celebrates its twenty-fifth birthday by issuing a very attractive Jubilee Number. From its birth to the present time the FOREST AND STREAM has been a clean, able journal, espousing the cause of true American sportsmanship. We heartily congratulate our neighbor. May its shadows never grow less.—Shooting and Fishing.

WE hope to grow old gracefully; let us now add, as gracefully as FOREST AND STREAM, whose Jubilee Number, celebrating its twenty-fifth birthday, comes to us just as we go to press. We have long read, enjoyed, and admired FOREST AND STREAM, and we congratulate it on its prosperity, strength, and wise influence; we can wish for ourselves nothing better as we pass our first birthday than to grow to the measure of the success and usefulness this splendid weekly has attained on its twenty-fifth.—Land and Water.

CHARLESTOWN, N. H., June 27.—*Editor Forest and Stream:* My congratulations on your Jubilee Number. It is certainly a wonderful number, and I have not finished reading it yet. "Rosberryin' in Danvis" is in Mr. Robinson's best vein, and Fred Mather's "Camp-Fire Story" recalls the hunting on the Somers and Lieut. Guest Gansevort, whom I knew well in after life as an invalid retired captain.

"Shiftless Jim Tracy," from a Vermont correspondent, who is new to me, is also very good, though the writer is at fault in his botany. The great white lady's slipper is Cypripedium "*spectabile*," not "*cantabile*," for flowers do not usually sing, and is a very different flower from *Orchis spectabile*, or the showy orchis!

It is an orchid, but not an orchis proper. My own letter reminds me of many more of the old contributors, whom I omitted, Yo and Shadow, J. B. B. and A. L. L., Hermit, Iron Ramrod, Stanstead, Shoshone, Chambers and Keuka, and I should probably recall more if I took time for it. Enough said, with best wishes for the continued progress and prosperity of FOREST AND STREAM.

VON W.

HAMDEN, Conn.—*Editor Forest and Stream:* There was one article in your Jubilee Number which all lovers of yachts and of true yachting history must acknowledge to be worth many times over the price of FOREST AND STREAM for the privilege of reading it alone, say nothing of being able to retain it permanently. I refer to the "Quarter-Century of Yachting," by W. P. Stephens. As an abridged, unprejudiced record of the true yachting history of our country, for twenty-five years, its value cannot be overestimated. It would be a valuable contribution to the pages of the most reliable encyclopedia.

W. H. AVIS.

Camp-Fire Flickerings.

"That reminds me."

ONE Thanksgiving evening some dozen or fifteen years ago Sam Eddy and I happened into Matt. Wolford's shooting gallery on Frankfort street. Matt was having a Thanksgiving Day rifle shoot. He had arranged a box with a sliding cover, in which he put small chickens, leaving only the bill and a small part of the head for a target; he charged ten cents a shot and allowed twenty-five cents for the dead birds. As we were in good practice the result was that we would kill at least two out of three, or three out of four. We were shooting strictly off-hand over the counter at the regular distance practiced at the gallery. Matt soon thought the pace a little hot, so he said: "You fellers got to go back by the door." So we moved back a distance of 15 or 20ft., but kept on killing chickens so often that Matt got tired and declared: "You fellers got to quit." So Sam and I quit and Matt settled by paying us about three dollars each.

As a sequel: Some years later Sam and I met Capt. B. one evening. Capt. B. is a good rifle shot, but we thought we could trim him, so we adjourned to a gallery on Bank street, taking along a couple of gentlemen to referee and see the fun. We beat the captain, and on our way up town stopped into Matt's place. After sundry greetings Matt addressed himself to Mr. James Pannel, who had acted as referee, as follows:

"Say Jim, I want to tell you something. Some years ago, when I was down on Frankfort street, one Thanksgiving time, I sent a man out and bought all the little black chickens we could get; then I took a box with a sliding cover and painted it black, and I painted everything around it black, and when the chickens pull down their heads they don't make a mark so big as the tip of your finger. I charged ten cents a shot, and allowed twenty-five cents for the dead chickens. Well, the Dutchmen shot all day and only killed two or three chickens. Then these two Yankees came in in the evening and they only shot a little while and I had to make 'em quit, and I owed 'em about six dollars."

This, of course, sounded very funny to Sam and me, as we had not noticed his little scheme of painting everything "black" for a background.

Poor Jim, poor Sam, poor Matt, poor me. I am left.

FELSIE.

CLEVELAND, Ohio

Sea and River Fishing.

The Fourth on Bear River.

"HELLO, Jim! Where are you going on the 4th? I guess that I will take the fish boat and the women folks and go to my ranch on Bear River for trout. What do you say to going with us?"

"I am with you, Mac."

"We will start on the third and stay till the fifth, that will give us one whole day with the fish."

The two days that followed saw great preparations. There was the juicy yellow-leg to be procured and cooked, canned meats, fruit, ham, milk, bread, cakes, rods, lines, hooks, flies, bait, boat, gun boots and a thousand and one things to be looked after.

At noon on the third we commenced to load our staunch Columbia River fish boat; and the amount of blankets, food and fishing tackle we put aboard that craft would have made people think we were off for at least a month's camp instead of for three days. At 2 o'clock the ladies of the party put in an appearance. Then our captain gave the command to push off, and away we went before a strong northwester and with everything set, and a flood tide and fair wind, sped right merrily across the Nasel and up through the straits which separate Long Island from the main land. When we got to the cannery wharf, four miles on our way, we had to tie up to wait for more water to flow in from the Pacific. Two of us put in the time digging for the luscious bivalve called by some the clam, by others the "rubber neck," and we succeeded in filling two buckets, which we placed aboard for future reference. Then we weighed anchor and sailed on our way along the foot of the Bear River range. The mountains are covered with impenetrable forests of fir, spruce, cedar and hemlock, from foot to summit; and are the home of numerous elk, bear and deer, with an occasional panther. But the underbrush is so thick and matted that except on hands and knees one may not penetrate it, and an elk 10ft. away would be invisible.

We leave the straits and enter the mouth of Bear River, with its low, flat banks extending for miles covered with marsh grass. In the fall it is the home and feeding grounds of countless thousands of swans, geese, mallards, canvasbacks, gadwalls, gray ducks, sprig, widgeon, teal, curlew, plover, and best of all there are patches in it where may be found the jack snipe.

Into Bear River we bowl right merrily, and the river gradually narrows and the banks get higher until we are sailing up a tide-affected stream about 40 or 50ft. wide, and in an avenue of giant firs, spruces, hemlocks and swamp cedar, which in places lock arms and form a canopy overhead. Here the breeze dies out, and we have to depend on the ever faithful white ash. Pretty soon we come to a place where the river shallows, and donning rubber boots, Mac, Joe and I get out, and one pulling and two pushing, we at last, by following the deepest part of the river, manage to get to the portage, a short half-mile from the ranch. We find a comfortable house—two bedrooms and a kitchen.

After supper us men brought out the tackle for the morrow's fishing. I took my six-strip from its case and looked it all over, put it together, whipped it a few times, and unjointed and returned it to its resting place. It weighs 7oz., and this makes the fifth season it has been my companion. Its best work was a 4lb. 9oz. rainbow in forty-six minutes in Cedar River, this State, and in one of the swiftest of riffles on that glorious stream for trout.

At 4 A. M. I am out after fish for breakfast. After a tramp of a mile up the road, which skirts as pretty a trout stream as a person would wish to see, I put on a cast made up of alder, royal coachman and claret, and start to whip the stream; but alas, I lash that poor stream manfully for twenty minutes without a rise. Then I conclude that it is too early in the morning for the fish to be feeding near the surface, and I may get them nearer the bottom. So I change my 6ft. leader for one of 3ft., and with a cast made up with a No. 7 hook, two split shot and an angle worm fly. I cautiously let my lure sink in a riffle above a hole and gradually drop into it, when it sank a little over the end of my leader, or say 4ft., I am startled by the whir as a noble fish runs off about 15ft. of line and breaks water, going about a foot and a half in the air. Gradually, after three or four minutes' work, I bring my landing net under and raise out of the water a beautiful scarlet-finned trout of just 13oz. Hastily placing some grass in the bottom of my creel and depositing my panting prize thereon, I once more adjust my squirming fly and the next time bring a fish of 7oz. to creel. Then what a bite, and how the reel sings and hums, and how the beauty breaks once, twice, lashing the water into foam. Easy there, old fellow, you can't get under that root. Come up out of that. No skulking, if you please. Ah ha! doubling will do you no good. You got some slack that time, and—you are gone. Well, that is hard luck. No, not yet, you are all right, my boy. Oh, this tip is all right too. Steady now. My! what a jump. And another one; well, you are a game fish. Tired? Yes, and worn out. Poor fellow. I gently reel him in and slip the net under him and land 2lbs. 7oz. of as pretty and plump a specimen of the black-spotted trout as it has been my good fortune to take for over a year.

My little friends, the water ousels, hop up and down, look sideways and twitter at me, and fly just a few feet ahead down the stream, apparently watching the proceedings with interest. The robins stand on the bars and wonder what that big thing is doing to the poor fish.

Thus, with varying success, I go down the brook a half-mile, catching eighteen all told, but no more large ones; and just at 7 o'clock I stroll into camp and spread out on the grass (amid a chorus of oh my's!) my catch. With the exception of four fish they were all of the bright red-finned variety; with red throats and a broad red stripe on each side; and it was the prettiest lot of fish I believe I ever saw—not large by any means, whether in number or side, but the coloring was so vivid. We were hungry, however, and soon laid ruthless hands on them, and with a pair of pocket scissors carried for the occasion proceeded to dress them. Brothers of the angle, try scissors instead of knife when dressing trout. On examining their stomachs I was surprised to find caddis fly grubs, water beetles, and in two found freshly-caught white grubs from rotten wood, but nothing with wings. "This looks bad for fly-fishing," thought I.

"Jim, we have everything cooked but the trout; and you must do them, because we heard of your trout cooking last summer."

"All right, my girl, I will give you a lesson."

So getting two old fence posts and laying them a foot apart over a shallow hole, in a few minutes I have a fierce little fire burning between them, and two frying pans getting hot. Into each pan goes a piece of butter the size of an egg, and into the butter go the trout, well dredged with cornmeal. In ten seconds I turn them with a cake turner; in ten seconds more turn them back again, and add more butter, if necessary, and salt and pepper to taste. Then I turn them again and keep turning them till done to suit. The secret lies in putting your fish in a very hot pan and in very hot grease, and in not letting them lie long enough in one position to burn.

At 9 o'clock Mac and I started on a four-mile tramp up the river to fish in earnest. Going up the country road for a mile, we took to the river, fording, wading, or walking on gravel bars when we could, climbing through or over jambs, taking to the thickest brush on earth when we could not do anything else, and tramped till 12:30 before wetting a line. I shall not say anything of the elk, deer, bear, otter, mink, fisher, or coon sign we saw, as that would be transgressing. With a two-fly cast made up of alder and royal coachman I landed just exactly 70 trout of the red-fin variety, running from 8 to 12in. in length, not many of the 12, but plenty of the 8 and 9. My friend Mac landed 54 of about the same size and kind, with one old whopper that weighed 2lbs. 5oz., and gave him a grand fight. Of course, we caught plenty of baby trout also, which we returned to the water.

I reached camp at 6:30 P. M., and found that Mac had preceded me. Then we had another of those good meals and proceeded to wind up the Independence Day in a fitting manner. The everlasting declaration was effectively read by Miss S., followed by songs accompanied by my banjo. Then came the fireworks, of which we had provided a box, and more songs, in which we were joined by some of the natives, several of whom had come in. The evening's amusement wound up with a dance in the kitchen, and the way some of these lads and lassies hoed it down on that puncheon floor was a caution.

In the morning came the packing up to return to civilization, and at 10 A. M. it was all aboard, and we started on a four-mile push at the 10ft. sweeps till we once

more came into the waters of Shoal Water Bay, where we found a stiff northwester, against which we beat for four hours, and our Fourth of July celebration was over.

JIM MACK.

SHOAL WATER BAY, Washington.

The Bass that can Never be Caught.

AFTER supper at camp, on a calm summer eve,
When each his experience imparts
In wonderful stories we seem to believe,
Despite every doubt in our hearts,
How oft, as the twilight grows dim in the west,
A swift, unrestrainable thought
Will fly to the lake, and dive down in its breast
To the bass that can never be caught.

We have seen him at morn, we have seen him at noon,
We have heard him "cavoorting" at night,
We have dreamed, whilst the ripples were kissed by the moon,
That he had condescended to "bite";
But, daylight returning, we've 'wakened to find
The joys that in Dreamland were wrought
Leave only a longing remembrance behind
Of the bass that can never be caught.

When bright in the east gleams the herald of Day,
And we hopefully bend to the oar,
With a swish and a swirl, 'mid a tempest of spray,
He springs, not five rods from the shore;
Pass on, wistful fisher, pull nimbly away,
To locate on some favorite spot.
He is snug in the lake, and he's in it to stay;
He's the bass that can never be caught.

All spell-bound we note his magnificent length
As close 'neath the surface he glides,
Or, bouncing aloft in the pride of his strength,
Flings the foam from his glittering sides.
Then, silently sinking, he leaves not a trace
Whereby his retreat might be sought.
We will see him again, but what time—or what place?
He's the bass that can never be caught.

He has vanished, but where? Ah! my friend, who can tell?
Perchance to some rock-point remote,
Or he may be at rest in some wave-covered dell,
Or he may be right under your boat;
But your skill, perseverance and patience are vain,
For he holds your allurements at naught—
You may try what you please, but I tell you again,
He's the bass that can never be caught.

Yet, here's to his health! Though our tackle he shun,
Let us fill a fresh pipe for his sake;
May the mornings that dawn when our fishing is done
Still greet him the lord of the lake!
We may talk of our catches, big, medium and small,
We may smile o'er the rapture they brought,
But the "dandy," the "daisy," the king of them all,
Is the bass that can never be caught.

ED. LEGGO.

HARTSDALE, N. Y

Bass Peculiarities.

BARNSTABLE, Mass.—*Editor Forest and Stream:* If in your columns you can explain the peculiarities of a number of black bass living in a pond in this vicinity, you will greatly oblige a number of fishermen on old Cape Cod.

There is about one mile from this village a pond or lake, covering an area of about twenty to twenty-five acres; the water has been analyzed and is said to be the second purest in the State; the shores are steep and rocky, with the exception of one end, which has a clear, white, sandy beach, but quite steep; and one large bay, which is shoal and sandy. The pond itself is deep, being over 100ft. in many places, and has a depth of 20ft. within easy casting distance of the shore for nearly the entire length of one side. There is no stream running in or out of it, and it is apparently fed by underground springs, and there are what are termed spring holes to be found in the ice during the winter. This is always the last pond to freeze over, and it is usually open until other ponds have a covering of from 8 to 6in. of ice.

This pond was stocked with black bass of the small-mouth variety some thirty years ago, and protected for seven years. After the expiration of that time fairly good fishing was had at times. Some years good catches were made and other years nothing could be taken except very small fish. For the last eight or ten years no fish of any consequence have been taken from the pond, and it has been fished very little, although plenty of small bass from 3in. in length up to ½lb. can be taken at any time. Fifteen years ago one could almost count on taking a dozen good fish from 2 to 4lbs. in weight in an afternoon, and seven years ago a few fish could be taken, but since then little or nothing. At or about that time (seven years ago) I was fishing from a boat, in about 20ft. of water; the evening being very still, and the bottom clear white sand, objects could easily be seen. We had taken a small lunch with us, which we ate about sunset, and during the meal I crumbled up a slice of bread, throwing the pieces over the side of the boat, and watched them sink to the bottom; these pieces of bread were immediately surrounded by a number of large fish, which passed lazily in and out among the slowly sinking fragments without offering to devour them, nor would they touch our hooks. I have also noticed large fish following smaller fish to the surface, when the latter have been hooked. These incidents, as I have said, were all noticed about seven years ago, and since then I do not think that a single bass of over ½lb. in weight has been taken from the pond, although plenty of small fry can be taken at any time; consequently the pond has been fished very little if any. I have tried the following baits: Shrimp, grasshoppers (which were considered the best at one time), crickets, frogs, minnows, worms, and have even sent away and obtained helgramites, but without success. These fish have never risen to the fly, although tried repeatedly.

The above are the facts as nearly as I can give them, and if not asking too much, would you kindly answer the following questions:

No. 1.—Can you give any explanation of the present state of things as described? If there are plenty of small fish, why should there not be large ones; and if not, what has become of them? No dead fish have ever been found about the shores, and the pond has certainly not been "fished out."

No. 2.—Can you suggest any bait or lure by which these fish can be taken—supposing, of course, that some of the larger ones are still left?

Now we come to the second condition of things: Two years ago a large number of lake trout of good size were put in this pond, and as they are a new variety in this section, will you kindly give me a little further information regarding them?

No. 3.—Will they (the bass and lake trout) live amicably together in such a pond? Or, which can be expected to survive?

No. 4.—Should the trout be fished for in the shoal or deep parts of the pond?

No. 5.—Will these trout rise to the fly?

No. 6.—What would be the proper bait to use in fishing for these trout under the circumstances?

CAPE COD.

1. If there are small fish there must be large ones to produce them. It is probable that they do not care for your baits. Such was the case in Lake Giles, in Bloomingrove Park, Pike county, Pa., the fish were probably too well fed to care for baits. 2. No. If they refuse live minnows and the other lures you mention, we can suggest nothing. 3. Yes; the bass love warmer water than the lake trout, which will be found in the deepest part in summer. 4. In the deeper water. 5. Lake trout will rise to the fly for a few days after the ice leaves the lake, then they go into such deep water that they cannot see it. 6. See description of fishing for lake trout by Fred Mather, in last week's issue.

Wild Fishers I Have Fished With.

BY FRED MATHER.

AT first there was a notion to make the heading: "Things I Have Fished With," but a moment's thought showed that the title might be construed to mean worms, flies, minnows, spoon hooks and other lures, and that would not convey the meaning which was intended. I tried several headings and finally settled on the above, which is not just what was wanted, but no better seemed to offer. The idea was to say something of the furred, feathered and other life which at odd times during half a century fished with me, or in my company, without previous appointment or even an introduction. That description is too long for a heading, and a heading should be descriptive of what is to follow. I have failed in the heading, but have tried to retrieve the failure in the first paragraph.

The Kingfisher.

There are about 100 species of kingfishers, of which 99 belong to the old world, chiefly to its tropical parts and to Australia. In North America we have only one species, called the "belted kingfisher," and therefore it need not be described further than to say that it is the female which wears the belt; perhaps in the dark ages of the past the original female "bested" her partner and her descendants have since held the belt undisputed.

This jolly bird is common everywhere, whether up some little trout stream, which the angler has just discovered, but which the kingfisher knew years before, or along the rocks and beaches of old ocean, where it seeks its prey among the breakers. There is no bit of fresh or salt water on this continent that the kingfisher does not frequent and where its cheery whir, like the song of the reel, is not heard. Every youthful angler saw one on his first fishing trip, and also learned its name, which fortunately is the same from Florida to Alaska. The Germans call it the icebird, *Eisvogel*, and the name seems inappropriate, although it often remains all winter along the northern coast, near open waters.

Once I cast a minnow for black bass, and some fish struck at it and knocked the bait on top of a lily pad. A passing kingfisher saw it, stopped, hovered and dove. The bird struck the water hard just as the minnow floundered into it, and bore the fish some feet in the air until it learned that its prey was fast to something, when the bird dropped the fish and alighted on a dead limb and scolded away. In fact it always scolds when it misses, and I have been in doubt whether it can spring its rattle with a fish in its bill. By the marks on this minnow the long bill of the bird did not pierce it, but it struck the fish about the middle, leaving a mark on each side.

The kingfisher sizes up its prey and does not take a fish which it cannot swallow whole. It takes the fish head first, after it has seized it crosswise and gone to a limb to swallow it. This I have learned by dissection, for as a fishculturist I was forced to protect my trout fry from a bird which has always been a welcome companion on angling trips. As an angler I loved the company of this cheerful fish, but the business of fishculture is another thing. Prince Hal loved the society of "Fat Jack" while he was merely the heir apparent; when he became king he left the old fellow to die "a-babbling of green fields," and I have always hated King Henry V. for it. Yet every man has two sides to his character, and I have herein shown a sentimental and a business side while condemning a monarch for the same thing. Please do not confound the miserable Falstaff of "The Merry Wives of Windsor" with the real article of Shakespeare's King Henry IV.

The kingfishers nest in holes in the bank, usually under the protecting roots of trees, and the young seem to be able to reject fish bones or to pass them undigested, I don't know which. Nor do I know how the young are fed, whether as pigeons are fed or whether the old takes a fish to the nest and picks it to pieces for the fledgelings. In fact there are many things which we may never know of the life history of wild birds, because we cannot be allowed to intrude upon their privacy.

The Osprey.

This is a large bird of the great family of falcons, which includes the eagles, hawks and kites. Osprey is the correct name of the bird, which is called "fish hawk" in many parts of our country, and not without reason. It ranges almost over the world, and is not confined to America. This fact, in combination with the other fact that the name "osprey" is more universal than "fish hawk," leads me to use the name which is wider known, even if not so descriptive.

Did you ever watch a kingfisher hover at 50ft., dive and strike its prey; or an osprey do the same thing to a larger fish at three times the distance? If you have done this, and have seen these birds take their fish in from 1 to 3ft. of water, you may have wondered at it in an indolent sort of way, and have gone on fishing.

Stop here and think! Put your hand a foot above the water and try to grab a fish that is just below the surface and you will fail. Then consider what the kingfisher and the osprey do at the heights at which they dive, and make a good living at it, and you will marvel how the birds do it with repeated success, while you can never catch even a little minnow in your hand.

The osprey can sail in circles, like all of its class, but it often flies in a direct line with head bent down to scan the waters below. When it sees a fish of the desired size or kind, it hovers, as the kingfisher does, and then like an arrow it dives and rarely misses. Unlike the kingfisher, it emerges from the water with the fish in its powerful talons, and not in its bill, and then wings its way into the woods to feast or to feed its young.

Once while sitting still watching a woodcock boring, an osprey alighted on an oak limb about 20ft. high and nearly that distance away. The woodcock was alarmed and remained without motion; the osprey pressed the fish, which appeared to be a herring or a menhaden, to the limb with both claws and tore its flesh with its beak. I almost held my breath, fearing to disturb the woodcock, which seemed to have become part of the bog in which it had been feeding, but when the osprey left the tree there was a quiet eye that followed its flight for a while, and the woodcock began boring again.

Just sixteen years ago there was a pair of ospreys that had nested for years in the top of a dead tree that stood on the shore of Big Moose Lake, in the Adirondacks. There was no permanent camp there then, and when Jack Sheppard and I entered the lake in June the old birds sailed around us and screamed in a threatening manner. They had either eggs or young and wanted no neighbors of our kind. We stayed at Jack's camp a week and fished; when we left the lake the birds had almost ceased to fear us. Down on the Fulton chain there was a nest and a sign near the carry, "Don't shoot the hawks," for there were heedless fellows who needed such a caution; men who saw nothing in the sailing osprey but a thing to shoot at and to kill. Verily, all the missionaries need not be sent abroad.

The Bald Eagle.

In schoolboy days I had read how the hard-working osprey was robbed of its prey by the bald eagle, which soared above the osprey and waited till it was struggling with a large fish, when the eagle would descend upon its relative and make it drop the fish, which the stronger bird would seize before it struck the water. There was a picture of the scene, but neither of the birds were then on my list of personal acquaintances, and I took no further interest in the fish-earning osprey and the robber baron who despoiled him until I went to Currituck Sound, N. C., to collect fishes for the old aquarium of New York city, and by accident to fish with the Grand Duke Alexis, of Russia, as recorded in FOREST AND STREAM of June 12, 1897.

My boatman was a typical one,, interested only in such things as brought money to his purse, and who wondered at the interest which I took in birds and fishes, which to him were "no 'count." I had watched the gulls, buzzards and other birds, noting their modes of flight, when Jim thought I should have been fishing, for in addition to his pay he was to have all the fish which I did not care to keep alive for the aquarium.

"Hold on, Jim," I called, "there is one of your fish hawks, as you call 'em, hovering over a fish, and I want to see it dive and note if it scores a hit or a miss; I'll pull in the trolling line and not let it get to the bottom, just stop, I can't watch birds and fish at the same time."

Jim rested on his oars, ejected a quid of North Carolina plug and filled his pipe with some fine cut and lighted it. By this time the osprey had delivered itself as a bolt from heaven, and was struggling with what looked like a black bass of at least 6lbs. weight, probably much heavier than the osprey. The bird was laboring hard and rising slowly; when about 20ft. above the water Jim said: "Now yo' watch dat ah white-head eagle up dah in de clouds a-lookin' like a little speck. He see dattah hawk take dattah fish, an' he play he got no interes' in de game, but jess wait till dattah hawk get hees fish up in de yare an' yo' see some fun."

The osprey winged its way laboriously with about all it could carry for some distance without the least sign that the eagle, Jim said it was an eagle, took any interest in the proceedings. The osprey had inclined toward the wooded shore, and when it had wearily attained the height of about 100ft. the eagle paused, hovered, and like a stroke of lightning descended on the osprey with a scream that would have scared many a fisherman with more avoirdupois than an osprey to hold up his hands, and when the fish dropped the eagle had its talons in it before it reached the water, and the osprey screamed a note of thanks that it had escaped with its life.

Next day we were fishing up the Sound and rowed close to a flock of coots, *Fulica*, which Jim called "blue-peters," and we had an argument regarding their edible qualities which ended this way: "Jim," said I, "you have no right to an opinion on the edible qualities of this bird, because you say you have never eaten one and never will eat one. In the West, where they call 'em 'mud hens,' there is the same prejudice, but they are as good as some ducks, try 'em and see for yourself."

"Nossir, I'd go hungry a long time afore I'd eat a blue-peter, but look up in the sky, there's a fellow who likes 'em an' he's goin' to get one fo' his dinner."

There were probably four acres of these coots when we

came near them. When the bald eagle appeared in the sky, even as a speck, these four acres of birds condensed into one acre. They paid no attention to our boat, but every head was turned to one side to watch that "speck" in the sky. Circle by circle the speck came lower, and as it did the excited coots crowded together like sheep. The eagle hovered and the quarry beneath made the water boil by their divings, as they went down by hundreds and came up by thousands. When the eagle made its swoop into the terrified and concentrated flock it took a fat bird for its dinner.

Said Jim: "I don't see what you want to waste time a-watchin' these fish hawks, white-head eagles an' bluepeters a-doin' what they do every day. I see 'em do it an' let it go at that, but I can't never understand you fellers f'om the Nawth that looks to the doin's of beastes, fishes, an' other things. Las' year tha' was a fellow down here who killed snakes an' actilly opened their bellies to see what they'd been eatin', jess 's if it made any difference to him what a snake eats."

Gulls.

I don't know that a gull can catch an active fish, but every bluefish angler watches for a flock of gulls and can tell by their motions if a school of bluefish is feeding below them. When the bluefish strike a school of menhaden and begin chopping them up the far-seeing gulls hasten to the spot at once to pick up the pieces and thus tell the bluefisher where to head his craft. In this way it helps the angler, who, several miles away, cannot see the commotion on the surface of the water. Gulls are scavengers, and should never be shot, they will eat most all refuse thrown from the ship's galley, as well as devour any dead fish they may find. In winter several northern species unknown by name to me come as far south as New York, but our common gull, known as the "herring gull," breeds on the islands at the eastern end of Long Island Sound, and in winter flocks to the harbors when storms rage outside. It is a graceful bird whether on wing or water.

Gulls feed on the flats at low water, perhaps on worms, snails or other life, and I have watched them for hours with a ship's glass to learn what they were after. Crows mingled with them and once I saw a crow and a gull struggling for a large soft clam, and it was fun. They braced back and were kept from falling over by their tails and they pulled. The glass could not determine which bird had the neck of the clam, but it did show that when the clam could no longer bear the strain the gull swallowed something, while the crow flew off to a quiet spot and pecked away at the shells as though there was a portion of the prize left for him. As referee I declared the game a draw, and all bets off. A remarkable thing about this struggle was the absence of interference by friends and relatives of both parties, who were plentiful on both sides, but seemed to take no interest in the struggle.

Our herring gull goes up rivers, frequents the Great Lakes and waters of the Adirondacks, and no doubt breeds there, for it is there during the breeding season. Yet I have seen them in mid-ocean in summer, presumably the same species, where they were at least 1,000 miles from either land or fresh water, and then the questions arose. Do these birds drink salt water or can they go without drink? Can they go as far as that from their nests, or is it only the males which go to sea in summer? Are the gulls which are with us in the morning the individuals which followed us yesterday? If these gulls sleep on the water, what protects them from sharks, porpoises and other hungry creatures? They often rest on the ocean for a while during the day, but do they sleep there at night? And all this shows that there is much that we do not know about gulls.

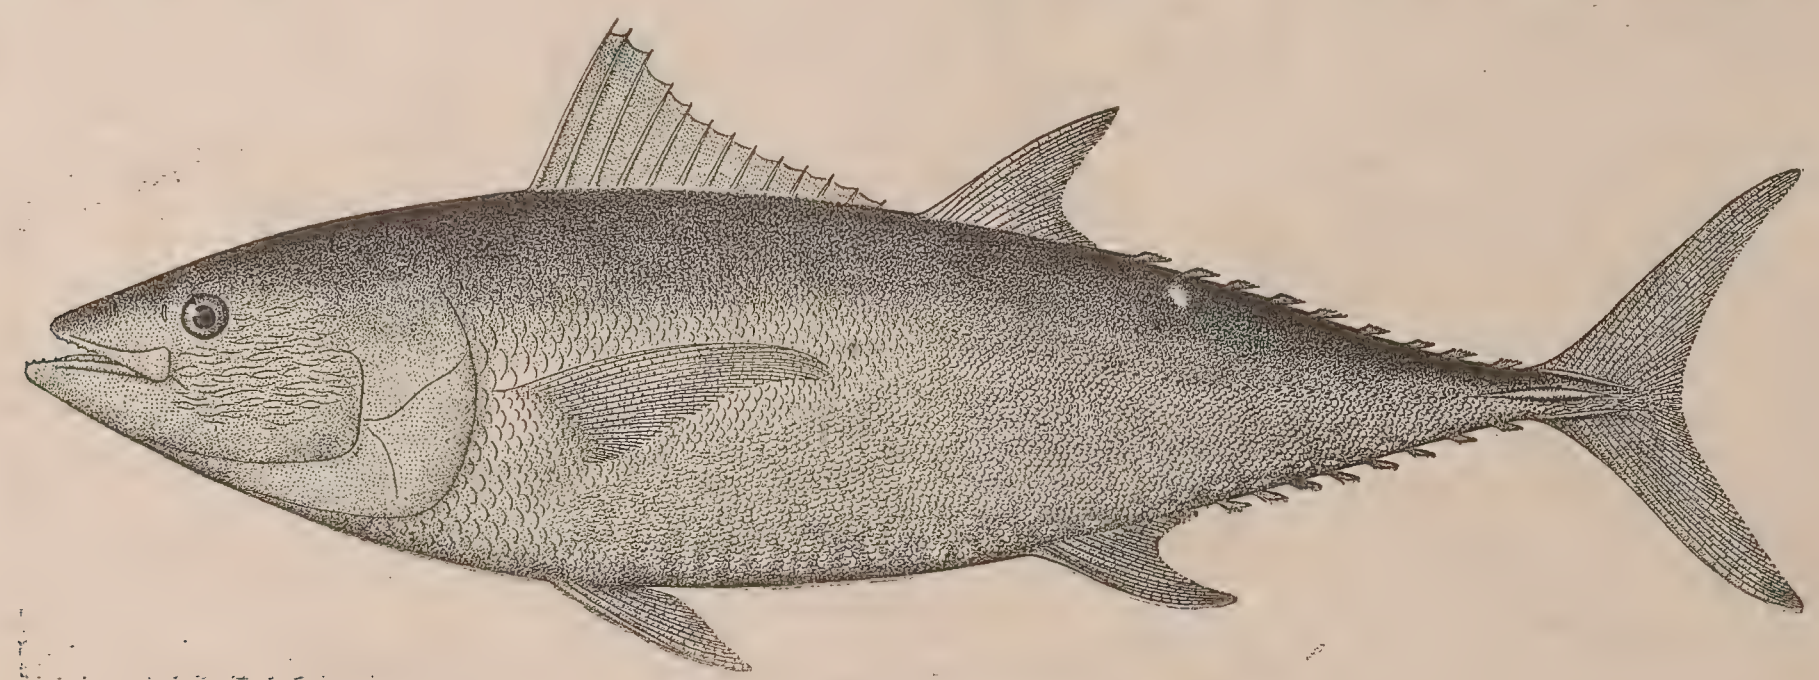
[TO BE CONTINUED.]

Canandaigua Lake Fishing.

THERE is no lake in western New York that affords better sport of this sort. Under the vigilant care of the Canandaigua Anglers' Club the laws against poaching have been rigidly enforced, and as the result of their generous enterprise every season sees the lake enriched by hundreds of thousands of salmon trout, brown trout, and black bass fry. As a result these fine game fish, together with pickerel, perch, and other finny wealth, abound in its waters, and highly reward the skill of the fisherman.

M.

Fishing Near New York.



WEAKFISH are very plentiful in the sound off Rossville and Kreischerville, Staten Island; also large numbers are taken in Raritan River, above the drawbridge. The past week large catches of bluefish have been made off Ward's Point, Tottenville, S. I., by chumming with menhaden.

T. S. A.

Tuna and Tarpon.

NEW YORK, July 1.—*Editor Forest and Stream:* If any angler still denies the justice of my claim, as made in my article in your issue of July 2, that "the tuna is the grandest game fish in the world"; and moreover, if he still maintains that his pet, the tarpon, deserves to be classed *facile princeps* amongst all the subjects for the rod and reel; then both Prof. Holder, the conqueror of the now record tuna, and Mr. O. A. Mygatt, greatest of tarpon fishermen, have both written in vain in the above number of FOREST AND STREAM. But, thanks to Mr. Mygatt, my position is amply sustained. Let any fair minded man read what he has to say concerning the splendid tarpon fishing at Boca Grande (page 5), wherein he recounts how they "bit like catfish"—seemingly being killed about as readily as big catfish too; how "every fish was played squarely to a finish without any help whatever"; and how he made scores on numbers such as were never dreamed of before. Then let such a man turn to page 10 and read what Prof. Holder has to say of the tuna, his habits, and as to the capture of his single fish, a 183-pounder. Result, my assertion is absolutely proven. Whereas my friend, Prof. Holder, a good angler, as I very well know from personal association with him, took four hours to capture an individual tuna; was towed ten miles, and was exhausted at the end of the fight to such an extent that to have fought another such fish would have been an utter impossibility. Mr. Mygatt killed in a single day's fishing, not merely one, nor two, nor a half-dozen, nor even nineteen, but no less than twenty-two of the much-vaunted tarpon! Need I say more? It is hardly necessary, and yet just for form's sake I may add that on May 21, when Mr. Mygatt took only nineteen tarpon—oh, vanished glory of the erstwhile invincible silver king!—six of his fish went well over 6ft. in length. These are no little fellows! Or I might say that on the 26th Mr. Mygatt's companion and friend, "L.," concluded that he had been cruelly treated by the patron saint of all good anglers, and so stopped fishing, in so much as half a day's work yielded him a miserable quota of only fifteen fish. How does this compare with tuna, gentlemen? If either of you will go to Santa Catalina, and camping on the trail of the tuna, rival of your beloved tarpon, make such a record for a day on average fish—to say nothing whatsoever of Mr. Mygatt's great score of twenty-two tarpon—I shall admit not only that the two fish are equal as to game qualities, but that the fortunate angler is the greatest rodster who ever turned a reel handle.

STUART-MENTETH BEARD.

THE TUNA, TUNNY OR HORSE MACKEREL (*Thunnus thynnus*)

From Bulletin of U. S. Fish Commission.

New England Fishermen.

BOSTON, July 8.—Black bass fishing is now in order, and the lakes and ponds in Maine are popular. Good reports come from Cobbosseecontee. H. T. Brown, of Boston, with Mr. Sims, of Gardiner, Me., spent the Fourth at that lake. The weather was intensely hot, except one day, when they made a good record. Charles E. Sanderson and Councilman Farrington, of Boston, have just returned from their annual bass fishing trip to Great Pond, at Belgrade Mills, Me. They had great sport with bass, fishing almost altogether with flies. They caught some bass of good size, and landed many doublets. Mr. Farrington lost his cast on a good sized fish. Later he was casting and got another strike on about the same spot, near the lily pads. He landed his fish that time, and behold there was his leader with flies attached, one of the hooks fast in the jaw of the bass he had just taken. They had fair success with white perch, but caught only a few pickerel. The theory there is the same as at many of the other Maine lakes and ponds: that the bass are destroying the pickerel, while the trout they leave undisturbed. There is mentioned some large trout taken from the Belgrade ponds this spring.

Mr. E. B. Haskell, senior proprietor of the Boston Herald, has also been having his usual success with the bass at Belgrade ponds. He was accompanied by a Newton clergyman on a part of this trip, and they took great numbers of bass, some of good size. Mr. Charles Horbury, of Lewiston, Me., and Mr. Parke G. Dingley, of the Lewiston Journal, were also at the same ponds on a fishing trip last week. Their score was 300 fish, nearly all of good size, varying in weight from 1 to 3lbs. Mr. Horbury is declared to be an expert fly-fisherman for bass.

There has been great sport of late with the bluefish off Nantucket and in the neighborhood of Martha's Vineyard. Off Hyanis some good catches are also reported. Boston professional and business men made up a number of bluefishing parties for over the Fourth. Messrs. Mills, Pratt, Collins and Chamberlain fished off Nantucket the Fourth from one boat. The sport was excellent, with just about the right breeze. They took twenty fish in all; the size running remarkably high, the smallest being 9lbs. and the largest 10½lbs. There were seven boats in all on the bay that day, with a record of 133 bluefish. Mr. Mills says that he did not see any fishermen taking bluefish with rod and reel, though he heard of such fishing being done there.

July 11.—The salmon fishermen are some of them returning. M. C. W. Sias, Harry Olmstead and Geo. Talbott have returned from the St. John, at Gaspe, Quebec. They fished Mr. John Fottler, Jr.'s, river, and Mr. Fottler himself will fish the same this month and in August. They had a grand trip and are much pleased with the river and the surroundings. They took 50 salmon in all. Messrs. Waldron Bates, Dr. C. W. McConnel, Parkman Haven and W. A. Macleod have returned from a three weeks' fishing trip to Big Hole, at the mouth of the Sevogle, on the Northwest Miramichi, New Brunswick. They also fished a couple of days at Square Forks, of Sevogle. The weather was against the fishermen, but they killed 33 salmon in all, the largest weighing 20½lbs. Mr. Herbert Dumaresq, Mr. T. R. Hoyet, Mr. L. R. Howe and Dr. John Bryant are off for the Restigouche on a salmon fishing trip. They are to fish one of the best pools in that celebrated region.

Mr. L. Dana Chapman, corresponding secretary and treasurer of the Megantic Club, has returned from his flying observation and inspection trip to the club's preserve. He found matters in excellent shape, with a good number of members and guests in camp. The new steward of the club is giving good satisfaction. The money expended this year on buckboard roads and trails is showing good results. The Canadian Government has lately put 60,000 salmon trout into Spider Lake, from its hatcheries. The club's own hatcheries are turning out well. From them 90,000 trout have recently been put into the waters contiguous to Big Island Pond. Mr. W. W. Pierce, of Cambridge, has gone to the Megantic preserve for an outing trip. Mr. Charles W. Bryant, with four guests—A. T. Migeon, C. S. Dikeman, W. A. Roraback and J. A. Doughty—left Boston Saturday for a two weeks' stay at the preserve. Dr. T. L. Jack, of Boston, with his friend, J. A. Shaw, of Portland, Me., has been spending a couple of weeks at Big Island Pond. They had good sport with lines and rods. Sportsmen and Megantic Club members will all remember that the open season for fishing closes on the west branch of the Dead River July 20.

Salmon fishing is still reported to be fairly good in Rangeley Lake, Me. Mr. Fred R. Skinner, of Boston, took there last week a salmon weighing 9¾lbs., as well as one of 5½lbs. and 5lbs. Mr. Horace Porter also took one of 4¾lbs.

SPECIAL.

CHICAGO AND THE WEST.

An Indiana Bass Preserve.

My friend, Mr. H. R. Wills, of Alton, Ill., writes me regarding a fishing preserve owned by the Rod and Gun Club of Richmond, Ind., which he says deserves the attention of all anglers of this part of the country. He adds:

"Adjacent to and overflowing into the White River, a pure and limpid stream in itself affording in a wild way many splendid bass runs, is located the preserve owned by the club. W. B. Craighead is president, and C. P. Holton secretary and treasurer, both main promoters of the enterprise. The lake embraces an area of about 30 acres of pure spring water, crystal enough to be declared direct from the Rockies or the Sierras, and the supply is never failing; so for a genuine bass home this is about as near the ideal as could be imagined. The waters are stocked with smallmouth bass exclusively, and the writer had the privilege of his life recently in witnessing the feeding of the beautiful fellows, this through the courtesy of Mr. Holton, who had spoken to him a number of times about the club, but had refrained from making any boastful statements, as he really had a right to do. This particular day, however, a week ago, we drove out and Mr. Holton secured a bucketful of minnows from the river, which we carried to the lake and proceeded to "feed" the rapacious pirates. The first minnow thrown in brought up two recruits, weighing from 1½ to 2½lbs. We fed at this point until we could figure reasonably upon at least 150 of genuine small-mouthed bass in sight, and then moved to a distant part of the lake to feed again, with practically the same result. The place is alive with the beauties, and they only await the angler to give him some merry tussles. No fishing has been allowed for two years, and the club has managed the propagation of their stock in a really scientific manner, which results in magnificent promise for this and coming years' sport.

"Below the main lake they have another, with a large receiving box sunk at the lower level of the drain in the bottom. In this lake is placed all the spawn immediately upon its maturing sufficiently in the upper lake to allow of carriage to the new quarters, where they are safe from being devoured, and where they can grow unmolested to complete maturity, or to a size of self-protection. Then they are transferred to the upper or main lake. This is done by draining the pond down to the level of the big receiving box, in which all the fish are to be found, thus giving a good opportunity to expel everything objectionable that may have accumulated. The upper lake also is arranged to drain in the same manner, if at any times sunfish, catfish and the like should make their appearance.

"The Rod and Gun Club of Richmond should be congratulated upon the success of their efforts to establish a genuine fishing resort. Although beset in the beginning, years ago, by the most discouraging troubles in the shape of washouts, overflows, etc., they have a retreat now from business cares that will make glad the heart of every sportsman that visits the club. The writer has been pretty well over the world, and has seen many fine angling nooks, but never in his life did he see such a beautiful sight to the 'lover piscatorial' as he was privileged to witness at this lake near Richmond."

Would Fence the Earth.

Last week a Kankakee angler was plying his art on the Kankakee River, at Beebetown, when he made a little discovery that may cast light upon the fishing at points above Waldron on that stream. This discovery was that some parties unknown had planted a wire netting clean across the river, cutting off entirely all chance for a fish to get above that point. Add to this the fact that the dam at Waldron has no working fish ladder, and it may be seen that the fish have little opportunity to get up as high as the once famous point of Momence. The enterprise of the man who sunk the wire fence is commendable, and no doubt he would, if he could, like to put a fence around the earth.

Carp.

One morning this week Deputy Ratto, of Chicago, saw a plain, unvarnished wagon jogging along the country roads south of Chicago, and he gratified his idle curiosity by looking into it and discovering nearly a ton of fish, mostly carp, which A. P. Neilson was hauling up to market. They were fish netted contrary to law, and hence the warden took them and gave them to the poor. It's pretty tough to be poor and to have to eat carp.

In the Kern River, California, so say papers of that State, the falling waters have left stranded tons and tons of huge carp, which were trying to get up stream to some place where they could earn an honest living. The carp have been dying in large numbers all along the shallow and dried up reaches.

Manitowish Matters.

Mr. Fay L. Buck, of the Buck resorts on the Turtle and Manitowish chains, owned by Geo. W. Buck & Son, writes me in regard to the current weights of muscallunge noted by themselves and guests. He calls attention to the statements regarding weights of Wisconsin 'lunge made in a recent issue of FOREST AND STREAM, and does not think the average weight is decreasing from year to year. He says:

"We have had this season at our resorts about thirty-five guests, and there have been fifty fish landed that weighed over 14lbs. each, the largest 32lbs., and about twenty weighing from 18 to 24lbs. People do not understand that we are in reach of 120 lakes. To average the catches made, I should say they are as heavy this year as they ever were. Folks don't come up here to ship fish to market to pay their expenses, but keep what they want to eat and let the rest go. July is considered a poor month for muscallunge, but on the first two days of July Mr. Laws and wife, of Chicago, got muscallunge weighing 12, 14, 18 and 25lbs., and plenty weighing from 3 to 9lbs. Pike can be caught by the hundreds, and I can myself take a man on a week's fishing trip and land from 50 to 75 bass each day."

Lower Wisconsin Waters.

The bass fishing in Lake Winnebago and the Winneconne waters has been and still remains very good this season, and in the lower waters of Wisconsin, such as the Waukesha county lakes, the sport has been beyond that of several years past. At the prolific Mukwonago "millpond," one of the best breeding grounds for fish I ever saw, and a place which I first broke into with big success two years ago, great strings of big bass have been caught within the past three weeks. At Phantom Lake, our old camping ground years ago, the big hotel is proving a worse hoodoo this year than ever, having comparatively few guests, but the fishing was good there this summer. At Lulu Lake, near the corner of Walworth county, but few anglers have been out this season, and not many bass are reported. On Lake Beulah a local summer hotel entertained over 500 guests on July 4, to say nothing of the hundreds of cottagers who fled from the cities at that time. Naturally, not the finest of fishing should be expected of a water so popular, yet I hear that some good takes have been made.

The Glorious Climate.

The glorious climate of California always produces things a trifle bigger than can be raised in any other land. Already, as see late issues of FOREST AND STREAM, the State is claiming for itself the biggest and hardest fighting fish that can be taken on rod and reel, so that Florida and her tarpon may hide their diminished heads. Now comes Redondo, California, with the story of a fish fry at a mild sort of Sabbath school picnic in which over a ton of fish was cooked for the multitude. I have heard that there is a State somewhere down East known as Rhode Island, and that it is chiefly famous for its clam bakes and fish fries, but where is Rhode Island's proudest achievement when stacked up against Redondo's ton of fish, fried at one clatter?

For a Thoughtful Man.

The carp is the fish for the thoughtful, peaceful man of quiet habits. Down on the Mississinewa River, in Indiana, they have carp, and consequently not much else. Yet I read that two plain, unvarnished Belgians, whose names I cannot pronounce, last week caught a two-bushel sack full of carp, using for bait nothing more pretentious than cold boiled potatoes. I have never tried cold boiled potatoes as a bait for trout, muscallunge or bass, but I have spent much time and gone to great trouble in procuring such things as I supposed most likely to tempt those fishes, and I can see the objections to such whimsicalities on their part. Now, in order to take cold boiled potatoes for bait, one does not need a minnow seine nor rubber boots. He needs no frog bag nor fly book, nor any perforated tin box for his cherished worms. He does not even need a garden, if his neighbor has a garden. A spade, a wife, a pot and a stove are all the angler needs for his simple equipment in pursuing this hardy and intelligent animal. A few moments of simmering of the bait, which latter is as good for one's children as it is for carp, and the matter is concluded. What man hath not expent $4.13 for luxurious spotted frogs, and carried an umbrella over the same lest they acquire sunburn, and yet after many days of ardent exercise hath had no two bushel sack of fish? Why should one waste tissue in overexertion when for the thoughtful there is at hand the carp, and likewise the cold potato which he craves!

Sportsmen Promoted.

Among the brave fellows at the front in Cuba, where all the good men of America ought to be, and where about all of them want to be, are hundreds of sportsmen whose presence is missed in many parts of the United States. To-day, a most singular state of affairs to recount, the great daily papers of Chicago did not appear. A strike of the stereotypers has tied them up, and all day and to-morrow we will be in ignorance here in this great city, so far as Chicago papers are concerned, of the work of the American rifles in front of Santiago. That it has been accurate far beyond the possibilities of any non-sporting people is to be considered matter of course. The people of the old world will learn something of the stuff used in the manufacture of American soldiers—a material which has never yet failed to stand against the best of old world troops and make them ultimately turn from the American firing line. In these times of anxiety one feels interest in personal friends who may be with the troops in Cuba, or about to be, and this interest is perhaps shared by readers of the FOREST AND STREAM. Thus I note with pleasure the fact that both Mr. Calvin S. McChesney and Mr. Geo. B. Harrison, of Troy, N. Y., whom I mentioned as soon to tell us the story of their sheep hunt in the Rockies, have received military promotion in the Second New York Volunteers, Mr. McChesney to be lieutenant, Mr. Harrison to be quartermaster sergeant. Oscar Guessaz, of Texas, has already received mention in these columns as being a captain in rank. There will be new names before the people when this war is done, and among these will be many names of sportsmen.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

A Ride on a Locomotive.

Editor Forest and Stream:

I have just laid down a copy of a recent issue of your always interesting and instructive paper. In reading the experiences of sportsmen I often find them similar to my own. Mr. Hough describes shooting partridges with the help of a railroad train as a vehicle of conveyance, reminding me of a fishing trip I once took.

Three seasons ago I stopped for a week in Plymouth, N. H., and while there was invited by Dr. H., the fat and jovial practitioner of the town, to go trout fishing with him. By agreement we met at the depot in time to take the train running up the Pemigewassett Valley along the bank of the river by that name. The Doctor had planned to fish in this stream at a point about eighteen miles from P., where I knew there was no station, and I wondered how the Doctor would make out carrying his 230lbs. of flesh from the nearest stopping place, some four miles, to the grounds; but soon I learned he had no intention of walking, for as the train came up to the station I saw him in earnest conversation with the engineer. "The Doctor and I will ride on the front of the engine and when I see a good place to fish I'll swing my hat for you to stop."

This we did, and how the air cut our faces as we flew along the rail. It was my first experience, and it was full of excitement, sitting on the iron platform in front of the boiler, holding on by the hollow iron post which is used to place the signal flag. Objects appeared differently from that point of observation than from a car window. I saw a culvert in the distance coming toward me with frightful rapidity, and as it shot under me I dodged, as it looked as though it would strike me. The Doctor kept his eye on the river, and when he got where he wanted he took off his hat and the train came to a standstill.

We soon got into the river, and succeeded in catching a fair lot of trout, among which was one that actually weighed a pound. I was the lucky one to capture him.

Along toward sundown the Doctor, after consulting his watch, said it was time to make a move, and we got up on the track again. I expected surely to walk to the nearest station, but the weighty M.D. sat himself down upon the rail, saying he "guessed Jo (the engineer) would not run over him." Sure enough, he guessed right, for soon the train came in sight, gave three sharp whistles, then slowed up, and we climbed into the baggage car and shortly we were in Plymouth again.

DOCTOR.

San Francisco Fly-Casting Tournament.

SAN FRANCISCO, July 2.—*Editor Forest and Stream:* At a regular meeting of the club held June 28 it was resolved

"That under existing circumstances of war our proposed tournament for 1898 be and is hereby abandoned, and the secretary be instructed to notify the papers."

HORACE SMYTH, Sec'y.

About Dark Flies on a Light Day.

Editor Forest and Stream:

In the editorial contained in your issue of to-day under the title "Adirondack Fly Casts," you refer at the close to "the well-known rule that dark flies should be used on light days and light flies on dark days," and I know that this is generally regarded as the rule, but is it a correct one?

When I began fishing with the fly between thirty and forty years ago one of the first rules given to me for observance by old anglers was the one which you have quoted, and it was many years before I was inclined to doubt its accuracy, but some fifteen years ago I visited in the latter part of May a small lake in the Catskills abounding in trout of large size, and on the first day of my stay was greeted with a cold, sour northeast storm. I went down to the lake, however, to cast the fly, more for the purpose of going through the motions than with the expectancy of taking any fish.

For a long time I fished exclusively with light flies, and not a single fish arose to the service. I then changed my flies, using very dark ones, and immediately had quite an abundance of rises, and took several very fine trout.

I need hardly say that this experience shook my faith in the rule in question, and since then I have tested its correctness on a number of occasions, with the result that I am inclined to think that trout are quite as apt, if not more apt, to take a dark fly rather than a light one on a dark day.

Is it not a fact that light flies generally abound on a bright day, and that on a dark day such flies, if any, as are brought into being are generally of dark or somber hue, and if it is true that trout are most apt to take flies which resemble or are similar in character to those abounding for the time being on the stream, is it not reasonable to believe that they would be quite as apt, or more apt, to take a dark fly as a light one on dark days?

I think that I can give further reasons for the correctness of my view, but do not care to enter into a discussion of the matter at the present time at least, lest I may stir up the imaginary cynic referred to in your editorial.

J. S. VAN CLEEF.

New Jersey Shore Fishing.

ASBURY PARK, N. J., July 9.—Never has striped bass fishing been more gratifying than at the present time. All along the coast results are most pleasing. Particularly is this true of Deal Beach and vicinity. All along the ocean front an enormous mussel reef extends, and it is fair to presume that this has much to do with holding the striped fellows there. It would be most gratifying were it possible to have an accurate list of the fish taken the past month at the above point. They have been taken at all hours of the day and night, and at all stages of the tide, but, of course, night has given the best results. Weakfish are taking the hook in the surf now, and that adds to the sport, as they are in no manner to be despised. Kingfish have apparently almost entirely deserted the ocean, and are in the bays and rivers, attending to spawning.

I spent a night recently in Barnegat at that most pleasant pastime, weakfishing, and I found the yellow finned fellows there in great abundance, and clad in their best fighting garb. That bluefishing will soon be at its best in the bay is to be inferred from the fact that the waters are literally alive with menhaden; in all my experience there, never have I seen them so abundant. From Harvey Cedars the reports continue to be of the best. Mr. Walter Davis spent the Fourth there, and landed eleven red drum or channel bass, aggregating 240½lbs., besides a fine lot of bluefish, a most remarkable fact, the drum were taken on the squid casting from the beach. Altogether the prospects are of the best all along the line.

LEONARD HULIT.

"Webster Chowder."

OUR correspondent, Jim Mack, who writes to-day of trout fishing in Washington, is like Daniel Webster, in that he can catch fish and cook them too. Webster was not only a devoted and skilled fisherman, but a cook whose chowder was famous. The art of chowder making was perhaps shared as a common inheritance among the farmers of the Massachusetts coast, who were the great statesman's neighbors. The farmers, we are told, "were in the habit of coming seven or eight miles across the country for a day's fishing in the sea. It was customary on their return to the shore to have a chowder cooked. Webster had a stable near his boat house on the beach, which the farmers were allowed to use for their teams. Harvey relates an anecdote of Webster sending fish from his house to a party of these excursionists who were unsuccessful in their sport, that they might enjoy their usual pot of chowder."

In a letter from his home, July 29, 1851, Webster so wrote:

"We went a-fishing yesterday and brought in a good fare; but we did not catch a halibut, nor did we see or hear of a single haddock; there are a few mackerel in the bay, of an uncommonly large size, and we have just had one for our breakfast. Mrs. Webster is making us a nice chowder for our dinner to-day out of a cod-fish, very large and gray, which Mr. Blatchford took yesterday at a quarter past 2 o'clock."

From this it has been inferred that Mrs. Webster was the chowder artist, but there is abundant evidence that to Webster himself is due the credit for the dish which bears his name. This is the recipe as he wrote it for a large fishing party:

"Cod of 10 or 12lbs. well cleaned, leaving on the skin, cut into slices of 1½lbs. thick, preserving the head whole, 1½lbs. clear, fat salt pork cut in thin slices; do the same with twelve potatoes. Take the largest pot you have, try out the pork first, take out the pieces of pork, leaving in the dripping; add to that three parts water, a layer of fish so as to cover the bottom of the pot, next a layer of potatoes, then two tablespoonfuls of salt, one teaspoonful of pepper, then the pork, another layer of fish, and the remainder of the potatoes; fill the pot with water enough to cover the ingredients, put it over a

good fire. let the chowder boil twenty-five minutes; when this is done have a quart of boiling milk ready and ten hard crackers split and dipt in cold water, add milk and crackers, let the whole boil five minutes, the chowder is then ready and will be first rate if you have followed the directions. An onion is added if you like that flavor."

Chicago Fly-Casting Club.

CHICAGO, July 9.—*Editor Forest and Stream:* The regular meeting of the club was held to-day, with scores as follows:

	Long Distance Fly, Feet.	Distance and Acc'y, Per Cent.	Bait Casting, Per Cent.
J D Belasco	...	....	86 2-5
I H Bellows	110	90 2-3	98 1-5
B W Goodsell	108	93 1-3	73 2-5
H G Hascall	107	86 2-3	97 3-5
E R Letterman	...	61 1-3	93
C A Lippincott	...	....	96 3-5
C G Ludlow	101	79 2-3	92 1-5
G A Murrell	...	75 1-3	97 1-5
H D Osgood	...	74 2-3	....
F N Peet	118	89	88 1-5
H W Perce	...	64	96 2-5
E A Renwick	101	66 2-3	83

J E Strong	93	....	95 2-5

Holders of Medals.—Long distance fly, F. N. Peet; distance and accuracy, B. W. Goodsell; bait casting, I. H. Bellows.

Canadian Angling Resorts.

UNDER the title of the "Anglers' Guide to Eastern Canada," Mr. E. T. D. Chambers, editor of the Quebec Morning Chronicle, has prepared a concise and comprehensive manual of directions for reaching the salmon, trout, ouananiche and bass waters of Quebec, Nova Scotia, New Brunswick and Newfoundland. A large share of the material has been drawn from the author's personal experience on the waters described, and special pains have been taken, Mr. Chambers tells us, to verify all statements, so that the guide may be absolutely depended upon. The book is a model of plain and clear statements, and will serve the purpose admirably. Mr. Chambers should add an index to the next edition. The price is 25 cents.

Fishing at Charleston Lake.

CHARLESTON, Ont., July 2.—Salmon fishing in shallow water is about over. Dr. Brown, Dr. Denison, J. J. Roberts, V. A. Harder and W. H. Loomis had extra good luck, in three days capturing ninety-five salmon averaging from 4 to 10½lbs.; the last was caught by Mr. Loomis. Dr. Alexander and E. T. Foster landed a salmon weighing 17¾lbs.

Bass fishing is just opening in this lake. The guests at Cedar Park are having rare sport. Capt. Adams, Geo. Madole, Fred Roblin, J. Canfield, D. P. Hanthaway and W. S. Silver left a few days ago, having had some fine sport black bass fishing. A 4lb. small-mouth was gathered in by Mr. Roblin. W. H. LEAVITT.

Fishing Resorts.

WE shall be glad to give information respecting desirable fishing resorts to any reader of FOREST AND STREAM.

The Kennel.

Fixtures.

Sept. 7.—Manitoba Field Trials Club trials. William C. Lee, Sec'y, Winnipeg, Man.

Sept. 12.—Northwestern Field Trials Club's Champion Stake, near Winnipeg. Thos. Johnson, Sec'y.

Nov. 7.—Indiana Field Trials Club's trials, Bicknell, Ind. W. H. Dye, Sec'y.

Nov. 11.—Eastern Field Trials Club's trials, Newton, N. C. S. C. Bradley, Sec'y.

Nov. 15.—International Field Trial Club's trials, Chatham, Ont. W. B. Wells, Sec'y.

Dec. 5-6.—Missouri Valley Field Trial Club's trials. C. H. Werner, Sec'y.

Dec. —.—Continental Field Trial Club's trials, Lexington, N. C. W. B. Meares, Sec'y.

A Coon Hunt Mystery.

CONNECTICUT.—*Editor Forest and Stream:* The rattle of the last washed dish, as it was deposited in its individual pile, had ceased to echo through the kitchen of the farmhouse. The large combination wood or coal burning stove diffused throughout the room a grateful heat, for it was autumn and the evening air was filled with a decided chill. In the center of the dining table a shaded lamp cast its not over effulgent rays into every corner. Excepting the occasional snap and crackle which emanated from the cheery applewood fire that burned in the interior of the stove, or the rhythmical purr of the large gray and wite Thomas cat who disported his generous proportions in lazy gracefulness before the fire, a perfect quietness pervaded the room; not that it was devoid of human presence, for there were five of us there. Excepting the young man who manipulates the chores and does other necessary work about the farm, and who lay, with half-closed eyes, on the lounge, watching the hazy rings which arose from his corncob pipe, each individual was industriously extracting knowledge and pleasure from the pages of FOREST AND STREAM and other periodicals.

Such quiet, peaceful surroundings are apt to produce in a tired person a feeling of drowsy languor, from which it is but a step to drop into the land of dreams. I was nodding and about to take that step when suddenly out on the road there arose the noisy clatter of rapidly-approaching wheels; soon a wagon dashed up to the front of the house and stopped; then a voice was heard to say: "I wonder if this is the house? You go and ask, anyhow. There will be no harm in asking."

"Oh, I guess this is the place right enough," answered another voice, "they said we would find a bull terrier chained out south of the house, and if that cuss making all the noise isn't the gentleman I'll eat him."

Our bull terrier Ben, who has been one of the family for over seven years, and who is extremely jealous of any intrusion by strangers on our domains, was on the verge of strangulation owing to his wild endeavors to break his chain in order to form their close acquaintance.

Footsteps were now heard rapidly advancing up the walk. Presently a loud knock rang out on the side door. As I opened it the full, round October moon revealed a tall, young, 6ft. stranger, who inquired: "Does Mr. Avis live here?" "I am that person," I answered, "what do you wish?"

"We are members of the New Haven Coon Club," he answered. "Brooks told us if we would come out some night he would go on a coon hunt with us. We called at his house to-night, but Brooks was away. Say! won't you come with us for two or three hours?" he asked persuasively. "Brooks' folks said we might get you to go."

Now I didn't feel much inclined to go coon hunting that night. I was tired and sleepy. "But then," thought I, "these persons have come all the way from New Haven to indulge in a few hours' recreation. If they should be compelled to return without engaging in their hunt they would be grievously disappointed. It is in my power to accommodate them, so I guess I'll do it."

"Hadn't you and your friends better come in and warm yourselves while I get ready?" I asked.

"No, thank you," he answered. "We're not cold. We'll wait outside for you."

"Who is it?" asked my wife, as I entered the room.

"Oh, it's a party that want me to go coon hunting with them," I answered.

"Going?" inquiringly.

"Guess I'd better; don't you think I had?" I answered.

"It's a fine night," she said, as she glanced out of the window at the big, bright moon, "you're foolish if you don't go. If it wasn't for leaving the children, I believe I'd go too!"

This conversation had the effect of thoroughly awaking Sam, the farm hand. When my wife jokingly suggested that it would be beneficial to his health if he would get out and exercise himself, he decided to go along. Ten minutes later the bright moonlight would have revealed to a chance observer a grotesque appearing party of five bipeds and one quadruped as they took their way down the road and across the fields in the direction of the nearest corn patch. One carried a lantern, while two others carried shotguns. A fourth was armed with an axe, while the fifth was content to carry a pair of creepers such as telegraph linemen use. The sixth member of the party, the quadruped, trotted contentedly along in the rear.

The corn patch, which we were not long in reaching, was bordered on the west and south by an extensive swamp. Huge maple, chestnut, oak and hickory trees reared their towering forms above the swamp's gloomy shadows.

When we had arrived at the southern end of the corn field, after scrambling and struggling through the swamp, the dog, a black and tan hound and a famous coon dog, was sent ahead to investigate.

We lay expectantly awaiting results on the edge of the swamp where the moon cast the deep, somber shadows of the trees on the ground. Conversation was carried on in cautious, subdued whispers lest we might frighten away any game that might be about. We lay in this manner for fully half an hour, then, as the hound had given no sign of game, he was called in and we started across the swamp in the direction of another cornfield on its western edge.

We floundered around in the swamp for what seemed an hour. I had been made the butt of much ridicule and many jibes as to my guiding abilities, when we finally emerged in a cornfield. Now it was my turn to be funny, so I sarcastically remarked that "nobody fresh and green from the city could understand the first principle connected with the finding of one's way through the trackless forest, especially at night." I had proceeded thus far when my words came to a sudden stop. Surely there was something wonderfully familiar about this place. There to the south arose a fringe of giant trees. Its western edge too was deeply bordered with trees. The old moon seemed to wink and indulge an expansive, silvery grin; a burst of rollicking, derisive laughter awoke the sepulchral echoes of the tomblike swamp. After parading those fellows through the mud and briers of the swamp for fully an hour, I had awkwardly succeeded in conducting them back to the very corn patch from which we had started. Surely my best hold was not "guiding parties through the 'trackless forest,' especially at night." This experience demonstrated how easy it was to lose one's way in the woods, even when those woods were familiar and near home.

Well, they were a jolly, good-natured crowd, and seemed to derive as much enjoyment from my discomfiture as they would had a coon been started; it was voted, therefore, that I should try it over again.

This time I succeeded in striking within half a mile of where I aimed. As we emerged from the swamp the hound was sent away and it wasn't long before his mellow music was leading us a merry chase over the silvery flooded landscape. Across the open fields and through brambly patches of blackberry and other prickly vines; over a silvery, ribbon-like stream, the lisping waters of which tremulously reflected, in their nervous, shallow depths, "Luna," the fair "Queen of Night." On and on, under canopied forest arches whose wealth of autumn colors showed even in the moonlight; into enchanting dells, where one almost looked for fairy bands; through open fields lavishly scattered with glimmering frost jewels. Surely it seemed we were in a land not of this earth.

We had followed the hound in this manner for perhaps two miles, when suddenly his music ceased. How to account for this strange action on his part puzzled us considerably. We whistled, then listened, but whistle and listen as we would, he gave no sound to indicate where he was.

"Well, this beats me," remarked H., his owner, after whistling and calling for fully ten minutes. "I never knew him to act like that before."

"Nor I either," said another of the party.

"It's something new for him; I hope he hasn't fallen over one of those ledges over there and been killed."

"Oh, don't worry about him; he's all right, and I'll bet he is," said a third member confidently.

"It may be that he has been running a fox or rabbit and has holed him," remarked the second speaker.

"No man ever knew that hound to notice any game but coon," rejoined the dog's owner. "Besides, when he trees or holes his game he always barks up," with these words he raised his voice and started the echoes once more.

After listening intently for awhile longer, it was decided to start in the direction where we had last heard him. This led us directly toward a line of nearly abrupt, ledgy cliffs, fully 200ft. in height.

When we arrived within about 500yds. of the base of the ledges we stopped under a giant oak that stood on the edge of a field where buckwheat had been raised. No sound broke the stillness of the night. Not the faintest zephyr's sigh breathed through the inanimate leaves and branches overhead. The soft moonbeams sifting silently down through the wide-spreading branches of the tree portrayed their forked outlines in fantastic shapes upon the frosty ground. The towering ledges, under "Luna's" soft flood of light, stood out to sight as plainly as they would had it been midday. Here and there in the clear vaulted heavens a ghost-like star, paled by the light of the moon, struggled to be seen.

"How beautiful," the words were almost whispered by one of the party, yet they seemed too loud in that place.

"We never get a treat like this in the city," said H., turning to me. "I wish we knew what has become of the dog though," he continued, as thoughts of the hound came into his mind.

"Oh, I think he'll—" I never finished the sentence, for my words were cut short by a cry that seemed filled with the bitterest agony; a cry that cut the frosty air like a knife; that sent chills up and down some of our spinal columns and caused us to stare into each other's faces in blank amazement; from the side of the ledges it came and it rolled away in ghoulish echoes along the semi-mountain side.

"For God's sake, what was that?" hoarsely whispered H. as he grasped my arm.

Before I had time to answer the cry was repeated; shrill, piercing, quavering, it ended in a prolonged, choking sob that resembled the long-drawn cry of h-e-l-p. It was suggestingly human.

"That's a panther, and I'll bet he has killed and eaten the dog!" excitedly whispered the 6-footer.

"I don't think it's a panther. A panther yells altogether different from that," said the fat man of the party. "I'll be hanged if it don't sound just as bad as a panther, though," he added nervously as another cry issued from among the rocks.

"I think it's a lynx, one of those bob-tailed wildcats with tassels on their ears," said the quiet man. "I heard one up in northern New York State once and it sounded something like that."

"I wonder do ghosts ever go around bellerin' that way," remarked Sam, the farm hand, as he gave me a sly wink.

"Ghosts! Who believes in—oh—ho—Lord! There it goes again!" shiveringly gasped the fat man; he was growing more and more nervous.

"Let's get out of this, I've had all the coon hunting I want. I'm going home!" declared the 6-footer, who now looked ready to run for his life.

At that moment we were startled by a rustling in the brush near by. Those who had guns grasped them firmly, while those who were unarmed showed unmistakable signs of a nervous desire to precipitately retire from that neighborhood. There was no occasion, however, for alarm, for just as that mysterious cry welled forth from the ledges once more, the old hound trotted up to us from out the bushes.

Six or eight times the cry pierced the frosty air. To say that it was one of the wierdest experiences I ever met in the woods is to but tell the truth. The very conditions under which we heard it but added to its wierdness. The moonlight covering the earth like a blanket of silver; the frost shimmering from every spangled object; the deep shadows of the trees; the intense stillness of the night, broken at intervals by that wild cry, and the subdued whispers of our party, all these conducive influences were naturally productive of wierdness. Although we were but nine miles from the center of a large city, still that section is very wild. It can be safely said that twenty persons a year do not visit those ledges.

It was suggested by one of the party that an effort be made to induce the hound to track whatever caused the cry. When we tried to get him to investigate, however, while he showed no actual fear, still in his polite, canine way, he declined to take part in any such arrangement. When told to "Go find 'em," he turned his head toward the place from which the cry emanated, but always kept his eyes on the person who extended the invitation to "Go find 'em," then, with his tail industriously wagging, he would sit down and look up into our faces, as much as to say, "I'll hunt coons all night long, but what-is-its are out of my line of business."

What caused the cry we probably never will know. Sam, the farm hand, and myself went (not without some misgivings, I confess) the next night to that spot among the ledges from which the cry had seemed to emanate. We waited until after 12 o'clock, but saw nor heard nothing. It is needless to say that our shells contained buckshot.

Some time after our adventure a crazy man was taken into custody who had been running more or less at large in the woods that summer and fall. As he was captured within three or four miles of where we heard the cry, I have always wondered if he was in any way connected with it. Thus ends the story of our memorable coon hunt.

As I expect to engage in a number of coon hunts this fall, I hope in the near future to send FOREST AND STREAM an account of a hunt in which the returns in the capture of game will be more satisfactory than they were on the hunt when we heard that mysterious cry.

WILLIAM H. AVIS.

Manitoba Derby Entries.

WINNIPEG, July 7.—*Editor Forest and Stream:* The Manitoba Field Trials Club Derby entries closed on July 1, and consist of sixteen setters and fifteen pointers, thirty-one in all, as per enclosed list:

Bang, black and white pointer dog, May 5 (Rector—Dinah II.), A. Code.

Manitou Spot, black, white and tan English setter dog, Jan. 27 (Val Lit—Cam Sing), John Wootton.

Rule Britannia, black and white English setter bitch, Jan. 27 (Val Lit—Cam Sing), John Wootton.

Buckshot, black, white and tan English setter dog, Aug. 23 (Duke of Manitoba—Bonnie Lit), John Wootton.

Trapper, black and white English setter dog, Aug. 23 (Duke of Manitoba—Bonnie Lit), John Wootton.

Hope's Lil, liver and white English setter bitch, March 3 (Hope's Ridge—Silver G.), Mira Monte kennels.

Stampede, black, white and tan English setter dog, February (Dash Antonio—Belle of Detroit), Mira Monte kennels.

Flyaway, black, white and tan English setter bitch, May (Dash Antonio—Patty B.), Mira Monte kennels.

Silver Lace, black and white English setter bitch, July, '97 (Val Lit—Cam Sing), E. McKenny.

Jubilee Queen, liver and white pointer bitch, Feb. 6 (Alberta Joe—Diana II.), Thos. Johnson.

Jubilee King, liver and white pointer dog, April 5 (Lonsdale—Fez), Thos. Johnson.

Jubilee Prince, black and white ticked pointer dog, May 5 (Rector—Dinah), Thos. Johnson.

Jubilee Princess, black and white ticked pointer bitch, May 5 (Rector—Dinah), Thos. Johnson.

Jubilee Flo, black English setter bitch, March 4 (Little Billee—Belle W.), Thos. Johnson.

Jubilee Blithe, liver and white ticked pointer bitch, May 5 (Rector—Dinah), Thos. Johnson.

Rattle, black and white pointer dog, March 1 (Bang—Duchess), Joseph Lemon.

Fritz of Zippo, black, white an ticked English setter dog, March (Zippo II.—Lady of Glass), Wm. Elliott, agent.

Up-to-Date, orange and white pointer dog, Jan. 2 (Royal Bill—Siscane), Elliott and Ewing.

Button-hole, black and white English setter bitch, Jan. 27 (Val Lit—Cam Sing), Winnipeg kennels.

Young Buster, liver and white pointer dog, April (Lord Buster—Mingo Kent), B. Gordon.

Rob Roy, liver and white pointer dog, July 27 (Adamsons—McEwen), Dr. W. S. England.

Mogul, black and white pointer dog, May 5 (Rob—Heatherbelle), Charlottesville Field Trials kennels.

Warlock, black and white pointer dog, January (Rip Rap—Edna), Charlottesville Field Trials kennels.

Nana, liver and white pointer bitch, June 9 (Rip Rap—Laxic), Charlottesville Field Trials kennels.

Hindoo, liver and white pointer bitch, June 9 (Rip Rap—Taxic), Charlottesville Field Trials kennels.

Ranee, black and white pointer bitch, June 9 (Rip Rap—Taxic), Charlottesville Field Trials kennels.

King, black, white and tan English setter dog, Jan. 5 (Duke of Manitoba—Maid of the Morn), W. F. Ellis.

Exasperator, black, white and tan English setter dog, April 29 (Duke of Manitoba—Dora M.), W. F. Ellis.

Hootalinqua, black, white and tan English setter dog, April 29 (Duke of Manitoba—Dora M.), W. F. Ellis.

Busy Bee, black and white English setter bitch, March 11 (Val Lit—Atlanta), Chimo kennels.

Valet, black and white English setter dog, March 11 (Val Lit—Atlanta), Chimo kennels.

WILLIAM C. LEE, Sec'y-Treas.

International Derby Entries.

THE entries for the Derby stakes of the International Field Trials have all been handed in to Secretary W. B. Wells, and are exceedingly full and promising. It is the largest entry list since '94.

The trials this fall will be at Mitchell's Bay, where birds are reported to be very plentiful, and there is every prospect for a successful meet.

The time for the closing of the entries for the all-age stake is not until Nov. 1, but already numerous entries are nominated, and interest in the contests is very keen. The executive committee of the association will meet shortly to select the judges and transact other preparatory business. The following is a full list of the Derby entries:

ENGLISH SETTERS.

Tickler (Duke—Puss), T. C. Stegman, Toronto.

Rods Clip (Rodfield—Latonio), J. R. McGregor, agent.

Blue Bonnet (Dash Antonio—Nelly Breeze), Jas. B. McKay, Detroit.

Selkirk Romona (Selkirk Dan—Selkirk Tessa), W. B. Wells, Chatham.

Selkirk Freda (Selkirk Dan—Selkirk Tessa), W. B. Wells, Chatham.

Selkirk Stella (Selkirk Dan—Selkirk Tessa), W. B. Wells, Chatham.

Selkirk Bretta (Selkirk Dan—Selkirk Tessa), W. B. Wells, Chatham.

Selkirk Max (Selkirk Dan—Selkirk Tessa), W. B. Wells, Chatham.

Bird of Freedom (Dash Antonio—Gaiety Girl), H. Marshall Graydon, London.

Golden Gate (Dash Antonio—Gaiety Girl), H. Marshall Graydon, London.

Merry Hampton (Dash Antonio—Gaiety Girl), H. Marshall Graydon, London.

London Boy (Roy of London—Fanny), J. W. Humpidge, London.

Doctor Jim (Roy of London—Bessie), J. W. G. Winnett, London.

Jubilee Vic (Roy of London—Bessie), J. W. G. Winnett, London.

POINTERS.

Beau Ideal (Bedowin—Lady Rip Rap), J. R. McGregor, agent.

Norwood (Bedowin—Lady Rip Rap), Dr. Totten, Forest.

Bessie (Brighton Joe—Girl of Kent), T. G. Davey, London.

Cousin Peggie (Uncle Sam—Beppo's Mollie), Leamington Pointer kennels.

W. B. WELLS, Hon. Sec'y I. F. T. C.

Stock-Tending Instinct.

A CORRESPONDENT writes: "You will remember that Mrs. Annie E. Preston some time since asked in FOREST AND STREAM if dogs were ever given away, and my undertaking to supply her one. After considerable delay, I sent her a puppy, crossbred between a Yorkshire and rough-haired black and tan, and she writes me the inclosed letters about him. He must be something over eighteen months old now, and what is striking about him is his development of instinct for caring for animals, as in his selecting Mrs. Preston's cow, driving strange chickens off the place, etc. This is a characteristic almost entirely confined to the sheep dogs—collies and bobtails—and I never heard of a terrier developing it; their mastering instinct is for vermin killing, directly antagonistic to the stock tending instinct."

Mrs. Preston writes: "As you said, his mixed ancestry is apparent, but he must have the good points of all his predecessors. He will do anything that he understands, shakes hands, rolls over, begs, catches, sometimes speaks and jumps; a rubber ball is nothing to him. He makes himself useful as a watch dog—tramps keep shy of the premises—but he never even growls at our friends. He sends the neighbors' hens kiting. The other day he discovered a flock of brown Leghorns in the yard (ours are all barred Plymouth Rocks), and away he went. One he drove into a tree, one to the roof of the piazza, another across the street into the ladies' sitting room. He came back happy, with his mouth full of feathers. He goes to the pasture for the cow every night, separates our Jersey from the herd, and brings her to our bars, at the top of the hill, while the others go to the barn of a neighbor a half-mile away. And so important as he is over it; he fairly laughs."

"Penny's first exploit was in hunting up a flock of Plymouth Rock fowls that had strayed away into the woodland beyond the orchard one day last autumn. We were wondering what had become of them and called them, when away went Penny like a flash, and soon we heard him barking in a thicket on the edge of the wood. Following him we found he had the truants all huddled together, and he then proceeded to drive them to their quarters.

"A few days later, the cow, a most capricious creature, hid herself in a little nook behind some rocks in the orchard, and when we called her he went and found her. He has since kept it up, and as soon as she was turned out to pasture this spring he went for her every night. Now he only barks when he finds her and if she refuses to come to the bars. He drives her quietly if she behaves properly. He keeps our fowls at home and off the flower beds instinctively, and the neighbors' fowls at home."

Lost Fox Terrier.

GUELPH, Ont., July 1.—I wish to know if you would put the following in as a local, so that all your subscribers would take notice of same, as I am led to believe that a great number of stolen dogs has been recovered in this way, as all sportsmen are endeavoring to put a stop to the contemptible manner which some people have in procuring a good dog:

Stolen on March 16, fox terrier dog, eight months old, black head, white body, one side of neck black half-way. Answers to the name of "Sting." Any reader will confer a favor on a brother sportsman by advising me any information with regard to the above. Address R. H. RODGER, Guelph, Ont.

Points and Flushes.

Mr. T. Farrar Rackham, who has been long and favorably known as Spratts Patent traveling representative, will start on his regular trip through the South and West with Spratts new line of medicines, or rather the old medicines in a new and more convenient form. Many of the medicines are prepared now in the form of tablets, capsules and ointments, thus being more convenient to handle in every way, while retaining their efficacy unimpared. All remedies are in amber glass bottles, the cork covered with airtight capsule, and the whole wrapped in transparent parchment paper. In the list of medicines in the new form are tonic and condition tablets, distemper tablets, alterative cooling tablets, anti-ricket tablets, eye lotion tablets, jaundice cure tablets, vermifuge capsules, sprain and rheumatism liniment, hair stimulent ointment, eczema cure, two kinds of mange cure, cough pills, etc. They have perfected a new preparation whose merits they extol highly, their veterinary antiseptic soap, which may be beneficially used as an antiseptic and germicide, and may be used alike with curative results on man or beast in cases of cuts, bruises, skin diseases, etc.; and in cases of mange in the dog, and obscure skin diseases in general, it is said to be wonderfully efficacious. Mr. Rackham, besides being a skilful judge, bench show and poultry show manager, is quite expert in medicines.

MR. JOS. W. IRWIN, of Little Rock, Ark., writes us that his setter bitch has raised four dog and three bitch puppies. He says: "They are beauties, and I expect great things of mine. I have divided them with my friend, Judge Guinotte, of Kansas City. I have quite a string now of pointers and setters and Chesapeakes, all good ones. I hope next year to enjoy some fine sport. Last year quail were not plentiful in this section, but I hope for better results this year."

Keep in mind that entries of the Continental Field Trial Club close positively on Aug. 1. The purse is $500. The trials will be held on grounds at Lexington, N. C., Dec. 5. Lexington and Newton, N. C., are but a few hours apart, so that the E. F. T. C. trials and the C. F. T. C. trials can be attended without extra travel and with insignificant extra expense. Write to Secretary W. B. Meares, Hillsboro, N. C., for the club's artistic brochure, which contains a list of the club's officers and the stakes and their conditions.

Answers to Correspondents.

No notice taken of anonymous communications.

C. de L. B., Amherst, N. S.—Kindly tell me through the columns of your valuable paper where I can get carp fry and the probabilities of receiving it safe in Nova Scotia. Ans. Carp fry may be had in this city (of Mr. E. G. Blackford, Fulton Market), shipped in cans at a cost of $10 per hundred and $2 for the can (a can will carry fifty carp), and the fish will go safely a four days' trip.

Poster, Ellenville, N. Y.—The provisions for posting private game parks are as follows in the New York game law; we omit the penalty clauses:

Sec. 210. No person shall trespass upon inclosed or cultivated lands for the purpose of shooting or hunting any game, or taking any fish from private ponds or streams, after public notice has been given by the owner or person entitled to the exclusive right to shoot or fish thereon, as provided in this article.

Sec. 211. The notice provided for in the last section shall be given by maintaining signboards at least one foot square upon at least every fifty acres of the premises sought to be protected upon or near the lot lines thereof, or upon or near the shores of any waters thereon, in at least two conspicuous places, or by personal service of a notice containing a brief description of the premises and name of the owner or of the person having the exclusive right to shoot, hunt or fish thereon, and prohibiting the same.

Sec. 212. A person owning or having the exclusive right to shoot, hunt or fish on lands, or lands and water, desiring to devote such land, or lands and water, to the propagation or protection of fish, birds or game, shall publish in a newspaper printed in the county within which such land or lands and water are situate a notice, once a week, for a term not less than four weeks in the county where the lands so described are situated, substantially describing the same and containing a clause declaring that such land or lands and water will be used as a private park for the purpose of propagating and protecting fish, birds and game.

Sec. 213. There shall be posted and maintained upon such private territory notices or signboards, not less than one foot square, warning all persons against trespassing thereon. Such notices or signboards shall be placed not more than forty rods apart, along the entire boundary of such private territory, when the same shall consist entirely of land, or when it shall consist of both land and water they shall be placed so that there shall be at least one notice or signboard for every hundred acres thereof. When the private property consists of a lake, pond or stream only such notices shall be placed in at least four conspicuous places on or near the shore of such lake or pond, and one of such notices shall be placed on every half-mile of such stream in a conspicuous place on the bank thereof.

Sec. 214. When such territory or any part thereof is fenced, notices or signboards shall be placed on or near such fences not more than forty rods apart.

Sec. 215. Upon compliance with the foregoing provisions for preventing trespassing or for devoting lands to propagation of fish, birds and game, no person shall disturb or interfere in any way with the fish or wild birds or wild animals while on the premises so protected, except with the consent of the owner or person having the exclusive right to shoot, hunt or fish thereon.

Rifle Range and Gallery.

A Remarkable Score.

MR. G. H. HAULENBEEK, of New York, sends us the cut of a target, concerning which he writes: "You will doubtless be interested to know of the wonderful score recently made by Mr. Z. C. Talbot, one of the members of the Smith & Wesson Revolver Club. With a 10in. barrel, single shot, .22cal., at 20yds., he scored a very high score—99."

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

July 13.—Albany, N. Y.—Forester Gun Club's annual tournament; targets. H. H. Valentine, Manager.

July 15.—Poughkeepsie, N. Y.—Trophy shoot, Hudson River Trap-Shooters' League, on the grounds of the Poughkeepsie Gun Club. J. B. Rogers, Manager.

July 19-20.—Atlanta, Ga.—Two days' shoot of the Fulton Gun Club; targets. J. E. Avery, Sec'y.

July 19-21.—Palmyra, Mo.—Eight annual tournament of the Missouri Amateur Shooting Association, under the management of the Palmyra Gun Club. Targets and live birds. Added money announced later. W. N. Bates, Sec'y.

July 23.—Ogden, Ill.—Ogden Gun Club's third annual tournament for amateurs. Wm. McKinley, Sec'y.

July 26.—Brooklyn, N. Y.—Tournament and clam bake of the Hell Gate Gun Club.

July 26-28.—Little Rock, Ark.—Eighth annual tournament of the Arkansas State Sportsmen's Association, $500 added. Paul R. Litzke, Sec'y.

July 27-28.—Meriden, Conn.—Tournament of the Interstate Association, under the auspices of the Parker Gun Club. C. S. Howard, Sec'y.

July 29-31.—Milwaukee, Wis.—Milwaukee Gun Club's tournament. S. M. Du Val, Sec'y.

Aug. 3-4.—Worcester, Mass.—Tournament of the Worcester Sportsmen's Club. Targets.

Aug. 4-6.—Baltimore, Md.—Ocean City midsummer tournament; two days at targets; last day at live birds. James R. Malone, Manager.

Aug. 10-11.—Duluth, Minn.—Central Gun Club's sixth annual tournament; targets. E. C. Maxfield, Sec'y.

Aug. 11.—Marlborough, N. Y.—Trophy shoot, Hudson River Trap-Shooters' League, on grounds of Marlborough Gun Club, J. B. Rogers, Manager.

DRIVERS AND TWISTERS.

The programme of the Hudson River Trap-Shooters' League tournament, to be held on the grounds of the Poughkeepsie Gun Club, Poughkeepsie, N. Y., on Friday of this week, has ten events, at 10, 15 and 20 targets, with a uniform entry of $1, with an additional sum for targets at 2 cents each. The average money, $15, will be divided into five parts—$5, $4, $3, $2 and $1. Targets furnished free to manufacturers' agents. All purses divided by the Rose system. Shooting begins at 9 o'clock. The team race will be called at 1 o'clock. This contest is for the American E. C. & Schultze Powder Co. trophy, the conditions of which are five-men teams, each man shooting at 25 targets; the team making the best average during the season to become the owner. The King Smokeless Powder trophy, for the shooter making the highest score each month, ties to shoot off at the end of the season. The United States Powder Co. presents thirty-five 1lb. cans of Gold Dust, eight cans to go to the eight high guns in the programme event.

The Sherbrooke Gun Club, Sherbrooke, P. Q., has fixed its next tournament for July 1, 1899. It holds a shoot every Saturday afternoon, and extends an invitation to visiting trap-shooters to participate with the members in the sport. Its amateur tournament on July 1 was a pleasing success, as will be noted by reference to the excellent report of it published in these columns. Messrs. J. H. Cameron, of the Winchester Repeating Arms Co., and B. H. Norton, of the Hazard Powder Co., were the only trade representatives in attendance, and the report indicates that they did excellent work for their firms. By the way, Mr. Cameron's scores indicate that he has made a great gain since the time he shot in the memorable three-cornered team race, in which Messrs. Keller, Banks and Van Dyke were captains.

The Marlin repeating shotgun, model of 1898, is the latest in the line of new guns presented for the consideration and use of the public by the well-known firm, the Marlin Fire Arms Co., New Haven, Conn. It is a take-down repeater, with all the valuable convenience which appertains to that model. The standard weight is 7lbs. The 12-gauge is chambered for a 2¾in. shell, but it will handle any shell of the shorter length. The barrels are made of high-grade steel, and are guaranteed for any reasonable load of smokeless powder. The Marlin Company have issued a circular, giving a very full description of their new repeating shotgun, which they will be pleased to send to applicants.

Joseph H. Swan, of New York city, better known to shooters around this city as Joe Swan, of the Brooklyns, was absent from that club's monthly shoot on Saturday last, July 9, thereby defaulting to B. Amend in the tie for the club trophy on June 11, which was to have been shot off on Saturday. Mr. Swan's absence was due solely to the physical impossibility that always confronts a human being when he wants to be in two places at once. At present he is aiding Uncle Sam, acting as one of the assistant paymasters at Camp Thomas, Chickamauga, Tenn.

Jim Hildreth, of the Winchester Repeating Arms Co., left last week on a business trip through the Southern States. With Joe George down on Long Island for the summer, and with Oscar Guessaz, now Capt. Guessaz, of the Second Texas U. S. V., tied up with his regiment at Miami, Fla., Mr. Hildreth expects to have a quiet time in San Antonio. We up North are now peacefully awaiting Mr. Hildreth's return, confident in the belief that his repertoire of anecdotes will have received some valuable additions prior to his Northern flight next fall.

The amateurs can cut some very pretty capers in the way of smashing targets, as well as the shooters who engage in it professionally. This was particularly in evidence at the fifth annual championship shoot of the Kentucky Gun Club, July 4, wherein Mr. Harry J. Lyons, of Louisville, a strict amateur, won the gold medal on a score of 49 out of 50, a .98 per cent. gait; and Mr. J. D. Gay, of Pine Grove, Ky., was second with 48 out of 50. Each used his Whitworth steel Parker gun.

The Muskegon Gun Club was organized recently at Muskegon, Mich. E. T. Pennoyer was elected president; H. A. Banknecht secretary and treasurer. The club has a membership of thirty-four. The treasurer was instructed to purchase a magautrap and a supply of targets. George L. Ervin was appointed as agent to obtain a lease of grounds near Lake Michigan Park. A committee to have in charge the erection of buildings on the grounds was also appointed.

The Arkansas State Sportsmen's Association has added $500 to its prizes. This is a generous sum of added money, worthy of the earnest attention of shooters, and it, with the other liberal inducements, should command their stanch support. The programme will be ready in a few days, but to secure it promptly the shooters who are interested should address the secretary, Mr. Paul R. Litzke, at once, asking for it.

C. A. Mink, or Philadelphia, will be missed at the traps, for a while at least, and the cares of load No. 1020 has passed into other hands. The tall form of Mr. Mink will soon be in a squad breaking up things which oppose the progress of the American flag at the front. Straight shooting is what does the smashing, whether the objects be targets or enemies, and Mink was noted for shooting straight.

Next week, Tuesday and Wednesday, the two days' target shoot of the Fulton Gun Club, Atlanta, Ga., takes place. At Palmyra, Mo., the eighth annual tournament of the Missouri Amateur Shooting Association takes place on Tuesday, Wednesday and Thursday; targets and live birds. On Saturday, the Ogden Gun Club, of Ogden, Ill., will hold its third annual tournament for amateurs.

The Forester Gun Club's annual tournament, targets, takes place on Wednesday. The trophy shoot of the Hudson River Trap-Shooters' League takes place on Friday. At Elkwood Park the Half-Holiday Handicap, 25 to 30yds., 10 birds, $10 entrance, 21yds. boundary, is on the programme, while on Wednesday the Bird Allowance Handicap, 20 birds, $2 entrance, takes place.

The Ocean City, Md., tournament, to be held on Aug. 4-6, promises to be a pleasant affair. The attendance at last year's effort was sufficiently good to warrant another trial this summer, and from present indications the figures of last year will be left far in the rear. Mr. James R. Malone, of 2671 Pennsylvania avenue, Baltimore, Md., will forward programmes on application.

The Gold Watch Handicap of the Boiling Springs Gun Club, Rutherford, N. J., will take place on the second and fourth Saturdays of July and August. The E. C. cup handicap will take place on the second and fourth Wednesdays of those months. Entrance to each is the price of targets.

W. H. Wolstencroft spent a few hours in this city on Saturday last, but was too full of business to engage in any trap-shooting exercises. This may have been just as well for the peace of mind of some of our shooters, for Billy is shooting now in something like his "usual good form."

The Forester Gun Club, Newark, N. J., will hold an all-day merchandise shoot on Labor Day—Sept. 5. It will be open to all except experts. The programme will be issued later.

The return match between the Rockaways and Hudsons will be shot off early next week, at the grounds of the latter, in Jersey City.

The Marshalltown Gun Club defeated the Waterloo, Ia., Gun Club on July 8, in a contest for the State trophy, by a score of 191 to 159.

The next shoot of the Brockton Gun Club is fixed for July 23.

Milwaukee Carnival Shoot.

SATURDAY, THIRD DAY.

Event No. 1 was at 15 live birds, $15, entrance, $25 added. The birds were a fair lot, there being but three or four sitters. The weather was hot. A strong breeze blew almost into the shoters' faces.

The Interstate at Meadville.

THE fifth tournament of the season of 1898 of the Interstate Association was held here July 6 and 7, under most favorable auspices. The shooting grounds were located on the Athletic Club grounds, within five minutes' walk from the center of the city. So far as grounds are concerned, they were all that could be desired, except as to background, and in this particular they were simply awful. Imagine the trap being placed in the cleared infield of a baseball ground, with a wide stretch of green grass just beyond, then a raised narrow stretch of bare ground of a bicycle track, and still another stretch of green grass, while in the extreme distance was a high board fence, lined with a row of dark trees, with several patches of clear space between, and you have some idea of the combination we had to shoot against. But there was one feature in regard to location of these grounds which is not often met with, and was fully appreciated by all the shooters; that was they were situated so close to the center of the city as to admit of the boys going to the hotels for dinner, instead of having to subsist upon the usual cold lunches handed out in most places. It is fair to say that the man who provided a cold lunch on the grounds, expecting to do a good business, got most sadly left.

The accommodations were all that could be desired, and this fact, together with accessibility of grounds, was what inspired the boys of the Meadville Gun Club to give up their own grounds temporarily. The magautrap faced almost due south, in consequence of which we had the full force of the sun all day long, and while not extremely hot, it was not cold enough to require a Klondike ulster. Taking it all in all, the Meadville boys gave us one of the most pleasant tournaments of the season.

The attendance was not as large as we had reason to think it would have been, the highest number in any one event of the first day being thirty, and averaging twenty-three.

The trade was represented by Paul North, of the Cleveland Target Co.; J. S. Fanning, of Gold Dust fame, and H. P. Collins, representing Du Pont and Hazard Powder Co. Just imagine Paul North beating Jack Fanning for average on the day, but such was the fact, North breaking 143 and Fanning 139 out of 170. Du Pont Collins started the day's work well by scoring two 13s out of the first two 15-bird events, and then went into the air for the remainder of the day. Paul North was so elated over his good work in beating Fanning and Collins that he could not be induced to stay over for the second day. He jumped the town at the conclusion of the first day.

The visitors were represented by Messrs. Miller, Black and Colbert, of Butler, Pa.; Fleming, Read and Shaner, of Pittsburg; Hogan, Raney, Stanley, Elliott, Worthington, of Cleveland; Flick, of Ravenna; McNary, of Greenville; Pope and Kennedy, of Corry; Lay, Smedley, Bates and Graham, S. T., J. F., and L. E. Mallory, Jr., Parkersburg, W. Va., and Messrs. Prenatt, Keck, Clarke, Adams, Hellenbrecht, Johnson, Whitney, Buck and Hotchkiss, of Meadville.

It will be noticed that the old familiar name U. M. C. does not appear among the names of trade representatives. This was but the second Interstate shoot that U. M. C. Thomas missed in the past six years. He is too busy inspecting goods sent out by his company for the Government in our war with Spain.

Grant and Paul tied for first place the first day with 155 out of 170; Elliott second with 154, and James and S. T. Mallory tied for third place with 153.

James, Red Wing and J. F. Mallory tied for first place the second day with 160 out of 170; C. H. Miller second with 158, and Grant and Elliott tied for third place with 156.

The remainder of the story is best told in the scores of the two days, which follow:

WEDNESDAY, JULY 6, FIRST DAY.

PRYOR.

The Sherbrooke Tournament.

THAT the interest in trap-shooting is not on the decline in Canada was fully proved by the attendance and enthusiasm of the crowd on Dominion Day at Sherbrooke. The programme said 8:30, but at 8 A. M. there were two hot squads at it, and two extras were shot while awaiting the hour; and all day long squad followed squad with greatly to be commended promptness. We have never seen squads come up more promptly or with less waiting for that "last man."

The weather as usual at Sherbrooke was perfect. A light breeze blew in the faces of the shooters and the targets seemed a little slow in consequence, but the traps threw good birds, and all worked beautifully. For a wonder, the trapper boys behaved themselves, and the wisdom of putting a good-sized man on No. 3, where he could command his forces, was evident.

Following Westmount's lead, the club enlisted their wives as caterers, and the result was a nice sit-down lunch served in a big tent, to which full justice was done.

The merchandise side show was patronized to the extent of 185 entries and re-entries, and furnished lots of amusement, many trying their hand for the first time for targets only. The targets here were the hardest possible, and at 18yds. rise, consequently only three straight 10s were made all day. W. H. Eastman, of Barre, Vt.; Kirkpatrick, of Sherbrooke, and Barret, of Montpelier, being the lucky ones and taking first, second and third of the fifteen prizes.

Of trade representatives the club was pleased to see their old friends J. H. Cameron, of the Winchester Arms Co., and B. H. Norton, of the Hazard Powder Co. They never miss the Sherbrooke shoots, and none are more gladly welcomed.

Kirkpatrick's highly unexpected straight at the merchandise was made with Hazard powder, and caused a regular boom in the trade. Winchester and Hazard labels decorated gun stocks and caps, while Secretary Foss shot his Parker with a big bow of blue ribbon over his sight in honor of Hazard powder.

The Eastman brothers, from Barre, Vt., were with us for the first time, and we hope they will come again. C. O. Barret, of Montpelier, is a regular comer and can shoot as well as ever. Montreal sent only three men this time, several much desired faces being missed. Westmount sent four—Messrs. Cleghorn, Hanson and the two Outhets. St. Hyacinth's new gun club was represented by four good men, nice fellows and good shots. Sutton Junction was with us in the persons of A. W. Westover and Jos. Clark, old and valued friends of the club, as are Messrs. Hobbs, Taggart, Finlayson and Lindsay, of Magog, and Goodhue, Hovey, of Rock Island.

No. 11 was a team match for the Eastern Township trophy, five men, 20 targets, known angles. Sherbrooke retained the cup with a score of 87, Rock Island 73, St. Hyacinth 69, Westmount 64. Scores:

July 1, 1899, is the date of Sherbrooke's next tournament, and already the club is planning for attractions. There are no crackerjacks in the vicinity, as the above scores show, but they are not afraid of anything, and are ready to shoot in any amateur company. They hope to see better shots at their next shoot, and in the meantime, by persistent practice, will do their best to get ready to beat them. No shoot could have gone more smoothly or with a greater amount of good fellowship than this last, and to all our friends who by their presence and staying qualities helped to make it a success we extend our kindest thanks and a hearty invitation to come again and bring their brothers.

The club shoots every Saturday afternoon, and visiting trap-shooters are always welcomed.

Sidell Gun Club's Tournament.

SIDELL, Ill., July 6.—The Sidell Gun Club held its fifth annual tournament July 4 and 5, and met with success. There were not so many shooters the 4th as there were on the 5th, owing to the many celebrations in the neighboring counties.

The weather was ideal. A slight breeze was blowing, and it was not too hot for the shooters, as there was plenty of shade.

The regular programme was shot off and extras added both days. Max and Wade Holton were the attractions the first day. They were fourteen and twelve years of age, and shooting as high as 82 per cent. Bluerocks were thrown from expert traps, and gave entire satisfaction. Athor had a streak of hard luck and could do no better than miss one bird out of 90, and finished first with .974 per cent. Lindley came second with .933 per cent. Gray shot a .933 per cent. gait, and shot a good race, considering that he is only a new shooter; he only shot half of the day. Sconce came next with .911 per cent. for the two days. Jack Parker was to have managed the shoot and advertise his firm's ammunition (the Peters Cartridge Co. and King Powder Co.), but failed to put in appearance.

Champaign won the team shoot, and there were three more exciting team races. The scores below will tell the tale:

Targets:	15	10	15	25	10	10

Yearndt	240	203	Carson	100	83
Cadwallader	230	199	Wright	230	165

Capt. A. W. Money, of The American E. C. & Schultze Powder Co., returned from his trip to England on Thursday last, July 7, having been absent just seven weeks. To all appearances the trip has benefited Capt. Money physically, although he was in excellent health when he left the States. While in England he did some shooting at Hurlingham and at the Gun Club, and divided one or two good sweeps. At The Gun Club on Saturday, June 18, he took part in the Northumberland Handicap Sweepstakes, $20 entrance, $150 cup added. There were fifty entries, and Capt. Money was handicapped at 30yds. At the end of the eighth round there were only four left with straight scores, and they accordingly agreed to divide the purse, about $900, and shoot off for the cup. Mr. Vernon Barker, who has been shooting remarkably well this year, and who was therefore handicapped at 33yds., was the first of the four to retire, losing his 11th bird, Capt. Money joined him in the next round, the third man, Mr. Ford Barclay, 26yds., dropping out on the 13th bird. Mr. St. James, who was lightly handicapped at 22yds., killed his 13th bird and won the cup. How good the birds were in this event may be judged from the fact that there were 119 kills to 49 misses recorded on the score book!

WESTERN TRAPS.

STILL DANGLES.

CHICAGO, Ill., July 2.—As see the columns of FOREST AND STREAM recently, the celebrated Chicago challenge trophy still dangles from the window of FOREST AND STREAM at this shop, Mr. Paterson having again encircled it with the gay ki'bosh. It is getting a shade monotonous, this steady retention of the medal, and as it seems to lose interest I suggest we meet pretty soon and amend the rules some more.

SOO SHOOT.

Over 100 shooters at the last shoot of the Soo Gun Club would seem to indicate that the tournaments with bars to them are growing in popularity among the rank and file. It seems much this way to me; an army can't get along without officers, but we can't all be officers. Even if we could, an army without a few privates is not much good. Omaha was an officers' shoot, and so was Milwaukee to some extent, though such shrewd ones as Frank Parmelee and Charlie Grimm could see nothing in it with 19 to beat each time. Cleveland and Soo shoots were privates' shoots, and the rank and file came out in numbers.

IOWA STATE TROPHY.

The rival cities of Marshalltown and Waterloo, Ia., are still keeping up the race for the State trophy, which is now in the hands of Marshalltown.

MUSKEGON CLUB.

The live little city of Muskegon, Mich., has just organized a gun club with thirty-four members, and will buy a magautrap and a bunch of targets. Mr. E. T. Pennoyer has been elected president and H. A. Banknecht secretary and treasurer.

PRETTY GOOD BUDGE.

Out at Pine City, Minn., which is somewhere, there is printed a little paper which comes out monthly and is called Bede's Budget. It costs but 25 cents a year, but its owner says, "It budges for all." In the current issue I observe the following little statement, which is a pretty good "budge" for all sorts of men to remember:

"Those who have been arraying the North against the South have suddenly stopped, and now let those who are striving to create hatreds between the East and West take a tumble to themselves. This is the United States, and we are the people."

ODDITIES IN MERCHANDISE PRIZES.

Not long ago a few old-timers were sitting and discussing together some of the current aspects and past phenomena of trapshooting. The talk turned upon the merchandise prize, which most of those present seemed to think was doomed to an early death among the greater shoots of the country. "Speaking of that sort of thing," said one, "reminds me of some of the odd prizes I have seen offered at trap shoots at different times. Of course such things as household goods, chairs, tables, stoves, etc., are common, but that is only the beginning of the things managements have been known to beg as prizes. I had a friend who once won a ton of coal at a shoot. It was in the summer, and he was a visiting shooter! Another time I knew a man to win 10lbs. of beefsteak, and again one country shoot had as a prize twenty bread tickets. Frames for pictures, crayon portraits, a dozen photographs, a silk hat, an umbrella, a half-dozen shirts, a pair of rubbers, are among other things I recall as hung up for the hard-working and deserving shooter who is out for 'pleasure.' I was myself once lucky enough to win a box of condition powders, though I am not sure they improved my scores any. A well-known shooter at a Pennsylvania shoot once accumulated a post-hole borer, a sort of machine with which a fellow might go out before breakfast and amuse himself a few lines. He rebelled at that machine, and said he was no post-hole digger, but a shooter, sir!"

"That's not so bad," said another shooter who was listening, "but I think I can raise you one and still be within the truth. I was at a shoot once myself where the management had gone out and hustled among all the local business men, and they had a long list of what you know the boys call 'plunder.' It all went off pretty well except for myself. I won a fine, new, glossy coffin for second average. When they brought me out that thing I felt awful strange. I didn't want to be impolite and tell the folks that I had no use for it, for of course, you know, that sort of thing is useful once in a while. I just apologized the best I could and gave the coffin to a negro, who made it into cradle for his twins. That shoot gave me a kind of shock some way, and I have never much believed in merchandise prizes since then."

CHICAGO, July 9.—The Fourth coming on Monday this year, gave the shooters of the clubs in this vicinity plenty of work at the traps. The weather, though warm, was accompanied with a good cool breeze, both on Saturday and Monday.

The Eureka Gun Club, of Chicago, held its regular weekly contest at the traps on July 2, with a slim attendance, as many of its members left the city to spend the Fourth.

Following are the scores in the practice events, shot under the Sargeant system:

Events:	1	2	3	4	6	7	Events:	1	2	3	4	6	7
Targets:	15	15	15	15	15	20	Targets:	15	15	15	15	15	20
F Stannard....	13	14	10	12	14	..	H Vatter	11	9	7	10	9	..
C Smith	6	8	8	9	7	..	O Buck	..	..	..	..	..	14

No. 5 was the trophy contest at 25 targets, known traps, unknown angles, classified, and following are detailed scores:

F P Stannard, A .....1111111111111111111111111—25
C S Smith, C .....1011111111101110010111011—19
Vatter, B .....1001101100001111111111010—16
O J Buck, B .....1101110011101111111111100—19

F. P. Stannard won Class A on a straight score; O. J. Buck won Class B; Class C unaccounted for.

On July 4 the attendance was also small. The grounds were kept open for the accommodation of such members who desired to participate.

Following are scores of events, which were all shot from the magautrap:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7
Targets:	25	25	25	25	15	10	23	Targets:	25	25	25	25	15	10	23

CALUMET HEIGHTS CLUB.

The Calumet Heights Club held its annual celebration and shoot on the 3d and 4th inst. The total attendance at the club numbered 112 persons. The weather was all that could be desired, and a most enjoyable time was had by all present.

The first day's programme opened with a 10 live-bird event, $3, two moneys, followed by a miss-and-out, $1. The birds were a good lot of swift flyers. Following are detailed scores:

A Paterson	2112221222—10	P Norcom	0210111120— 7
G Lamphere	2111111121—10	J Morgan	0001120110— 5
G Marshall	0211112101— 8	H Ferguson	1121*12120— 8
H Baedker	1112222*22— 9	A Harlan	0010101122— 6
C Hess	2*21122210— 8	K Marks	1000100011— 4
G Knowles	2201112111— 9	S Young	1112*01001— 6

Miss-and-out, $1, birds extra:

G Lamphere	1121	G Knowles	2220
H Baedker	1110	P Norcom	1110
C Hess	10	H Ferguson	0

The ties divided.

Following the live-bird event were the target races, shot in the face of a strong wind. No. 1 was 10 singles and 5 pairs; Nos. 2 and 5 were snipe; No. 5 was pairs, and No. 4 was a team race at single targets, all of which were thrown from the magautrap. Following are the scores:

Events:	1	2	3	5	Events:	1	2	3	5
Targets:	20	10	10	10	Targets:	20	10	10	10
G Lamphere	11	7	6	..	S Booth	13	..	..	5

GILBERT VS. MARSHALL.

On the return of Fred Gilbert from the Milwaukee shoot he acepted the kind invitation of the Hon. Thomas Marshall, to spend the Fourth in Keithsburg, Ill., where an elaborate programme had been arranged to celebrate Dewey's great victory. Music by the band, a game of baseball, a three-legged race, bicycle, hurdle, and other races, even to a boat race on the Mississippi, the day ending with a live-pigeon match between the gentlemen above named, and the evening opening with a grand display of fireworks, which continued well into the night. The race was at 50 live birds per man, and commenced immediately after the game of baseball ended. The score was: Gilbert 49, one dead out of bounds; Marshall 44, with 4 dead out of bounds. It is not known what the side bet might have been, but Gilbert flushed a new, crisp $50 bill on his return to Chicago without an explanation as to where he got it.

EUREKA GUN CLUB.

The Eureka Gun Club, of Chicago, held its regular weekly contest on the club grounds, corner Seventy-ninth and Vincennes avenue, on the afternoon of July 9. The attendance was fair. There was a bright sunlight, and as a strong wind was blowing from the right quarter across the traps the targets were thrown unusually high and were somewhat erratic in their flight.

Following are scores in the practice events:

Events:	1	2	3	5	6	7	Events:	1	2	3	5	6	7
Targets:	15	15	25	20	20	20	Targets:	15	15	25	20	20	20

H B Morgan .....1111101101011100111011101—18

Class A won by F. P. Stannard; Class B won by H. F. Carson; Class C won by A. C. Borroff.

GARFIELD GUN CLUB.

The Garfield Gun Club held its regular weekly contest at the traps on July 9, with a good attendance, quite a few targets were thrown, and some good scores made. O. von Lengerke and R. Kuss tied with a straight score in the trophy contest, with Dr. Shaw a good second after missing one out of the 25 shot at. Following are scores in practice events:

Events:	1	2	3	5	6	7	Events:	1	2	3	5	6	7
Targets:	25	15	10	15	10	25	Targets:	25	15	10	15	10	25
C Richards	16	12	9	11	7	16	T Hicks	..	..	8	14	8	17

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

On July 18 next Mr. Bernard H. Worthen—the Barney Worthen, of the Palmetto Gun Club, of Charleston, S. C.—will join the vast army of Benedicts, everyone of whom should be glad to welcome as a brother such an excellent shot and good fellow as Our Barney.

Trap Around Reading.

READING, Pa., July 4.—The annual Fourth of July shoot of the South End Gun Club proved a grand success. The club shoot at 25 targets per man was the principal event, and the gold medal of Class A was won by Brooke Harrison. In Class B, James Gicker successfully defended the silver medal which he won on May 30. In Class C, Mr. Grossman again won the silver medal. The grounds present a fine appearance, and are considered by experts to be one of the finest in the State, having a fine background. The next shoot will be held on Labor Day, Sept. 5, when the club medals will again be shot for. Events at 10 and 15 targets occupied the rest of the programme, all thrown by the magautrap. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Targets:	10	25	10	15	10	10	10	10	10	10	10	10	10	5p

Pottstown, Pa., July 6.—Several interesting target events were shot at the Shuler Shooting Association grounds. In spite of the brisk wind, which made the flights of the targets erratic, good scores were made. Summary:

First event, 25 targets: Wickersham 19, Davis 22, Hawkins 11, Slonaker 19, Cole 16, Grubb 17, Bossert 13.

Second event, team match, three-men teams, each man at 25 targets:

Capt. Wickersham's team—Wickersham 17, Davis 23, Hawkins 21—61.

Saylor's team—Slonaker 15, Grubb 17, Saylor 22—54.

Third event, team match, three-men teams, each man at 25:

Capt. Wickersham's team—Wickersham 20, Davis 21, Hawkins 18—69.

Saylor's team—Slonaker 15, Grubb 20, Saylor 17—52.

Pottstown, Pa., July 9.—A battle royal took place to-day between the teams of the Phoenix Gun Club, of Phoenixville, Pa., and the Shuler Shooting Association, of this place, in which three matches were required to decide the victor. The first match was at 25 targets per man, teams to consist of ten men, and resulted in a tie, likewise the second of 10 targets per man. In the shoot-off at 10 targets each the Shuler won by 6 targets. Both teams did remarkably good shooting. The next match will be held here July 23, with the same club. Summary:

Shuler—L. H. Davis 18, Saylor 19, Capt. Wickersham 20, A. Slonaker 19, Lenhart 19, Shaner 18, Grubb 17, Yerger 17, Trego 11, Smith 20—178.

Phoenix—Johnson 20, Erb 19, Dotterer 19, Leidy 17, E. L. Buckwalter 14, Phlert 20, Hodge 19, Lambert 15, Harris 15, J. Buckwalter 20—178.

First shoot-off, 10 targets per man:

Shuler—Davis 9, Saylor 8, Wickersham 6, Slonaker 7, Lenhart 6, Shaner 9, Grubb 5, Yerger 6, Trego 6, Smith 7—69.

Phoenix—Johnson 10, Erb 8, Dotterer 3, Leidy 8, E. L. Buckwalter 5, Phlert 8, Hodge 6, Lambert 7, Harris 6, J. Buckwalter 8—69.

Second shoot-off, 10 targets per man:

Shuler—Davis 10, Saylor 7, Wickersham 6, Slonaker 7, Lenhart 8, Shaner 9, Grubb 10, Yerger 5, Trego 6, Smith 7—75.

Phoenix—Johnson 8, Erb 9, Dotterer 6, Leidy 8, E. L. Buckwalter 8, Phlert 7, Hodge 6, Lambert 6, Harris 7, J. Buckwalter 4—69.

West Chester, Pa., July 4.—This afternoon the West Chester Gun Club held its monthly shoot. Several sweepstakes followed the regular medal match.

July medal shoot, 25 targets per man: Ford 19, Twaddell 20, Hoar 14, Gill 19, Brinton 19, Henry 19, Beebe 16, Lumis 18.

June scores, 25 targets: Beebe 14, Gill 14.

May score, 25 targets: Beebe 17.

Sweepstakes, 10 targets: Lumis 5, Henry 8, Twaddell 8, Brinton 6, Gill 5, Beebe 7, Ford 7.

DUSTER.

Centredale Gun Club.

CENTREDALE, R. I., July 7.—Our Fourth of July shoot did not come up to expectations in regards to number of entries, as only nine shot through. The reason was plainly evident, as the weather was the hottest ever recorded in this State, being 102° in the shade. It was so uncomfortably hot that several intermissions had to be taken to allow the guns, shooters and the poor trappers to cool off a little.

On account of the small entry the purse was reduced from $25 to $15.50, as follows: $5, $4, $2.50, and $1.50 to four high guns, $1.50 to longest run and $1 to second run.

The magautrap worked well, and some of the scores made were quite good under the conditions, as the birds were thrown about 60 to 70yds. The only straight was made by Griffith in the third event. Dr. Hammond really did the best shooting, but fell down in the event, which lost him first money. Sheldon, with his usual good, steady shooting, won first with 125, beating Dr. Hammond 2 birds; Griffith third and Bain fourth. Everybody was glad when it was over, so that they could go home and put on some dry clothes.

Events:	1	2	3	4	5	6	7	8	9	10			
Targets:	15	15	15	15	15	15	15	15	15	15	Broke.	Av.

Root	13	12	11	9	11	8	12	9	10	13	108	.720
Hammond	13	13	13	13	13	7	12	13	14	10	122	.810
Moore	9	11	12	9	10	9	9	11	8	7	95	.630
Bain	11	12	11	12	9	10	13	12	10	13	113	.750
Corey	9	8	13	10	10	12	10	9	12	12	105	.700
Campbell	6	6	6	7	10	7	6	9	9	..	...	.460
Reiner	9	8	13	13	7	9	9	10	9	13	100	.670
Whittaker	8	7	10	11	10	..	..	..	..	..	...	.610
Arnold	4	8	7	10	7	..	..	..	..	..	....	.510
Sheldon	11	14	11	13	13	12	13	12	12	15	125	.830
Sherman	3	6	2	4	1	1	..	..	..	..	...	.200

Longest run, Griffith, 36. Second longest run, Sheldon, 19.

The events were very creditably refereed by Mr. W. N. Sweet, of the Centredale Gun Club. N. F. REINER, Sec'y.

Philadelphia Trap-Shooters' League.

THE fourth match of the second series of the Philadelphia Trap-Shooters' League was held at Wayne Junction, July 2, under the auspices of the Wayne Gun Club.

THE TEAM RACES.

The conditions of the team races were 25 targets, known angles, handicap, each team composed of six men. The scores:

Independent, 165.

Ocean City Midsummer Tournament.

BALTIMORE, Md., July 8.—*Editor Forest and Stream:* In the month of August trap-shooting is and ought to be at its best. The boys have all had several months' practice at the elusive inanimates, and should be and generally are in fine fettle.

The sea shore in August is delightful. Brilliant sunshine, the heat thereof tempered by cooling breezes; old ocean ever ready to embrace and engulf you in his fluid affection; the evening atmosphere redolent with the life-renewing ozone, which intoxicates, but does not inebriate.

The midsummer tournament committee, of which Mr. Jas. R. Malone is chairman, have therefore been particularly happy in their selection both as to time and place for their annual tournament. Time, Aug. 4, 5 and 6. Place, Ocean City, Md. Two days, the 4th and 5th, will be devoted to targets, and one day, the 6th, to live birds. Two or more sets of traps will be used, as the occasion may demand. Every facility will be at hand to promote the comfort and convenience of the shooters; events will be run off promptly, without any tiresome waits; the best target obtainable will be used, thereby insuring swift, steady and even flight, and sure breaks when hit; the background will be clear and unobstructed sky, and if there is anything additional required to make of this tournament a grand success it has but to be asked for.

A special fare of $2.50 for the round trip between Baltimore and Ocean City has been obtained over the Baltimore, Chesapeake & Atlantic Railroad.

Congress Hall will be headquarters for shooters and their friends, and a special rate of $1.50 per day has been kindly proffered by the management of this hotel. The building is contiguous to the tournament grounds, faces on the ocean, and is a very delightful stopping place.

Many shooters from Baltimore, Washington, Philadelphia and New York have signified their intention of being present, and it is anticipated that this will prove one of the most largely attended and successful tournaments of the season in this section.

Ocean City is the great Maryland seaside resort. The hotels and cottages are numerous; the beach, one of the finest in the world, is as smooth and grateful to one's pedal extremities, when relieved of the artificial covering, as is the early spring grass on a well-kept lawn before the sun has had opportunity to absorb the dewy globules pendant from each blade. The fisherman can fish to his heart's content and be sometimes rewarded by a bite. Shore bird shooting will be at its height, and great sport can be had by those thus inclined.

With the music from the various orchestras wafted o'er the breeze; the moonlight upon the water changing it into a sea of iridescent silver; the dreamy waltz in the pavilion, or the moonlight stroll upon the promenade, nothing is lacking to fill the evening hours with pleasure and delight.

For programme and further information, address Jas. R. Malone, 2671 Pennsylvania avenue, Baltimore, Md

STANLEY.

Kansas State Association.

OLATHE, Kan., July 6.—I send scores of the Kansas State Sportsmen's Association tournament, which, as will appear from the record, was a decidedly successful affair.

The programme was followed to the letter, except that the money was all divided. No jack rabbit system was used at all on any event so marked on programme. The Sargent system, with targets thrown at good, fair speed and angles, was used.

Showery weather interfered with attendance, but the shooters were numerous, and all enjoyed themselves.

The Ottawa Gun Club treated everybody royally, not a shooter had the shadow of a kick. The club lost $80 on the meet, but pluckily determined to try it next year, and asked for the Association meet for 1899, when it is hoped that better weather and attendance will retrieve their loss.

With but one or two exceptions all the best shots of Kansas were present. Sargent, Cornett, Cockrell and other Missouri shooters shot most of the programme.

I had the pleasure of winning the State championship on a clean score, and my team—Lemon, Lipscomb and myself—won the team championship by a very fair score—82 out of 90.

The detailed scores in the State team contest do not appear in the scores. Four teams of three men each entered. Goff, of Leavenworth; Erhardt, of Atchison, and Herr, of Concordia, entered as the Leavenworth Gun Club team, and were second with 80 out of 90. Erhardt and Herr were honorary members of the Leavenworth Gun Club.

* No. 6 was at 5 pairs.

The winners of badges were: Bauman, Class A; 333, Class B; O'Leary, Class C.

JOHN E. WILSON, Sec'y.

Kentucky Gun Club.

AT Louisville, Kentucky, on July 4, the annual tournament was given by this famous club, and as usual a great many devotees of the gun shot on those healthful grounds.

The main interest centered on the State championship medal, lately held by Ralph Trimble, and right gallantly was it fought for by the contestants. This time, however, it was destined to stay with the home club, our steadfast Harry scoring in faultless time and with greatest precision 49 out of 50 targets. By our Harry I mean the only one Harry in that section, i. e., Harry J. Lyons, Esq., who every now and then goes after cups, trophies and things in a way that completely astonishes the natives, to say nothing of himself.

Well, on this occasion he had to shoot a champion's gait, for right after him was that splendid shot, J. D. Gay, who rolled up 48 to his credit; so it was no walkover, nor can it ever be when so many fine shots compete for the much-coveted trophy.

There is a good deal of course in getting a good running start on anything, and as Lyons smashed 25 straight he certainly obtained a good lead. Yet they all had the same chance, but it is very awkward to most men to buck up against such awfully strong, accurate, dogged shooting; for instance, the Spaniards most presumably found it so at Santiago. So he went along on his next 25, and by some mischance slipped one little undersized one, and landed with 49.

For a strict amateur not so bad, especially when in very close, warm, sticky company, whose names I need not mention, as their previous records show what they have done.

Indianapolis sent down her hardest nuts to crack, and Partington went out on the day with 96 out or 100, Tripp with 94, and Griffith was the only man who scored 25 straight on the team shoot, which put the Indianapolis team highest with 72 out of 75. Being a State team affair, Indianapolis was barred from championship honors, shooting merely to show the boys how they trot in harness and altogether.

The Kentucky Gun Club team No. 2 carried the day, as will be seen by the score. So that everyone came out feeling pretty comfortable, as all the "fixings" did not go into one receptacle. Messrs. Harry J. Lyons and J. D. Gay, who scored highest in the championship event, both used their Whitworth fluid steel Parker guns, fully demonstrating how good these are when good steady men do the steering. Scores:

Event No. 8, team championship of Kentucky:

Kentucky Gun Club No. 1—Chadwick 23, Woodcock 19, Lyons 21—63.

Indianapolis Gun Club—Tripp 23, Griffiths 25, Partington 24—72.

Kentucky Gun Club No. 2—Alexander 23, Fallis 22, Phelps 19—64.

Paris Gun Club—Coyle 20, Gay 24, Dodge 15—59.

Georgetown Gun Club—Nichols 21, Betts 21, Graves 19—61.

Event No. 9, 7 live birds: Tripp 7, Ewing 7, Frank 7. Lyons, Tripp, Smith, Street, Betts, Du Bray, Dodd and Kellar withdrew with scores ranging from 0 to 5.

GAUCHO.

Brockton Gun Club.

BROCKTON, Mass., July 5.—The weather here yesterday, July 4, was almost unbearable. Still a few of the enthusiastic ones came out and faced the traps. Some very good shooting was done in event 14. Stork broke 25 straight, which was good shooting for a boy of seventeen. Le Roy kept up a good average, only losing 4 out of the last 150; 500 loaded shells were divided in events 6-14, and with the handicap added everybody got some. Inclosed are the scores. The next shoot is on July 23.

The merchandise match, 25 targets, five moneys, was as follows:

Barrett	1101111111111111111111110	—22—4—25
Allen	1011111110111010111111111	—21—5—25
Carr	1111111101101011011110110	—19—7—25
Stork	1111111111111111111111111	—25—4—25
Taylor	1011001111111110010001111	—17—7—24
Allison	1111111111111101111111111	—24—3—25
Everett	1101011001110101100101011	—16—8—24
Grant	1111111111111111111110111	—24—4—25
W Murdock	0000011001101100011111111	—15—7—22
Howard	1111110110111111111111101	—22—9—25
W Woodard	1001101101101100110110111	—16—7—23
Le Roy	1111111111011011111111111	—23

The watch charm event, 25 targets, resulted as follows:

Barrett	1011011111101011101001111	—18—4—22
W Murdock	1111011010011110011100111	—17—7—24
Allen	0001111111110111111111111	—21—5—25
Scott	1111101011101011111011111	—22—6—25
W Woodard	1111111111101101011111111	—22—7—25
Carr	0100011101001110110111111	—16—9—25
Pratt	1100011001011010100001100	—11—9—20
Le Roy	1011111111111111111111111	—24
Grant	1111111101111011111111100	—21—4—25
Everett	0011010000100001001110010	— 9—8—17
Wood	1111111110111111111011111	—23—4—25

The scores in the sweepstakes follow:

A. A. BARRETT, Sec'y.

Trap at West Superior, Wis.

WEST SUPERIOR, Wis., July 4.—I inclose you the score made to-day. A cold breeze was blowing from Lake Superior, making it a disagreeable day in which to shoot, but some very good scores were made. A team shoot between Duluth and Superior was shot off, 15 birds each man, seven in each team. The score was: Duluth 88, Superior 66.

Targets:	10	15	10	15	10	*10	10	10	10
Delaware	9	14	9	14	10	8	9	10	8

HACKENSACK RIVER GUN CLUB.

Hoboken, N. J., July 7.—A live-bird shoot was held on the Hackensack River Gun Club's grounds on Friday, July 1. The light attendance is attributed to the severe warm weather. Much credit is due Mr. Heflich for furnishing such a fine lot of birds considering the season of extreme heat. Both events were 10 birds; 28yds. rise, A. S. A. rules, entrance $3.50:

JOHN L. CHARTRAND, Sec'y.

FORESTER GUN CLUB.

Newark, N. J., July 4.—The Forester Gun Club held a holiday shoot to-day. The hot weather kept some of the boys home, but enough got together to run off about a thousand targets before the rain stopped the fun.

The Forester Gun Club will hold an all-day merchandise shoot on Labor Day, Sept. 5. Prizes will be gunpowder and other articles. Open to all except experts. Programmes later.

Arkansas and the South.

ST. LOUIS CHAMPIONSHIP.

ST. LOUIS, Mo., June 29.—There not being any trophy in existence here now, which is subject to competition, the Du Pont Powder Co. has recently donated a medal representing the individual live-pigeon championship of the city. The first contest for this medal took place to-day at Dupont Park, the conditions being 50 pigeons per man, 30yds. rise, otherwise A. S. A. rules. Entrance $25, high guns, two moneys, 60 and 40 per cent. There were five contestants in this race, resulting in some great scores, John Cabanne winning on 49, while Dr. Smith and Winston cut up second money on 48. Barre scored 47 and Kling 46. The winner made a percentage of 98, and the lowest—Kling—92. Cabanne's lost bird was dead out of bounds, as were also the two that Winston failed to account for. The scores in detail were:

Cabanne .....2222222222222222222222*2*22222222222221221222222—49
Winston .....2212121212222221*2212211111222222222222222*122221212—48
Dr Smith .....1211111222201221122221221221011121112111111212211221—48
Barre .....1121121111121 1*2221112112211100122121121221121212121—47
Kling .....101011*1222022220221122222121022222211122222222222—46

PINE BLUFF GUN CLUB.

The Pine Bluff Gun Club is a very active organization, and to keep in line, so to speak, they have decided to hold an all-day tournament on July 21, with the inducements of 2-cent targets and $50 added money. The loyalty with which this club has always supported all the shoots given in this vicinity should assure them a good attendance. From Little Rock and vicinity they will certainly get a good delegation. The Pine Bluff Gun Club is a stanch supporter of the Rose system, and of course this basis of dividing the money will prevail at their shoot.

ARKANSAS STATE SPORTSMEN'S ASSOCIATION.

After much deliberation the tournament committee has decided to make the added money at the eighth annual tournament of the Arkansas State Sportsmen's Association $500. This they confidently expect will draw a large crowd of shooters to Little Rock on July 26 to 28. Nothing like this sum of added money has been hung up at any tournament in the South this summer, so those who are contemplating attending a shoot in the near future would do well to send in their names for a programme and thus find out exactly what this energetic shooting organization has to offer. Programmes will be out in a few days.

INDEPENDENCE DAY.

LITTLE ROCK, Ark., July 8.—At Louisville they celebrated the Fourth with a shoot, and as Dr. Britton, of Indianapolis, made high average he evidently thought it a glorious day. A. H. Frank, of Memphis, was second, only one bird behind the Doctor. Frank finished with the nice run of 64 straight. The programme called for 10 targets, of which Dr. Britton accounted for 96 and Frank 95.

Little Rock held a little shoot on the Fourth at the special request of the Hot Springs shooters, who were anxious to get some practice over the grounds, where the State shoot will be held. However, when the entries were made only one Hot Springs shooter was present, that old reliable standby John J. Sumpter, Jr., who again set the pace for the boys, carrying off the honors of the day. Nothing pretentious was attempted on this occasion, as the local shooters are reserving their energies for the State meeting. Targets were thrown at 2 cents, and a half-cent of this amount was set aside for average money; as there were about 2,000 targets thrown during the day this netted $10, which was divided by Sumpter, Pemberton and Thibault, as follows: $5, $3, $2.

Nos. 6 and 9 were 20-target events; the others being 15:

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.
Sumpter	15	13	15	14	11	19	14	13	17	14	160	146	.912
Pemberton	12	15	13	12	12	18	14	13	18	13	160	142	.887
Thibault	11	9	12	14	10	19	9	15	19	12	160	130	.812
Fletcher	12	11	9	11	9	14	12	11	15	9	160	113	.706
Duley	9	15	13	10	7	14	13	8	14	9	160	113	.706
Woodson	14	9	13	15	10	14	11	11	14	..	...	...	....
Phillips	..	8	11	9	6	12	..	..	..	..	...	...	....

Lenow	..	..	..	..	..	..	..	12	13	12	8	...	...	....
Osborne	..	..	..	..	..	..	..	5	..	16	8	...	...	....
Farmer	..	..	..	..	4	8	..	..	..	..	..	...	...	....
Hobbs	6	..	..	..	..	..	..	..	..	..	..	...	...	....
Baldy	..	..	..	..	..	..	..	..	8	..	..	...	...	....
Britenstine	..	..	..	..	..	..	..	..	..	15	...	...	...	....

Several extras were also shot.

The St. Louis tournament was a fairly successful one too, though the attendance was principally local. Hirshey was high with 150 broke out of 165. Taylor was second with 147 out of a like number shot at. Hirshey also beat Winston in a match at 50 pairs with a score of 77 to 73. Jack Winston is back in his elements again, as he has a match on with Dr. Smith, 100 live pigeons, for $500. This is the same Doctor who shot such a great race against Fanning last November. This match will be shot July 12.

HOT SPRINGS.

On July 1 the following scores were made. The visitors present were J. A. R. Elliott, of Kansas City, who is sojourning there for his health, and Mayor J. A. Woodson, of Little Rock. John Sumpter, Jr., shot in his usual good form, and easily led the bunch.

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
Sumpter	75	69	.920	Collings	75	63	.840
Williams	75	68	.906	Rix	75	55	.733
Elliott	25	22	.880	Smith	75	43	.573
Woodson	75	64	.853				

ARKANSAS STATE TOURNAMENT PROGRAMME.

This is now being mailed out to the shooters of the country. It consists of thirty regular and two State events; there being ten events each day, eight 15-target events and two 20-target events, the latter being Nos. 4 and 8. Entrance in these events will be $1.50 for the 15s and $2 for the 20s. There will be $15 added to each event. Wednesday, the second day, the State championship will also be decided. This is open only to members of the Association, and members of teams must be bona fide residents of the State. Four men to a team, 25 targets each, 100 to the team. At the last tournament Pine Bluff won the trophy. The individual championship will occur on the last day, Thursday, and will be at 50 single targets. John J. Sumpter, Jr., of Hot Springs, is at present the holder of the championship emblem. These are the only two events that are not open to all. It will be seen that according to the programme the Association adds $150 each day, making a total of $450 for the three days. Then there will be $50 average money, which acounts for the $500 that the Association will add. Rose system of dividing the purses will prevail at this shoot. There will be four moneys in the 15-target events and five in the 20s. The following points will be paid for the respective positions: Four moneys, 7, 5, 4, 3. Five moneys, 7, 5, 4, 3, 2. The $50 average money will go to the seven high guns of the tournament, being divided as follows: $10, $9, $8, $7, $6, $5 and $5. The Gleason and Capital hotels will be headquarters; at both of these hotels special rates have been secured. What concessions the railroads will make cannot be stated now, but it is expected that the customary rate of one and one-third fare for the round trip on the certificate plan will be granted. Efforts to bring this about are now being made. Ship your shells to the Dickinson Arms Co., and remember that the dates are July 26, 27 and 28.

The annual meeting of the Association will be held Tuesday, July 26.

PAUL R. LITZKE.

Boston Gun Club.

WELLINGTON, June 29.—The Boston Gun Club concluded its '98 shooting on Wednesday last, June 29. With plover and yellow-legs to occupy the sportsmen's attention by the middle of this month, and sundry vacation trips to distract attention from trap-shooting, the little stand at Wellington closes doors and windows for a few months, to be resurrected all the more enthusiastically next winter. Certainly the twenty-four weekly meetings have flown on the wings of the wind, and there is no scarcity of wind at Wellington. Each and every one has been packed full of solid pleasure and practice. The prize list, while of no extraordinary value, serves to center the interest, and permits of rivalry and antagonism in a pure-hearted way. Sweeps neither large nor small are ever called for or desired; yet the inquiry at the close of squads as to "how many did you break that time?" is asked with genuine interest and probably a little less envy or exultation, as the case may be, than if results touched the pocket.

As will be seen by final scores, Mr. Hollis secured first prize, and a very creditable win it was. The last three weeks have seen rapid improvement in his scores, and a yard or two handicap will be his portion undoubtedly next series. Mr. Woodruff was only headed the final contest, and his 127 is close to winning score in general excellence. Gordon and Horace tied on 124, but the former gained precedence because of slightly better attendance. Scores complete as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16

Buffalo Audubon Gun Club.

BUFFALO, N. Y., July 4.—The Audubon Club's shoot of July 4 was a perfect success. Thirty-five shooters attended it. The committee, which was composed of Charles S. Burkhardt, Edgar P. Reynolds and H. G. Middaugh, received the congratulations of all present. The novelty was $75 in merchandise prizes, which was given in five events, Nos. 1, 2, 5, 6 and 9. There were from ten to fifteen prizes in each event, consisting of useful articles, from a gun case to a pocket knife. Some of the curious selections were a silver syrup pitcher, a hammock, a traveler's blacking kit, bamboo fishing rods, and silk umbrellas, etc. Events Nos. 3 and 4 were jack rabbit sweepstakes, and afforded considerable amusement. No doubt these events will become a regular fixture in the future.

Among the out of town shooters present were Mr. Green and Kirkover, of Fredonia; C. A. Ward, of Lockport; H. Clark, of Corfu; Joseph Sweet, J. Heltz and F. Anderman, of Smokes Creek; also Messrs. Jackson, Sherman and Burgwart.

July 2.—There were no regular badge or cup events at the shoot of the Audubon Club to-day. Six target events were pulled off, the most interesting being Nos. 4 and 5, which were team events at 15 singles and 5 pairs, between teams captained by E. N. McCarney and R. H. Hebard, six men on a team. Each team won one event.

The following is a complete record of the badge season of the Audubon Gun Club, just closed, with winners and prizes:

Class A—First prize, C. S. Burkhardt, badge or trophy, valued at $20; second, E. C. Burkhardt, $15; average, L. W. Bennett, $15; most birds broken, C. S. Burkhardt, $10.

Class B—First prize, badge or trophy, valued at $20, B. Talsma; second, J. P. Fisher and George Zoeller, tied, $15; average, B. Talsma, $15; most birds broken, B. Talsma, $10.

Class C—First prize, valued at $20, J. J. Reid; second, value $15, W. R. Eaton; average, $15, J. J. Reid; most birds broken, J. J. Reid.

Total number of targets shot at during year of fifty-two shoots, 85,000:

Events:	1	2	3	4	5	6
Targets:	15	15	15			15
E Burkhardt	6	10	10	20	15	12
C Burkhardt	14	14	11	18	17	12

Nos. 4 and 5 were at 15 singles and 5 pairs.

Haverhill Gun Club.

HAVERHILL, Mass., July 8.—The Haverhill Gun Club held its third annual shoot July 4, on the grounds at Hoyt's Grove, in this city. The day was bright and clear, and the weather very warm, and that will no doubt be considered sufficient reason for the absence of many of the members whose presence had been anticipated.

The Boston Gun Club favored us with the presence of four of its members, chief of whom was the favorite lady shooter Miskay. With her were her two brothers, Horace and William, and Mr. Hardy. This was the first appearance at our grounds of the two latter, but Miskay and Horace shot the day through with us a year ago, a fact they will never forget on account of the excessive heat of that day, if for no other reason.

Owing to the heat Monday no one felt disposed to hurry things very much, and as a consequence only about 2,500 birds were thrown throughout the day. Everyone went in for comfort rather than for hard shooting and high scores.

Miskay averaged high gun for the day, which was all the more to her credit from the fact of her meeting with a mishap at the beginning of the last part of event 11. In shooting at her first pair in this event she managed to discharge both barrels of her gun at the same time, receiving such a jar from the combined loads as to compel her to retire until the others had shot out the event. That she was pretty badly shaken up is shown by her score, one out of ten, which will readily be admitted by any one familiar with her usual excellent work at the traps.

Below are the events, tabulated, and the scores made:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Targets:	10	15	10	15	10	15	20	10	15	10	20	5	10	20	10	15	10

Harvey	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	1

Event 8 was a team race of 25 birds per man, 10 unknown, 15 reversed: Bryan and Miller, after tossing for choice, chose a man alternately until all shooters present had been chosen. The race was productive of much merriment, and the finish a close one, Bryan's team winning by one bird, score 124 to 123.

Events 6 and 14 were unknown traps and angles, the latter shot from traps 2, 3 and 4 after the Sargent system.

Event 16 was shot gun below elbow till bird was in the air, and use of both barrels allowed.

Event 16, 10 targets, unknown angles: Bryan 7, Miller 6, Marble 6, Griggs 4, Gardella 8, Fernald 7.

Event 17, 20 targets: Bryan 17, Miller 14, Griggs 10, Gardella 10.

GEO. F. STEVENS, Sec'y-Treas.

Auburn Gun Club.

AUBURN, Me., June 30.—The Auburn Gun Club held their first annual tournament to-day. The weather was all that could be desired and the boys turned out well, about every club in the State being represented by their best shots.

Among the shooters from out of the State were O. R. Dickey, Cap. Wadsworth and B. Leroy Woodard. These three only shot the first eight events though, as they had to leave early in order to catch the train for Boston. They shot well, but were hardly up to their usual form.

Shooting began at 9:30 o'clock, and the last event was shot out by 5:30. The Parker gun was won by Mr. Preble, of Waterville, who got 25 straight. Mr. Preble then ran a 10 straight and a 15 in the next two events, making the longest run of the day—50 straight, 15 of which were at unknown angles.

In the seventh event, $50 guaranteed purse, Mr. Berry scooped the pot on 25 straight.

The club will put the money made at the tournament into the club house fund, and next spring will build a nice, large house, so as to give the boys better accommodations next year.

The visitors spoke highly of the Auburn Gun Club's first annual, and thought the dinner out of sight.

6. Mount Hope, open, Mount Hope Bay.
6. Woods Holl, championship, Hadley Harbor.
6-8-9. Oshkosh, Green Lake cup, Felker cup, Oshkosh, Wis.
6. Queen City, 16ft. class, Toronto.
6. Royal Canadian, first and 22ft. classes, Toronto.
6. Baltimore, McAllister cup, Chesapeake Bay.
8. American, Newburyport day, Newburyport.
9. Squam, open, Annisquam.
10. East Gloucester, open, Gloucester Harbor.
10-11. Chicago, open, Mackinaw.
13. Beverly, sixth Corinthian, Buzzard's Bay.
13. Queen City, 19ft. class, Toronto.
13. Horseshoe Harbor, annual, Long Island Sound.
13. New Jersey Ath., cup, Newark Bay.
13. Cohasset, open, Cohasset Harbor.
13. Baltimore, Rear-Com. cup, Chesapeake Bay.
13. Corinthian Marblehead, open, Massachusetts Bay.
13. Winthrop, evening race, Boston Harbor.
13. Jubilee, championship, Massachusetts Bay.
13. Burgess, cruise, Massachusetts Bay.
13. Woods Holl, open, Woods Holl.
13. American, cruise, Newburyport.
13. Taunton, cruise to Newport.
13. Shelter Island, open, Gardiner's Bay.
13-14. Corinthian San Francisco, cruise, Port Richmond.
13-18. Royal St. Lawrence, Seawanhaka international cup, Montreal, Lake St. Louis.
13-14. East Gloucester, cruise, Gloucester, Mass.
13. Green Bay, annual, Green Bay, Wis.
18. Miramichi, Stewart pennant, Oak Point.
18. Plymouth, open, Plymouth, Mass.
19. Kingston, open, Kingston, Mass.
20. Huguenot, annual, Long Island Sound.
20. Park City, annual, Long Island Sound.
20. Duxbury, open, Duxbury, Mass.
20. Quincy, handicap, Boston Harbor.
20. Winthrop, club, Boston Harbor.
20. Woods Holl, championship, West Falmouth.
20. Beverly, seventh Corinthian, Buzzard's Bay.
20. Burgess, championship, Massachusetts Bay.
20. Royal Canadian, 27, 22 and skiff classes, Toronto.
20. Baltimore, McAllister cup, Chesapeake Bay.
21. Winthrop, cruise, Boston Harbor.
22-23-24. Quincy, challenge cup, Boston Harbor.
22. Wollaston, cup, Boston Harbor.
22. Cape Cod, open, Provincetown.
22-26. Seawanhaka-Phila. Cor., knockabout interclub match, Oyster Bay.
23. Wellfleet, open, Wellfleet, Mass.
26. Fall River, open, Mount Hope Bay.
27. Beverly, club meeting and informal race, Buzzard's Bay.
27. Queen City, 27ft. class, Toronto.
27. Huntington, annual, Long Island Sound.
27. Douglaston, special, Long Island Sound.
27. Cor. Marblehead, third championship, Massachusetts Bay.
27. Woods Holl, open, West Falmouth.
27. Shelter Island, special, Gardiner's Bay.
27. Taunton, open, Taunton, Mass.
27. American, cruise to Squam.
27-28. Corinthian San Francisco, cruise, Petaluma.
27. Canarsie, Corinthian race, Jamaica Bay.
27. Baltimore, Withers cup, Chesapeake Bay.
29. New Jersey Ath., club, Newark Bay.
30. Taunton, ladies' day, Taunton, Mass.
31. American, moonlight sail, Newburyport, Mass.

SEPTEMBER.

3. Savin Hill, open, Boston Harbor.
3-4-5. Corinthian Marblehead, cruise, Massachusetts Bay.
3. Woods Holl, championship, Sussett Harbor.
3-4-5. Wollaston, cruise, Boston Harbor.
3. Baltimore, Rear-Com. cup, Chesapeake Bay.
3. Beverly, eighth Corinthian, Buzzard's Bay.
5. Cor. Philadelphia, fall, Essington, Delaware River.

11. Corinthian San Francisco, regatta, San Francisco Bay.
11. Massachusetts Y. R. A., review, Hull.
17-18. Corinthian San Francisco, cruise, Vallejo.
17. American, cruise to Plum Island.
17. Baltimore, Rear-Com. cup, Chesapeake Bay.
17. Queen City, 22ft. K class, Toronto.
26. Newport, ladies' day, Narragansett Bay.
29. Miramichi, Gould cup, Newcastle.
30. Taunton, ladies' day, Taunton, Mass.

OCTOBER.

14. Miramichi, Watt cup, Chatham.

THE fate of perpetual prize cups is proverbial. In a recent hunt over records we have come across one that has been for some years forgotten. The Livingston memorial, originally established, we believe, by that good yachtsman and all-round sportsman the late Anson Livingston, was given to the Atlantic Y. C. many years ago; for some twenty years back it has been given as an extra prize for the single-stick class of about 46ft. l.w.l. in the annual regatta. Of late years it has disappeared from sight, and is no longer raced for. It is unfortunate that an old trophy of this kind should be allowed to pass out of existence, and we hope that some means may be taken to recuscitate it.

The Measurement Rule.

THE Yachtsman, reprinting an abstract of the report of the Seawanhaka special committee, disposes of the principal points as follows:

The committee has very carefully considered the matter, and unanimously think that the present American rule must be altered in order to get a more wholesome type of boat. They have not, however, decided upon trying a modification of the British formula, but have resolved upon recommending one of their own, which we consider rather crude. In order to verify this factor (area of midship section), a drawing of the midship section must be furnished, with the waterline accurately marked. It is also intended that the submerged profile, the vertical longitudinal section, exclusive of the rudder, shall not, without penalty, fall below 65 per cent. of a parallelogram constructed to touch its extreme dimensions. Now, for these drawings—for a drawing of the profile must be supplied—before him, an experienced designer could reproduce the whole design of any boat that he has seen with almost absolute exactitude, and for this reason we have called the proposition "crude."

After continuing at some length in the same strain, the criticism concludes: "We hope, in the interests of American yachting, that the report will not be adopted, but that the committee will see their way to achieve their evidently good intention in a more satisfactory way. The matter is, after all, a very simple one for those who have the British rule and its lessons before them."

We are tempted to apply the same adjective, "crude," to the Yachtsman's criticism, as well as to question its application to the Seawanhaka proposal. The important point of the committee's work is the presentation on the part of Mr. Hyslop of the one great evil of modern yachting and the weak point of all rules, the use of untaxed levers; and of his proposal of a remedy that is simple, direct, and far more promising of good results than any thus far suggested or tried. So far from being crude, the report in covering these two points goes beyond any similar work that we have thus far encountered.

In disposing thus summarily of a proposal of this kind, the Yachtsman lays itself open to the very same criticism, its work is "crude" in that it fails to discriminate between a very important principle and a possibly faulty arrangement of details. Even if we grant all that the Yachtsman urges on the ground that too much is asked of the designer, and we are not quite prepared to do that, there is little ground for condemning the entire report and recommendation.

The main point of the report is that the proposed formula demands the disclosure of the beam, draft and the area of midship section. In this it goes no further than many proposals made by competent authorities, and seriously considered by yachting bodies. If yachtsmen are intent, as they now seem to be, on a rule that will promote displacement, there is little less that can be asked for than the area of midship section. It is less than asking directly for the displacement itself, and really very little more, at least to the man who has once seen a yacht out of water, than the girth would be. Given the beam and girth, as in the Y. R. A. rule, any designer who has once seen a yacht can obtain her area of midship section very closely indeed by a little trial sketching.

Until it is accepted that the formula in itself is a good one, there is no need of discussing the minor details of its application; but, this point once reached, the latter could probably be met in some satisfactory way. At the worst, it would be possible to accept the statement of the designer, as to the area of midship section and lateral plane, subject to verification by actual measurement in the case of a protest; or, as the measurers are usually men of reputation and perfectly responsible, it might be made imperative that they should consider the sketch of section as confidential, to be filed securely with the club records, and accessible only to themselves.

As to the lateral plane, that is of minor importance, under the proposed tax it is probable that very few yachts would be built below the standard, of 65 per cent. In the case of all yachts built to the standard all that would be necessary is the statement of the designer that the area does not fall below the limit. The proposal to call far a sketch of the lateral plane was seriously made by the British designers under date of Nov. 8, 1892. It does not follow from the mere use of these factors that it is necessary to publish to all the world the actual midship section and sheer plan of every racing yacht.

We regret that the Yachtsman has not directed its criticism to the really important features of the report instead of an auxiliary one. We confess that, after a long study of the subject of remodeling the formula from many points of view, we do not share the Yachtsman's ideas as to the extreme simplicity of the task and the aid to be obtained from the Y. R. A. rule; to us it presents many difficult features.

We had hoped this week to continue our discussion of the Hyslop formula, but find it necessary to defer it. However, we have a criticism quite as hostile as that of the Yachtsman, but of a more satisfactory nature, from our correspondent, "Sextant." As it was received at a late date, we are unable to attempt any reply at present:

Editor Forest and Stream:

From the point of view of the opponents of the old type of measurement rules the report of the Seawanhaka committee will seem a distinct advance in the following particulars, viz.:

It favors a rule which is specifically intended to produce wholesome boats.

It defines wholesome boats in terms of dimensions.

It says it is hopeless to attempt to assign independent or relative values to beam and draft as factors affecting speed.

It maintains that in racing it is relative and not absolute speed that is desired.

And, by leaving some matters to clauses supplementary to the formula, it gives testimony to the point that it is neither necessary nor expedient to include all matters concerning measurement in a formula.

From the same point of view the report is open to criticism in sundry respects.

The formula is made of two parts. The first, $\frac{\text{L.W.L.} + \sqrt{\text{S.}}}{2}$ which alone is effective with what we may term the committee's normal yachts, i. e., those having the desired amount of displacement. With such boats the remainder of the formula, $\frac{2\,(\text{B.} + \text{D.}) - 6\frac{2}{3}\sqrt{\text{M. S.}}}{2}$ equals O. With other boats the latter portion becomes effective. It is unlikely that yachts will have the precise amount and arrangement of displacement necessary to reduce the new portion of the formula to zero; therefore it will act as a whole and should be so considered.

The avowed purpose of the rule is to permit the building of "really good" yachts, having reasonable displacement, that can successfully compete with racing machines on "fair and equated terms." The accomplishment of this result by this formula depends upon the validity of the following fundamental proposition, viz.:

The relative worth of S. A., L.W.L., beam, draft, immersed midship section, immersed lateral plane, and weighted centerboards, as speed factors, is so accurately represented by the numerical relations of the several terms of the formula that no advantage in speed will be gained by sacrificing L.W.L. or S. A. in order to be able to reduce the area of immersed midship section and

lateral plane below the amount deemed desirable by the committee, or to get stability by weighting the centerboard.

No reasons are given in support of this proposition, although its truth is far from being obvious.

Concerning beam and draft the committee says: "It appears extremely doubtful if any rule which included beam as a separate and distinct factor * * * would meet with acceptance, and it appears to be nothing less than a truism that to assign to either of these distinct and separate values, or values relatively each to the other, is in the absence of more accurate knowledge wholly unwarranted." Yet the committee proceeds to assign relative values not only to beam and draft, but also to L.W.L. and $\sqrt{S.A.}$, all these elements being included in the formula with interchangeable values. That is to say: 1ft. of beam = 1ft. of draft = 2ft. of L.W.L. = 2 units of $\sqrt{S.A.}$; and beam is made as "separate and distinct" a factor in the formula as L.W.L. or S. A. or draft.

Without directly stating it the committee apparently opposes arbitrary restriction on sail, length, beam, draft and displacement; and favors so-called freedom of design. In view of the failure of all rules of the old type, and the fact that these rules have not given designers any more freedom than rules fixing maximum and minimum limits to the principal elements of design, it is a matter for regret that the committee has not given the reasons which impelled it to adhere to the old type of rule.

There have been sundry expressions of opinion by correspondents of FOREST AND STREAM that rules should not interfere with the freedom of designers, and that arbitrary restrictions are undesirable; but so far as the writer knows, no arguments have been adduced to show that the designer has any more freedom under the old type of rule than under rules like those of the knockabout associations which fix maximum and minimum limits to dimensions. The editor of FOREST AND STREAM testifies on this point in the issue of July 2, as follows:

"No rule can be framed that will not put at a premium some one class of yacht, the racing machine, the all-round fast cruiser or possibly even the slow cruiser. It has so happened in the past that every rule tested on an extensive scale has in time resulted in the production of an extreme racing type." * * * "This inevitable tendency of every rule has been fully recognized of late years by the various experts and committees called upon to suggest new formulas." In other words, designers have been free to make a single type of racing machines and nothing else.

These views have been repeatedly urged by correspondents of FOREST AND STREAM; and yachtsmen everywhere have been driven to rules with arbitrary restrictions or to one design classes in order to have any racing at all. If it is true that the formula type of rule with interchangeable factors gives designers no more liberty than rules which fix maximum and minimum limits to dimensions, then the only objection to arbitrary restrictions vanishes. Probably no one will claim that merely for influencing design in any desired direction the indirect method is so certain or desirable as the direct method.

For these reasons it seems to the writer that the committee has not done justice to itself or to its constituents in asking them to adopt the old type of rule, so many times discredited, and with all its uncertainties, without giving reasons for preferring it to a kind of rule that is absolutely certain in operation and easily understood by every yachtsman.

After defining its ideal yacht it is a pity the committee did not bar all other types from racing, instead of vainly trying to frame a rule that shall let the wholesome boat race on "fair and equated terms" with racing machines of all kinds. This rule is certain to produce a single type that will be faster under the rule than all others, and consequently will completely bar everything else from racing. The chances are that the new type will be something entirely unexpected.

No reasons are given for not recommending action on light construction, though there is a widespread belief that this is one of the vicious factors in the present condition of affairs.

In part justification of the old rule, whose continuance is recommended with some corrective factors added, the committee says: "The changes that have come about and the necessities that have arisen (since the adoption of the $\frac{L + \sqrt{S.}}{2}$ rule) are not in any degree a product of the rule."

Did not the rule foster such large sail plans and short L.W.L. in the small classes that it was found desirable to arbitrarily limit sail area in the last Seawanhaka cup race? Anything short of an adequate tax on sail encourages excessive sail plans. Under the proposed formula sail is only half taxed; and a premium is offered on large sail area and short L.W.L.

The notable omissions in the report are the failure to discuss fundamental principles of measurement, and the absence of any attempt to justify the adoption of the proposed formula and to demonstrate its usefulness. Yachtsmen are practically asked to adopt it on faith, as they have so many others which have proved worthless.

The new portions of the rule, $\frac{2\ (B. + D.) - 6\frac{2}{3}\sqrt{M.\ S.}}{2}$, and the provisions concerning lateral plane, are added with the expectation that they will permit the successful racing of yachts of wholesome type with fin keels, splashers and freaks of all kinds. This expectation is based upon the assumption that one unit of the difference between the sum of beam plus draft and three and one-third times the square root of midship section ($B + D. - 3\frac{1}{3}\sqrt{M.\ S.}$) is equivalent for speed purposes to 2ft. of L.W.L. or to two units of square root of sail area ($\sqrt{S.}$), and that one-fifth of the difference between the coefficient of lateral plane and the standard coefficient, 65 per cent., $\left(\frac{.65 - .04}{5}\right)$ is equivalent to as many units of L.W.L. or $\sqrt{S.}$ or to half as many units of beam or draft.

It is probably safe to assert that these assumptions are not founded upon any known laws of the resistance of partially submerged bodies moving in water. But on no other assumption can the use of this formula be logically justified. The formula presumes that all yachts of the same racing measurement have equal speed; and the factors which together make up R. M. are interchangeable on the basis stated. On the truth of these numerical relations between L.W.L., $\sqrt{S.}$, $\sqrt{M.\ S.}$, and the plane of lateral resistance, the worth of the new formula depends.

SEXTANT.

Annisquam Y. C.

Annisquam, Mass.
Monday, July 4.

THE Annisquam Y. C., of Annisquam, Mass., has this year quite a strong 15ft. class, the result of the racing of Spruce IV. in these waters last year. Among the new boats specially built for the class is Lynx, Messrs. Cunningham, designed by G. H. Duggan; Schatz, Mr. Felton Bent, designed by W. P. Stephens, with others by Boston designers. Three men are allowed as crew, though the yachts are measured with but 300lbs. on board. A number of races are scheduled for the season, beginning on July 4 with one for the Hastings cup, and also the first of the series for the "half-rater" trophy. The race was started off the club house at 2:35 P. M. with six boats, Tobasco, H. H. Wiggins; Lynx, Messrs. Cunningham; Gaboo, Walter Adams; Schatz, Felton Bent; Gertrude, H. Damon; Scooter, D. H. Woodbury; Imp, Oscar Perkins. Mr. Butler Ames is with his regiment, so Spruce IV. was not present. There was a strong westerly wind; the course was a triangle, sailed twice. Lynx led from the start, but after being handicapped through mistaking the signals, Schatz pulled up and at the end of the second leg, to windward, was first; on the reach Lynx again took the lead, with Scooter, Gaboo and Imp astern of Schatz. On the windward work of the second round Schatz again took the lead and had a safe position when a heavy squall swept over the fleet. In the squall the truck of her mast gave way, disabling her so that she was forced to retire. Lynx took in her jib and lowered her peak, riding out the squall, and she and Gaboo finished, the latter lowering everything for the time. The others gave up. Lynx wins the Hastings cup and the first leg for the trophy.

Hull Y. C. 30ft. Class.

Hull—Boston Harbor.
Saturday, July 2.

THE Hull Y. C. opened its season with an invitation race for the 30ft. class, with five starters; the old Harbinger, built by Hanley in 1889; the fin-keel Handsel, Hanley's Ashumet, built in 1894; the new Hanley Meemer, and the Purdon Elfreda. The course was from off Hull around the lightship, 14 miles naut., with a moderate S.E. breeze and smooth water. Ashumet took the lead at the start, being passed by Handsel, and finally the two giving place to Meemer, she turning the lightship at 4:35:30, with Handsel 1m. 30s. astern. They ran in under spinakers, finally beating into the harbor. The times were:

30ft. Class.

	Elapsed.
Meemer, R. C. Nickerson	2 39 55
Ashumet, C. Fred Bache	2 43 24
Handsel, J. R. Hooper	2 44 46
Elfreda, Hall & Johnson	2 49 55
Harbinger, W. F. Bache	3 03 48

Palmetto, schr., W. F. Palmer, carried Mr. T. E. Jacobs, of the race committee, over the course, timing the boats. Under the Hull Y. C. rule Handsel probably saves her times and takes second place.

Kingston Y. C.

Kingston, Mass.
Saturday, June 25.

THE Kingston Y. C. sailed the first race of the season on June 25 in a strong S.W. wind, the times being:

Fourth Class.

	Elapsed.
Maud, W. N. Meyers	1 14 50
Dolphin, N. Morton	1 23 45
Winnetuxet, Potter	1 26 08
Amie, M. S. Weston	1 30 20

First Special Class.

Wabun, G. W. Shiverick	1 22 50
Kittawake, H. N. Jones	1 23 30
Veritas, Alex. Holmes	1 24 45
Olympia, W. Steele	1 25 15
Scrap, A. B. Holmes	1 37 17

The winners were Maud and Wabun.

Savin Hill Y. C.

Savin Hill—Boston Harbor.
Saturday, June 25.

ON June 25 the Savin Hill Y. C. sailed a race for the 30ft. class with but two starters, Ashumet and Elfreda. The course was from off Dorchester around the Sculpin Ledge Buoy and Buoy 6 and return, ten miles, with a strong S.W. wind. Other starters were expected, but none were at hand. Ashumet led over the course, Elfreda making a good second until she broke down on the return. Ashumet's elapsed time was 1:46:48.

The judges were C. S. Willard, J. E. Corr and S. Ayers.

Fall River Y. C.

Fall River—Mount Hope Bay.
Saturday, July 2.

THE Fall River Y. C. sailed a lively race for the 15ft. class on July 2, for the Boyd prizes; the times being:

	Start.	Finish.
Taboo, West Borden	3 46 26	5 15 28
Columbia, Wood Bros	3 46 39	5 15 55
Eva, J. Whitehead	3 47 49	5 31 00
Paradox, Jeff Borden	3 47 51	5 41 21

Columbia lost her bowsprit near the end of the course, but made a close second.

New Rochelle Y. C. Annual Regatta.

New Rochelle—Long Island.
Saturday, July 2.

THE New Rochelle Y. C. held its annual regatta, as usual, on July 2, over the regular club triangles, starting off Echo Bay. A fleet of forty-six yachts started, and all covered the course in spite of a provoking light easterly wind, which fell to a calm at one time, though a light south wind came up to help in the last boats. The times were:

	Length.	Elapsed.	Corrected.
First Division, Start 12:35—Sloops—51ft. Class.			
Bansbee, Henry Doscher	43.50	1 15 10	1 15 10

Yellow Pup, Mr. Somerville	15.00	1 32 34	. . . .
Porgie, Mr. Downing	15.00	1 24 38	. . . .

The winners were: Banshee, Huzzar, Anoatok, Fidelio, John F. Carroll, Bonnie Born, Ida, Akabo, Edwina II., Kit, Wanda, Amos, Sora, Lobster, Mongoose and Prize.

Huzzar sailed her first race, having been launched the same morning. Prior to the start a meeting of the council of the Y. R. A. was held to consider a protest against the new catboat Wanda, as not complying with the restrictions of a cabin yacht. The protest was not sustained. After the race Volsung protested Kit for fouling at the first mark. The regatta committee included Messrs. C. P. Tower, Paul A. Meyrowitz, J. C. Lippencott, John W. Rough and A. P. Weston.

Boston City Regatta.

Boston—Boston Harbor.
Monday, July 4.

THE regular city regatta was sailed on July 4, at Boston, under the rules of the Y. R. A. of Massachusetts, with a good field of starters. There was a puffy, wholesail breeze from S.W., making a good race. In the 25ft. class Eleanor had a lead toward the end, but missed a mark of the course and was disqualified. The times were:

35ft. Class.

	Elapsed.
Chieftain, M. R. Peterson	3 39 12
Violet, H. J. McKee	3 43 12

30ft. Class.

Meemer, R. C. Nickerson	1 58 37
Ashumet, C. F. Bache	2 00 45
Elfreda, Hall & Johnson	2 06 27
Emma C., P. A. Coupal	2 21 23

25ft. Class.

Nettie, Walter Burgess	2 12 22
Little Peter, H. Moebs	2 15 06
Beatrice, John Cavanaugh	2 15 14
Hermes, A. W. Chesterton	2 15 56
Eleanor, D. B. Clapp	Disqualified.
Rival, W. S. Nickerson	Withdrew.

21ft. Class.

Tacoma, Elmer Prior	2 11 46
Cleopatra, H. M. Faxon	2 13 55

21ft. Cabin Class.

Privateer, A. E. Schaaf	2 11 48
Thetis, C. D. Lanning	2 20 23
Harriet, L. T. Harrington	2 21 42
Omeme, W. P. Barker	2 26 30
Helen, T. Hagerty	2 31 31
Cruiser, Q. Tucker	Withdrew.

18ft. Class.

Duchess, C. D. Mower	1 54 39
Circe, F. L. Pigeon	1 54 49
Vamoose, R. M. Benner	1 57 50
Fantasy, Wm. Allerton	2 05 56
Perhaps, J. E. Robinson	Withdrew.
Alpine, C. J. Blethen	Withdrew.

15ft. Class.

Vitesse, E. H. Clapp	1 26 32
Ray, S. A. Freeman	1 30 26
Katydid, J. F. Small	1 37 07

Cash prizes and Association pennant and percentages go to the winners, subject to decisions on protests. Circe protests Duchess on measurement, and also for fouling Alpine. Vitesse is protested on measurement.

The committee included Com. E. W. Dixon, Atlantic Y. C.; Capt. William Daly, Sec'y A. T. Bliss, of the Y. R. A. of M.; Com. C. H. Chapman, Volunteer Y. C.; Com. W. H. Russell, Lynn Y. C., and Com. T. S. Young, Revere Y. C.

The Fouling of Marks.

IN connection with the race between Vigilant and Navahoe off Newport last season, on Sept. 4, in which the former was disqualified for touching a mark with the end of her boom, we discussed at some length the question of this class of what may be called a technical foul as distinguished from actual violent collision with the mark. The same subject is very ably dealt with from the opposite point of view by Mr. W. Baden-Powell, the canoeing editor of the Field, an old and experienced yacht and canoe sailor, and a member of the Council of the British Y. R. A. In spite of the difference in size between Vigilant and a 15ft. canoe, the principle involved is identical in both cases if we consider that the mark in the case of a yacht race is the usual light triangular raft of open timbers surmounted by a flag or ball.

While the punishment of absolute disqualification is undoubtedly too severe in some cases, such as that of Vigilant and the one mentioned below, of Nautilus, we still see no other practicable solution of the difficulty. The consequences of the fouling of a buoy are too serious; even though no material injury to boats or crews may follow, the removal or destruction of a mark may ruin an important race. Yachtsmen are always prone to take chances at a mark, and some very strong measure of restraint is necessary. It is hardly possible to make the man who has fouled a mark in the excitement of racing the judge of his own error, compelling him as punishment to lose time in a second rounding.

Hard as it is in some cases, we believe that the best interests of yachting are served by the rigid enforcement of the rule that a yacht in any way touching a mark, unless wrongfully compelled to do so by outside influence, shall be disqualified; and further, that it is the duty of every helmsman who is thus disqualified beyond question or doubt to instantly withdraw from the race in order to leave a fair field for those legitimately entitled to continue. Instances are found every day where skippers, after running down and overturning a mark, or nearly wrecking another vessel through a failure to give way when on port tack, calmly continue in the race, blanketing and obstructing the legitimate contestants. The evils arising from any loose construction or enforcement of the rule as it now stands are, we consider, far more serious than the hardship of an undeserved disqualification at times.

The question of the fouling a mark disqualifying the canoe which fouls it has often been discussed, and opinion is very evenly divided pro and con, the liability of disqualification. We certainly feel inclined to side with the non-disqualification set in regard to some kinds of fouling. Brushing aside prejudice and present usage, let us see how the matter stands from an abstract sailing point of view. The turning marks on a sailing course are necessary to define the shortest distance that may be taken, therefore they have to be "rounded"; but the touching of such a mark accidentally in rounding it, unless the mark is thereby damaged or displaced, cannot make the slightest difference to sailing results from a true sailing point of view, or from a sportsmanlike racing point of view. Surely no sportsman cares to take, or feels proud of taking, a prize handed to him on the fact that the boat which had fairly outsailed him over the whole of the course was disqualified by rule for having slightly touched one of the turning marks.

Going back a bit into history, the origin of disqualifying a yacht for touching a mark was a necessary measure for the protection of life and property; in the old days in most cases, and even now in some, the marks on a yachting race course were boats, with men in them, lying at anchor, and a recklessly handled yacht could easily wreck or sink such markboats. Then the great iron channel marks became the turning marks, and surely no one ever wished purposely, or even carelessly, to touch such a nasty hard mark, either with hull or spar; but when it comes down to a canoe race, around innocent little can buoys, placed in very confined maneuvering space of water, the disqualification for accidental immaterial fouling becomes simply ridiculous.

Of course it is necessary to place a penalty on such fouling as drags the mark out of place or as cuts it adrift; and also perhaps one vessel causing another to foul a mark with her hull should be disqualified, because in degree of speed and wind or sea such fouling, involuntary on the part of the canoe actually fouling, might bring grave damage to that canoe and be purposely done by the outside canoe. Taking one recent case of what we may call immaterial fouling of a mark, in the R. C. C. sailing race on Hendon Lake on May 30, sailing four rounds, nearly eight miles, in the fourth round, and within a quarter of a mile of the finish, a buoy had to be rounded "in the bight," a very confined little bay with shoal water all about the place. Nautilus, sailing third in the race, and well away from the next canoe, gybed at the buoy and rounded nearly her boom's length off, but immediately after the gybe the boom, by a sudden flaw of the fitful breeze in that sheltered portion of the lake, was flung back again for a moment, and the main sheet just tipped the can buoy. Her owner, of course, reported the matter to the officer of the day on arrival, and the next canoe, Vanessa, was awarded third prize; and Nautilus not only lost the prize, but the score for that race in the record prize, which goes from race to race. This is only one out of several such cases this season.

Now, on the strict reading of the sailing rule on this matter, and apart from usage, it may be doubted whether the intention ever was to disqualify for other than the hull fouling the mark. The rule says: "each canoe must go fairly round the course, and must not touch any buoy. Any canoe causing a mark vessel in any way to shift her position to avoid being fouled by such canoe shall be disqualified." Evidently in this rule the last sentence is simply copied from some yacht club rule (it was made before the Y. R. A. existed), and contemplates men in a markboat; but as to the "must not touch," it probably means "with her hull," because in the next rule, for completing the course, it is clearly set out "no bowsprit, spars, or other gear or fittings not part of the canoe's hull shall be taken into account." However, without troubling to imagine how the framers intended the rules to be read, we may come down to the practical question. Is it the general desire of canoe racers that rules are to be microscopically obeyed? Is the officer of the day bound to disqualify an owner who conscientiously reports an immaterial infraction of a rule, an infraction which he alone perhaps is aware of? If the answer is in the affirmative, we are afraid the confessional would upset some of the prize destinations at Hendon, and also, consequently, in the record; for instance, if a lifebuoy is carried below a fastened hatch it is an infraction of the rule that the lifebuoy "shall be ready for use," or where a canoe has not got her L.W.L. marked, or her flag has blown its end off and is less than required. The owner knows these things; is he not bound conscientiously to report them, even though immaterial to the performance? If reported, is the officer not bound to disqualify equally so as he does to the case of touching a mark? Possibly the best way to settle the mark-rounding matter would be to enact that if a canoe in any way touches a mark she shall go round it again, i. e., complete a circle there and then before going on to the next mark; but that if she drags the mark from its position she shall be disqualified, or if she sink the buoy she shall be disqualified and shall herself anchor about the spot and act as rounding-mark for the remaining competitors, so as not to throw the racers out for want of a mark.

In the table, Column 1 gives the coefficient of the midship section. Column 10 gives the amount of correction in the form of length which would be added to the present Seawanhaka measurement in the case of yachts of extreme beam or draft (or both), and limited area of section. Column 11 gives the amount of correction which would be subtracted from the present measurement in the case of yachts of fuller section and less extreme dimensions.

1 Coefficient of mid ship section.	2 Name.	3 Bm. at L.W.L.	4 Draft at M. S. + ⅓ excess.	5 Beam + Draft.	6 Area M. S.	7 $\sqrt{\text{M. S. Area.}}$	8 Proportion $\frac{\text{M.S.}}{\text{Bm.} + \text{D.}}$	9 $\frac{3}{5}\sqrt{\text{M. S.}}$	10 Excess B. + D. over $\frac{3}{5}\sqrt{\text{M. S.}}$	11 Excess $\frac{3}{5}\sqrt{\text{M.S.}}$ over B. + D.

Royal St. Lawrence Y. C.

Dorval—Lake St. Louis.

Friday, July 1.

THE Royal St. Lawrence Y. C. celebrated Dominion Day by a race for the Sir Donald A. Smith cup, and three short races for the 20ft. class. The former resulted as follows:

July 1, 1898.—Race for Sir Donald A. Smith cup prize.
Weather.—Fine.
Wind.—Moderately fresh; westerly.
Preparatory Gun.—11:10; start, 11:15; course A.

	Finish.
Molly Bawn, W. Kavanagh	1 18 40
Rita, C. O. C. Clarke	1 16 10
Good Luck, A. Hersey	1 18 45

The results of the 20ft. trials were:

First race—Start 11:35:

	Finish.		Finish.
Strathcona	12 16 00	Avoca	12 07 30
Speculator	12 11 30	Glenowen	Disabled.
Glencairn	12 08 05	Manitou	Disabled.

Second race—Start 12:40:

Strathcona	1 28 35	Glencairn	.. .. ..
Speculator	1 29 20	Avoca	1 29 45

Third race:

Glencairn	4 21 15	Strathcona	4 24 00
Avoca	4 23 40	Manitou	4 20 45

Fourth race—Start 4:50:

Glencairn	5 22 40	Strathcona	5 21 45
Avoca	4 23 40	Manitou	.. .. ..

Saturday, July 2.

Three more short races were sailed, each being won by Strathcona, sailed by Mr. Almon. The times were:

First race—Start 3:50:

	Finish.
Strathcona, Almon	4 37 22
Glencairn, Duggan	4 41 17
Speculator, Hamilton	4 41 45
Avoca, Shearwood	4 42 53
Glenowen, Davidson	4 44 11
Manitou, Drummond	4 48 18

Second race—Start 4:58:

Strathcona, Almon	5 32 53
Glencairn, Duggan	5 34 18
Speculator, Hamilton	5 34 40
Avoca, Shearwood	5 35 10
Glenowen, Davidson	5 35 35
Manitou, Drummond	5 35 55

Third race—Start 5:49:

Strathcona, Almon	6 23 21
Glencairn, Duggan	6 24 15
Manitou, Drummond	6 25 47
Glenowen, Davidson	6 27 18
Speculator, Hamilton	6 27 32
Avoca, Shearwood	6 27 55

The Radix Folding Centerboard.

WE have had inquiries for the Radix patent folding centerboard, and learn that it has been acquired as one of the best fittings manufactured by Messrs. M. E. Blasier & Co., of Utica, N. Y.

Larchmont Y. C.

THE uncertainty that has prevailed for some time as to the racing of the Larchmont Y. C. this season was by no means dispelled by the following notice, recently sent out:

"Certain members of the Larchmont Y. C. having expressed a desire to race on July 4, the trustees have decided that, while the usual annual regatta will be omitted, the regatta committee will manage races between any yachts that may desire to compete on that day, and will offer suitable commemorative prizes. Entries should be forwarded to the regatta committee on or before next Saturday."

As it happened, there were thirty-five starters, and had the race been duly announced as the club's annual event, there would probably have been nearly twice as many. The wind started in light S.W., shifting to N.E. and bringing up a squall from that quarter. Anoatok sailed in two different classes, winning in each. The times were:

First Division, Start 12:05—Sloops. Class L.

	Elapsed.	Corrected.
Hussar, James D. Baird	3 43 35	3 43 35
Anoatok, Oswald Sanderson	3 40 26	. .. ..

Class M.

Anoatok, O. Sanderson	3 40 26	.. .. ..
Acushla, C. T. Wills	3 42 04	3 42 04

Yawls—Class M.

Albicore, Seymore J. Hyde	4 00 19	4 00 17
Fidelio, Ed J. Sanford	4 37 52	. .. ..

Second Division, Start 12:10—Class N.

Newasi, A. H. W. Johnson	2 28 40	2 28 40

Third Division—Start 12:15—Class P.

Bonnie Bairn, F. H. Waldorf	3 18 18	3 18 18

Class P—Raceabouts.

Mongoose, Simeon Ford	2 43 56	2 43 56
Mariposa	2 50 16	2 45 16

S. C. Y. C. Knockabouts—Class P.

Dipper, Arthur Iselin	2 52 16	2 52 16
Dacoit, J. R. Maxwell	2 54 37	2 54 37
Gloria, J. R. Maxwell	2 51 34	2 51 34
Frances, George J. Milne	2 59 02	2 59 02
Midge, F. W. Boyer	2 55 44	2 55 44
Folly	Withdrew.	

Fourth Division—Start 12:20.

Akabo, Clark A. Miller	2 36 14	2 36 14
Gold Bug	.. .. ..	.. .. ..
Seawanhaka, C. H. Crane	2 37 28	2 37 26
Asthore, J. B. Jones	2 54 53	2 54 53

Class S.

Kit, T. J. Dunne	2 28 03	2 28 03
Volsung, De Forrest Bros	2 34 48	2 34 48
Dosoris II.	2 48 08	2 48 08

Fifth Division—Start 12:25—Class T—Catboats, 25ft.

Wanda, F. L. Bedford	2 29 18	2 29 18
Ella, A. H. Pirie	Withdrew.	
Shippan, A. H. Bradley	2 43 03	2 43 03

Sixth Division—Start 12:30—Class V.—20ft. Cats.

Dinga, A. H. Pirie	Withdrew.	
Sara, W. Hoey, Jr.	2 57 46	2 57 46
Minnetoska, A. Pryan Alley	2 58 00	2 58 00

Class W—15ft. Cats—Once Around.

Lobster, T. J. S. Flint	2 25 15	2 25 15
Turk, Charles G. Davis	2 22 26	2 22 24
Edwina II., J. Nelson Gould	2 16 27	2 16 27
Cora, H. Stevenson	2 41 07	2 41 07

The winners were Anoatok, two classes; Albicore, Newasi, Bonnie Bairn, Mongoose, Gloria, Akabo, Kit, Wanda, Sora and Edwina II.

Royal Canadian Y. C. Queen's Cup.

Toronto—Lake Ontario.

Friday, July 1.

THE race for the Queen's cup of the Royal Canadian Y. C. was a very perfunctory affair this year, only three yachts entering and two starting. One of these, Wona, is the old Burgess cutter of the 22ft. class, now owned by Eby Bros., of Toronto. The other, Verona, is a new boat, designed and built by James Wier, of Hamilton, for W. J. Biggar. She is in the 27ft. class, a wide, shoal hull, similar to Hiawatha and Kestrel, with deep wooden fin and iron keel. Hiawatha entered, but did not start. The wind was very light from the west and the day hot and sunny. The course was a ten-mile triangle on the lake, sailed twice. Verona lost some time through mistaking a mark, but won very easily. The times were. Start 10:32.

	Finish.	Elapsed.	Corrected.
Verona	3 29 48	5 07 48	5 07 48
Wona	3 41 39	5 19 39	5 13 19

Verona won by 5m. and 31s., allowing 6m. and 20s.

Quincy Y. C. Handicap Race.

Quincy—Boston Harbor.

Saturday, June 25.

THE Quincy Y. C. sailed its first handicap race on June 25, the course being off Hough's Neck. A strong S.W. wind compelled the fleet to turn in two and three reefs, and several were disabled. Helen was dismasted, Arbutus broke her boom, and Stella Manning lost her bowsprit. The times were:

	Handicap.	Elapsed.	Corrected.
Hustler, C. C. Collins	0 09 00	1 29 32	1 38 32
Thisbee, H. W. Robbins	0 07 00	1 35 20	1 42 20
Chatham, George Carey	0 09 00	1 37 56	1 46 56
Dorothy, F. F. Crane	0 05 00	1 50 12	1 55 12
Moondyne, A. J. Shaw	0 10 00	1 46 26	1 56 26
Supero, C. H. Alden	.. ..	1 59 13	1 59 13
Kitty, J. A. Evans	.. ..	2 19 18	2 19 13
Stella Manning, E. B. Glover	.. ..	Disabled.	
Arbutus, Hall & Merritt	.. ..	Disabled.	
Princeps, J. L. Whiton	.. ..	Withdrew.	
Tantrum	.. ..	Withdrew.	
Vexer, W. H. Shaw	.. ..	Withdrew.	
Sunbeam, H. B. Faxon	.. ..	Withdrew.	

Hull Mosquito Y. C.

Hull—Boston Harbor.

Saturday, June 25.

THE first race of the Hull Mosquito Y. C. was sailed on June 25 in a strong S.W. wind, the course being off James' Pier, Hull. The times were:

First Class.

	Length.	Elapsed.
Aurora, A. F. Hayden	15.10	0 58 15
Rabbit, Fred Keyes	16.06	1 07 30

Second Class.

Isidora, Harry Cleverly	14.11	0 52 00
Noname, P. F. Folsom	....	0 55 45

Bubble, W. Field, W. Burwell, broke tiller, capsized.

Atlantic Y. C. Special Regatta.

Sea Gate—New York Harbor.

Monday, July 4.

THE Atlantic Y. C. sailed a special regatta on July 4, with prizes for working boats as well as yachts. The programme being: Eleven A. M., regatta for working boats; open to all schooners, sloops and mainsail boats used for working and business purposes, and in no way for pleasure. The vessels will be classed in three divisions, viz.: Schooners, sloops, and mainsail boats.

If two boats in each class, first, $25.

If three boats in each class, first, $25; second, $15.

If five boats in each class, first, $25; second, $15; third, $10.

If seven or more boats in each class, a fourth prize of $5 will be awarded.

Three P. M., special regatta for the following classes: Class J, Series A, and each class under Series B and C of Racing Rule I. (each class separately.)—Special knockabout class, special 30ft. class, dory class, special canoe class, open to canoes of all organized canoe clubs.

The working boat race was sailed in a fresh southerly breeze, the course being three rounds of a five-mile triangle; the times were:

	Length.	Elapsed.	Corrected.
Flyaway	34.50	3 17 58	3 17 58
Lena	33.40	3 20 22	3 18 52
Loretta S.	31.60	3 24 45	3 20 37
Lydia	30.09	3 32 22	3 27 09
Birdie and Etta	28.00	Withdrew.	
Marietta	28.00	Did not finish.	
Caldena	26.00	Did not finish.	
Bessie B.		Withdrew.	

First prize, $25, won by Flyaway. Lena captured the second prize, $15, and Loretta S. won third prize, $10. All other boats that started received $5 each.

The dory class was started at 11:45, with but two entries, the times being: Pinkie, 12:52:55; Dixie, 1:02:23.

The afternoon race of the yachts was timed:

	Length.	Elapsed.	Corrected.
Series A—60ft. Class.			
Athlon, E. B. Havens		1 32 10	. . . .
Daphne, Geo. W. Copeland		1 45 15	. . . .
Series C—25ft. Class.			
Impudent, L. Boury	23.70	1 36 14	1 36 14
Grace E., W. A. Neidhart	23.90	Did not finish.	
Series C—30ft. Class.			
Dorothy, J. L. Johnston	28.61	Did not finish.	
Rex, F. M. Randall		Did not finish.	
Qui Vive, George Freeth	27.50	1 38 15	1 38 15
Martha M., R. V. Moore	27.50	1 37 00	1 37 00
Special Knockabout Class.			
Vortex		Did not finish.	
Gryphon		Did not finish.	
Cyclone II.		Did not finish.	
Gunvar		Did not finish.	

The winners were Athlon, Impudent and Martha M.

Com. Adams offered a special cup for the 60ft. class, and Eclipse was expected to start with Athlon and Daphne, but she did not. After the race a special meeting was held, at which the following amendment to the constitution was finally adopted:

Any woman owning a yacht is eligible for election to the club as a flag member, and shall upon election pay annual dues, but no initiation fee.

Such membership shall continue only during the period of yacht ownership, and carries only the following privileges:

The right to fly the club burgee. To have private signal registered with the secretary. To enter yacht in club races, and the use of club stations and floats.

Corinthian Y. C.

Marblehead—Massachusetts Bay.

Saturday, July 2.

THE Corinthian Y. C. sailed its 118th regatta on July 2 over a course from off the new club house around Bowditch Ledge Beacon and Half-Way Rock, with a good fleet of starters, including nine in the new raceabout class. The wind was light from S.E.; the times were:

	Elapsed.	Corrected.
Second Class.		
Nettie, W. Burgess	1 57 18	. . . .
Dragon, C. M. Barker	2 12 10	. . . .
Raceabouts.		
Tilt, W. O. Gay	1 47 18	. . . .
Sintram, W. P. Fowle	1 47 29	. . . .
Cockatoo, C. H. W. Foster	1 49 31	. . . .
Hazard, H. M. Sears	1 50 03	. . . .
Susanne, F. Brewster	1 50 55	. . . .
Sally III., W. B. Stearns	1 51 43	. . . .
Quill, J. F. Cole	1 52 33	. . . .
Dafila, W. D. Turner	1 54 55	. . . .
Chinook, C. F. Adams 2d	Disabled.	
25ft. Knockabouts.		
Rowenia, W. H. Rothwell	1 49 47	. . . .
Manissa, S. W. Boyson	1 56 54	. . . .
Class A.		
Lillian, H. E. Whitney	1 57 15	1 52 15
Tryphena, S. H. Foster	1 59 45	1 55 45
Class B.		
Carina, J. P. Clark	2 00 25	1 56 55
Polly, E. Wadsworth	1 57 12	1 57 12
Ruth, R. Wiggin	2 02 10	1 58 50
Jenny Wren, F. E. Peabody	2 00 50	1 59 20
Water Lily, F. C. Lyman	2 01 03	2 01 03
Arbuka, F. P. Bowdin	2 03 20	2 03 20
Maia, E. Paine	Withdrew.	

Winthrop Y. C.

Winthrop—Boston Harbor.

Saturday, June 25.

THE Winthrop Y. C. sailed a race on June 25 off Point Shirley. A strong S.W. wind kicked up a sea and called for two and three reefs. The times were:

	Elapsed.
25ft. Class.	
Nettie, Walter Burgess	1 13 40
Hermes, A. W. Chesterton	1 15 56
Active, J. R. Hodder	1 22 00
Alert, John McConnell, Jr	1 34 41
Alma, C. A. Herne	Withdrew.
21ft. Class.	
Whisper, W. H. Simpson	1 20 30
Harriet, L. T. Harrington	1 23 12

Hermes is a new boat, sailing her first race, she made good showing, but tried to carry too much sail.

The judges were Messrs. A. T. Bliss, William Daly, Jr., and W. J. Kelly.

Beverly Y. C.

Wing's Neck—Buzzard's Bay.

Saturday, June 25.

THE Beverly Y. C. sailed its second race on June 25 in a strong S.W. wind, the yachts carrying three reefs. The times were:

	Length.	Elapsed.	Corrected.
Cruising Knockabouts.			
Amanita, J. Crane, Jr	21.00	1 19 18	. . . .
Kalama, David Rice	21.00	1 21 56	. . . .
Edith, C. M. Baker	21.00	1 23 50	. . . .
Apteryx, L. S. Dabney	21.00	1 24 29	. . . .
Second Class Cats.			
May King, D. L. Whittemore		1 22 06	. . . .
Fifth Class Cats.			
Pedro, H. O. Miller	15.00	0 40 51	0 40 51
Imp, George Dabney	13.07	0 44 04	0 43 36
Helen, W. Swan		0 46 06	0 46 06

As told in the FOREST AND STREAM last winter, Amanita is a new knockabout designed by Crowninshield and built by Lawley for Mr. Joshua Crane, Jr. She has frequently been mentioned as designed by C. H. Crane for the Seawanhaka 20ft. class, but this is a mistake.

Saturday, July 2.

The club sailed its third race on July 2 in a light S.W. wind, the times being:

	Elapsed.	Corrected.
Cruising Knockabouts.		
Apteryx, L. S. Dabney	2 15 35	. . . .
Amanita, J. Crane	2 15 50	. . . .
Kalama, David Rice	2 17 50	. . . .
Eina, J. Parkinson	2 18 20	. . . .
Second Class Cats.		
Thordis, T. B. Wales	2 04 12	. . . .
May King, Whittemore	2 12 15	. . . .
Third Class Cats.		
Melro, Whittemore	1 58 10	1 42 17
Daisy, H. Stockton	2 03 40	1 45 26
Sally Brass, H. Sargent	2 16 02	2 01 06
Fifth Class Cats.		
Kolea, Mrs. J. Crane	1 28 02	1 14 48
Pedro, H. O. Miller	1 28 29	1 15 15
Lara, G. Washburn	1 31 13	1 17 59
Imp, G. S. Dabney	1 33 20	1 19 13

The Kolea is a new boat built by Phinney.

Open Sweepstakes, Buzzard's Bay.

Monday, July 4.

Rather a small fleet turned out for the open sweepstakes of the Beverly Y. C. on July 4. There was a fresh S.W. wind at the start, increasing to a hard blow before the finish. The times were:

	Elapsed.
Cruising Knockabouts.	
Edith, C. M. Baker	1 30 11
Apteryx, L. S. Dabney	1 31 22
Kalania, Dand Rice	1 32 00
Eina, T. Parkinson	Withdrew.
Amanita, J. Crane, Jr	Lost bowsprit.
Maid Marion, C. H. Jones	Lost bowsprit.
Fourth Class Cats.	
Maori, W. Phinney	1 54 18
Elsa, C. S. Sargent, Jr.	1 57 06
Fifth Class Cats.	
Pedro, Howard Miller	1 24 43
Vif, A. Winsor, Jr	1 42 10
Imp, Geo. Dabney	Lost bowsprit.
Kolea, Mrs. J. Crane, Jr	Disabled.

Judges, F. E. Cabot, E. M. Farnsworth.

Burgess Y. C.

Marblehead—Massachusetts Bay.

Saturday, June 25.

THE first championship race of the Burgess Y. C., its eighteenth race, was sailed on June 25 in a strong S.W. wind; the times being:

	Elapsed.
Second Handicap.	
Ben-My-Chree, W. H. Stewart	1 27 55
Petrel, E. W. Remick	Not taken.
First Class.	
Sassacus, A. W. Erickson	1 24 28
Plover, W. H. Chamberlain	1 28 03
Second Class.	
Pointer, B. C. Melzard	1 40 08
Bugaboo, H. B. Ingalls	1 47 27
16-Footers.	
Dove, F. G. Macomber	0 45 02
Dora, Stebbins	Withdrew.

Ben-My-Chree, Sassacus, Pointer and Dove each won a leg for the championship in her class.

Nineteenth Regatta, Monday, July 4.

The Burgess Y. C. sailed its nineteenth regatta on July 4 in a light S.W. wind, finishing with a squall. The times were:

	Elapsed.	Corrected.
Raceabouts.

The Newport 30ft. Class.

THE first regular race of the special 30ft. class was sailed off Newport on Saturday, July 2, none of the fleet remaining about New York this year for the Sound races. The Dyer's Island course was sailed, sixteen miles, with a moderate S.W. wind, the times being. Start, 2:50.

	Finish.	Elapsed.
Veda, Cornelius Vanderbilt, Jr.	5 32 21	2 42 21
Wawa, Reginald Brooks	5 33 19	2 43 19
Carolina, Pembroke Jones	5 34 40	2 44 40
Vaquero III., Herman B. Duryea	5 35 30	2 45 30
Dorothy, Harry P. Whitney	5 37 20	2 47 20

Dorothy grounded, but came off uninjured.

Wawa was sailed by her new owner, Mr. Reginald Brooks, who recently purchased her from Mr. J. A. Stillman.

On July 4 there was a strong S.W. wind, and a course of ten miles up the bay, to Hope Island and return, was chosen, the prize being the Narada cup. Vaquero III. led all day and won as below. Start 2:50:

	Finish.	Elapsed.
Vaquero III., Herman B. Duryea	5 11 35	2 21 35
Wawa, Reginald Brooks	5 14 14	2 24 14
Carolina, Pembroke Jones	5 15 04	2 25 04
Veda, Cornelius Vanderbilt, Jr.	5 15 45	2 25 45
Dorothy II., Harry P. Whitney	5 16 06	2 26 06

On July 5 the start was made at 2:47, the times being:

	Finish.	Elapsed.
Veda, C. Vanderbilt, Jr.	4 57 40	2 10 40
Catalina, P. Jones	4 58 03	2 11 03
Hera, R. N. Ellis	4 58 22	2 11 22
Vaquero, H. B. Duryea	4 59 26	2 12 26
Wawa, R. Brooks	5 00 34	2 13 34

On July 6 a sweepstakes race was sailed over the Hope Island course, with a south wind, strong at the start at 2:53, but dying down later. The lee mark was timed:

Dorothy, 4h. 2m.; Caroline, 4h. 2m. 15s.; Vaquero III., 4h. 2m. 50s.; Hera, 4h. 3m. 2s.; Wawa, 4h. 3m. 26s.

Vaquero III. did the best work in the long beat home, the times being:

	Finish.	Elapsed.
Vaquero III., Herman B. Duryea	5 58 16	3 05 16
Hera, Ralph W. Ellis	5 58 51	3 05 51
Wawa, Reginald Brooks	5 58 58	3 05 58
Carolina, Pembroke Jones	6 01 47	3 08 47
Dorothy, Harry P. Whitney	6 02 31	3 09 31
Veda, Cornelius Vanderbilt, Jr.	Disabled.	

Essex Y. C. Annual Regatta.

Newark—Newark Bay.

Monday, July 4.

THE Essex Y. C. sailed its annual regatta on Newark Bay on July 4, starting in a light breeze and finishing in a heavy squall. The course was a ten-mile triangle. The times were:

	Length.	Start.	Finish.	Corrected.
Class A—Cabin Sloops.				
Sinner	28.00	2 38 00	4 42 00	2 04 00
Rosa	26.11½	2 39 00	4 50 30	2 10 25
Amy	24.02	2 39 00	4 56 30	2 14 20
Pastime	24.08	2 38 00	Withdrew.	
Class B—Cabin Sloops.				
Vagabond		2 39 30	4 33 30	1 54 00
Madge		2 40 00	4 50 00	2 03 00

Bayswater Y. C. Open Regatta.

Far Rockaway—Jamaica Bay.

Saturday, July 2.

THE open regatta of the Bayswater Y. C. was sailed on July 2 in a moderate S.W. wind, the times being:

	Elapsed.	Corrected.
First Class Cats.		
Katherine, Com. Griffin	1 43 01	1 43 00
Alice May, M. Schuman	1 45 47	1 44 37
Louise, L. R. Joggles	Did not finish.	
Madeline, J. J. Healy	Did not finish.	
Second Class Cats.		
Ellsworth, J. Wilson	1 45 54	1 45 40
Lochinvar, J. F. Savius	1 47 20	1 47 20
Coquette, Guy Watts	1 49 40	1 47 50

May E., J. Schuman	1 11 44	1 11 29
Maggie, J. C. Kane	Did not finish.	

Quincy Y. C.

Quincy—Boston Harbor.

Monday, July 4.

THE Quincy Y. C. sailed its second scrub race on July 4, the times being:

	Elapsed.
Helen, W. R. Sawtelle	1 42 23
Tantrum, Whittemore & Johnson	1 43 41
Thisbe, H. W. Robbins	1 43 47
Kittie, J. A. Evans	1 52 00

YACHTING NEWS NOTES.

For the past two months an odd-looking craft has been anchored off City Island, a plumb stemmed boat, with a good sheer forward, her rig being nearer to a ketch than a yawl. With no bowsprit and dirty white sides, she was a curious nondescript, and hard to recognize as the once famous 15-tonner Maggie, the pride of British courses twenty seasons ago, and later, about 1882-3, famous about New York and Boston. A few years ago she was taken by the Herreshoffs in part payment for another vessel, and they changed her from cutter to yawl rig, with mizen mast stepped well amidships. Last winter she was purchased by Sigmund Bruenne, a Hungarian who had accumulated some money after working for years as a peddler, and later as a clothing dealer in Trenton, N. J. The man was demented, his hallucination being that he had committed numerous crimes, for which the police were hunting him, and after living in New York for a time, where he was arrested on account of his peculiar conduct, he went to Bristol and purchased the yacht. She was provisioned for a year's cruise when she came through the Sound last April, with only her owner aboard, and anchored off City Island. The strange conduct of the man led to suspicions on the part of the police that he was spying on the work of the mining parties about the head of the Sound, and he was arrested, but released when his history became known and it was proved that he was a harmless lunatic. From all accounts he was entirely unfitted for the task of handling a yacht alone, especially one of 44ft. l.w.l., but he cruised on the Sound about City Island. On June 28, when in the East River, near Randall's Island, Maggie was in collision with a tug towing a scow. Her owner went aft, hauled in the dinghy, and attempted to drop a kedge into it; in so doing he fell overboard and was seen no more. The yacht, with her bow stove in, went on the rocks off Ward's Island, but was later hauled off and taken to a dock at Astoria. Bruenne is believed to have had no friends or relatives in this country, and to have left considerable money.

The centerboard sloop designed and built by T. R. Webber, of New Rochelle, for James D. Baird, of Philadelphia, was successfully launched on Saturday, July 2, being christened Hussar. The yacht is similar to Mr. Baird's Surprise, built by Webber last year; but a little larger, being built to the limit of the 42ft. class. Her dimensions are: Over all 50ft., l.w.l. 31ft. 6in., beam 15ft., draft 4ft., least freeboard 2ft. 6in., headroom under trunk 6ft. She has the usual wood centerboard working through a lead keel of five tons. She will carry a sail plan of 2,700sq.ft. The construction, as in all of Mr. Webber's yachts, is strong and durable, with no skimping of weight, the yacht being built for general use. She has excellent room below, a good cabin, three staterooms, galley and forecastle. The yacht was rigged complete on the ways before launching, and was under way as soon as the was fairly afloat, taking part in the New Rochelle Y. C. race the same afternoon and winning in her class.

The second of the two steam yachts built this past winter at Roach's Yard, Chester, No. 295, has been purchased by the U. S. Government, and named Sylph. She will be fitted for use in Cuban waters.

The Y. R. A. of Long Island Sound has issued the official programme of races, which may be obtained of Thompson & Co., 55 Dey street, New York, price 5 cents. The Y. R. A. rules may be had at the same address, price 10 cents. Notice is given that the Y. R. A. will publish no new book of racing numbers this season, but the secretary has arranged for the correction to date, in manuscript, of such of the official classification and racing number sheets as may be sent to him for that purpose, the charge being 50 cents each.

Theodore C. Zerega, of this city, has been commissioned lieutenant in the United States Navy and ordered to command the patrol steamer Free Lance, now in commission at this port. This, we believe, is the first time that a civilian pure and simple has been placed in command of a Government vessel, and it is a high tribute to the ability of an amateur sailor. Mr. Zerega is a gentleman of independent means, a member of the New York Y. C., the Seawanhaka-Corinthian Y. C. and the Calumet Club. He is not a graduate of the United States Naval Academy, nor is he a professional seaman. But he has been a yachtsman all his life, has cruised on large yachts all over the world, and has sailed small ones, like the Kathleen, to many a brilliant victory. He was one of the original officers of the First Naval Battalion, serving for several years as Senior Ensign of the Third Division, then commanded by W. Butler Duncan, Jr., now commander of the battalion, but, absent on leave as senior watch officer of the Yankee. Mr. Zerega went on the supernumerary list of naval militia officers three years ago, and was called into active service again at the opening of the war as an aide, with the rank of lieutenant, junior grade, on the staff of Capt. J. W. Miller, commander of the naval militia of this State. It is stated that Mr. Zerega passed a higher examination than any other person, not an Annapolis graduate, who appeared before the examining board. His cousin, W. Irvine Zerega, one of the crack yacht sailors of Long Island Sound, is chief quartermaster on the cruiser Yankee.

We can heartily second all that the New York Times says, as above, of Mr. Zerega, who is one of the best of the many good yachtsmen that hail from Westchester county, New York. As a boy Mr. Zerega began his sailorizing in small, open boats and sandbag catboats about the head of the Sound, learning all that was taught in a pretty good school of practical Corinthian yachting. In 1883 he, with Mr. R. W. Rathbone, built the little cutter Surf, cruising and racing in her for several years. Since then he has owned or had under charter Minerva, Nymph, Peri, Kathleen and other yachts. He has cruised a great deal in the West Indies and European waters, on Yampa, Oneida, Utowana and other large craft. When the first experiment of a naval reserve proved a failure in New York, Mr. Zerega was one of the leaders in the formation of the Naval Reserve Association, through whose efforts the present Naval Reserve of New York and in fact of the nation was established.

The New York Y. C. has sent out the following concerning the annual cruise: New York Yacht Club, 67 Madison avenue, New York, June 30, 1898.—At the last general meeting of the club it was referred to the flag officers to decide whether the usual annual cruise should take place during the present summer. The flag officers have decided that the cruise should be omitted. They are of opinion that the comparatively small number of yachts in commission and the restrictions upon navigation in force at the principal ports would seriously impair the success of a cruise. But were this otherwise, there is another consideration which they deem controlling. The country is engaged in war, thousands of her citizens are risking their lives in her service, including, in the navy particularly, many who are members of this club. The flag officers feel sure that the members of the club will agree with them that at such a time the usual festivities of the yachting season should be suspended. J. Pierpont Morgan, Commodore; Lewis Cass Ledyard, Vice-Commodore; August Belmont, Rear-Commodore.

A very sad capsize occurred on Lake Ontario, off the little port of Mimico, west of Toronto, on July 3. On Dominion Day, July 1, a party of five, R. A. L. Gray, A. W. S. Roberts, A. Q. Caniff, W. I. Anderson and W. M. Brodie, all of Toronto, left that city for a cruise to Oakville. They were in a new boat, Aloah, a yawl of the 22ft. class, owned by F. M. Gray, former owner of Vedette, a well-known Toronto yachtsman. While returning from Oakville on July 3 the yacht was caught in a very severe squall when about three miles out on the lake just abreast Mimico, and was capsized while her crew were trying to lower the sails. The capsize was seen from the shore and in spite of the storm and a heavy sea several parties put off in skiffs and small boats. That headed by Dr. Godfrey, with three friends, was the first to reach the wreck, but Caniff and Anderson had already sunk, while the other three were nearly dead from exhaustion, Mr. Roberts requiring prompt medical treatment for his resuscitation at the hands of Dr. Godfrey. The three received no serious injury, recovering shortly after being cared for ashore.

The same storm passed over Burlington Bay and Hamilton, also with fatal results, an open sailing boat being capsized, and out of her crew of four three, Chas. Searle, Roy Sinnett and Chas. Williams, were drowned. At the same time the cutter Zelma, Com. Lucas, Royal Hamilton Y. C., slipped her moorings, and under trysail tried to beat out into the open lake, Mr. J. F. Monck being at the tiller. She was driven into the drawbridge and dismasted, two of Mr. Monck's ribs being broken. A great deal of damage was done to yachts, wharves, etc., and to persons ashore.

The schooner yacht Katie, owned by Daniel Sanzenbacher, of Toledo, was stolen from that city on June 25 and recovered at Kingston, Ont., three days later.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JULY 23, 1898.

VOL. LI.—No. 4. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

PRIZES FOR AMATEUR PHOTOGRAPHS.

THE FOREST AND STREAM offers prizes for meritorious work with the camera, under conditions which follow:

The prizes will be divided into three series: (1) for live wild game; (2) for game in parks; (3) for other subjects relating to shooting and fishing.

(1) For live game photographs three prizes are offered, the first of $50, the second of $25, and the third of $10.

(2) For live game in parks, for the best picture, a prize of $10.

(3) For the best pictures relating to FOREST AND STREAM'S field—shooting and fishing, the camp, campers and camp life, sportsman travel by land and water, incidents of field and stream—a first prize of $20, a second of $15, a third of $10, and for fourth place two prizes of $5 each.

There is no restriction as to the time nor as to where the pictures have been made or may be made.

Pictures will be received up to Dec. 31 this year.

All work must be original; that is to say, it must not have been submitted to any other competition or have been published.

There are no restrictions as to the make or style of camera, nor as to size of plate.

A competitor need not be a subscriber to the FOREST AND STREAM.

All work must be that of amateurs.

The photographs will be submitted to a committee, who, in making their award, will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities, and other things being equal, the unique and difficult nature of the subject.

Photographs should be marked for identification with initials or a pseudonym only, and with each photograph should be given, answering to the initials, the name of sender, title of view, locality, date and names of camera, and plate or film.

FLOOD AND FOREST.

THE progress of humanity depends on man's familiarizing himself with the laws of nature, and adapting himself to the conditions of his surroundings; for to man is given the power to modify those conditions beneficially or prejudicially. But this power, always exerted unconsciously by a people at large, is rarely guided intelligently until the fatal results of misdirection are experienced. Asia Minor, and the tract extending eastward to the Caspian and southeasterly between the Caucasus range and Arabia into northern Persia, was once the garden of the world, and is now capable of supporting but a scanty population. It is the hand of man that has marred the fair face of nature. The region is one of scant rainfall, but as long as its mountains and a considerable proportion of its area were covered with forest the rainfall, not of the year only, but of many preceding years, was stored up in its subsoil as in a reservoir, from which it was pumped up constantly by the tree roots to be exhaled as vapor during the day and condensed as dew at night, giving fertility to the occupied area. In course of time the whole land was brought under cultivation, the mountains cleared of their forests, and the scant rainfall, instead of sinking slowly into the subsoil, rushed precipitately into the stream beds, and was carried rapidly away to the sea, and the subsoil waters sank lower and lower, until finally the country having only its scant annual rainfall to depend on for its fertility was degraded to the rank of a subdesert region.

One may point to a dozen different regions or countries in which man, by the destruction of the forests, has converted once fertile regions into barren wastes, subject to periodical floods and droughts; but in all these cases the great majority of men will pooh-pooh your conclusions as baseless speculations, and the combined ignorance of the world is a very heavy force to contend against. Ignorance is power, but it can make no headway against the evidence of the magnificent works undertaken in France for the arrest of whilom destructive floods, the regulation of the flow of the rivers, and the restoration to fertility of barren wastes by the restocking of denuded forest areas.

The first great work of this kind undertaken in France was the taming of the torrent of the Garonne, a river subject to periodical devastating floods which in the year 1875 did damage to the extent of $60,000,000, along with the sacrifice of over a thousand lives, and the success which attended the efforts to curb this stream inspired full confidence in the capacity of the State engineers to regulate the flow of rivers everywhere. The region drained by the Garonne is a hilly region fissured by deep ravines. For more than 300 years the wood cutting had been carried on in the most improvident manner, until it was all cut out, the higher lands converted into pasture land, and the lower slopes and valleys broken up for agriculture. Then began the work of destruction, slowly, imperceptibly, but surely. The slim soil of the ravines and of the hill tops dried in the sun was cut up by the hoofs of the sheep and cattle, and gradually washed away by the rains, which, instead of percolating slowly into the soil of the ravines, rushed precipitately down their slopes, carrying the soil along with them, and undermining and dislodging boulders and great masses of rock; the pasture grew poorer and poorer, the fields suffered from alternate flood and drought, while every rainfall caused a torrent in the ravines, which, rolling along with it a mass of sand, gravel, boulders and rock fragments, spread it out over the fertile valleys below, embracing them in the general destruction. In one province alone, that of Ardeche, some 70,000 acres of rich land were covered up and rendered worthless in this manner.

Now these ravines have been planted with trees, and the hill tops have either been planted or returfed, and now, in the works of a great French writer, one has only to look at the work so ingenious in its simplicity to understand how it is effectual. "Every liquid molecule, so to speak, is seized individually, the thin sheet of water flowing down is retarded in its course by a thousand thirsty little plants, by the lines of cultivated herbage, and by the hedges of shoots and trees. It is compelled to tarry a little on each terrace to slake the thirst of the ground, and when it reaches the lower end of a furrow it spreads itself out on the flattened bed there prepared for it. Stopped at every barrier, it loses its vital force on every hand, and finally, from resting place to resting place, and from descent to descent, it arrives after a thousand retardations, and still limpid in the channel which conveys it to the river."

All floods are but accumulations of rain drops, which ought to be slowly absorbed into the earth, each where it falls, and contribute to the perennial flow of springs and streams and rivers. Foods in this country are as much the result of denudation of forest area as in France. The evil has not yet been carried to the same extent in this country. The clearing has been as reckless, but it has not yet borne its full fruit. At the same time the devastations to which we are annually subjected by flood constitute a very considerable bar to progress.

It is more economical to spend ten millions in guarding against floods than to allow property to the value of one million to be swept away by flood. The ten millions once spent constitutes a perpetual safeguard; the flood which sweeps away one million hightens the liability to further loss.

And periodic floods carrying devastation in their train are but one of a numerous set of consequences resulting inevitably from reckless forest clearance. We clear the forest to enlarge the agricultural area, and the conditions which create floods leave the crops parched for want of moisture, so that if the one prime consideration were to increase the measure of agricultural produce of the country, the steps necessary to secure it would be, not the conversion of all the forest into cornfields, but the conservation of so much forest area as would regulate the supply of moisture for the agricultural area.

And this forest area must be judiciously distributed to effect the desired results. It is not enough to conserve the timber along the crests of the principal ranges. These constitute but a small proportion of the area of the continent, and they can do no more than prevent floods originating in their own area, and insure the lower country a certain measure of perennial river flow, even when its own rainfall has been carried off to the sea in floods. But this is not enough. The agricultural interests require local forests everywhere to create or maintain conditions favorable to them. Every State wants its own forests, every county wants its own forests, and every hillside and valley farm in interested in the maintenance of forest on the crest of the hill above it.

But no one is slower to recognize his dependence upon controllable conditions than the farmer, and the obstinacy with which the French peasantry opposed the State measures for retrieving the ever-growing evil, as set forth in the little volume "The Forest Waters the Farm," is both instructive and amusing.

And not only do forests regulate the flow of the rainfall back to the sea, and conserve a supply in the subsoil which, by creating dews, sensibly affects the precipitation over large areas; not only do they save the hills from erosion and the subjacent valleys from being buried under the debris from the hills; not only do they create springs which fertilize lands below them, but there is little doubt that they exert a very powerful influence on the arrest of wind storms.

Wind storms, like floods, if unobstructed, are apt to gather force as they go, but in transit through a forest country their force is broken. It is only on the ocean, the desert, and the prairie that wind storms accumulate their greatest force; and when we take into consideration the enormous destruction of life and property resulting from storms as well as from floods on this continent, and realize that it might be averted by means which would favor the future development of the country, it will be seen that there are few problems of greater national interest than forest conservancy.

SNAP SHOTS.

We invite careful reading of the thoughtful and well considered paper from the pen of our English contributor, Mr. J. J. Meyrick. It is a very clear and well rounded discussion of the relation of the sportsmen's interests to those of the public; or more accurately, it is an endeavor, and a successful one, to demonstrate the identity of those interests.

We have been printing from time to time a series of interesting and suggestive accounts of wild creatures in domestication: Mrs. Le Plongeon's sparrows, Mr. Perry's egret, Mr. C. M. Stark's coon, Mrs. Willson's cranes, and to-day Mr. Robt. P. Stark's hawks. Next week we shall have a sketch of Mrs. Willson's otters. Doubtless there are other tamed animals quite as deserving of record, and we should be glad to have their ways told in our National History columns.

The progressive element of the Florida press is showing an appreciative realization of the fact that the native game and fish of the peninsula constitute a source of wealth which has been squandered by lamentable shortsightedness and folly. This fact that the subject is now receiving editorial attention is significant of a changed public attitude. It is not too much to hope that even at this day, before it shall have become irrevocably late, an adequate system of conservation and restriction may be put into operation.

Dr. G. E. Hill sends us a letter, addressed by him to the Indian River Advocate, which is a well considered presentation of the case by one who has traveled extensively, and from experience and observation can testify to the dollars and cents aspect of game resources, with their opportunities and attractions for visitors and permanent residents. The sight of a flock of wild ducks, seen by him at Titusville eight years ago, he avers, was the accident which prompted him eventually to invest $15,000 in Florida real estate. What Florida had to offer the sportsman tourist even eight years ago—and the supply was barren enough even then, to those who had known it in the 70s—and the paucity of the present are contrasted, and the sound deduction—not sentimental, but practically commercial—is that in permitting the extermination of its wild creatures the State has unwittingly turned away tens of thousands of dollars.

The Sportsman Tourist.

The Poacher's Victim.

Through thickest glade on early morn
Of June a trapper sought his trail.
But, oh! what scene of mis'ry born,
What piteous, bleating, moaning wail!

Dark pines and hemlocks spread a gloom
Of shadows brooding o'er the scene;
A fit abode for bloody doom
As e'er that woodman's eyes had seen.

On mossy bed, beside a brook,
Lay dead a doe with trickling wound,
While from her breast her suckling took
The last of mother-milk it found.

What wretch was he who fouled his soul
With dastard deed as vile as this?
Cursed poacher! May, like burning coal,
Ten thousand doe-eyes glare at his!

ERNST HELD.

In Fur Trade Days.

NOT far from my ranch, in a neat little cabin, built by the shore of a mountain lake, lives an old-timer, Joe Brown by name. He entered the service of the Hudson Bay Co. in 1851, when only a lad, and continued in its service for twenty years and more. Then, concluding that he had eaten enough of their pemmican and whitefish to last him the rest of his life, he struck out on his own hook trapping and prospecting, and visited in turn the gold fields of British Columbia, Oregon, California and Idaho, coming finally to Montana and the little cabin by the lake.

Joe is now a little more than sixty years of age, but I wish I was as young as he, although I lack more than twenty years of that. He climbs the steepest mountains with perfect ease; will ride fifty miles in a short winter's day and dance that night as long as any one. Or, if necessary, he will play the fiddle while the others dance. He seems to have mastered everything pertaining to the life of a mountaineer and plainsman. He is an unerring shot, a splendid roper, rider and packer; can build a house or a canoe; work a placer bar or a quartz vein; make and use traps and nets, toboggans and snowshoes; train and drive a team of dogs, and cook. You should sample one of his famous elk stews or fish chowders!

Joe is not a taciturn man by any means; still he isn't given to talking about the many adventures he has had. Occasionally, under the mellowing influence of a glass or two of hot rum—the real old Hudson Bay Co. drink—he will give a friend a glimpse of life in the old times, and it was under such circumstances that I got the following from him:

In 1858, he said, I was stationed at Fort Edmondton. Our factor was a man named Hardestie, a hard old Scotchman; gruff, rough and abusive, and withal a bit of a coward. Our main trade at that point was with the Crees and other northern Indians, although we were occasionally visited by the different tribes of the Blackfeet and by their allies, the Gros Ventres and Sarcees, who often came long distances, from the Missouri River and beyond, to barter their furs with us. The Crees and Blackfeet were deadly enemies; always at war with each other, with the odds in favor of the latter. Early in July of that year a war party of Crees started south on the war path and ran across a large camp of Bloods* on the Belly River. Immense herds of their horses were grazing on the hills a mile or more from their camp, and the Crees boldly rounded up a bunch and started off with them. But the Bloods were never to be caught napping; they always kept a number of horses picketed near their lodges, their best ones too, and the Crees hadn't got out of sight over the brow of the hills before the Bloods were right after them. The result was that most of the Crees were killed and not a few of the Bloods. Among the slain Crees one man was found who, while dressed like his companions in typical Indian custom, was evidently a French half-breed; some indeed remembered having seen him at Mountain Fort, the next post west of Edmondton. War was immediately declared on the Hudson Bay Co. If they sent their employees to steal the Blood horses they would be taught a lesson. So it wasn't very long after this fight that the inmates of the Mountain Fort awoke one night to find their place on fire and surrounded by Indians calling on them to come out and fight. But like most all of the Hudson Bay stations this fort was bounded on one side by a river, the Saskatchewan, a couple of batteaux were moored under the bank, and hastily embarking in these the factor and his employees, their wives and children, quietly floated down the river under the shelter of the high-cut bank, and reached the Cree camp safely next day. The fort was burned to the ground with all its contents, but the loss was not so great as it would have been a month or two earlier or later, for the winter's collection of furs had been shipped down the river, and the goods for the next season's trade had not arrived.

When Hardestie heard of the burning of the fort, he was scared. He said that it was but the beginning of their devilment; that the Bloods would send for their kindred tribes and destroy every post from the Rockies to Lake Winnipeg. We must make peace with them, he declared, if it took every dollar's worth of goods in the fort. An old fellow named Bird, who was married to a Blackfoot woman, offered to bring the Bloods in for a council, and started off with two pack-horse loads of tobacco, rum, powder and ball as an opening gift to the chiefs. He had no difficulty in finding their camp, which was only a few days' ride to the south, and in due time returned with the chiefs and about fifty of their leading warriors. We lost no time in ferrying them across the river to the fort, the small gate was opened, and as each one stepped into the stockade he handed his arms through the window of the trade room, where an employee stood to receive them.

The council lasted two days, during which the chiefs were kept liberally supplied with rum, and all of them were well fed. Hardestie gave them a large number of presents, and the morning of the third day, having buried the hatchet, as the saying is, they prepared to return to their camp. I was detailed to ferry them across to the south shore, and had taken over two boat loads, and was midway across with the third and last, when the Crees, who it seems had been hiding in the brush waiting for them, opened fire, and an awful fight took place. As soon as I saw what was up I turned the boat and put back for the fort, but for a few minutes I never expected to reach it. Some of the Bloods in the boat with me declared that this was simply a Hudson Bay Co. plot to get them into a trap so the Crees could kill them. One big fellow began priming his gun, saying, "If we've got to die we will have one white man anyhow," and when he said that a couple of young bucks drew their knives and started for me. Luckily for me though, the head chief, Ancient Sun, was in the boat, and he ordered them to leave me alone, saying he would brain the first one who disobeyed him. Well, we finally got back to shore, and I rushed up to the gate and shouted to have it opened. "No, no!" I heard Hardestie yell, "don't unbar that gate. This is only a ruse, I know. If we open the gate they will murder us all."

Maybe I wasn't mad when I heard him say that. But the bullets were beginning to fly around us, and we lost no time in taking to the brush. I don't know where the Bloods went. I cached myself under a fallen tree top not far from the fort. The shooting didn't last long, and after everything became quiet I went back to the stockade and they let me in. Along in the afternoon three or four of us ventured across the river and found eighteen dead Bloods lying around in the brush, everyone of them scalped and hacked to pieces. We dug a long, deep trench and buried them all together.

After this unfortunate end to our council of peace we scarcely ventured from the fort, and kept a guard on all night. But somehow there was no attack. Our fort was well built, with bastions at the corners mounted with small cannon, and probably it was these "heavy-voiced guns," as the Bloods called them, that deterred them from assaulting us. But the poor Crees suffered. The whole Blackfeet tribe immediately made war upon them; they hadn't a single horse left in two weeks, and lacking transportation could not move out to the buffalo, which had drifted away to the southeast some fifty miles or more, and had we not loaned them our little herd they must have starved.

Communication between the different posts was kept up in those days by a monthly mail service, on horseback in summer, by dog sledge in winter, but for some time after the massacre of the Bloods at our post no messenger arrived. As the days slipped by after the carrier was due Hardestie began to get uneasy, and finally he called the men up one morning and said that some of us must start right away for Fort Pitt, about 200 miles to the east. None of the men volunteering, I finally said I would go, provided I could choose my horse.

"Why of course," said Hardestie. "Take your pick, Joe, and I'll send young Baptiste with you to keep you company."

"No you won't," I replied. "If I'm going on this trip I'm going alone. It's easier for one to sneak along and keep hidden than it is for two. And as to the horses, I'll ride your black horse and pack my bay."

Next morning I started, riding Hardestie's black, a powerful, swift animal, and packing the mail, my bedding and a little food on my bay, which was almost as good. I made up my mind to keep off the trail altogether. The country for the first part of the way was fairly well wooded, and I rode about a mile to the left of it. The afternoon of the second day I approached a large prairie ten or twelve miles wide. I hated to go around it, and studied some time whether to attempt it or not. I finally concluded to take the safest route, and made a wide detour to the left. As evening approached I hurried along, in order to reach a little lake I knew of on the edge of the prairie. It was almost dark when I got to it, and hurriedly unpacking I hobbled the bay and picketed the black horse just outside of the brush which grew along the shore. I thought it would be safe to light a little fire here, as the brush would screen the light, and anyhow there was a high bank about 50 or 60yds. back, where the prairie abruptly terminated.

After drinking my pot of tea and eating some pemmican I made my bed and went to sleep. Just about daylight I was awakened by hearing my bay horse snorting and jumping. I grabbed my gun and jumped out of bed, and there, standing on the bank looking down at me, were fifty or sixty Indians, a war party afoot. They gave a yell of delight, and in a minute were all around me. It didn't take them long to go through my outfit, each one taking what he could lay his hands on. They not only took my gun, but one fellow grabbed up my coat, another my trousers and moccasins, my hat, and a great big, strapping fellow tore the shirt off my back; so the only clothing I had left was my drawers. I could understand enough of the Blackfoot language to know that most of them were in favor of killing me, and they had quite a wrangle about it. I made up my mind that my time had surely come. While the talk was going on an Indian I knew a little, Berry Child by name, said to me: "Don't you be afraid, they are bound to take everything you have, but they will not kill you. We will not let them." I felt a little encouraged when he said that; still whenever some fellow danced around in front of me, singing, yelling, pointing his gun at me or brandishing his knife in my face, I would think again that this was to be the end. Well, after they had apparently had enough fun, a big surly Blood named Little Otter stepped up, took hold of my shoulders, and saying "Go, go back to your home," game me a rousing kick that sent me sprawling. You can imagine how I felt. To be kicked, and by a dirty Indian, made me almost choke, I was so mad. I wished I had a knife or even a club, I would have turned on him. But I got up and walked off, never looking back, although I wanted to, and I expected every minute to be struck by a bullet or an arrow.

The prairie had been burned that year, which made the old grass sprouts short, stiff and sharp, and it wasn't long before my feet began to bleed and swell. I tore up my drawers—they were pretty thin—and wound them around my feet as well as I could, but they would keep slipping and wearing, and the second day were all used up. I got mighty hungry too. I did come across a few bushes of service berries, and that was all I had to eat. There was plenty of water though, and every little ways I would stop and bathe my feet. Well, you can bet I suffered. Naked and cold, hungry and sore, along toward the last I just stumbled along, and about 2 o'clock on the fourth day I reached the shore of the river in front of the fort, and shouted. I couldn't shout very loud, but they heard me, and pretty soon some of the boys came over and took me in. The first thing Hardestie said when he saw me was, "What's happened? Where's that mail?"

"Curse your mail," said I, "give me a pint of rum and something to eat," and I wouldn't tell him a thing just then. In fact I was too weak to talk.

The next spring the Bloods sent word to Hardestie that they wanted to make peace, and in a few days the whole tribe arrived and pitched their lodges close to the fort. A day or two after the council I was sitting in my room when the door opened and in walked Little Otter dragging a rawhide rope. The other end of it was tied to a fine big horse, which he brought to me as a peace offering. I felt like reaching down my gun and killing him, but of course I didn't. I accepted the present, shook hands with him, and we smoked the pipe together and had a little something to eat and drink. I may as well finish by telling you that in less than two weeks the horse was stolen and by this same Little Otter.

J. W. SCHULTZ.

* A tribe of the Blackfeet.

Fishing on the Fourth.

FOUR of us agreed that the war could proceed without our able criticism, so concluded to spend the glorious Fourth in the mountains. You are "in the mountains" anywhere in East Tennessee, but to the native, or denizen, there are degrees. We took the highest degree, going right into the heart of a spur range of the Great Smokies, to try for bass in the upper waters of Little River.

The distance—twenty-five miles—was driven between 2 and 5 o'clock on the hottest day recorded this summer, July 2. Our party was odd one man, made ill by the intense heat, so we were only three. The General, title genuine and achieved; Old Rex, the kindest gentleman alive, and called "Old" as a matter of affection by his many friends, and the writer.

We reached our destination in time to make a few casts Saturday evening, but only the General scored. A kind native agreed to put us up during our stay. We were in one of the mountain coves—small enclosed valleys—with the dark green timbered mountains shutting us in apparently on all sides. The crooked river winding around the rugged hills and steep bluffs seemed to end abruptly 50yds. up or down as you stood on the bank. The Sabbath day found us totally relaxed, and inclined to no greater exertion than lying in the shade of a grand old sycamore listening to the music of the waters playing on the shoal. We were surrounded by nature's grandest effects, but overtaxed bodies and minds demanded relaxation and perfect rest.

We were but a few moments' walk from an historical edifice—the first Baptist Church built in the State, now more than 100 years old; and with the added sanctity of having rung with the eloquence of the famous "Parson" Brownlow in the dark days of the "sixties," when he was often fleeing, but ever voicing defiance. But believing and realizing the words of Bryant:

> "To him who in the love of nature holds
> Communion with her visible forms, she speaks
> A various language,"

in sweet contentment we dreamed away the day. Bright and very early Monday morning, the Fourth, we went fishing. Rested, enthused and sanguine, we were all jolly as "sand boys" as we drove over the mountain to strike the river three miles up, where we had engaged to meet our man with minnows and begin to fish down.

Wading was the only way to fish successfully. The General and Rex were rigged out in old suits each, to take the water just as the exigencies of the occasion required; while I was in wading boots and intended to keep a discreet distance from the deep holes.

The General again scored first, taking a ½lb. bass on 150ft. of line that he had run out with the current, and firmly believing that he had a record breaker.

The mountains rose almost perpendicular on each side of the river, and the cool morning air was laden with the smell of the fresh spruce and pine. The swift current flowing over the slick rocks and boulders of the river bed made it a very difficult task for me to navigate the stream at all. Every few steps I would slip, roll, pitch, and grab handfuls of air, while my companions shouted with laughter. One-half mile of this work satisfied me and I waded out, intending to seek a deep pool that could be fished from "terra firma."

I had not caught a fish, and felt as though I had run a hurdle race handicapped. I had the satisfaction of seeing the General properly punished for laughing at my misfortunes before leaving them. Just as I had arrived at the water's edge in safety, the swift current caught his feet on a shoal, sliding them from under him, and shot him into the deep hole below with a force that sent him to the bottom, and kept him there several seconds.

He had to dive twice before he recovered his rod, and run a quarter of a mile down the bank before he overtook his new cork helmet; and his language was neither polite nor patriotic.

I cheered him vigorously from start to finish of his performance; but when he came back up the river's edge on my side, with his arm drawn back at half-cock and holding a big chunk of water-logged rotten wood in his hand, it occurred to me that there was a much better place for bank fishing about a mile further down, so gathered up my tackle and quietly slipped back to the road, while he trudged on up the bank peering carefully into each opening. My destination was the mouth of a creek where the water was deep and very accessible from the point of land between creek and river. Here, with a good smooth log to sit on, and a current to carry my bait where it looked likely it would do the most

good, I sat resting from my arduous labors. It was half-hour before my first strike, and he was but a trifle more fish than the small one that had fooled the General early in the morning.

My next capture, some time later, was a turtle of the hard shell denomination. He was heavy and vicious, and afforded me considerable sport until landed, and then it was a parallel case with the man that caught the bear—I wanted somebody to help me let him loose. He showed such an attachment for my hook that I finally cut it off my line and presented it to him together with a few inches of snood.

About two pipes after this episode I was recalled from the top of the mountain that towered above me—where in fancy I had climbed—by a splash in the water. A goodly bass had struck at my minnow, which was swimming near the surface, and missed. Again he struck, and missed; and then I saw him attack as I had never before seen a bass do. He leaped entirely out of the water and came down on the minnow, and got him.

Bass leaping out of the water after fleeing minnows is usual, but to see one leap out of the water and come down on a stationary minnow was a novelty to me.

A short time after this experience a horn, a small boy from the house, and my department of the interior united in an effort to convince me that it was dinner time in the "cove."

Desiring to avoid the embarrassment of comparing two fish with my companion's fine string, I hid mine away in a cool place and repaired to the house, where I found my two companions with a magnificent long string containing three bass. We were trying to account for our lack of success, when a rumble of thunder was heard over the western mountain, and then we knew that a thunderstorm was brewing, and the fish not feeding. Our hard luck had not impaired our appetites, and they live well in the cove.

'Twere better far to be able to eat such a dinner as Rex and the General ate that day, and feel no more ill effects from it than to be president of the Philippines. After dinner and a pipe of peace, during the smoking of which I argued the General out of his fixed and expressed intention of throwing me into the river at the first opportunity, we called a council to consider our plans for the afternoon. A heavy shower had fallen, but the clouds were breaking away and the sultry heat of the morning had been tempered and cooled most delightfully.

We finally agreed on a campaign for the afternoon. Rex and the General were to fish down the river a mile or more to where the road crossed it, and I was to fish my favorite place, the creek mouth, for about an hour, and then drive down, pick them up, and all start for home.

Starting me in to fish with the minnows on hand, my two companions, with a tall native, went up the creek to seine a fresh lot of minnows. In about a half-hour they worked their way back to me with a goodly lot of minnows, and a fine string of perch, bass and goggle-eye or rock bass. To my surprised look of interrogation they proceeded to explain that Rex and the native had done the seining, while the General had fished on ahead in all the likely holes, catching the fine string of fish aforesaid. For an instant I was an arrant skeptic; but a look in the General's eyes as he quietly shifted them from me to a sizable chunk of water-soaked wood, apparently his favorite weapon, considerably nearer him than me, converted me.

I did not then, and do not now, doubt the fact that the General caught more fish in one-half hour, with two men and a 20ft. seine splashing in the water within a few feet of him, than all three of us caught in a day of applying the most approved methods.

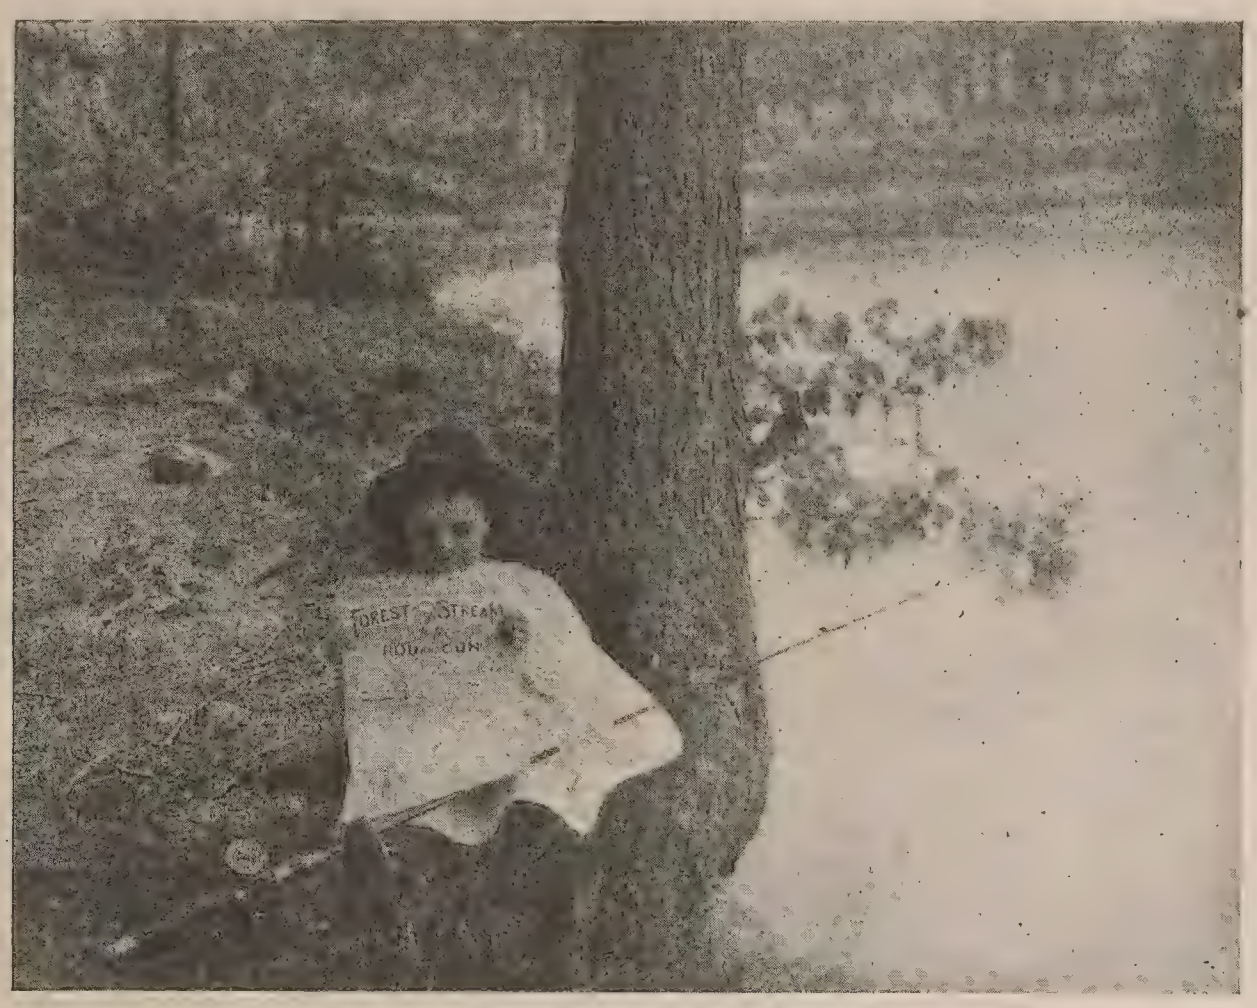
I am willing to give my reasons for my faith: First, my friends are truthful men and readers of FOREST AND STREAM. Second, it is against the law to seine fish in this State.

Now this new method of taking bass is not to be copyrighted, but, like the grand new scheme of our friend Hough, of the "Windy City"—who says lash and not lure your fish—is to be given to the readers of FOREST AND STREAM.

There was but one more incident in this eventless but enjoyable outing. Becoming interested in my earnest efforts to catch any of the few fish that had escaped the General's fatal rod and remarkable skill, I did not start down the road to our agreed meeting point until the sun was dropping over the mountain and it was decidedly cool.

The trysting place was not well known to me, and when I reached it came near driving by under the impression that some dew dippers had broached a keg of the "moonshine" brand, and were fighting furiously in a drunken orgy; but something familiar in the voices made me stop and hail the old mill on the bank of the river, from which the sounds proceeded. It was my friends, and they proceeded at once to give me to understand, in language more forcible than polite, that they had been shivering in their wet clothes for nearly two hours waiting for me to arrive with their grips containing dry clothes.

They had not had any success, and had hurried on down to the meeting place in hopes that I would be there; and had spent the time running up and down the old mill floor to keep up circulation.



I was very much afraid that they would suffer some ill effects from their long exposure to the chill air in wet clothes, until I heard them express themselves freely, and then concluded that they were too hot to be hurt by a simple wetting.

By packing up all their wet clothes and tackle, I finally won them back into their usual amiability, and we pulled out for home.

Looking back on the trip it seems singularly eventless, but nevertheless I had many narrow escapes.

The General generously divided his new process caught fish with Rex and me, and we have agreed to go again as soon as he recovers from his cold and forgets his bad two hours in the mill.

LEWIS HOPKINS.

"WE ARE ADVERTISED BY OUR LOVING FRIENDS."
To the Editor of FOREST AND STREAM, with the compliments of Miss Eleanor Beegle.

Natural History.

Two Hawks.

WHILE out in the woods one day along in February of '97 I observed two red-tailed hawks sitting in the trees, but keeping a respectful distance from my gun. Thinking there must be a nest near by, I proceeded to look the matter up with the result of locating it. I made up my mind to visit it again late in the season, which I did about the 1st of May.

The nest was situated in the very top of a beech about 60ft. from the ground. Not having any climbers with me, I nailed cleats on the tree until I could reach the first branches, then, after considerable effort, reached the nest. It was a bulky affair, made entirely of small twigs about the size around of a lead pencil, with foundation of sticks 3ft. long and 1in. in diameter. The top was perfectly flat, about 3ft. across. There must have been over a half wagonload altogether. In, or rather on, the nest I found two young fledgelings and one egg. There were also one freshly killed downy woodpecker, the hind leg of a rabbit and some bones and feathers. While I was pawing over the nest one of the adult birds came sailing around with vengeance in its eye; but I was saved from an attack by one of the boys sending a charge of shot after it, which caused the bird to turn about and go to its mate to figure out a plan of attack. I secured the birds and egg, and reached the ground with no further incident except that I was nearly "bushed."

The birds were curious little creatures, perfectly white and covered with a down resembling a young lamb. They were not able yet to stand on their feet, and after a day readily took meat from the hand. I would cut up pieces of meat in small chunks and feed them so that their crops would fill out the size of a baseball. They grew rapidly, and in a few weeks were able to fly around some. I put them in a coop with a couple of crows, but one morning awoke to find one of the crows dead. The hawks hadn't eaten it, but simply killed. I suppose this was to stop the incessant cawing it was wont to keep up early in the morning before being fed. After that I tethered them by their legs to a post in the yard, giving about 30ft. of rope to exercise with. One became quite tame; the other always seemed to have a surly disposition, and did not like to be handled much. I taught the tame one to sit on my arm by giving it a piece of meat when it behaved well, so that it would sit there and allow me to carry it anywhere. I would let them loose at intervals for exercise, and after they alighted would catch them again.

They never seemed to notice the chickens that were continually running about, but their chief delight was a bird or rat—rat especially. When eating a bird they would always take it in their claws and give one bite at the nape of the neck, whether dead or alive, and crush its skull. They would pick most of the feathers off and begin under the wing to devour it by tearing off chunks and taking out the heart almost the first thing. After the forward half had vanished the remainder, including the legs, was swallowed whole. When a rat was given them, they always seemed to be ready for a fight, one grabbing one end, while the other would get a grip on the other end; and there would be a tug of war, both bristling up and squealing for all they were worth. A few hours after feeding they would eject a roll or ball from their crops, called a casting, which consisted of the indigestible parts of their foods, such as feathers, hair, bones, etc.

One of them got loose one day, and while flying around was shot by a man, who mistook it for a wild hawk. During the winter I kept the mate in a barn, and once put a chicken in for it to eat; but it never bothered the fowl, both roosting on the same perch, until I killed the chicken and cut it up, and then it ate it all right. In the spring, having occasion to go elsewhere, I let the bird loose; it took a circle around town and alighted on a passing freight train, where it was soon lost to view. I suppose ere this it has met its fate by dropping down near some one's dooryard, not knowing the danger of undue familiarity with strangers and guns. It may be identified by a strap sewed on its leg with a ring in it for tying it by.

ROBT. P. STARK.

MICHIGAN, July, 1898.

The Origin of Animal Instincts.

FOR more than a score of years I have unresistingly suffered violence to some of my most cherished convictions and theories concerning the habits and instincts of animals, and such kindred phenomena, by men who seemed to me old enough to know better, and with whom I would homologate, fraternize, go fishing and sit at their feet upon any other subject whatever. But even the worm will turn, when too persistently trodden upon selected spots, and that has at last happened to me. Many a time, for instance, have I suffered in silence from the publication of stories about the intercommunication of animals which would make angels weep. But I never rebuked even the theory that dogs have a wig-wag alphabet with their tails, and spell out to each other all sorts of messages, as the Army Signal Corps do with their flags—perhaps with one vertical drop for the end of a word, two for a sentence, and three for interrogation. Nor have I ever remonstrated at the martyrdom of fatigue inflicted by Prof. Garner upon the whole population of the United States except the newspaper reporters. But now I have drawn the line, and I am going to defend the memory and the theory, as I understand it, of Darwin from a growing misconception—from a burglarious interjection of an idea into it which he never advanced; and which is so illogical, so in the face of facts, that it is enough to disturb his bones in the grave. Perhaps it will give the clearest idea of how this theory is being distorted and perverted if I first give the particular instance of its misapplication, which has, as it were, blown up the Maine of my endurance, and precipitated this disturbance of the peace.

It occurs in the otherwise most amiable letter of delightful Fred Mather, in FOREST AND STREAM of April 9, when he accounts by heredity for the shyness of fish and game which have been much pursued. He says: "An old trout, often pricked, learns caution and transmits that quality to its progeny; the heedless young trout takes the first lure, and has no progeny to transmit its rashness to." Then, in reference to ducks, deer, etc., he says: "There is no instinct in it; it is reason pure and simple. The wounded that survived learned a lesson and transmitted it to their posterity."

Now there stands exposed a theory, often supposed to be Darwin's, and which too at a casual glance seems most simple and plausible. But it will neither stand analysis nor a checking up against facts. First, as to its logic. The fish pricked with a hook rarely seems to mind it. He is usually ready to bite again in five minutes. He has no clear conception of man and his works, or that he has escaped a great danger. It seems to me indeed at least as reasonable to suppose that his escape would tend to diminish his instinctive wariness, as that the slight prick would increase it. And for every wounded bird which survives and has further progeny there are hundreds unhurt to whom the explosion of the gun was, after all, only a harmless sound, and one which in certain circumstances they will easily come to disregard entirely. Birds and fish do not know what death is, nor do they figure out that missing ones are dead. The whole conception assumes for all animals reasoning powers which thousands of more conclusive phenomena show that they do not possess.

But, even if they did, there is a still further logical difficulty. Is it plausible to suppose that the progeny of the small percentage pricked, wounded and surviving will overcome the progeny of all others, and even their own born, before they received their injuries; and finally come to possess the territory? The danger from hooks or guns, it must be remembered, is not the only danger which thins their ranks. It is but one danger of many, and often comparatively speaking a very minor one. Especially is this true of fish. Eternity hardly seems long enough for the infinite happening of chances to bring about that every living trout, or duck, should have in his family tree more and nearer ancestral blood

of recovered cripples, of hook or gun, than of sound individuals. Clearly then, however it may be that birds and fish acquire their increased wariness, when much pursued, it is most illogical to say that it is by heredity or atavism.

Now let us see how the theory will check up with all the other facts that we know about heredity. According to this theory, ducks which have suffered pain, from mistaking a wooden decoy for a sister duck, and trout which have had their mouths snagged from sampling new varieties of fly, will transmit to their posterity, born after those experiences, an instinctive fear of the awkward, wooden-looking duck, and a decided suspicion of all insects with crooked and barbed tails. Now, if a few experiences of pain following certain appearances would impress the progeny of an animal with a dread of those appearances, we would have hundreds of examples of it occurring around us daily, and the fact would be generally recognized. One litter of pups, for instance, would be born which would run from the sight of a whip before they had ever known a blow; while another would run from the cook with a pan of hot water, without ever waiting to be scalded. Crucial test experiments would long ago have been suggested, devised and made. We would have a science of it, and would know the value of more or less reiterated experiences of father, mother, grandparents, etc. And there are many curious and useful results which could be brought about. But all experience shows that acquired knowledge is not transmitted to posterity. Children will never be born knowing the multiplication table because their ancestors know it. I am not denying the value of cross breeding and selection in producing the highest possible development of all natural instincts, abilities or powers, or any natural variations of any physical form. For instance, by selection we might breed a variety of dogs with very short tails. But we would never accomplish it by amputating the tails. Nor, if we always amputated with shears, could we ever breed a fear of shears in the progeny. Great is heredity and wonderful are its works. It is the great centripetal force of nature. But it is not everything. There is very much beside it in the problem. And especially it is not to be confounded with what we may call, for a name, the centrifugal force of nature. By that I mean the force which does adapt things to their surroundings, in very spite, as it were, of the opposing influences of heredity. It is this centrifugal force which teaches wariness to the fish and caution to the duck, when men begin to pursue them, without even waiting for a single generation to pass away. This is the force to which we owe the endless variety of natural forms in every kingdom of life. It has the disposition and the ability to conform every creature to its environment. If a simple access of wariness and caution is not enough, a new sense or a new organ are not beyond its powers. What is this strange, this wonderful force? Its existence cannot be denied, and since Darwin pointed out the marvelous wonders of its work, nobody tries to deny it. But what is it?

And now we can make clear the too common misconception of what Darwin taught, which I have before referred to as the casus of this belli. Darwin never pretended to say what this force was. But many, who claim to be his followers, assume to know all about it. They say that all changes and variations are produced by chance. And thus they have a beautiful and simple scheme for all things.

Chance produces infinite variety. Heredity seeks to perpetuate all that chance produces, but environment, otherwise called natural selection, steps in and culls out all varieties not distinctly beneficial, and lo! we have the universe as we see it. Great are chance, heredity, environment; and greatest of these is chance! No fish will suspect a hook; no duck will shun a decoy; no dove will fear a hawk—unless three of its grandparents out of four have suffered pain and wounds by hook, shot or talon, but still escaped with life before becoming an ancestor! Now perhaps it is possible that this trinity, of chance, heredity and environment, given the material and a planet eternally habitable to work in, might possibly organize some sort of a world. But I think chance would forever keep spoiling things faster than environment could adjust them. And certainly the world which we inhabit is not at all the sort and type of world which would be produced where chance was the initial force. For we are full of infinite fine touches, which chance alone could never impart, and which must have had their origin therefore in the original centrifugal force. If we study any single natural object, as for instance a mallard duck, we will find as many coincidences and adjustments in his structure, plumage, functions, etc., as we will find coincidences and adjustments of the letters of the alphabet in a printed newspaper. Every feather will have thousands of them. It would be just as reasonable to argue that a newspaper could have been produced by an accidental assemblage of type, and preserved by an environment of newsdealers who appreciated that it would sell, and naturally selected it, as to suppose that the infinite coincidences about the duck are the offspring of chance, assorted and preserved by environment. The cases are exactly parallel, and the mind which can accept chance as an element in the origin of the duck could accept it also for the production of the newspaper. The theory I hold in opposition to this theory of chance I can most briefly express by calling it a blue-print theory. That is to say, that all changes and modifications of natural forms, which have resulted in nature's present variety, were preceded by such an intelligent foresight and adjustment as would be paralleled in human affairs by making a preliminary blue-print. For only by such a device can we be sure of successful operation, and adjust delicate niceties of structure, function and ornament. One illustration is as good as a hundred. The venomous serpent is not the result of chance variations of the serpent type; some with fangs, but no poison, and others with poison, but no fangs, and at last an accidental union of the two in the same individual, preserved by environment. The long front tooth, the strange hollow bored through it, the poison gland, the reservoir, the modified bones and muscles and instincts, the chemical composition of the venom, and the adjustment of the dose to the intended victims must have all been considered and adopted together. Or, humanly speaking, there must have been a blue-print of him before there was ever a venomous serpent. There are too many coincidences of structure (all utterly useless and in the way when alone, but when combined forming a powerful weapon) for chance to have cut any more figure in his existence than it does in that of a loaded gun. Indeed the loaded gun is but a poor comparison, a wretched abortion of a machine, in comparison with the serpent. He is a mathematical demonstration that something which plans originates all nature's variety. Accident then must be utterly, at once and forever, ruled out of consideration in our study of the mysteries of her infinite array of beautiful and delicate machinery, and of her endless gallery of exquisite sculpture and painting. What we have called her centrifugal force—that which produces variety and imparts instincts, as needed, to creatures devoid of reason—is a force with far closer and more exact control than environment and natural selection could ever acquire, and all its work is stamped with blue-print characteristics—with the marks of intelligent foresight. What this force is it needs a greater than Darwin to say. But we may frame more or less complete working theories of its methods upon studies of phenomena, after we are once got rid of the idea that its essence is blind chance. To recur to the case of new instincts becoming necessary to animals, from the advent of new dangers. The facts seem to require a theory which shall provide as follows: That the instinct of each animal of any community shall promptly profit by any important or vital experience of any other animal of that community—even though and especially if the experience results in death. For it is certainly most illogical to provide for animals (as the heredity or the "three-wounded-grandparents" theory does) instincts founded only upon escapes. Escapes are misleading. Death experiences only are truly instructive. Now is it possible to frame any theory which will fulfil the requirements stated above? Something like the following, I am sure, has suggested itself in some shape to thousands of observers, and can be found more or less clearly expressed or implied by a very great number of writers. For a single example, Dr. Livingston, the African explorer, records phenomena witnessed among wild animals leading him to suggest the existence of a "Guardian Spirit" watching over each race. But the same idea is practically embodied, along with very much else which needs to be taken account of, in the following conception.

No one can carefully consider any living organization as a machine without feeling that beside the conscious ego which animates it there resides within it, be it man or animal, another and separate intelligence absolutely governing and controlling many of its most important functions. For a name let us call this second intelligence sub-ego, though clearly it was the first comer, and if either is to be considered as the owner of the body and the host it is sub-ego and ego is but the guest. As to the importance of its functions, like the Vestal Virgins, it is charged with the care of the very spark of life itself, which requires the perpetual fanning of many vital processes. The ego may sleep, or be drugged, or even become insane, but sub-ego is ever at its post. Nor is it any lifeless and automatic mechanism, as it were, a spring running a clock. It is an intelligence, repairing accidents and meeting emergency with resource. If flesh is torn, injured portions are thrown out and new flesh formed. If bone is broken, new bone is built exactly where and as needed. The tablets of memory seem to be in its keeping, and to naught else can we assign that mysterious power which has fixed limits to the size, strength and longevity of every race, upon the minute and exact regulation of which the very survival and present supremacy of the human race itself has depended. But it is not necessary for our present purposes to speculate further upon the powers, mental or physical, of the sub-ego, inviting and prolific as the field may be. All that need be here said is that, chance being ruled out, the onus is upon those who would reject the existence of a sub-ego to suggest a working theory more in accordance with observed phenomena. Until that is done sub-ego is a legitimate speculation. Its existence granted, all operations of animal instinct must be ascribed to it, whether habitual or newly acquired. They are but promptings to the ego from the sub-ego, which constructed and runs the mechanism of its body. And the evidence is overwhelming that the whole sum of the life and death experiences of every individual of its race is available in some way to each sub-ego. In other words, we must predicate some telepathic communication or its equivalent between the sub-egos of each race. So far the phenomena of nature will bear us out with evidence as endless as that supporting the theory of gravitation.

Finally, in our conception of the character of our original or centrifugal force there can be no compromise between the theories of chance and design. Design may avail itself of experience gained by chance to reach a higher foresight, but the two theories will no more mix in accounting for a duck than in accounting for a newspaper; and if one single phenomenon of nature requires design in our centrifugal force, it is as absurd after that to try and show how chance may have cut a figure in this or that phenomenon as it would be to debate and to split hairs over the influence of chance upon the development or improvement of steam engines.

To recapitulate. Individual acquirements are not transmitted to posterity. The three crippled grandparent theory is totally inadequate. Chance could no more produce the creation we see than the newspapers we read. Practically a blue-print of every species preceded its first appearance. A sub-ego precedes every ego, superintends its entire life and imparts all necessary race instincts. And finally there is in some manner the equivalent of telepathic communication between sub-egos of the same species. E. P. ALEXANDER.

A Mongolian Pheasant's Nest.

MALDEN, Mass.—*Editor Forest and Stream:* As a constant reader of the FOREST AND STREAM, I have taken great interest in the notes from all over the United States on the Mongolian pheasant for the last five years, and I thought perhaps some of my sporting friends might enjoy a few lines from near Boston. The Mongolian pheasant is found in a large part of the State; I have seen and heard of it on good authority seventy-five miles from Boston. But most all the birds seen are males. The reason of this is, I am told, that about nine males are liberated to one female.

I was taken to the nest of the bird I send you a photo of by my old-time friend of the field and woods, Minat, on the 2d of May, in the Medford woods. We have spent many pleasant hours with the rod and gun, but this was the first hunt with the camera we had ever taken together; and the results were as fascinating as with either rod or gun. I presume many a sportsman who enjoys nature has taken his friends out on a warm spring morning to let them take a peep at a partridge nest he has found on some of his rambles. When on such an expedition your guide halts and says: "There is the bird on the nest, right by that stump." For a short space of time, that you may think hours, you would have no sight for the bird; but at last you catch the sparkle of its eye and say: "Strange, but I could not see the bird at first sight." It is plain enough after you have seen it. It was just the same with the pheasant nest as with a partridge nest. I was within a few feet and could not see the bird, though she was in plain sight, so near was her color to the ground. The nest was on the east side of a pine and oak wood, on a small hill near a swamp, and in open ground. The only things to cover her were a few twigs that had been cut off and some very small blueberry brush. I could go all around her, and I put the camera within 4ft. of her. After I had taken her photo I pushed her from the nest and found thirteen eggs of very dark olive. When she left the nest, she flew a few feet, then ran a few yards, then flew out of sight. On the 20th of May I went to the nest and found no trace of the happy family; I do not think she was disturbed, and I think all the eggs were fertile.

I hope to hear more through your paper of the pheasant, as I think it will soon be a game bird all over Massachusetts. C. E. BAILEY.

[We regret that the interesting photograph could not be reproduced.]

An Unusual Nesting Place.

LAKESIDE PARK, N. Y., July 13.—While sitting on the porch of the Lakeside Park Hotel I noticed a bird that I thought was a house wren fly into the vines that cover the wire netting overhead, and looking up I saw a nest placed on the wire among the vines about 2½ft. above my head; examining it I concluded that it was not that of a wren and that it contained a young bird. A few minutes later I saw on the lawn a pair of song sparrows, the female without a tail; and I concluded that it was the bird I had taken for a wren. A moment after I saw her fly into the vine and feed a young bird that was sitting near the nest, and later saw her feed the one in the nest. I was then convinced that the nest was that of the song sparrow, of which I was skeptical, as I had never known this species to build its nest other than on the ground, or more than 2ft. above it; and here it was placed on the wire netting about 10ft. from the ground, and nearly within reach of one's hand from the floor below, where people have walked and sat hundreds of times daily for the past month. A young lady guest of the hotel told me that she had seen the bird without a tail hopping around on the floor and supposed it was a young bird, but did not know of the nest. Taking in consideration the shyness of the song sparrow, I consider this an unusual nesting place for this species.

There are many species of bird in the park surrounding the hotel and its cottages, and as they are not disturbed they are quite neighborly. I have seen three nests of the red-eyed vireo; that exquisite penciled basket affair hanging near the cottage. As I write this, a pair of kingbirds, a dozen or more of cedar birds, and a phœbe can be seen catching flies in front of the cottage we occupy. Although not of the fly-catching family, the cedar bird seems to hold its own with its two fly-catching neighbors. J. L. DAVISON.

A West Virginia Panther.

MR. ANDREW J. PRICE sends us this account, as given by a Pocahontas county paper, of the occurrence of a panther in the Cranberry Mountains of that county:

It has been so long since there was a well authenticated case of a panther being seen in the mountains of this county that the general belief has grown up that there was not a panther left. There seems to be no doubt that there is a panther in the Cranberry Mountains. The first heard of it was from Ed. Patterson, who saw the tracks of some large animal which had been following a deer trail in a muddy path.

Last week Andrew and John Moore went to Cranberry to fish. They are absolutely reliable, and are not given to exaggeration. They were shy of believing that they saw a panther, and the reader can judge whether it was one or not. They had fished down North Fork and had prepared to lay out at the forks. They got everything ready and started up the South Prong for a short fish. When they got up about half a mile, to the foot of the island, where the path comes in, they were standing close together, talking of turning back. It was nearly sundown. John had his eyes turned up the river and saw the animal jump across the stream about a hundred yards above him. He remarked that he had seen a deer. They immediately started up the back channel to get a sight of the animal if possible as it crossed the back channel.

They were fortunate to the last degree. As they reached a point nearly opposite where it was seen, the panther came out of the brush ahead of them and walked slowly away in a diagonal direction. They saw at once that it was not a deer. They thought at once that it was a cinnamon bear, but catching sight of its long,

prehensile like tail, drooping to the ground and turning up at the end, they spotted it as a panther. The animal continued to slowly nose the ground in front of them at a distance of about thirty steps, long enough for them to discuss the identity of the animal. They noted the reddish brown color, the round ears, the long lank body, and the quick movement of the foot, which was stayed just as it reached the ground. The size they put as three times as large as a big dog. The panther approached a log and put its forefeet upon it, and they had a good look at its foot. Its front legs were as large as a man's arm, sleeve and all. It was when the panther was in this attitude that it slightly turned its head and caught sight of the men. Like a flash of light, it sprung clear across the back channel and took to the mountain side.

Oh, the things you see when you haven't got a gun! What would the naturalist, who waits around to photograph animals, given to have been there when that panther had its front feet on the log. The boys say that it made no noise whatever as it ran through the woods. They went to see where it had sprung across the stream. It had sailed across, without raising perceptibly, a distance of about 25ft., and had alighted on a rock. The print of its wet feet was to be seen on the rock. From thence it had jumped ashore in a muddy place and it made a track in the mud like a horse. At nowhere else could they discover the imprint of its foot.

The presence of this panther will discourage fishing parties to Cranberry, where the trout are about exhausted. It will not be pleasant camping out when the fire burns down, with a mountain lion as big as a yearling steer prowling about the camp.

Game Bag and Gun.

Horn Measurements.

Editor Forest and Stream:

"Record head." How shamefully this term is being abused, especially in the past three years; or since the giant moose from Alaska made his appearance in public and placed all former records (so far as moose are concerned) far in the shade.

What constitutes a record head? Certainly not the one that merely has the widest spread across the horns after being mounted, which seems to be the most popular plan of deciding by some innocent though wily taxidermists. Providing the head, or rather the horns, of a moose, elk or deer are measured fairly and squarely (for with these animals it is really the horns that are considered, generally speaking), several measurements are necessary. Many claim the largest head on record in consequence of the horns spreading to a greater width than any recorded. This means nothing unless one simply wishes to claim the record for spread alone. This single measurement is of little consequence when taking into consideration general size, beauty, massiveness, number of points and weight.

A man might claim a record for horns bearing greatest number of prongs, or for horns with greatest length or greatest thickness or weight. Any one of these features alone does not constitute a "record" in the general acceptance of the term. For instance, one of the first giant moose heads that astonished the public was exhibited about two years ago. It was one of the Alaska variety, and before it was mounted was measured fairly by noted authorities on such things, for instance, Dr. Merriam, of U. S. Biological Survey; Hon. Theo. Roosevelt and Geo. Bird Grinnell, of FOREST AND STREAM, men whose names and reputations would be accepted anywhere. The horns of this head, instead of having a tendency to spread apart, lay almost straight backward at direct angles with each other. Even in this form their greatest width was 70¼in. This was, of course, remarkable and unheard of, but still more so were the other measurements. The palms measured 29in. in width, not including the prong, or 35in. with prong (almost a yard), and each palm was 56½in. in length (simply the blade, not entire horn). The circumference of the horn at the burr was not extraordinary; but the number of prongs was marvelous, the horns were very uniform, the weight was very great, and taking everything into consideration the head and horns were allowed to be the largest and finest on record. Pictures and an account of the head were published by one of the leading sportsmen's mediums, granting it to be the "record moose head." But suddenly, owing to misleading pictures and statements, the glory due this head was doomed to short life, for the same journal in its following number printed an illustration with an account of another Alaska moose head, with horns spreading 73¼in., the spread being the only measurement given; but it was claimed to be the "record" regardless of other measurements, size, weight and general appearance.

This last mentioned head was sold for a large figure, and passed through New York for transshipment, and in order to satisfy themselves FOREST AND STREAM had its representative examine and measure the head. Although he found the spread to be apparently 73¼in., the blades measured only 18in., or little more than half the width of the 70¼in. head mentioned in their former issue. His own words to writer were that the head and horns were babies compared to the head the horns of which measured 70¼in. And the paper very promptly and fairly acknowledged the wrong done. I merely cite this instance to prove that the mere spread of horns goes for nothing, except as to that measurement alone. A man might have a swelled head and not hold the record for having the most brains.

Comparatively small, light-beamed horns might have an abnormal spread. In fact I have seen horns almost deformed by spreading remarkably wide apart. They were not necessarily large horns, but simply inclined to spread during growth.

In justice to all fair minded collectors and taxidermists I should be pleased to see heads and horns measured and judged according to their respective merits, by men whose knowledge and authority is beyond question. To avoid the devices of fakirs or unprincipled and unscrupulous men, horns should be weighed and measured in the rough, raw state before being mounted, as the natural skull can be seen and no deception can be used, such as has been resorted to recently to give spread and apparent size. The prices realized for the large Alaska moose heads were certainly very high, and such temptations are too great for some taxidermists to withstand.

Moose heads having an actual measurement of 58in. spread have been sold as 68in., and one head having an actual measure of 62in. was spread to 74in. by simply splitting the skull in the center, separating the horns, allowing them to spread to desired measure, and then fastening the split skull by blocking the opening in the center and bolting together. The scalp is, of course, then too narrow across the forehead and neck to be drawn over the falsified skull. This is remedied by skillfully setting in a piece from another scalp. This is most degrading to the art and profession of taxidermy, and disgusting to all fair minded people.

In the sportsmen's exhibitions of this year, both in Boston and New York, five or six heads of the Alaska moose were exhibited. They certainly all had large handsome antlers, but they were all offered for sale at prices according to their spread, when not a single horn was fast to its natural skull. Everyone had been sawn off, drilled and bolted on to a large iron pin that protruded from the unnatural or improvised skull. Let us have fair judgment and fair measurements on heads and horns, taking all features or points into consideration, not any one single point. A horse, a dog, in fact anything is not judged to excel in consequence of any one or two points. Every point is considered and then judgment is passed as a whole. Horns by right should be weighed if possible, taking as a basis the horns and clean, dry skull. Where skull or part is missing, or where it is covered with the flesh, allowances should be made.

Moose horns should be measured for spread on straight line across widest prongs, width of palm following the flat surface at widest part with and without prong; length of palm in same manner, measuring on under side; entire length of each horn, beginning at extreme end of prong nearest inside, following inside curve to the burr; circumference at burr, also between burr and blade, and number of prongs on each horn; then with description of general shape, etc., the whole can be judged. With elk, the weight if possible; widest straight spread across; total length of each horn from longest point following inside curve to burr; length on curve of each pair of prongs from main beam to tip, beginning at brow prongs and numbering them first, second, third, fourth, fifth, sixth and more if they have them; circumference at burr and just outside of burr; general uniformity, form and massiveness. Caribou are so peculiar in formation and so lacking in uniformity that measurements are difficult, but I would say that with spread, length of each horn, circumference and especially number of prongs and statement as to how evenly distributed with each pair of palms, width of brow palms, if two and if locked or folded, general massiveness and uniformity, they can be fairly judged. Deer can be measured and judged the same as elk. Mountain sheep should be weighed with dry, clean skull, largest circumference taken at base, greatest length of each horn on outside curve, and as the extreme large horns of this animal are usually worn or broken off at the tips, it would be fair to allow the blue ribbon to the horns with greatest circumference in conjunction with finest form and most perfect tips. Antelope should be measured as follows: Length of each horn on line of outside curve, spread, circumference at base, general form and appearance.

Skulls could be measured in length from base to nasal bone, and width across the eye cavity, where they are complete. But to take measurements of a mounted head in many instances would be ridiculous, as very few taxidermists have any idea of proportions and anatomy; and given a nice fresh scalp most taxidermists stuff it considerably out of proportion, it is so elastic; and consequently measurements would be a farce.

With buffalo, I would emphatically state that the only authentic measurements should be from the skull and horns. Other measurements should be given in the flesh and sworn to. The idea of measuring a buffalo head (excepting size and spread of horns) when mounted is positively ridiculous.

The only fair way to measure heads and horns is in the rough, raw state, and not mounted.

I trust that the above remarks will lead toward the solving of a very interesting question, that can be very easily adjusted and handled by the sportsmen's associations of the different cities, official records being taken and kept, and that some influential sportsmen and lovers of fair play will interest themselves in seeing that credit is given where due.

WM. W. HART.

Maryland General and Local Laws.

PRESIDENT GEO. DOBBIN PENNIMAN, of the Maryland State Game and Fish Protective Association, writes: In our general game law most of the counties were exempted from the operation of the law as far as it might change any of their local game laws. The effect of this, of course, would be to make the general law applicable on all points not covered by the local game laws; and while we were not able to produce as much uniformity as we desired in the open and closed seasons for adjoining counties, on account of the great jealousy which exists in our State against general legislation, as it affects the local interests of the counties, still in many of the local laws passed for the counties during the session of 1898 there was a decided tendency to come as closely as possible to the seasons named in our bill. After the bill had become a law four of the counties, which were excepted when the bill passed, expressed their willingness to come under the general bill, but it was then so late in the session that this could not be arranged. I have no doubt that at the session of 1900, when the people throughout the State have had an opportunity to become familiar with the features of the general law, most of the counties will come in under its provisions.

Pelts and Winter Meat.

IT was in the fall of 1891 that Bert Reed, an old-timer in the Rocky Mountains, who was a neighbor ranchman, and myself formed a partnership to go trapping in the mountains of Colorado and Wyoming. It was our object besides getting furs to kill our winter's meat, and also meat for some of our neighbors, who could not get away from their ranches.

I left the ranch Sept. 22, with the agreement that Bert was to meet me at one of our old camp grounds in Stump Park in a few days. The morning I started the mountains were white with the first snow of the season, and by the time I had traveled up the mountains three or four miles I found the fresh, soft snow hanging heavily on the trees. My ranch being the furthest settlement into the mountains at that point, I was out of sight of any settlement from the start. The feeling of being alone entirely and going further each hour from civilization is one, not of loneliness, but of supreme delight to a lover of the forest.

About 12 o'clock I arrived at the spot agreed upon to await the arrival of my companion. We were each to carry a bed and complete camping outfit, so that if circumstances required we could operate in different localities, which required each of us taking a saddle horse and pack horse. After setting up the tent and making a comfortable camp, I spent the time scouring the country surrounding for a distance of several miles to ascertain the prospects for game and fur-bearing animals. For two days I followed up my investigations, finding some elk and deer signs, and an abundance of marten. On my return to camp on the third day I found Bert in camp, and felt a relief at being able to say something to somebody. After supper we discussed the best course to pursue, and decided to push further into the mountains the next day.

That night it snowed a little. The next morning, as we were eating our breakfast about daylight, sitting just under cover of the tent, and looking across a small, open park, we saw two deer standing looking at the smoke of our camp-fire; without getting up I reached back in the bed and got my gun and took a shot; but it was beyond my range, for I am not generally a dead shot at 200 or 300yds.; and after pausing an instant they went on to make more tracks and make some other hunter's heart glad. We were on our way at an early hour, as was our custom, and by noon were on top of the Continental Divide, which separates the eastern and western waters.

There we decided to camp and see what we could find; and after dinner we took opposite directions to learn what game was in our immediate vicinity.

After climbing a discouragingly high mountain to a distance of perhaps a mile from camp, I found tracks of elk, which I judged had been made early that day. The snow was gone only in patches, and it was difficult trailing. Across a ravine I saw a cow feeding along the side of the mountain about a half-mile away. I didn't look any more for tracks, but made my way cautiously in the direction of the game. When nearing the place where I had sighted the cow, a bull bounded to its feet not more than 30yds. from me, and making a few jumps stopped, turned and looked right into the .45-90. The distance being very short, I scored a hit, and he came tumbling down the side of the mountain straight toward me, and when he finally came to a "lie still" was but a few steps away. Turning around to look for the cow, I saw her standing 100yds. away, and fired; then another bull tore up along the side of the mountain, and I took a running shot at him, and "there were others," seven in all, that I saw, but I stopped shooting and commenced looking for results.

The one by my side I knew was mine. Going to where the cow had stood, I saw her lying dead near by, and then went to look for the third, but found I had made a clean miss. As by previous arrangement one of our neighbors was to come in two days later with a pack outfit to get meat, we felt ready to receive him; for two elk make a good pack load for four horses. At that time the greater part of the settlers in that region depended entirely upon the game for their meat, and as the game did not winter in the locality on account of the great depth of snow, it was necessary to lay in a supply in the fall to last all winter.

Bert had been informed where an elk had recently been killed, and that afternoon had taken his 43lb. bear trap and went to the spot where the entrails were, and spent the evening planting his "jewelry" for any stray bear that might come that way. When I reached camp about sundown with the elk antlers over my shoulders, the barn-door smile on Bert's countenance was suggestive of dreams of fresh meat in camp. The next morning we both went out to the bear trap and found, no, not a bear, but a red fox "in it with both feet." Both front legs were caught up close to the shoulder, and, of course, it could not move the trap out of its bed.

We remained in that camp a week, during which time several inches of snow fell, making good tracking; and we spent most of our time tramping over the mountains in search of bear tracks, as to that we meant to give special attention during the first snows. No bear tracks were found, but there was a great abundance of elk and deer. One morning early, while going in search of bear, and while passing near where I had killed the elk, and while it was snowing very fast, I crossed the trail of a band of elk which must have numbered at least fifty, and scarcely any fresh snow had fallen in their tracks; they were certainly less than ten minutes ahead, and were feeding as they traveled. It was a great chance to get meat, but we had plenty for that time, and I went on after bear tracks.

At another time, while coming in in the evening, when within five minutes' walk of camp, I crossed the fresh trail of five deer, and through curiosity circled around, taking in perhaps four acres, and found that they had not gone outside of the circle; but we needed no meat and I resisted the tempting offer.

During our stay there we caught six marten between bear hunts. We next moved our camp to Buffalo Park, a point several miles nearer home, and while moving, and within three miles of the intended camping ground, we crossed a bear track. The snow had gone off the south

side of the mountains by that time, but there was plenty of snow in the heavy timber and on the north side of the mountains. We were traveling north and the bear was headed west. It was night by the time we reached the camping ground and made camp. Next morning at break of day Bert started for the ranch for more grub and some things that were left behind, while I mounted a saddle horse and went to look after our bear. I was headed for a dense forest, where there was good tracking snow, and purposed making a detour westward, thinking to strike the track several miles west of where we had seen it. After climbing a very high mountain to the top, and starting into the timber on the western slope, I found a very fresh trail of half a dozen elk going in my direction. As there was a wagon road leading from the settlements into our present camp, and it was not more than ten miles distant, we had determined to get all the meat we could from that camp. So I dismissed bruin from my mind for that time, and dismounting, left my horse to graze on the rich feed in the bare patches where the snow was melted off, and went ahead cautiously. When only a few rods away from my horse, I saw in a low basin ahead a cow elk, which saw me at the same time; taking a hurried shot as it turned, I hit it hard. They were all off in a rush, except a calf, which seemed slow to get started, and as these make fine meat, and weigh at that season of the year about 150lbs., I shot it and killed it on the spot. After the band had run to a considerable distance a bull stopped and turned broadside. I fired three shots at him and cut not a hair, and have never been able to give a good excuse for such a clean miss.

Hurriedly dressing the calf, I went after the horse, unsaddled and picketed him, and went on after the wounded elk. After going with the bunch a short distance, it left them, and accompanied by a bull, started straight down the mountain side. Following a short distance, I found where the wounded one had been lying down, but had gone before I came in sight. The bull had gone up on the side of the mountain to keep watch, and he started running up the side of the mountain when I came in sight. Taking a shot at long range as he went between two trees, I hardly expected to hit, and he ran on out of sight. I followed on down the hill after the wounded one, and every few rods found where it had lain down; but the snow had thawed the day before and had frozen hard that night, making a hard crust, which could not be gone through without a great noise. Seeing it was useless to try to get in sight of it with the snow in that condition, I retraced my steps and decided to wait till the sun got high enough to soften the snow. Going back to the place from where I had fired at the bull, I went up to see what had been done. On finding his tracks I saw plenty of blood on both sides of his trail where he had run, and found him 50yds. away dead. After getting him in shape to save the meat I went on to look after my bear. Making the entire circuit of several miles through the woods to the west, where I supposed it would go, and not finding its trail, I came to the place where we had crossed its trail the day before, and followed it up a ravine and found there the carcass of an elk, on which it had been feeding for perhaps a week; and instead of going west, as its track had indicated, it had gone back where it came from, only up on the south side of the mountain, where the snow was all gone. Having satisfied myself that it was "living" round there, I started back to find the wounded elk. Striking the trail where I had left it, I followed it about two miles down the side of a very steep mountain, and on coming up with it found it very much alive, and keeping a sharp lookout for danger. Expecting to find it that way, I was moving with caution and got a good shot, and after crashing down the side of the mountain for 50yds. it fell to rise no more. By the time I got it in shape to preserve the meat, and reached my horse, which fortunately was directly on my way to camp, and then into camp, the shades of night had shut off from view the splendid surroundings. The park in which we were camped contained perhaps 400 acres, and was a most beautiful spot; it was surrounded by heavily-timbered mountains, and was one of my ideal camp grounds. After attending to the wants of my horses, and preparing and eating my supper by the light of the camp-fire, I rolled into my "feather bed," being alone that night.

The next morning I was up and ready for action at break of day, having bear on the brain. Packing the bear trap on one horse and riding the other, I proceeded to bruin's headquarters for supplies. The carcass which it was working at was in a ravine, which was at that spot barren of timber, consequently I had to pack timber several rods to build a pen, and by the time I had it all completed and the trap set and had returned to camp, the sun had again disappeared behind Old Baldy, one of the prominent landmarks of that section. I found Bert in camp with a fresh supply of grub, and ready to listen to my report for the past two days.

Means had to be secured for taking out the meat we had on hand, I therefore directed Bert where to find the bear trap, to see if it was all right, and I hit the trail for the ranch, about ten miles distant, to arrange with a neighbor to come in with a wagon and take out the meat. On my return to camp about noon I learned from Bert that the trap had been undisturbed. After dinner we went to the place where the meat was, and skinned and prepared it for packing, and set two traps at the entrails for foxes. Next morning we took the four horses and went by way of the bear trap; we found, by fresh tracks, that the bear had been near there, but had not disturbed anything. Going on to our meat we found a fox in each of our traps. In packing our horses, one of them, a stubborn old brute, lay down after we had him packed with half an elk, all ready to start, and we had to unpack him to get him up. Of course all that goes in with the business, and after some extra hard lifting and work, intermingled with pack ropes, it was all forgotten, to be remembered against the horse no more.

When we came in sight of camp that evening, about 4 o'clock, we saw old Elick Hilton there with his wagon ready for the meat, and after supper he started for a night drive to the ranch.

Next morning the weather looked threatening; it was very dark and a few snowflakes were falling. We started on horseback to visit our bear trap. Bert was riding ahead when he reached a rise of ground which overlooked the bear pen, at a distance of 80 rods, he stopped his horse, and shading his eyes with his hand from the now fast-falling snow, said: "I believe he's been there!" Riding up quickly, I saw at a glance that the pen was demolished. We left our horses and went down through the woods and across the ravine, as if the bear was behind us instead of ahead; for by this time it was snowing very fast, and we were afraid the trail would get covered and we would lose it. When we came out of the timber near the pen we saw that the clog was gone. We struck the trail of the clog before we reached the pen, and took the trail at a good gait, with visions of bear in every object in sight. The chase was too short, for we only followed about 75yds. when we came up with it fastened among some trees, quite gentle, much to our regret. It is said, and I believe truly, that when a bear is trapped by a hindfoot, as was this one, they are not nearly so full of fight as when caught by a front foot. There it was, a fine specimen of bear—a female Rocky Mountain grizzly, weighing 400lbs., and with a good hide, which netted us $25. The game was dispatched by a bullet in the head. Oh! how it did snow. We built a fire, for we had something of a job before us, as any one knows who has properly skinned a bear.

We both worked at it a while, and then Bert went to look after the fox traps, which had been set at the same place again, while I finished it. When he came back he had another fine fox hide to add to our day's catch. Then the fun commenced—packing the meat and hide of that bear on the horses. Nearly all horses are afraid of bear, and the scent of one will create a general panic among horses. Ours were no exception, and "there was a hot time on the hillside that day"; but we succeeded. By the time we reached camp, about 3 o'clock that evening, there was fully 6in. of fresh snow on the ground.

The next two days we spent in scouring the surrounding country for many miles in search of bear tracks. The second day, about 10 o'clock, I struck the trail of an old she and two cubs, and as they traveled mostly on the south side of the mountains, where the ground was bare, I followed them with great difficulty. They were not more than two or three hours ahead of me at most, as they crossed my tracks at one place, where I had passed before finding their tracks. I followed them till sundown, when they went entirely out of the snow, and all that was left for me to do was to turn my weary steps toward camp, fully ten miles distant, without a trail of any kind. But the night was a beautiful moonlight one, so that I traveled as easily as by day, and reached camp by about 10 o'clock. I had a fine marten skin for my day's work, having treed and shot it before finding the bear trail. Bert had not found anything of interest.

As the snow was gone to a great extent, we set about preparing to move camp about ten miles further west, to Hog Park. We arrived there in due time, and after making camp we each went out to take a survey of our surroundings before dark. I came in after dark, having gone about two miles north to learn the prospects for game, as we hadn't brought any meat with us. I found Bert feeling good, for he had gone out about 100yds. from camp and found fresh beaver sign, and we had hardly hoped to find any of them there. He had set a trap, and when we were ready for bed I suggested that we go and see if everything was right at the trap. On coming near we heard a great commotion in the water, which was about 4ft. deep, and soon saw a head come up out of the water; we had him, and he was so large and powerful that he could raise the bag of stones which was fastened to the trap to drag him down and drown him, and he would hold it up while he would get his head above the surface and breathe. That was the largest beaver I ever saw, and it would have weighed fully 50lbs. We went to bed feeling hilarious over our good luck. As that was a day for moving we had not counted on any profit, and the hide brought us $9 when we sold our bunch of fur.

Bert was an enthusiastic beaver trapper and understood it thoroughly, while I had no hankering for working about the water; so he followed his inclination next morning by going to some beaver dams several miles southeast of camp, while I went north to look for meat. Soon in the morning snow began to fall, and it snowed hard. The ground was bare when I left camp, and by 9 o'clock there was no less than 5in. of snow, and still snowing. About that time I had given up looking for game until the snow stopped. There was a small park about four miles north of our camp, which was better located for a camp than where we were, and I decided to go up there, while it was snowing, and see if anyone had camped there, with a view to making our next camp there providing no one had been there with horses to eat off the feed.

While making my way leisurely up the side of a very steep mountain through the blinding snow, I saw an object ahead of me which I thought looked like the head of an elk lying down. I looked at it so long and it remained so perfectly still that I began to doubt. It appeared to me as having its ears set forward and looking intently at me. I moved on a few steps and looked again as well as the fast falling snow would allow, still thinking it must be an elk lying down and covered with snow. While thinking hard what to do, the object, along with about a dozen of its kind, suddenly rose to its feet, and I saw, mingled with snowflakes, a fine bunch of elk. Hurriedly bringing my gun up, I discovered to my chagrin that the sights were full of snow, and by the time I had that cleaned out the chances were slim, but I took a snap shot and hit, but not hard enough to do any good. Their trail led through the small park to which I was going. When I got there, knowing the advantage of delaying pursuit until they would be off their guard, I stopped and took a survey of the park and surroundings, and found that there had been no campers in the vicinity. Then I sat down and ate my lunch, and after spending an hour started after my elk, determined to "get meat" or "get tired"; the latter I was quite sure of, for they were going directly away from camp. It had stopped snowing and the sun was shining; I followed them about two miles, and found where they had stopped, on coming into the edge of heavy timber, after passing through a long stretch of open country, where they had every advantage of a hunter in pursuit. Some had lain down; and everything indicated that they had spent at least an hour there, showing the advisability of not following them at once. They had gone leisurely up along the side of the mountain and I followed cautiously for about 80 rods, when I spied the hindquarters of one about 75yds. ahead. Waiting a moment to learn of its movements, I saw a fine pair of antlers move at the other end of the hindquarters, and then there stepped into partial view a magnificent bull, all unconscious of any danger, and affording a fine shot, and the .45-90 belched forth death to another of the noblest of American animals.

The others had been lying down, and jumped up in confusion and afforded some more good shots, but I was too far away from the ranch then to take any meat home, and I just held the old gun down tight so it wouldn't shoot, while the band passed safely out of sight. This was an ideal spot for bear, and after skinning the animal and taking off all four quarters, and trimming off such meat as I could, I left the carcass there without taking the entrails out, making a tempting bait for a wandering bear. I got back to camp about dark to find Bert feeling at peace with all the world; he had found some beaver sign a few miles from camp and had some traps out.

The next morning dawned bright and clear. I started on horseback toward the scene of action of the day before, hoping to find a bear trail, as there was a good tracking snow in the morning. When within 300yds. of the carcass I struck the largest bear track I have ever seen in any place. It was coming up from toward the carcass, and I at once supposed it had been at the meat, in which event I was nearly sure of finding it, for usually they do not travel far after filling themselves with fresh meat. Leaving the horse, I followed the back track to within 50yds. of the carcass, and there found an end to the trail. It had come so far and then turned about and stepped in its tracks, going back so exactly that it looked as if it had passed but once. Why it had not found the carcass when so near to it I never could tell. I went back, got my horse and started in pursuit. By 11 o'clock I found the tracks heading down the side of a very deep cañon, where the morning sun had so bared the ground that I was unable to trail it. By walking and leading the horse, and picking my way down the steep, rocky side of the cañon, I was able, after a tedious and in some places dangerous passage, to reach the bottom of the cañon, in which flowed the Grand Encampment Creek, a few miles above the present site of the Grand Encampment mining town, which is now enjoying a boom. There I found a small space where I could tie my horse with a few feet of rope, enabling him to reach a few bunches of grass. Leaving the horse there I hastened on across the creek, and climbed the cañon on the other side until I reached tracking snow, and after considerable searching found the trail, as I had hoped to, and pushed on with a zeal which only a bear track of such dimensions could give. I followed it on at my best pace for three hours, only taking my eyes off the tracks, and the vicinity in which they were leading, occasionally to note the too rapidly declining sun. Never did I so much wish to be alone in the mountains, without a horse to care for, in which event I could have followed till dark and then camped on the trail; but the horse must come out of that cañon before dark. The last half-hour I trailed on a good smart trot, and there was the trail still leading on, on, on, back tracking all the way, and the sun sinking low in the west. With a last look in the direction of the coveted prize, I turned about and made a long home run for the bottom of the cañon—the distance I would not try to calculate—reaching it just as the sun had ceased to shine on the mountain tops, and dusk was fast gathering down in the cañon. I found the horse shivering with the chill of the frosty evening.

I knew there was a hard task ahead of me—to get the horse out of the cañon before dark. Taking the picket rope in hand, I would climb up the steep slope the full length of the rope, or until I would come to a spot which offered footing sufficient for a horse to stand, then I would bid him come; and he would come, climbing, scrambling, plunging, sometimes on his knees and sometimes on his feet, but always coming, till he would land at the place selected, puffing and ready to stop. In this way we worked until darkness was fairly settled around us, when we reached the top. Then commenced a long plod to camp; riding where it was good footing, and walking over rough country, and guided through the wilderness by the bright moon. I came in sight of our camp-fire at about half-past nine. Tired and hungry? Well, yes, middling. Bert had had better success and had added to our stock of beaver hides.

The bright sun had spoiled the tracking snow and we agreed to move camp to the place before mentioned, about four miles north, and to turn our attention to trapping. Having established a good permanent camp in what was then a paradise for hunter and trapper, I started out to string a line of traps for marten, while Bert devoted his time to looking after beaver, having a long distance to go, since our last move was directly away from his beaver dams. We were taking a goodly number of marten, getting one or two every night at the elk carcass, which was on my line of traps, as I was visiting it every day to discover the first appearance of any bear that might find it.

Grub began to run low, and Bert agreed to go for a new supply, while I should tend the traps and take care of the furs. He was to be gone three days, going and coming by way of his beaver traps, which were about two miles off the trail leading to the settlements. On the morning of the third day that he was gone I went on horseback to the carcass which I was watching, and which was over two miles from camp. After looking at some traps along the route it was 10 o'clock when I got there, and found the carcass torn to pieces and dragged about, and my marten traps scattered around. On leaving the camp where we had last used the bear trap, we had had our horses heavily packed, and had left the bear trap behind. I was determined on getting the trap to camp that night; so rode back to camp, put the pack saddle on the other horse, and started in a hurry for our old camp ground. It was nearly noon when I started, but as there was nothing cooked to eat for

lunch I concluded not to take time to cook dinner, but to trust to luck to meet Bert on the road, as I knew he would have a supply of bread with him. It was about a mile from where he would leave the main trail in going to his traps to where he would come back to it again, and I hoped to reach the point where he would leave it ahead of him, and then I would be sure of meeting him. Covering that distance as rapidly as possible, I reached the spot only to find the trail of his horses where he had passed. There was no time to lament over having nothing to eat, and I went on, arriving at the old camp ground, where the trap was cached, about 4 o'clock in the evening. My own hunger reminded me that the horses might be hungry, and I turned them loose and allowed them a half-hour of the precious time to feed; then packed the trap and started for a fourteen-mile ride over a very mountainous trail. By the time half of the distance was covered it was so dark in the pine woods that I could not see my hand before my face, but trusted entirely to the saddle horse to keep the trail, letting go the reins, and covering my face with my arms for protection against underbrush. In this way we plodded on, and between 9 and 10 o'clock the welcome camp-fire showed among the trees in the distance and Bert rolled out of bed wondering what I was celebrating, as I had left no clue behind to give him a chance to even conjecture where I was.

The next morning we went to set the trap; we did so by building a Fig. 4 pen about 4ft. high. The second morning after this we found that the bear had been there, and reached over the side of the pen and dragged a piece of the carcass which would weigh 100lbs. over the side of the pen, tearing it partly down; had then dragged the meat away a few feet and eaten a small quantity and gone on its way rejoicing, I hope, for there was no rejoicing on the other side. We built the pen up 6ft. high and left the trap two weeks without his reappearing. During this time the weather was warm during the day, and very dry; we were successfully trapping for marten, and in the meantime Bert killed a fine, fat, calf elk, which made a grateful change in our meat diet from old bull meat.

It was our intention to go trapping in January on snowshoes with trail sleds, and as the big game all leaves that locality as soon as the snow begins to get deep, we had been caching some meat at the different points where we had been killing for our winter supply, and we were in need of at least one more elk to complete our supplies; but day after day we visited our traps and traversed woods abounding in game, yet were not finding any, hence we were anxiously looking for snow. One morning toward the middle of November we got up and found several inches of snow, with every indication of more from the way it was coming down. I started out over the line of traps early to give myself time to hunt for meat, and after going about two miles from camp found where a fine bunch of elk had crossed in the fresh snow evidently not more than fifteen minutes before. I went on and finished looking at my traps, taking two marten, then returned to the elk trail and proceeded to follow them with care. They were going straight down the side of the mountain, which was very steep and rocky, and in a dense growth of large spruce timber. The snow was piling down in great chunks, making it difficult to see. I had gone perhaps a half-mile from where I struck the trail when I saw the head of a cow, which was lying down, and she saw me at the same time and got up; then I heard more stirring in the bushes, and then a huge pair of antlers rose up from behind a large log, about half way between where I stood and where I had seen the first one; he had been lying down and was hidden from view as I approached. He got up facing me, with his entire body hidden by a log and some rocks, and with only his head and horns visible, at about 50yds. away. As I already had gun to shoulder when he got up, I had only to switch it a few inches to one side to have a bead between his eyes, and when the gun cracked the head went out of sight, and then such a crashing down the side of the mountain. One not having heard a band of elk go at full speed down a steep, rough mountain side would have declared there were hundreds of them, I think, from the tracks, there were about twenty. I went down and found lying where he had fallen truly the "monarch of the forest." It was the largest elk with the largest antlers that ever fell to my gun. The horns now decorate the walls of my father's dining room at the old homestead in Pennsylvania, where they are admired by many. By the next day the snow was too deep to hunt, and we went out and packed in the hindquarters and hide and head, caching the remainder of the meat there.

Grub was running low, and as it looked as if it was going to clear up the next day, Bert started for the ranch again for a two weeks' supply of provisions, while I kept on trapping. The snow commenced again soon after he left, and by the third day, when he was to be back, I had determined that we would be obliged to get out, as the snow was getting too deep for the horses to find feed and also too deep for travel. The morning of the third day I started out to lift my traps, as the snow was at least 15in. deep and still falling. The first trap was about a mile and a half from camp. I concluded to leave my gun there till I came back. When coming back and within half a mile of my gun, I saw a marten and chased it up a tree. Then I felt that I owed myself an apology for not bringing my gun. I threw clubs at the marten, thinking if I could get it down in the deep snow I might catch it. Finally it jumped and landed well out from the tree, and I chased it just about one-quarter of a minute, when I realized I had underestimated its running qualities in deep snow. It went directly the way I wanted to go, and I followed it about 80 rods and tracked it up a dead tree. I saw its head sticking out of a hole, looking down at me; and right there before its eyes, in broad daylight, I took two traps out of my haversack, set them both at the root of the tree, baited them and went away, leaving it still watching me. I found Bert in camp with our supplies, and he agreed with me that we would have to get out, as the time of year had come when we might expect to be snowed up any time. However, we had previously decided to pack the hindquarters of the two bull elk that had been killed at that camp over to the top of the Continental Divide, about ten miles further west, so that we could sled it over on the western slope, if we wanted to trap that far west later in the season. The next morning I packed two of the horses with elk meat and started out to cache it, while Bert following my directions went out to get the traps I had set for the marten. Owing to the depth of snow I had a hard day's work, and got back at dusk, finding Bert there with the hide of the marten that had watched me set the traps. Still the snow kept piling down, and it was with feelings of remorse that we tied our horses out on picket that night, for by that time the snow actually touched their bellies when they walked; yet it was rather light, and they managed to paw out some grass.

We were up three hours before daylight, brought in our horses and gave them a feast of hay, which was under our bed, for we had cut and dried it when first making camp. By daylight we were ready to start for home; and by steady plodding, without a stop for lunch or anything else, reached the ranch at 4 o'clock that evening; glad enough to have a comfortable stable for the horses, with plenty of feed, and a roof under which we could eat and sleep after living outdoors two months. After summing up our expenses, which were only what we had eaten, and counting our ingathering of furs, to say nothing of the store of hard-frozen meat laid up for winter use, we found we had netted a nice profit, besides enjoying to its full extent the pleasures attendant upon such occupation. Thus ended our fall hunting and trapping expedition.

I will give an account later of our winter trapping expedition, which began two months later, and was conducted on snowshoes with trail sleds.

EMERSON CARNEY.

WEST VIRGINIA.

Arkansas Non-Residents.

LITTLE ROCK, Ark., July 4.—There is no exception whatever in the non-resident law. The fact that a man owns land or is a member of the club does not exempt him from the non-resident tax. I think the Memphis Club members stand in with the county officers of Crittenden county and thereby evade the tax.

I am not much in favor of the non-resident tax. What we have to contend with is the St. Louis and Chicago market hunters. The tax and non-export law were aimed at them. They had been coming into our woods and staying the year round and shipping game and fish in closed packages, and we had to do something. The result is that we have reached some people we did not want to reach, and we do not exactly know what to do with the visiting sportsmen. Like Nanki Poo, the market hunter does not carry his name on his pocket handkerchief, and we cannot tell him from a pot-hunter.

I am chairman of the committee on game laws appointed by the last session of the State Sportsmen's Association, and I am going to try and get at some reasonable solution of this matter, if the rest of the committee will have it so. My idea is to tighten up the non-export law. If we can stop that, the visiting sportsmen will not hurt matters. I want to put a penalty on the carrier so heavy that it will not be profitable to carry the game. No railroad will carry it unless there is money in it, and when you take that inducement away the non-export law is a success. The trouble with the present one is that the railroads are willing to pay a fine now and then to keep the business. We have got clear sailing under the provisions of the decision of the United States and State Supreme Courts, and I believe in using it.

At present there is no law protecting ducks and geese, and they are exported to St. Louis and Chicago by the thousand, and with them other game in the center of the package. I am going to prepare a statute that will protect all the game and make it unprofitable to ship them, and leave out the license clause.

That may not suit the rest of the committee, and then our statute may not go through the Legislature, but we will at least make an effort to get a consistent and reasonable game law that will protect the game and not be unjust to any one.

The market hunters are the disturbing element. They come in and camp in some secluded spot and arrange with a railroad company to stop at some flag station and take on their game and fish; and they keep that up all the year round. If the railroad is indicted it pays the $25 fine and keeps up the business. If the fine was $500, the jury would put it on just as quick, and the business would not pay. A jury will not put a heavy fine on an individual, but that reason does not apply to a railroad, whom they consider a fair subject for slaughter anyhow.

J. M. R.

North Carolina Bears and Deer.

A HERTFORD, N. C., correspondent writes in reply to an inquiry: "We have plenty of bears, but no dogs upon which to rely. Our packs of bear dogs have all been killed out. Rabies broke out among them, and the whole pack had to be killed, as they were all bitten. If your friend who desires bear territory has a good bear dog or two, I can give him points on good grounds for the sport, and if he has one or two good sticking and striking dogs can supply plenty of young inexperienced hounds to help in the running; but I have nothing to be depended upon when the game comes to a stand and shows fight. Young hounds always have business elsewhere at such times. We have excellent deer hunting about 1st of September or October, and plenty of good deer dogs. I had some excellent sport the past fall, in company with some gentlemen from Atlantic City and Philadelphia, hunting deer.

Big Yellowlegs and Dowitchers.

INNER BEACH, L. I., July 16.—A flight of big yellowleg and dowitchers is reported. The birds have come into the creeks and salt ponds, along the north side of Long Beach, and have been killed along Wreck Lead and on the sand bars in the bay near Broad Channel. Some very good bags have been obtained by the market gunners, and there is an opportunity for some excellent sport in this vicinity. Surf snipe are still very scarce.

The Game Laws.

Editor Forest and Stream:

To sportsmen and politicians in the British Islands it appears at first sight very remarkable that of late years many States in America (the earliest home of modern democracy) have made laws to protect game from extermination. In this country one of the avowed and indeed foremost objects of the democratic or radical party has always been to obtain the complete abolition of all game laws.

The fact, however, of similar laws having been established in Canada, Australia, New Zealand, and South Africa, proves that the most democratic countries are giving up old prejudices and practically acknowledging that the preservation of game is beneficial to the whole community.

Reports published from time to time in FOREST AND STREAM and other American sporting publications appear to show that in some of the States there is still either a great repugnance to the institution of game laws or a great practical difficulty in enforcing them; and the results are most deplorable, large districts being almost entirely denuded of game.

I have never read any details of the arguments used against such laws in America, but in the British Islands the chief objections urged are:

1. That they are remnants of feudalism, conferring privileges upon some classes of the community which are denied to others; all exclusive privileges being contrary to democratic ideas of justice.

2. That the protection of game causes fighting between game-keepers and poachers, sometimes even resulting in murder. It also frequently causes the homes of the poor to be broken up, through men being sent to prison for taking game illegally.

3. That the preservation of game is a hardship to agriculturists, in consequence of large quantities of grain, roots and green crops being eaten.

4. That the destruction by game-keepers of birds and beasts of prey causes a degree of increase among insects, rats, mice and granivorous birds, which is most injurious to agriculture.

5. That killing wild animals for amusement causes great and unnecessary suffering. It is therefore cruel and should be prevented, like cock fighting, dog fighting, bull fighting, etc.

6. That the fondness for hunting is only an inheritance of a habit acquired of necessity by our savage ancestors. To indulge in it at our present stage of evolution demoralizes and tends to brutalize us.

7. That wild animals may be on one man's land at one time and on that of another shortly afterward. Consequently they belong to no individual owner, and therefore everyone has a right to capture or kill them.

It is doubtful if any of these statements will bear the test of impartial examination; and the amount of truth in some of them merely exemplifies the old adage that "the abuse of a thing is no argument against its use." Let us therefore take them as numbered:

1. It is perfectly true that the game laws of Europe were first enacted in the feudal ages, but surely that fact in itself is no argument against them. Many other laws then originated which are still maintained and give general satisfaction. It is also true that when political power was exclusively in the hands of kings, nobles and the prelates of the Christian church they reserved to themselves the right of killing game. Although they acted selfishly and frequently abused their power such facts can hardly be urged against the preservation of game in the present day, because plenty of men of very moderate means and in all stations of life now have the pleasure of shooting, hunting or fishing, and far greater numbers could have such enjoyment if game were preserved more extensively. Of course in thickly populated countries first-class sport is usually very expensive, but it is no more the exclusive privilege of the rich than that of living in large, gorgeously furnished houses, keeping large yachts, or having other kinds of amusement which cost much money.

Tyrannical as the game laws were in feudal times, their results were practically beneficial. If all men had been permitted to kill game there would soon have been none left, and thus a large amount of the food supply of the nations would have failed. The serfs doubtless cultivated as much land and raised as many pigs, cattle and sheep as the backward state of agriculture permitted, yet they were by no means too well fed, and at times there were severe famines. The nobles, with their armed retainers, by living to a large extent upon game, left all the more food of other kinds for the dwellers in towns and the serfs.

2. The assertion that protecting game by law causes crime is equally true if applied to laws for the defense of every kind of property. A man who keeps jewels, plate or valuable pictures in his house tempts burglars to break into it and sometimes to shoot those who interfere with them; and the burglar's family often loses its home through the husband being imprisoned for robbery.

In the British Islands those who wish to abolish the game laws make a distinction between poachers and other robbers, sometimes describing the former as poor fellows who capture game merely for the purpose of saving their families from starvation. Men who write like this are usually inhabitants of the large cities, and are personally unacquainted with poachers. The latter in nineteen cases out of twenty are in reality lazy, drinking scoundrels, who will not work when work is offered them, and who are as ready to steal farmyard poultry as game if they can do so without being discovered. Farmers have more than once told me that it is useless to offer work to a poacher.

3. Game is injurious to agriculture only when kept in excess. Even hares and rabbits in moderate numbers repay for the damage they commit; and winged game, while taking only a small quantity of grain, benefit the farmer by eating largely of the various insects and the seeds of noxious weeds. Pheasants especially consume incalculable numbers of the worst enemies with which the farmer has to contend. Mr. Tegetmeier, natural history editor of the London Field, mentions that in the crop of one pheasant were found more than 700 wire worms, and in that of another more than 400 grubs of the crane fly.

That most beautiful of American game birds, the ruffed grouse, lives I think entirely upon insects, wild berries, wild seeds, and the buds of trees, chiefly birch.

Farmers in this country sometimes complain of damage done by game, and of the latter being kept for the exclusive use of the landlords, but it must be considered that the rent they have to pay is lower than it would be if the landlords did not reserve a right to the game; and certainly any farmer possessed of ordinary common sense, when about to hire a farm, would protect himself by a written agreement from losses due to excessive preservation.

4. Objection No. 4 certainly does not apply to America, where it is universally admitted that the birds and animals which destroy game are far too numerous. In the British Islands it is quite true that they have in most places been killed by game-keepers in too indiscriminate a manner. Especially is this the case with regard to owls and some kinds of hawks, which live chiefly upon rats and mice; and the latter also upon grubs and beetles. The peregrine falcon and sparrow hawk should, I think, be exempted from the list of the condemned. They both destroy game, but the former is of great service to the cultivator in helping to diminish the numbers of crows and wood pigeons, while the sparrow hawk kills multitudes of the small granivorous birds which have of late years increased so as to do very serious damage to the cornfields.

Many game preservers are now well aware of these facts and are taking measures to limit the destruction of birds of prey.

5. It is very doubtful whether the game killed by sportsmen suffers more pain on the average than that which dies according to "nature's" methods—by disease, cold, starvation and the attacks of the carnivora. The latter are known to frequently eat their prey while alive, and in other cases the prey escapes wounded, either to recover or to die after lingering a longer or shorter time.

With regard to tame animals, if we take into consideration their sufferings when driven on country roads, carried long distances by rail, hustled through the crowded streets of cities, beaten with heavy sticks, worried by dogs, kept purposely without food or water for twelve or more hours before being slaughtered, and finally put to death by more or less painful methods; if we think of all these facts it seems certain that they endure more misery on the whole than the game animals killed or wounded by sportsmen, for these suffer no terror or pain until shortly before they are fired at. There is of course unnecessary pain inflicted through using guns and rifles deficient in power, firing at too long ranges, etc.; but that is the abuse of sport and not a necessary part of it.

6. There can be no doubt that the love of hunting is an inheritance from our savage ancestors, but what proof is there that indulging in it tends to brutalize? We do not find in actual life that sportsmen are more cruel or unrefined than other men. The simple fact that they would not like to shoot poultry in a farmyard or oxen in a field shows that the pleasure of sport depends not upon killing, but upon exercising the skill required in approaching game and handling the weapons used for killing it. Some of the most tenderhearted and good men in existence have been ardent sportsmen, and this is only what might be expected, for shooting and fishing bring us into close contact with the wonders and beauties of nature, which tend to raise our minds above the srdid, money-grubbing spirit of the present age.

Sport is undoubtedly pursued by many who are brutal and degraded, but it is not sport which has made them so. Such are the men who form the band of "trout hogs," the shooters (not sportsmen) who fire at bushes which they see moving, knowing well that they risk killing a fellow man, or that, if a deer be behind the bushes, he is quite as likely to escape with a broken leg as to be bagged.

It is deeply to be regretted that the Christian religion has never taught the necessity of kindness to the lower animals; or that it has not inculcated some sort of superstition which would have the same effect in causing us to dislike sacrificing life uselessly. The Hindoos are not in themselves more tenderhearted than the European races, but the doctrine of the transmigration of souls, which they have held for countless ages, has suffused their minds with a feeling of reverence for the life of the lower creatures, which prevents bullying or killing them without real necessity. The votaries also of the Mahometan and other religions in India have, by long association with the Hindoos, become largely imbued with similar ideas.

The result of this has been vividly depicted by Hall Caine, the well-known writer. When describing his tour in India, eight or nine years ago, he said:

"Nothing gives more delight when traveling through rural India than the bird life that abounds everywhere, absolutely unmolested. They are as tame as in a poultry yard, making the country one vast aviary. Yellow-beaked minas, ringdoves, jays, hoopoes and parrots take dust baths with the merry palm-squirrels in the roadway, hardly troubling themselves to hop out of the way of the heavy bullock carts. Every wayside pond and lake is alive with ducks, wild geese, flamingoes, pelicans and waders of every size and sort, from dainty red-legged beauties the size of pigeons up to great unwieldy cranes and adjutants 5ft. high.

"We pass a dead sheep with two loathsome vultures picking over the carcass, and presently a brood of fluffy young partridges, with father and mother in charge, look at us fearlessly within 10ft. of our whirling carriage. Every village has its flock of sacred peacocks pacing gravely through the surrounding gardens and fields; and woodpeckers or kingfishers flash about like jewels in the blazing sunlight."

With regard to argument No. 7, even if it were conceded that the mere fact of animals being wild gives everyone the right to capture or kill them, the question is, does it give everyone the right to trespass upon the land where the game happens to be?

If so, then everyone has a right to trespass on any man's lawn, garden, or orchard, for such a purpose. But it is obvious that any claim to such a right would be universally repudiated. If allowed, the comfort of individual owners would be seriously interfered with, and the market value of all gardens, lawns and orchards, together with that of the houses to which they are attached, would be very much diminished, thus injuring the whole community. But a farm is as much private property as a garden, and its market value would also be lowered if people had a right to trespass upon it in order to destroy game. And when an individual, by industry and business talent, saves enough money to purchase several adjoining farms and thus form a large estate, it is evident that the same rules apply to this as to one farm, or a garden.

Leaving out the question of annoyance to the owner and the injury done to crops and fences, there is the fact that the game upon the land and the fish in the waters upon it are of value either as food for the owner and the enjoyment he experiences in hunting, or else because he can raise money by selling the privilege of hunting to others.

I do not know what the popular feeling about poaching now is in America, but in this country the hatred which the Radicals or Democrats have toward large land owners sometimes causes them to write upon that subject in a manner which would at once be pronounced absurd if applied to a garden or small farm belonging to a poor man. But watching the evil effects of poaching upon the property of the poor demonstrates clearly how injurious it is to the country at large.

For some years I lived in a part of England where there are many farms of only forty to eighty acres, cultivated by their owners, chiefly with the assistance of their wives and children. Poaching was very prevalent and the farmers often complained of how much they suffered, not only by the loss of the game, but by fences being broken so that sheep escaped from the fields, and by growing crops being trampled down. One man showed me a stream on his land in which trout had once been plentiful, but had then been completely exterminated by poachers. If he could have protected them he might have let the right of fishing annually to his richer neighbors. Another man, who owned about eighty acres, wanted me to hire the right of shooting. I would gladly have done so, together with that upon two adjoining farms, but on inquiry I found they were so incessantly poached that the right of shooting was almost worthless. My refusal was a disappointment to the farmer, for he was very poor and had a mortgage on his land. There would have been no game whatever had some not strayed occasionally from the grounds of two neighboring land holders who could afford to employ game-keepers. The few rabbits which the owners of the small farms trapped they sold in a neighboring town for a shilling each, and might have added considerably to their incomes in this way if there had been no poaching.

Mr. Armin Tenner sent an account last year to an American sporting periodical, describing how the small land-holders in some parts of Germany co-operate in order to preserve the game, and sell the right of shooting to sportsmen, dividing the money fairly among themselves. Possibly a similar system might succeed in parts of the States where the farmers do not care personally for the pleasure of hunting. In those States where game laws do not yet exist much might be done by enforcing the laws against trespass.

There appear to be some strange ideas, among a certain class of politicians, as to the meaning of what they term "natural rights." Apparently they consider that, as man in a savage or "natural" state, and living in an uncultivated country, can kill whatever wild animal he desires, the power to do so is a right which is denied him by tyrannical legislators in a well populated and cultivated country. Even the reason given for claiming such a right will not bear the test of examination. Although, as a general but not invariable rule, an individual savage can kill a wild animal without restraint, he can only do so on the hunting grounds of his own tribe; and wars are very commonly caused by one tribe encroaching upon the land claimed by another. Each tribe is, in fact, obliged to fight in order to avoid starvation. Here is, therefore, one restriction upon so-called natural right.

Again, if a tribe find that uncontrolled destruction of game is seriously diminishing the supply of food, it will, if sensible, make some rules to stop such an evil and thus place another limit upon "right." In truth, the term "right" simply means any action which is permitted to each individual by the tribe or nation in which he lives; and if a community consider any special action to be injurious to its best interests, it is quite justified in making a law to prevent it, thus abolishing the right.

For several generations after America was settled in by various races from Europe the idea of establishing game laws was unpopular, partly because great numbers of emigrants had come from countries where, the power being chiefly in the hands of the king and aristocracy, the game laws were exclusive and oppressive, and enforced by extremely severe penalties. There was also little necessity for game laws in a new country, because game was plentiful upon unoccupied land, and if each farmer allowed a neighbor to shoot upon his own land he was equally free to shoot upon his neighbor's land.

The case is quite different in the present day, owing to the density of population and comparative scarcity of game. It is clearly beneficial to the community for each farmer to raise the greatest possible amount of food from his land, whether by growing crops, grazing tame animals, or encouraging game to breed. But this cannot be done unless there be power to keep off trespassers and punish those who abstract any portion of the crops or of the tame and wild animals. It must surely be admitted, in common fairness, that if any portion of the population have a right to capture game, it should be those upon whose lands the game feeds and not those who neither own the land nor pay rent for it.

That game laws rationally framed and enforced would be highly beneficial to the mass of the population seems certain for the following reasons:

1. The farmers in countries like the States, where they own the land, would make a profit out of the game whether they shot and captured it themselves, or sold the right of hunting to others.

2. The prosperity of countries with extensive manufacturing and mercantile businesses depends largely upon the energy and talents of those who direct and manage them. When such men become jaded and worn out, or even ill, through excessive mental labor during the chief portion of each year, nothing restores their vigor and health so much as an outing accompanied with hunting or fishing. But when game and fish are enterminated, forest life is so much less attractive that a holiday is likely to be spent in yawning about hotels at fashionable watering places, with the usual deteriorating effects of late hours and frivolous amusements.

A temporary residence in a country district is far more beneficial to both the man and his family, morally and physically, besides causing money to be spent among the scanty rural population where it is urgently needed.

3. In all civilized countries there are numerous individuals who, having made a competence, decide upon retiring from business. If they can obtain a moderate amount of sport in the nature of hunting, shooting or fishing, they frequently settle in a country district, otherwise, finding rural life too monotonous, they continue to reside in a city or its suburbs. There is a great tendency in modern times for the population to crowd into cities, but it is highly advantageous to a nation for as large a population as possible to live in the country, because the money spent there increases the prosperity of the local farmers, trades people and others, and still more because the children, having plenty of pure air, exercise and wholesome food (besides being in perpetual contact with the refining beauties of nature), become far superior, mentally, morally and physically, to those reared in the enervating surroundings of cities, amid drinking saloons and depraved companions.

London is one of the healthiest cities in the world, yet so deleterious is it to child life that, as statistics prove, the population would become extinct in a few generations if it were not incessantly recruited from those reared in the country.

4. If the States continue to be denuded of game at the present rate, there will in a few years be little or no use for either shotguns or sporting rifles. There must indeed now be thousands of men who refrain from purchasing guns solely because of the scarcity of game. If, by the enforcement of judicious laws, the supply could be increased and maintained perennially, a great impulse would be given to the gun and rifle trade. The result of this would be the training of multitudes in the use of such weapons, so that, if required for the defense of the country, they could be made into far more efficient soldiers than would be possible in their present circumstances. Numerous conflicts between practical hunters and highly disciplined troops have proved that the fire of the latter is almost incredibly inferior in accuracy to that of the former.

Mr. H. W. S. Cleveland, in his "Hints to Riflemen," published at New York in 1864, remarks: "I have been assured repeatedly, by officers who have taken very great pains in training their men beforehand, that the only men who were to be relied on were those whose long familiarity with the use of the gun was such that they instinctively held and pointed it in the right direction; while those who had had only such instruction as the soldier receives, in estimating distance, arranging sights, etc., were often seen in action firing into the ground or into the air, quite unconscious of what they were doing."

5. If game were preserved until it became abundant, multitudes of people would be able to buy it who now can rarely ever afford to do so. In England the numberless pheasants, artificially reared until old enough to take care of themselves, cost the large land-holders from ten shillings to a pound each by the time they are shot; but, being so plentiful, they are sold in the towns, retail, at two to three shillings each. Invalids and comparatively poor people are thus able to obtain a pleasant change of diet from the eternal round of beef, mutton and pork.

6. In most parts of the States game has decreased to such a degree that the only way of saving it from utter extinction appears to be that which FOREST AND STREAM has advocated for some time, viz.: prohibiting the sale altogether.

But such a prohibition need not be maintained more than a few years, if only public opinion could be so influenced as to allow of game protecting laws being universally passed and enforced. In a short time the result would inevitably be that not only would the native game, both large and small, again become plentiful, but the various species of foreign pheasants imported of late years by some patriotic Americans, instead of numbering, as at present, a few thousands, would exist in thousands of millions. To these may, and it is to be hoped will, be added other kinds of foreign game well worth acclimatization, such as francolins, bustards, black game, capercailzie, etc., so that every variety of ground on mountain and plain may have its fitting inhabitants.

Suppose, in addition to the above-mentioned measures, that the fish in all the lakes and rivers of the States be protected from being poisoned by the refuse of saw mills and chemical factories, and from decimation by dynamite and small-meshed nets, the effect must be that the total food supply of the country would be increased to an extent now incalculable. The poorest part of the population would thus be benefited, either directly by making butchers' meat cheaper, or indirectly by exporting larger quantities of it than at present to foreign nations.

J. J. MEYRICK.

SALTERTON, Devonshire, Eng., June 28.

Quail on Long Island.

FROM all sections of Long Island come reports of an unusual number of quail. It was supposed that the cold, wet weather of April and May would interfere with the hatching of the eggs or kill off the young birds, but nevertheless the flocks of half-grown quail are met with everywhere. On the south side of the island, even within the limits of New York city, the whistle of the quail is heard, and this is where there have been no quail for several years. It is said that rabbits and squirrels are also very plentiful. The outlook for sport in all parts of the island seem never to have been better.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

Florida's Game Wealth.

THE foolish course pursued by the State of Florida in permitting the natural game resources to be destroyed without reason has been a subject of comment in these columns. An interesting personal experience illustrative of the changed conditions on the East Coast is related by Dr. G. E. Hill, who, in a communication to the Indian River Advocate, contrasts an excursion in 1890 and experiences in the same country in 1898.

Eight years ago, he writes, my son and I came to see the Indian River. We boarded the steamer St. Sebastian, which was then in command of Capt. S. A. Bravo, on the second trip she had ever made on the river. This is what we saw on the trip: The Indian River in April is so covered with wild ducks that they would only part to let the boat pass. Through the Narrows, as the boat came to them, we saw thousands of fish, shark, sea bass, trout, cavalli, and occasionally a pompano skipping the water like a deer. On the banks of the river we saw alligators and coons. I stood on the bow of the boat for hours to see the fish, ducks and other birds. Pelicans by the hundreds, cranes, majors, herons and plumed birds. Oh! it was a grand sight!

Four years ago I went down on a boat with a party of friends to Lake Worth; and I had nearly as pleasant a trip as before.

Two years ago I went down on the same boat, but the scenery had changed; the frost, gamester and fisherman had all been there. I returned home and with a party of people took a sail boat and made the trip to Jupiter. We went from there to Lake Worth on the old hand-car. I hired the mail boat that ran to Lantana to take me up the canal. I saw gators and all kinds of game. At Lantana my wife and I took a mule team and drove to Biscayne Bay. We saw game, gators, and a panther that was killed not over a mile from our camp that night. The fishing was great. We stayed at New River with the Indians a week. We had a fine trip; Lake Worth and West Lake Worth were on a boom.

My son and I, with our wives and a party of friends, boarded the same steamer, St. Sebastian, at Indianola, about March 15, 1898, Capt. Joe Smith in command, and went to Lake Worth. We had a fine time; there were a good many people on the boat, and I could not help noticing how eager they were to see a poor little lone flock of ducks. Some had guns, some fishing poles in their baggage. As the boat neared Pelican Island we saw a few pelicans. We stood on the bow of the boat going through the Narrows, where I used to see thousands of fish jumping to get out of the way; and down near Jupiter, on the flats, where there were so many to be seen in the shallow water. Where are they now?

In the far distance we saw the St. Augustine and watched her coming up, for we had nothing else to do. But what of her? That was not what we were looking for, we see steamboats by the hundreds in the North.

It was a novelty for a while to go through the canal, but were soon tired. We had a good time at the hotels at Lake Worth. We went to Miami and saw a mammoth hotel and fine grounds that have been made in two years. What of them? We can see them in the North. We hired a launch, went up the river and caught one little lone mackerel. We saw Flagler, Plant and their party come from Nassau. What of that? We have seen them before. On our return home we saw on the boat two little deer and they took on two pelicans near the island. Where were they going?

Instead of having pompano for the people on board to eat, they had some other fish. It used to be the pride of the boat to have pompano on the table every meal. Where are they?

At Indianola, four years ago, I was invited to go with the cowboys to round up their cattle. What did I see? Seven deer the first day. Plenty of signs of bear, sandhill cranes by the dozen, white and blue spotted cranes, blue herons, plume birds, hundreds of gators, ducks and quail. It was a pleasing sight. The cattle were all over the island and in fine order. You all know the Merritt's Island beef brings more than any other in Florida, on account of their pasture, and the cattle can get plenty of water. Where did they get it? Out of the gator holes. They had the instinct to locate the water and locate themselves in it.

The same two cowboys that invited me four years ago to go with them invited me again this year. They had, as they supposed, a few head of cattle left up there, and they had seen signs of a bear when they were up before. We were a party of four, with a pair of good hounds. Saddling the horses early, we rode hard until after the sun had begun to sink low in the west. Our horses and dogs had had no water since we left the settlement. Where we expected to find water in the gator holes the gators were gone and we found none. We saw many skeletons and at last found where a gator had once lived; so Mr. Nisbet said he would get off and try to find water, and we would camp there, but we could go up around the hammock and see if we could find a bear. We found neither bear nor cattle, and did not get back to camp until after dark. Water had been found by digging 6ft. Luckily we had carried a spade. The horses were saddled early next morning, and that day we saw a half-grown deer, but no bear, two small alligators, ten dead cows (I mean we saw their skeletons), and in every case by the old gator holes, where they once had gotten water; they had looked and looked in vain for it until they perished. We saw twenty-five skeletons of gators in one place, ranging from 1 to 13ft.

This is what we did not see: Ducks, sandhill cranes, or, in fact, birds of any kind, except now and then a blackbird or a king bird. I do not think I saw a dozen in all; why? No water.

One thing that took me on this trip was to see about investing money in cattle. The cattle range on Merritt's Island, the same as in other places in Florida, is spoiled, except for men who have means to put down artesian wells. Four years ago men on the Indian River did not come to me to borrow money. How many have come to me this year? Too many. How glad I would be to help them all out, and how easy it could be done now.

The freeze could not be helped, neither could the dry weather. But the people all over Florida, especially those along the Indian River or back from it, can raise all the money they wish, pay it back and still have plenty of means.

How? I will tell you. Wait a minute and listen. My son, our wives and I have been born in this world lovers of wild scenery and the love to hunt for it. We love all kinds of game, to have and pet them. We love horses and all kinds of animals, to see and care for them. It has cost us thousands of dollars, because we were born so. We have been nearly all over the United States, from Maine to Mexico, and from the Atlantic to the Pacific, to see the country and the game in it. We have been on the Rocky Mountains, on the plains, have shot the buffalo and chased and shot the antelope; fished in the streams of the Kennedy and the famous trout streams of Tella, under the Pacific slope. My son last fall killed, no doubt, the largest moose that has ever been taken out of the State of Maine. Why did he go there? To shoot a moose. Why were they there? The laws protect them. You have but a short time to hunt, about six weeks, and then it is so cold no one can stand it any longer. There is a fine and six months in jail to kill a cow moose and the same penalty for killing more than one male.

In Newfoundland you have to pay a game warden or authorities one hundred dollars to kill a moose.

I was invited last fall to go to North Carolina to shoot geese, swans and ducks. We drove from Virginia beach thirty miles, and every foot of that country was leased by clubs. The Swan Island Club costs $1,000 to join and at that price they will take no more. No one can get in now, unless some member dies. Two hundred miles below that is the same kind of land, all leased only for hunting.

The game law is the same all over the country. All lands of any account are leased by the property owners at a big price only for the privilege of hunting and fishing. The city people are crazy to get away for an outing, and they are willing to join hunting or fishing clubs and will pay for it.

If this river, if Florida was protected, this would be the most valuable land in the world. Why? Because we have the climate, the best in the world, and it comes at the right time. In the north in the winter the people must get out of it and they like to see these things; if they cannot get them they are satisfied just to see them.

Protect your game and give them a rest for five years and as soon as that law is passed I can rent your land. You would have the use of it the same as now. I could form clubs in this country the same as others. You could borrow money and pay it from the rent. Suppose the same club would like you to see to it and keep them when they come down.

The flock of ducks that I saw in Titusville eight years ago and what I saw going down the Indian River has caused me to spend over $15,000 on the banks of the Indian River at Indianola.

Men, women and children, I beg you all to protect your game—fish, alligators, birds and every wild living thing that Florida supports. Put in men that will look the question squarely in the face; men who are not afraid to act; put in wardens who will work without pay, only the actual cost; put your wardens at such places that they will know what is going on. There is not a lover of hunting but what will help support this if they look at it right. If you do not act and act quick, Florida will be a thing of the past.

I have deer, squirrels, otters, coons, gators and plenty of animals on my place. I have never shot even a deer in Florida, they will do for me just to look at and the pleasure of seeing others look at them, for they expect to see them when they come to Florida. You can count on me to help protect the game with both time and money. Who will see me and go me one better?

The "Forest and Stream's" Platform Plank.

STATE OF MINNESOTA, Board of Game and Fish Commissioners, St. Paul, Minn.—*Editor Forest and Stream:* I appreciate the grand work FOREST AND STREAM is doing for the cause of game and fish protection.

You certainly exert a great influence throughout the country, and we appreciate the help we receive from FOREST AND STREAM here in Minnesota. We are doing what we can to stop the illegal traffic, and hope the day will come when FOREST AND STREAM's platform—to stop the sale of game—will be in operation in every State in the Union.

I fully believe Minnesota will adopt it in the near future. We have some sterling men in Minnesota who are convinced of its efficacy, and as they are men of influence and good standing in their respective communities, the good seed they are sowing will certainly bear fruit.

I wish to thank you again most heartily for your editorial in regard to the decision rendered by our Supreme Court. Such articles encourage men who are trying to enforce the law, making them feel their efforts are appreciated.

SAM F. FULLERTON, Executive Agent.

Norway Game Statistics.

IN Norway a careful account is kept of the big game killed. The average annual score for five years, 1889-1893, was 1,122 elk and 501 reindeer. In 1894 the scores were: 1,262 elk, 760 reindeer, 84 red deer. In 1895: 970 elk, 865 reindeer, 146 red deer. In 1896: 991 elk, 942 reindeer, 138 red deer.

Said Jno. E. Gunckel one day recently when charged with possessing a fisherman's reputation for veracity, "I want to say one thing to you gentlemen; I had an experience in the Lucas county courts once which not one of you ever enjoyed nor probably ever will, either. I was subpœnaed as a witness in an important case, and upon being called to testify raised my right hand to be sworn, as is the custom. 'Never mind swearing, Mr. Gunckel,' said the presiding judge smilingly to the court clerk—'he's a fisherman and couldn't tell a lie!' My testimony virtually decided the case, too. Now if any gentleman present has that sort of a reputation, speak up, or forever hold your peace."—Toledo Bee.

Camp-Fire Flickerings.

"That reminds me."

Eagletown and Cranetown.

HAVRE DE GRACE, Md.—The newspapers in Uncle Sam's country are full to the top and boiling over with war, and I have been led to hunt up some old war histories. I found one that I thought perhaps might be a little interesting to the many readers of FOREST AND STREAM. It records a very remarkable war that took place in this country as far back as April, 1719. The combat was fought between two families of large birds, both well-known natives of this country. It appears that at that time there was a large track of heavy timber land located in the southern part of Harford county, Md., bordering on the Chesapeake Bay, the woods being divided about the center by a small creek. One side was occupied by the great American eagle family as a rendezvous, where they built their nests and raised their young families. This rendezvous has always during my recollection gone by the name of Eagletown or Eagle Swamp; and during the nestling season it was dangerous for man or beast to trespass in Eagletown.

The other half of the woods was occupied by a large family of blue cranes, for the same purpose; and to this day it goes by the name of Cranetown. Although both of these families of birds have always been considered great fighters, they lived as near neighbors in peace for I suppose hundreds of years. But for some cause this is not mentioned in the history. They fell out, and this brought about the most savage bird war I suppose ever fought in our North American continent. The war lasted many days, with great loss of life and many cripples on both sides; but the eagle army eventually were victorious and captured Cranetown, and drove what was left of the crane army to seek shelter in some other State.

Eagles are the ruling family of birds in this country, for they are great fighters; but at the same time my experience with the cranes teaches me that single-handed a blue crane can whip an eagle. A large blue crane measures over 5ft. from the tip of his toes to the tip of his long, sharp bill, which is his dangerous weapon; and he fights at long range. I have known a wounded crane to whip three dogs; and I have known several valuable dogs to lose an eye in trying to capture a wounded crane. The bird always strikes for the eye of any living creature that attacks it; and a crane has been known to drive its long, sharp bill through the side of a small boat.

The history tells us that there were many eagles found on the battle ground with both eyes plucked out by the cranes. They can strike an object at a distance of 5ft., which makes them very dangerous to capture when wounded.

I must tell you a good joke that a man living near Cranetown played on his wife many years ago: This man was a farmer of the name of William Lester. He had a wife who took great delight in telling him about men and women who lived in the neighborhood who could never keep a secret; who if they heard anything would tell it all around the neighborhood. She had frequently said that, thank the Lord, she was not one of that kind. They had a neighbor named Nathan Crane; one day while out gunning Lester shot a large crane, and like many men who shoot many birds just for fun, which are of no use to them, he concluded that he was sorry that he had killed the poor, harmless crane. But a thought struck him all at once that he would have some fun with his wife about the crane. So he took the crane and covered it up with leaves in a bunch of briers; and when he reached home he put his gun away and put on a sad countenance, and walked up and down the room. His wife soon noticed that there was something wrong and put her arm around his neck and said: "William, what in the world is the matter? What makes you look so distressed?" "Oh," he says, "Annie, I can't tell you. I have done something to-day that will ruin me." She says, "My Lord! William, what have you done?" "Oh," he says, "I can't tell you; for if it is found out I will be hanged," when she commenced to cry. "Well," he says, "Annie, if you will promise to keep it to yourself I will tell you all about it." This, of course, she promised to do. He then told her that while out gunning he met Mr. Crane, who owed him some money, and that he and Crane had fallen out, and that Crane had struck him and he had shot Crane and had hiddden his body in the woods, and intended to go early in the morning to bury him. Accordingly, in the morning bright and early he shouldered his spade and left home, and his wife watched him until out of sight. It was not long before one of the neighbors came over to borrow something, and found Mrs. Lester crying. "Why," she says, "Mrs. Lester, what's the trouble? Have you lost any of your friends." "No," she says, "but my heart is fit to break with trouble." "Oh, my," she says, "Mrs. Lester, do tell me what's the trouble." "Not for the world could I tell you." But her neighbor worked on her to such an extent that she had finally to tell her, or burst with the secret; and so, after many promises from the visitor to say nothing to any one about it, she opened her heart and told her the whole circumstances. When the neighbor went home her husband soon saw from the sad looks of his wife that she had heard some bad news, and commenced to question her to know why she looked so sad. "Oh," she says, "I can't tell you; I have heard some very bad news." "It must be awful," he says, "if you have promised not to tell anybody." But he insisted on her telling him, and when she found that her husband was getting angry she told him that if he would promise to keep it to himself she would tell him the whole circumstance. He promised most solemnly; but just as soon as he learned that Mr. Lester had shot Mr. Crane he told his wife that such a thing as that should not be kept a secret. He saddled his horse and went to a justice of the peace and got out a warrant for the arrest of Mr. Lester. A constable was soon found, and they arrested Lester and dragged him to the woods and made him show them where he had concealed the body o

Crane. When they uncovered the big bird and dragged it out of the briers, we have been told, the whole crowd could have been bought for ten cents. Mr. Lester had a very quiet family for some time, and his wife had very little to say to her husband for many months after.

CAPT. E. B. GALLUP.

Sea and River Fishing.

The Working of Ponds.

Editor Forest and Stream:

May I be allowed to ask through your columns a few questions concerning the working of ponds, and the method of fishing the ponds when in that condition? I very much desire to solve the problem of the whys and wherefores of a pond's working. What is the cause of a pond's working? What good does it accomplish? How does it affect the habits of trout or any fish? What is the best method of fishing during the pond's working?

I have been for the last three years on Lake Twitchell, near Big Moose, in the Adirondacks, during the latter part of August and the first part of September. Last year the condition of the lake was exceedingly bad; an old guide saying he had never seen any lake in such a condition. What I term the workings were all over the bars and were from 3 to 5 or 6ft. tall, growing to within a few inches of the top of the water. They were of a substance somewhat yellowish in color, and of a thick, slimy nature. After a heavy wind the shores would be covered with a lot of black stuff washed ashore.

The trout in this water were slow and sluggish, and not particularly anxious to please the fisherman with a rise to his cast. When opened they had no visible traces of the food they were feeding upon, and they were very fat and in a good condition. It was their custom to break water at sunset, but this year they would even forego that sport. What caused this inactivity?

A. L. JORDAN.

Editor Forest and Stream:

There seems to be a great difference of opinion in regard to the cause of specks seen all through the water in nearly all the lakes and ponds during July and August, and it is commonly said that when the water is in such a condition the fishing is poor, as is usually the case. We would like to learn through the FOREST AND STREAM the cause of these specks, and if they do have any influence on trout taking any kind of a lure. Some say the specks are caused by the lakes fermenting; others say they are caused by a plant blooming in the bottom of the lakes, and others by the blow from trees coming into the lake. Please set us all right on this point that I have heard discussed so long.

L. O. CRANE.

Editor Forest and Stream:

I find in Bulletin U. S. F. C., Vol. VI., p. 341, a paragraph upon the "water bloom" of ponds, from which I quote:

"Lower forms of algæ, of the varieties *Nostochaceae, Oscillariae* and *Chroococcaceae*, occasionally produce by their astonishingly rapid growth the so-called 'water bloom' (*Wasserbluete*), and transform the water into a blue-green mass resembling oil. Sometimes this 'water bloom' causes the death of all the fish in a pond; in other cases only certain varieties die, and frequently the fish are not at all affected by it. So far no experiments have been made with the view to ascertain which of the algæ forming the 'water bloom' exercise an injurious influence on fish. It is therefore very desirable that careful observation should be made in this respect."

In the United States no doubt similar effects are produced by related forms of algæ. It is usually stated that the seeds of certain water plants float at the surface of ponds and make the water cloudy until fertilization increases their specific gravity, when they sink to the bottom and continue their development.

The German authority quoted is Dr. Berthold Benecke, formerly living at Königsberg.

Editor Forest and Stream:

I think that I can answer quite fully your question in regard to what you call the "blooming" of ponds, but which is more commonly called "working or clouding."

This condition of the water does not always result from the same cause, but I am satisfied that it results from one single cause in the pure water lakes of the mountain regions of the Catskills.

In the Bay of Quinte the blooming of the water evidently comes from the spores of an aquatic weed or plant which abounds in all the shallow waters of that bay.

So far as I have had the opportunity for observation almost every lake, pond or water abounds in aquatic weeds peculiar to itself. Where the water is not over about 4ft. in depth these plants abound in a large amount of insect life, and where the water is deeper there is, as a rule, an entire absence of animal life.

In the waters of the Catskills, with which I am quite familiar, I have never known of a single case where these weeds or plants throw out spores of any kind which cloud the water.

Mr. Cornelius Van Brunt, who is quite an eminent microscopist, and I, some twenty years ago or more, took particular pains to find out what caused the clouding of the waters in two of the lakes of the Catskills, Balsam Lake and Willewemoc Lake, and in both cases we found that this clouding was caused by the spores of the fresh-water sponge, which abounded in both lakes.

The waters of these two lakes, like most of the lakes of the Catskills, were very pure, being spring water, and on the bottom of the lakes, at a depth of about 2ft. or 2½ft., this fresh-water sponge existed in considerable abundance, each sponge being not over 2 or 2½in. in length by 1 or 2in. in width, and when taken in the hand and squeezed there seemed to be nothing of them.

The clouding of the lakes was found to extend down from 6 to 12in., and to be produced by millions of spores thrown out by the fresh-water sponge; and as I understand it, they are thrown out with very great rapidity, and the lakes where these sponges exist remain clouded until there comes a decided storm, when the spores are precipitated to the bottom of the lake and the water becomes perfectly clear again in two or three days.

In my testimony in regard to Forest Lake, near Hudson, N. Y., I referred to the fact that this lake was free from cloud, and that from a personal inspection of the lake I had failed to find any fresh-water sponges. In regard to this examination I can only add that the examination of the waters of these lakes was made under a microscope of the highest magnifying power suitable for such a purpose, and that no spores were found except those produced by the fresh-water sponge.

J. S. VAN CLEEF.

The Grayling.

(*Thymallus lewisi*).

THE grayling of Montana exists only in the three forks of the Missouri River—the Jefferson, Madison and Gallatin rivers and their tributaries. The first real effort toward its artificial culture was inaugurated by the U. S. Fish Commission during the past spring at Red Rock Lake, the headwaters of the Jefferson, an auxiliary station connected with the Bozeman (Montana) station. This sub-station is situated in Montana at the foot of the Continental Divide, while on the opposite side of the Divide, in Idaho, an auxiliary station for the collection of eggs of the cut-throat or Rocky Mountain trout was operated at the same time at Henry's Lake, the headwaters of Snake River.

As these sub-stations were under my supervision, my attention was naturally directed to the history of the grayling in Montana, and especially to its occurrence in the Jefferson and its tributaries, where it is especially abundant. Knowing that Lewis and Clark ascended the Jefferson to its source in the Rocky Mountains in 1805, I thought it extremely probable that those remarkably close observers had mentioned the existence of this beautiful and well-marked species. Upon investigation I found my surmise to be correct.

On page 545 of Dr. Elliot Coues' edition (1893) of the "Lewis and Clark Expedition," and page 411 of the original Biddle edition of 1814, I found the following:

"Toward evening we formed a drag of bushes, and in about two hours caught 528 very good fish, most of them large trout. Among them we observed for the first time ten or twelve trout of a white or silvery color, except on the back and head, where they are of a bluish cast; in appearance and shape they resemble exactly the speckled trout, except that they are not so large, though the scales are much larger; the flavor is equally good."

A foot note of Dr. Coues to this paragraph reads as follows:

"This species remains to be identified. The description indicates the *Oncorhynchus nerka*, the common blue-backed salmon of the Columbia and its tributaries, extensively used for canning, and ranking in commercial value next to the quinnat or king salmon, *O. chouicha* or *O. quinnat*. It attains a weight of 4 to 8lbs., and is usually of the color said; but the males in the fall become tinged with red. This salmon is also called *O. lycaodon*, and is one of the five well-established species of its genus; they are collectively known as Pacific salmon. But the genus *Oncorhynchus* is not represented in any Atlantic waters."

The locality where these fish were taken was near the headwaters of the Jefferson, where Lewis and Clark abandoned their canoes and crossed the Continental Divide on horses. At this point the grayling is abundant and coexists with the cut-throat trout almost to the exclusion of any other species.

There is not the least doubt in my mind that the foregoing description was intended for the grayling. As Dr. Coues truly says: "The genus *Oncorhynchus* is not represented in any Atlantic waters." Then the size, "not so large" as the trout, shows that some other species was meant. The description could not well apply to any other fish than the grayling, not even to the Rocky Mountain whitefish (*C. williamsoni*), for Lewis explicitly says: "In appearance and shape they exactly resemble the speckled trout, except that they are not so large, though the scales are larger." All of which is "exactly" true. Moreover he calls them "trout," and "white trout" they are called by some to this day. Furthermore he says: "The flavor is equally good." He might truly have said the flavor is much better—and both are superior to the mountain whitefish. Species have been predicated, and rightful names restored, on far less evidence than this. As a simple act of justice then, and in accordance with the law of priority, the name *Thymallus lewisi* should be substituted for the grayling of the United States, instead of *T. ontariensis* (Cuvier) and *T. ontariensis montanus* (Milner), for there is no real difference between the Michigan and Montana graylings.

It is not known where Cuvier's specimen came from, certainly not from Lake Ontario, to which locality it is attributed. The arctic form, *T. signifer*, seems to be distinct from that of Montana and Michigan, which I hold to be identical.

Lewis and Clark were both remarkable for clear, concise and correct descriptions of the animals and plants met with during their wonderful journey, many of which were new to science; but unfortunately others have reaped the honors of their discovery and description. In the matter of the grayling there is presented an opportunity to restore to those intrepid explorers one small tribute of justice and esteem; and at the same time to supplant the name of a foreign naturalist given to an American fish of doubtful locality, half a century after its discovery and description, from its native waters, by the pioneers who blazed the way for the course of empire.

BOZEMAN, Mont., July 4.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Wild Fishers I Have Fished With.

BY FRED MATHER.

(*Continued from page 48.*)

Ducks.

All ducks eat fish, frogs and other aquatic life to some extent, but there are birds which in popular parlance are called ducks which live exclusively upon fish. These I will not include with the ducks, but will refer to under another head.

The mallard and black duck are essentially puddle ducks and not divers for fish. They love to pass the ooze through their bills and sift out the snails and other life, as well as to eat grains of various kinds, seeds of water plants and other vegetation. The mallard being the original stock from which our domestic ducks are derived will give the reader an idea of its omnivorous feeding. All tame ducks will eat fish, if fed to them, raw or cooked, and every tame drake which has two curled feathers on its tail has mallard blood in it, for no other wild duck has this mark. The so-called "Cayuga black ducks" of the poultry shows, which claim to be "improved" wild black ducks, have the green head and curly tail feathers of the mallard, two marks of interbreeding. They are good birds, but are fraudulent in pedigree.

As one who for years bred wild ducks as a fad, and would like a chance to continue it, I can say that teals, pintails and wood ducks dearly love fish, frogs and tadpoles when they can get them. There is no duck or other bird, wild or domestic, which does not only relish, but require, some animal food in its menu, and what is more natural than that all water fowl should eat fish if they can get them?

Yet the mallard, black duck, teal, wood duck, canvas-back, redhead, pintail and others eat but a little quantity of fish. They may be classed with the *Omnivora* of the mammals, the hog, bear, raccoon and opossum, of which man is fond. There are no strict vegetarians among the ducks. When I brought out a few quarts of tadpoles to a brood of young wood ducks and let the "tittlebats" loose in the water, it was fun to see the little woodies go for them. They didn't mind my watching them if I didn't come too close, but a great, fat polly-wog was just the thing they needed to fill out their menu, and I loved to see the little woodies dive for them.

Once, after turning loose a quantity of tadpoles among broods of different ducks, and enjoying their pleasure of gobbling them, I thought what a temptation the smell of a broiling steak must be to a vegetarian, for these little ducks had been on a diet of bread and milk, lettuce and water cress, with an occasional boiled egg. The adult wood duck will eat small fish once in a while, but eats more of other things, acorns, chestnuts, snails, seeds, duck weed, water cress and such food.

The food of the old squaw, "south southerly," is mainly a little clam with a brittle, limy shell known as the "duck clam," but they also take fish.

The Fish Ducks.

The true fish-eating ducks are the mergansers, called also sheldrakes in America, but the sheldrake of Europe is a different bird. There are three of these: the big species, in which the male is black and white above and creamy below, while the female is gray (this bird is also called "goosander"); the red-breasted merganser, and the little hooded merganser, called also "little saw-bill" and "crested sheldrake." This last is a little bird about the side of a wood duck, and like that duck nests in hollow trees high from the ground; the male has a handsome black and white semi-circular crest, which it can raise at will.

These ducks have long, narrow bills which are so strongly serrated on the edges as to resemble teeth; they are good divers and live on fish as their main diet. All the mergansers, the whistler or golden eye, and the buffle-head or butter-ball nest in hollow trees.

Once, while fishing near the junction of the Neosho and Cottonwood rivers, in Kansas, I laid down my pole—it was a pole and not a rod—to step back into the bushes to cut a switch to catch more minnows with, and was absent perhaps ten minutes, when there was a great commotion at the place I had left. Running back I saw the pole flopping about as though a whale had hold of the line. The river was low and at this place there were alternate pools a few feet deep, and then a riffle where there was but a few inches of rapid water. My game would expose itself if it went up or down over a riffle and I could afford to let it have time. All this was thought out in a second, and then a large bird came to the surface and tried to fly, but the heavy pole brought it down and it again dove. The pole drifted down near the shallows, and I rushed in and seized it. Again the bird tried to fly, and I saw that it was a red-breasted sheldrake, but it had to drop to the water and go under. I pulled in on the line and the now tired bird resisted. Then came the question why I had tried to capture it, and if the beating I would get from its wings would be worth while? All this had happened before I had time to think much, but a knife severed the line within about 10ft. of the bird and left the hook in its mouth. The bird was exhausted and sat on the surface to gets its breath, but with an eye on the man with the pole. It slowly paddled to the other end of the pool, always looking back, and after resting awhile took wing, with the line dangling below.

Loons, Grebes and Hell-Divers.

I have seen trout and other fish which had holes in their bodies that looked as if speared by the sharp bill of a loon. Perhaps a loon may seize a fish in its bill, as ducks do, but the holes were grounds for suspicion. Often has the loon been a fishing companion, and an interesting one. I never killed but one, and that was in Kansas, and over forty years ago. It was flying and came down a creek too suddenly for a gunner to hail the stranger, ask his name and where bound, so I dropped him. The fact is I was out for meat; turkeys and prairie chickens were nesting, deer and antelope were out of season, rabbits were plenty, but poor and full of fleas and wood ticks, and I was meandering Coal

Creek for young mourning doves, paroquets or a stray male wood duck, which had left its mate to care for the offspring while he retired to moult and feed up in order to blossom out with a new suit in the fall. I was needing meat, and a stray loon flew into a light charge of No. 10 shot at short range and was knocked out in the first round.

Not until it came to hand was the bird known as one with which I had a nodding acquaintance. It was a fish-eater and was not classed among the birds that a man may eat. Pshaw! Man is a creature of prejudice! In Scotland he will not eat eels; in Connecticut he will not eat sturgeon, the royal fish of England, where the first one taken in the Thames goes to the Queen's table; in New York they will not eat lampreys, miscalled "lamper eels," which are delicacies in Connecticut, and in England some old king—I never could keep a record of kings—died from a surfeit of lampreys. With these prejudices in mind, and I hate all prejudices except those which I entertain, I decided to eat the loon.

There may be differences among loons, as there are between pigeons and squabs. I prefer an adult pigeon to a squab, there is better chewing on it, but if a man wants real hard chewing with a flavor of raw fish, let him tackle an adult loon. That bird could not be picked, it was skinned, and in its stomach there was a catfish recently swallowed, one partly digested, and the bones of another. The triggers of the pectoral fins of the catfish were set, but the stomach of the loon did not seem to be troubled by that fact. I do not shoot at loons and have decided opinions which cannot be gone into here about their diving at the flash from a gun.

The grebes are all fish-eaters, from the "red-necked," the "horned grebe," the "eared grebe," down to the little "hell-diver," known also as "dabchick" and "water-witch." These birds are all divers and fish-eaters, and have slender bills like the mergansers, but not as strongly "toothed," nor are they curved.

The breasts of these birds are prepared for adorning bonnets of women; they are beautiful, and so are the red-winged blackbirds and the orioles, but no woman within the sphere of my influence will wear a feather taken from a living bird, or from any bird that is not bred for its feathers, as the ostrich is bred.

In 1882, while officially gathering the fishes of the Adirondacks for a report thereon, I set a gill net in the upper end of Meacham Lake, near the bridge, and in the morning I had a little "hell-diver" in it. The bird had its head out of water and tried to dive, but was tangled in the net. It was unharmed, and knowing that it could not fly from the bottom of the boat we set it down there. It wriggled up under the bow seat and remained quiet. The bird was boxed and sent to Central Park, New York city, but it died, and Supt. Conklin told me that in the zoological gardens, both in Europe and America, all attempts to keep loons and grebes alive had failed.

The Herons.

These fish and frog lovers are often called "cranes" in some parts. But our two American cranes, the white or whooping and the sandhill cranes, never come to the eastern United States. The great blue heron is best known for its size, but the more commonly known species is the bittern, "stake driver," or "poke." Those mentioned are solitary birds which fish by day, standing in the pools, swamps or marshes as immovable as stumps until a luckless fish or frog comes within reach of their bills, when its fate is sealed. They do not love mountain streams, which seem to be left to the king-fisher, but haunt the still waters where they can wade among the lily-pads.

The most interesting birds of this group are the night herons, or "quawks." They are gregarious not only in nesting, but also go out in squads after sundown, calling to each other, and while they do not fish in groups they extend along a pond and drop at intervals, returning together in the morning, if nothing disturbs them. The "powder down" patches on the breast and under the wings of these birds are curious things. They are said to be phosphorescent, and I believe it, but can't prove it. There is a childish song, the burden of which is: "I believe it, for my mother told me so." Years ago my first tutor in natural history, "Old Port" Tyler, told me that the lights we saw in a dull and seemingly distant way were the lanterns of the quawks. Any man who has read my sketch of "Old Port" in "Men I Have Fished With" knows that he was a past master of woodcraft, with neither romance nor humor in his composition.

I have seen the lights among the lily-pads and along the shore, and have seen them appear and disappear. The "powder down" is plainly in evidence on every dead night heron, but it is not phosphorescent when the bird is dead. There's the rub. We've all seen "fox fire" in the woods at night, when decayed wood in a dry place becomes phosphorescent, and the light has the same quality as that which "Port" said came from the night heron. In all things connected with the habits of our birds, beasts and fishes I make an effort to sift what I know from personal experience from what I get at second hand, or "believe." As for the phosphorescence of the powder down patches of the night heron, I believe that I have seen the light from them. I believe, for Port Tyler told me so. Surely some of the anglers or ornithologists who read FOREST AND STREAM should be able to settle the "powder down" question; I cannot.

Here it is evident that the fishing birds have taken all the space that can be afforded for one paper on this subject, and the wearers of fur and scales must be considered later.

[TO BE CONTINUED.]

A Long Island Bass.

A BLACK bass weighing 6¾lbs. was taken on July 11 from Big Fresh Pond, near Hampton Park, Southampton, Lond Island. It was caught by John Zugg, a farm hand employed at Hampton Park. Big Fresh Pond is a beautiful body of water about five miles in circumference and surrounded by trees of large growth, which extend down to its banks. Catches of bass from 1 to 3lbs. each are quite frequent.

CHICAGO AND THE WEST.

The State Owns the Game.

The State of Minnesota, in the case of E. L. Thomas, respondent, against the Northern Pacific Express Company, appellant, lays down strong law in support of the proposition that the State owns its own game and fish. Thomas was an old offender, and had defied the fish commission for a long time. Tons of fish had been seized from him, and he had gone to the Supreme Court on a test case, which, if lost by the fish commission, would have brought about their ears dozens of cases which would have made a perpetual annoyance at least. As it is, the commission is supported in its position that the State never parts title with its game. The text of the decision reads as below:

STATE OF MINNESOTA—IN SUPREME COURT—APRIL TERM, A. D. 1898.

E. L. Thomas, Respondent, vs. Northern Pacific Express Company, Appellant:

When a common carrier has, on demand of the true owner having a right of possession, delivered to him the property bailed, it is a complete justification for non-delivery according to the direction of the bailor.

It is not necessary to give the bailor notice of such delivery, distinguishing the case in that respect from one where the property has been taken from the carrier on legal process against the bailor.

Where wild game has been caught or killed at a time or in a manner prohibited by statute, it remains the property of the State and may be reclaimed by it as the true owner. Where game unlawfully killed has been commingled with game lawfully killed, the burden is upon the possessor to prove as against the State what part was lawfully killed, and thereby became his property.

Order reversed.

This action was brought to recover damages for the failure of the defendant to deliver to the consignees several small consignments or shipments of fish, which plaintiff had delivered to the defendant, as a common carrier, for transportation and delivery to the consignees. The substance of the defense was that the fish had been caught in the State of Minnesota with nets, contrary to law, and consequently still belonged to the State, and that they were taken from the possession of the defendant by the State, through its agent, the game warden. In short, the defendant justified its non-delivery to the consignees by delivery on demand to the rightful owner.

The trial court found "that part of each of the shipments was fish illegally caught with a fish net, but from the evidence it was impossible to determine what amount was illegally caught and what was the value and quantity of the fish legally caught."

As a conclusion of law from these facts the court held that the plaintiff was entitled to recover of the defendant the value of all shipments, for the reason "that it did not appear that notice of such seizure was immediately given either to the plaintiff or the consignees."

The learned judge evidently confounded two entirely distinct defenses which a common carrier may interpose as a justification for non-delivery of property to the consignee, to wit: 1st, that he delivered the property on demand to some one else who was the rightful owner and entitled to the possession of it; and 2d, that the property was taken from his possession on legal process against his bailor, and that he immediately notified his bailor of the fact.

The first is always a sufficient defense of a bailee against the claim of the bailor, and there is no difference in this regard between a common carrier and any other bailee. The Idaho, 93 U. S., 575. Hutchinson on Carriers, Sec. 404.

To constitute the second defense, the bailee must promptly notify his bailor of the seizure, so as to give him the opportunity to defend his title. The law does not require a common carrier to defend a title of which he presumably knows nothing, but, in case of seizure on legal process, it does not require him to notify his bailor so that the latter may defend. Where the carrier delivers the property, on demand, to one claiming to be a rightful owner, he of course assumes the burden of proving, as against the claim of his bailor, that such person was the rightful owner, but we know of no rule of law requiring him to give notice to his bailor of such delivery. All of the authorities cited by plaintiff's counsel are cases where the property had been taken from the carrier by legal process. But in this case the game warden, as agent of the State, claimed and took it as its property.

Wild game belongs to the State in its sovereign capacity. No person can acquire any property in it except by catching or killing it at the time and in the manner authorized by law. If a person catches or kills it at a time or in a manner prohibited by statute, it still remains the property of the State, which may reclaim it. State vs. Rodman, 58 Minn., 393.

The court does not find by whom or with what intent the fish legally caught were commingled with those illegally caught. In view of the evidence they must have been intermingled either by the plaintiff or by the fishermen who caught them, and from whom plaintiff bought them. Neither does the court find that they were incapable of being distinguished, but merely that it was impossible to determine from the evidence what amount was legally and what amount was illegally caught.

We do not find it necessary to go into a general discussion of the law relating to the confusion of goods, nor do we think that a case where goods, a part of which confessedly belonged to each of two different persons, are intermingled is entirely analogous.

We have here a case where all of the property originally belonged to the State, and no one could acquire any right to or in it except by catching it at a time and in a manner authorized by statute. At least a part of it still belongs to the State because caught in an illegal manner. If any person claims that another part commingled with it was caught in a legal manner and thereby became his property, we think the burden is on him to show what part belongs to him, and not on the State to prove what part belongs to it.

Where game or fish illegally killed or caught is commingled with that which was legally killed or caught, any other rule would in many cases render it very difficult to enforce the provisions of the game law.

Order reversed and a new trial granted.

Mitchell, J.

A Michigan Angler's Luck.

Mr. W. B. Mershon, of Saginaw, Mich., writes me on his return from his lodge on the Cascapedia, where he goes for salmon and trout fishing each year, and states that he had very good sport with both salmon and trout. The early fishing for salmon was good, and there were many fish in the river, but a log drive hurt the sport at the best stage of water. On one afternoon, between 2 and 5:30, Mr. Mershon killed five salmon, the smallest weighing 24lbs. and the largest 29lbs. They were rising well that day. In trout Mr. Mershon and his wife, also a very skillful angler, did very well, Mrs. Mershon killing some big trout on a 6oz. rod, and her score being about as high in numbers as that of any other rod of the party, though others had trout up to 6lbs. and 6½lbs., which weight Mr. Mershon did not quite reach. He goes on to append the score of one day's fishing, which gives reason for his feeling, as he expresses it, "a little too much fished out to care for any more just yet awhile."

"The following is a list of the trout taken by me on an 8oz. trout rod on Monday, June 27, 1898, being the last day I fished on the Cascapedia; nearly all, if not quite all, were taken during about two hours in the evening, of course with a fly. In the same pool while I was taking the trout that evening three large salmon jumped clear out of the water, but would not take the fly: One each of 2, 2¾, 3, 3¾, 4, 4½ and 5lbs.; two of 1¾, two of 2½, five of 1½ and six of 1lb." E. HOUGH.

Boston Anglers in Maine.

BOSTON, July 15.—White perch fishing is mentioned as very good indeed at some of the better perch ponds in Maine. The ponds in Smithfield have been panning out well in that direction, and several parties of Waterville fishermen, with a Boston friend or two, have been making fishing excursions there. Belgrade ponds are also noted for such fishing, as well as black bass. Winthrop lakes and ponds are turning out good strings of black bass. Norway Lake is also counted in the same number. White perch at Wayne Pond, at the town of the same name, are reported to be biting unusually well this summer. Camping parties are in order there. A party of Lewiston young men have been in camp there this summer for several weeks. They were Carl White, Carl Fuller, Thomas Pingree and Eddie Wellman. They report a large number of white perch taken, with very few pickerel. Camping on the shores of Wayne Pond gave them no end of fun, though the weather was hot and dry a part of the time.

Mr. H. B. Hill, of Boston, is at the Birches, Moosehicmaguntic, with his family, where the summer fishing is holding out remarkably well. Almost any morning a string of trout may be taken on the fly, if one has the courage to get up before the sun and early seek the right spots.

Mr. Rodney P. Woodman, of Boston, well known as one of the greatest lovers of the angle, has just returned from his second trip this season to Sebec Lake, Me., for landlocked salmon. His luck was again good, since he secured a couple of fine salmon with only a few fishing days. Extremely windy weather came to his lot for almost the whole trip, and but for the fact that his guide had a small steam launch he could scarcely have been out on the lake at all. Black bass fishing was also good, Mr. Woodman taking over thirty during the trip; some of them of very good size. He is delighted with Sebec Lake and its surroundings, and believes that it is destined to become a great salmon lake. Each year the number taken there increases, while there is a good increase in the size of the fish taken. The lake has five or six good sized ponds for breeding places and feeders; these ponds, the natural hatcheries of salmon. Mr. Woodman says that one would be surprised at the great number of small salmon to be found in those ponds and their outlets. Sebec Lake is nearly thirteen miles long and half as wide at some points.

July 18.—The salmon anglers are many of them absent at their preserves or those of their friends, while some are returning and others are going. Dr. H. F. Hamilton, of Hotel Vendome, and Mr. Haviland, of New York, are off for the celebrated Dawson Pool at the Restigouche. They will be absent for several weeks. Reports of good fishing continue to come from that river. Mr. John Fottler, Jr., is off for his salmon river, the St. John, at Gaspe, Quebec.

Trout and salmon fishing at the Rangeleys continues good for the midst of the heated term. Some good catches continue to be reported from the Upper Dam. Douglas B. Stewart caught a salmon there last week weighing 5lbs. 13oz. Mr. T. B. Stewart also increased his record last week with a trout of 4lbs. 10oz. Mr. J. C. Dougherty is there, as usual, and landed a trout of 4½lbs. the other day. SPECIAL.

Newfound Lake.

BRISTOL, N. H.—The fishing season still holds good at this noted lake. Among the catches, George Fowler took three trout averaging 11lbs. each, Frank Calley a trout weighing 15lbs., and S. Hentall took in four fish one forenoon—two salmon and two trout; another morning he captured a trout weighing near 15lbs. A salmon of 10lbs. was caught by a young man who had never fished at any lake; and still others were caught that we did not see. And so it will continue through the summer months, as fish can be taken during July and August by using plenty of line and lead.

The fish commissioners last fall at this lake took from adult salmon and trout about 1,000,000 eggs. Last May their able superintendent, Rendall Sleeper, returned to this lake 280,000 salmon fry and 700,000 trout fry; strong, vigorous, young fish. So the lake is kept restocked every year. Fishermen are invited to stop and try their skill. A good hotel is needed here at the south end of the lake. It would, if properly kept, be a paying house; such a site is now on the market.

LANDLOCKED SALMON HOUSE.

Carp Fishing.

DEVOTED disciples of Izaak Walton may wax eloquent over the fine sport of landing trout, pickerel, black bass or rock fish, but if such wish to experience royal sport, landing true game fish, let them try carp fishing.

Early one morning lately, with 10oz. rod, reel, stout line of good length, strong hook and potato bait, I sought out a shady spot along the banks of a rapidly-rushing stream to fish for carp. I finally found a location to my liking, well shaded from the sun's scorching rays, and concealed from the view of too inquisitive ramblers. Here I made myself comfortable, baited my hook, cast my line into the rushing current, and patiently awaited a "strike." Time flew swiftly; the sun mounted slowly, but certainly, toward the meridian; the solar rays left their impress on surrounding vegetation, animate nature gradually gave way to oppressive heat, yet the carp bit not. Finally, with my rod resting on my knee in position for quick handling, I became keenly interested in the study of insect life actively manifest on the surface of the water before me; my attention became so absorbed in this entertaining diversion that I momentarily forgot the carp, when suddenly a sharp, strong pull on my line at once telegraphed to me the fact that I was carp fishing, not bug studying, and I soon learned the difference.

Quickly rising to my feet, with my pole in hand, I watched my line run out with almost lightning speed as the fish darted toward the far shore. Then the sport began: I had him fairly hooked, and he meant fight. It was a royal struggle. Not for an instant dare I lax my vigilance and allow him slack line. Up and down stream he darted; at times "head on" right for me, when I kept my reel buzzing catching up the slack; then with a lightning flick of his vigorous tail he turned and darted like an arrow straight for the far shore—the line fairly smoking as it flew from the reel. Then I could see him, ever and anon, well out in the stream a few inches below the surface, cutting the swift current with ease, while his gold-bronze sides glistened in the sunlight—then, quick as thought, he sought bottom and escape.

Thus I fought him, up and down, across and return, at the surface, on the bottom, at rest, at rush, darting, maneuvering, constantly active and alert, till my arm was numb, my fingers were sore, my strength well nigh exhausted. He was all game, and even after an hour and a half of brave struggle, when finally I threw him upon the bank, panting and gasping for breath, he attempted to leap back into the water.

I filled and lit my pipe, sat down to rest, and with genuine pleasure viewed my prize. It was "only a carp" about 6lbs. weight, but what sport.

F. ALEXANDER LUCAS.

Minnow Casting for Bass.

I WAS much interested in the article by Jay Beebe, in issue of June 18, on minnow casting, for that has been my method of fishing for bass in the James River, Va., for several years. It has proved much more successful in my hands than either still-fishing or using the fly. In this method a dead minnow is as useful as a live one, and I have more than once used the same bait over again until it has had three bass scored to its record. In my opinion a splash by the bait in the water attracts the attention of the bass, and then as the minnow is moved along just under the surface the fish is very apt to take it in. It is good sport to see a 2 or 3-pounder rise to your bait almost as it would to a fly.

In fishing the James near the headwaters, where the stream is often more than 150ft. broad, I find it well to let the bait play on both sides of the boat; first casting well under the trees along the shore, and then well out toward the middle of the river. If one is not watching the bait at all times, a broken tip is not unlikely, for I have many times had a strike just as the bait touched the water after recovery from the forward cast, and even a small fish will do damage if you try to "yank" him out of the water at the end of 40 or 50ft. of line.

As to bait, a small catfish is preferable, as fish with weak mouths are easily snapped off; and if, before casting, the pectoral spines be removed close to the body, by a knife, there will be less delay in waiting for your fish to turn the bait and start to swallow it. W. H. F.

The Fly and the Day.

TOLEDO, O., July 16.—*Editor Forest and Stream:* Referring to Mr. Van Cleef's letter in the issue of the 16th: My own experience with the fly would lead me to believe that there can be no hard and fast rule which will hold good as to the use of dark and light flies. As no good horse can be of a poor color, so no really good fly can lose its attractiveness because of a few degrees more or less of light. The "taking" qualities of any particular fly, under any given conditions, are determined by a number of attendant favorable (or unfavorable) circumstances, most of which we know nothing about. Sunshine and cloud are two of these, but only two. JAY BEEBE.

A Yukon Correction.

Editor Forest and Stream:

My Yukon articles have contained a good many misprints, but I have let them all pass without comment because without exception they have been due to my atrocious handwriting, and I am lenient with my own faults. If I could have convinced my conscience that the proofreader was responsible you would have heard from me before this, but as a matter of fact the intricacies which that worthy man has unraveled have won my admiration and counterbalanced the annoyance felt at seeing my stuff appear with a different meaning from that I had intended to convey.

I want to put it on record, however, before some one else rises to convict me of the error, that Chilcoot Pass is not fifteen miles below one of the sources of the Yukon River. A period instead of a comma and the substitution of "is" for "in" completely alters the meaning of the sentence, which should read:

"Fifteen miles below its source in Chilcoot Pass, at Lake Bennett, the river becomes navigable for boats 50ft. in length," etc., instead of: "Fifteen miles below its source is Chilcoot Pass."

A sentence has also been left out in describing the difficulties of navigation. The danger on the lakes was caused by the wind, and it was the rapids on the river that were made more perilous owing to the low stage of the water.

Tony's Gale.

TONY'S GALE (44,686 A), whose portrait we publish this week, is a noted field trial competitor and winner, as the following record demonstrates: First in U. S. Derby, January, 1895; second in the Southern Derby, February, 1895; fifth in U. S. All-Age Stake, February, 1896; third in Eastern All-Age Stake, November, 1896; third in Continental All-Age Stake, and second in U. S. All-Age Stake, January, 1897; first in Eastern Subscription Stake, and second in U. S. All-Age Stake, November, 1897; second in U. S. All-Age Stake, and winner of the Champion Field Trial Association Stake in January of this year. He is large in size, though not of the largest, has a dashing style of work, and has deservedly many admirers. He is owned by the Eldred Kennels, 11 Broadway, New York. The portrait is from the photograph of a painting by Mr. Edm. H. Osthaus, the well-known painter of field scenes.

Continental Field Trials.

HILLSBORO, N. C., July 14.—*Editor Forest and Stream:* I have just returned from a trip through North Carolina and have seen and heard of more old birds carried over and more young ones hatched early than for several years. The prospects for quail in North Carolina, and plenty of them, are excellent. The readers of your paper must not forget that the Continental Derby closes Aug. 1. Let them hurry up their entries.

W. B. MEARES, Sec'y.

The Continental Field Trial Club's meet will begin Dec. 5, at Lexington, N. C. The judges are Messrs. E. H. Osthaus, of Toledo, and W. B. Meares, of Hillsboro, N. C. Mr. Meares is also the secretary. The stakes will be as follows:

Derby.—Monday, Dec. 5, open to all pointer and setter puppies whelped on or after Jan. 1, 1897. First forfeit of $10 due Aug. 1; second forfeit of $10 due Oct. 1; $10 additional to start. Entries positively close Aug. 1. Three purses, $250 to first, $150 to second, and $100 to third.

All-age Stake.—Open to all setters and pointers not having won first in any all-age stake of previous seasons at any recognized field trial. Entries close Oct. 15, with $10 forfeit and $20 additional to start. Three purses: $250 to first, $150 to second, and $100 to third.

Sweepstake.—Open to all pointers and setters regardless of previous winnings. $25 to start; entries close the night before the race. First heat to be one and one-half hours. Right is reserved to declare stake off if less than six entries are made; 60 per cent. to first, 40 per cent. to second, third dog to save his stake.

STEVENSVILLE, Pa., June 20.—Dear Old Friend: I have denied myself the pleasure of your companionship too long already, and now, as the season approaches and thoughts of tangled thickets and whistling longbills haunt me continually, I cannot endure it, so inclose $2 for subscription for six months. Game prospects are fine in this part of Pennsylvania. W. W. MCCAIN.

Annual dues, $1; initiation fee, $1.

Western Canoe Association, 1895-96.

Commodore, C. F. Pennewell, Detroit, Mich.
Vice-Commodore, Nat. H. Cook, Chicago, Ill.
Rear-Commodore, E. H. Holmes, Milwaukee, Wis.
Sec'y-Treas., W. D. Stearns, Detroit, Mich.
Executive Committee: R. M. Lamp, Madison, Wis.; C. J. Steadman, Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

American Canoe Association.

Nineteenth Annual Meet.

Stave Island, St. Lawrence River.

August 5-19, 1898, Inclusive.

To the members of the American Canoe Association:

The annual meet of the American Canoe Association will be held from Aug. 5 to 19, inclusive, at Stave Island, St. Lawrence River. The main camp will occupy favorable locations on both sides of headquarters, which will be placed on a grassy knoll at the western end of the island, and directly facing a small bay.

The ladies' camp will occupy a selected position, convenient to the general camp and headquarters.

Meals will be served by caterer Mr. D. McElveney, of Albany, at the usual rates of $1 per day.

A camp store conducted by Mr. A. B. Chaffee will be conveniently located, and camp necessities kept in stock. Orders will be taken for articles not on hand.

Mails will be distributed in camp at the secretary-treasurer's tent. Address United States mail and express matter: A. C. A. Camp, Stave Island, Clayton, N. Y., and Canadian mail and express matter: A. C. A. Camp, Stave Island, Gananoque, Ontario, Canada.

Carpenters and laborers have been engaged and lumber purchased, and tents, floors, etc., will be built for members at reasonable rates. Members will find their old tent floors, skids, etc., which were left at Grindstone Island, removed to Stave Island, where same may be obtained upon payment of storage charges. Lumber and nails will be sold to members who desire to build their own floors, etc. Members desiring floors are requested to send their order, stating size desired and in which part of the camp they wish it located, by Aug. 1, or as soon after as possible, to F. S. Thorn, chairman camp site committee, 394 Main street, Buffalo, N. Y. After July 28 address A. C. A. Camp, Clayton, N. Y.

Tents, cots, camp-chairs and tables may be rented at reasonable rates by giving three days' notice to the chairman of the camp site committee, stating size of tent, etc.

Customs Regulations.—The same arrangements as have prevailed in former years have been made for canoes and dunnage coming from the United States. Duty must be paid on provisions.

Cruises.—Several short cruises will be arranged under competent guidance to some of the most beautiful spots in the Thousand Islands, and it is hoped that all members will come prepared to take part.

Signals.—The A. C. A. signal code will be used to convey all intelligence from headquarters to the entire camp. Copies of the code may be obtained from the secretary. Price 10 cents.

Water Parade and Illumination.—The officers urge all members to bring colored lanterns and flags and colored fire. The illuminated parade will take place if possible, also a review of the fleet, and a special effort will be made to illuminate the camp. Members are also requested to bring their musical instruments, songs, jokes and any odd costumes they may have.

Camp Rules.

1. A member of the executive committee will be appointed each day as "officer of the day," who will have charge of the camp, and will be obeyed accordingly. He will appoint four members as pickets to assist him. The "officer of the day" and "pickets" will wear distinguishing badges.

2. An active member and four associate members will be in charge of the ladies' camp. (See ladies' camp committee.)

3. Members will register, pay their camp dues ($1) and obtain badges at secretary's tent immediately upon arrival.

4. The commodore and secretary will be at headquarters for the transaction of business from 10 until 11 A. M., and 1 until 2 P. M., each day, but will be immediately available at all other hours.

5. Tents may be located by owners, subject to the approval of the camp site committee, and with due regard for the thoroughfares and lines. Daily before 10 o'clock tents and grounds must be put in order, all refuse, papers, etc., must be ready for removal by the camp cart. Members will be held responsible for the appearance of their tents and the surrounding grounds. Due regard to dress while at meals is requested.

6. Camp will be open daily from 10 A. M. to 5 P. M. Guests may be invited by card, obtained of the secretary. Before 10 A. M. and after 5 P. M. no guest will be expected in camp except by invitation for occasions specially announced on bulletin board.

7. Neither guests nor members from main camp will be expected in the ladies' camp before 10 A. M. or after 7 P. M. except by invitation, nor will the ladies be expected in the main camp before 10 A. M. or after 7 P. M. except by special invitation announced on bulletin board.

8. Visiting boats must land at the steamboat wharf, unless otherwise directed by officers in charge.

9. Revielle will be sounded at 7 A. M. The U. S. army bugle calls will be used.

10. Flags will be raised at 8 A. M. and lowered at sunset. Taps will be sounded at 11 P. M., after which quiet will be maintained in camp. Hours for meals will be noted on the bulletin board.

The observance of these few rules will greatly facilitate the officers in the discharge of their duties.

FRANK L. DUNNELL, Commodore.

A. C. A. By-laws, Sec. 2, Chap. I.: Every member attending a camp shall pay for camp expenses; for general camp $1, and for division camp such sum as may be determined upon by the executive committee of the division, provided such sum does not exceed $1. Visitors when accompanying members may be admitted to the general camp at the discretion of the commodore and secretary-treasurer, and to the ladies' camp on the invitation of an associate member and at the discretion of the committee governing it; provided that if they spend more than two nights in camp the member introducing them shall pay $2 each, the same dues and camp charges as regular members. But this shall not preclude the admission of any of the immediate family of a member.

Transportation Arrangements.

The Trunk Line Association, New England Passenger Association, Central Passenger Association, General Passenger and Ticket Department, the Grand Trunk Railway System, the Canadian Pacific Railway, and the Richelieu & Ontario Navigation Company have granted the customary concessions, viz.: A round trip of one and one-third fare to Clayton and Gananoque. Members will pay full fare to the points named, obtaining from the selling agents certificates, which when indorsed and vised at camp will enable the holders thereof to return to the point of starting by continuous passage at one-third of the regular rate. Tickets may be purchased three days prior to and during the camp, and certificates will be honored for return trip (without stop over) for three days (Sundays excepted) after the close of the camp, Aug. 19.

All certificates must be indorsed by the secretary-treasurer and the special agent.

The special agent of the Trunk Line Association will be at the camp to vise certificates on the following dates: Friday, Aug. 12; Wednesday, Aug. 17, 1898.

The Richelieu & Ontario Navigation Company have granted the rate of one and one-third fare, all points on their line to Clayton; this rate will not apply on their weekly steamer Hamilton, running between Hamilton and Montreal and touching only at Canadian ports.

Members arriving at Gananoque or Clayton by rail via R. W. & O., or by steamers of the Navigation Company (from Hamilton, Toronto, Kingston, Deseronto, Belleville, Brockville, Prescott, Montreal, Quebec and intermediate points), will find the steamer Valeria at the railroad dock, running on the following schedule: The Valeria does not run Sundays, but the A. C. A. launch will connect with trains on those days.

Leave Gananoque 6:45 A. M., arrive at Stave Island 7:30 A. M.; leave Gananoque 2:45 P. M., arrive at Stave Island 3:30 P. M.; leave Clayton 10:15 A. M., arrive at Stave Island 11 A. M.; leave Clayton 5 P. M., arrive at Stave Island 5:40 P. M.

The rate on the steamer Valeria will be from Clayton to Stave Island and return 75 cents per passenger, which includes one canoe and duffle. From Gananoque to Stave Island and return 50 cents per passenger, which includes one canoe and duffle.

Round trip tickets from either Gananoque or Clayton will be furnished by purser of steamer Valeria.

The free carriage of canoes and duffle on the railways must be made a matter of arrangements direct with the railroad agents by the members, as it is out of the jurisdiction of the Railway Association. It is probable, however, that most of the roads will agree to carry canoes and duffle free, or as part of the member's baggage, the limit being 150lbs., and excess baggage weight paid on overweight. (The Richelieu & Ontario Navigation Company will carry canoes at regular tariff rates one way for round trip.) As a rule, a guarantee of twenty-five tickets (twenty-five from any one locality to Clayton or Gananoque) will entitle the holders to entire use of a free baggage car. Members of clubs or individuals should consult together and try to arrange this, allowing time for securing the use of such a car.

A baggage car will be provided by the N. Y. C. & H. R. R. R. for the accommodation of members from New York and vicinity, including New Jersey and Pennsylvania; the car will be at the Thirtieth street station of the N. Y. C. & H. R. R. R., July 30; Manhattan Station, 130th street and Hudson River, July 31 and Aug. 1; Yonkers, Aug. 2; Sing Sing, Aug. 3, arriving at Clayton Aug. 5, and return by the same route. Members from points outside of New York can ship canoes or duffle by freight, express or truck to Thirtieth street station, care Wm. E. Barlow. Mark transportation car for Clayton A. C. A. Camp. Members should advise chairman as soon as possible the number of canoes and quantity of duffle, so proper arrangements can be made.

All canoes, duffle, baggage, freight or express matters should be prepaid and plainly marked Clayton, N. Y., or Gananoque, Ont., A. C. A. Camp, Stave Island, via steamer Valeria.

Any other particulars regarding transportation will be gladly given by the undersigned, and the committee would be pleased to help clubs or members in securing favorable transportation from the railroads in regard to handling canoes and duffle.

The transportation committee: W. E. Barlow, chairman, 20 Ellis Place, Sing Sing, N. Y.; C. V. Winne, Albany, N. Y.; Louis A. Hull, Newton, Mass.; F. S. Rathbun, Deseronto, Canada.

Schedule of Races.

Races for Decked Sailing Canoes.

Event No. 1.—Record combined paddling and sailing, ½-mile alternately; 3 miles. Start under paddle. Time limit, 1½ hours.

Event No. 2.—Record paddling, ½-mile straightaway.

Event No. 3.—Record sailing, 4½ miles; time limit, 2 hours. The same rig and seat will be used in Events Nos. 1 and 3. The record races are prescribed by Rule No. 5 of Racing Regulations. In addition to the record prizes, a first and a second prize will be given for each race.

Event No. 4.—Trial sailing (see rule 5), 6 miles; time limit, 2½ hours. The contestants in trophy race are selected from this race. First and second prizes.

Event No. 5.—Novice sailing, 3 miles; time limit, 1½ hours. Open only to members who have not sailed a canoe prior to Sept. 1, 1897. First and second prizes.

Event No. 6.—Trophy sailing, 9 miles; time limit, 3½ hours. First and second prizes, in addition to the trophy.

Event No. 7.—Dolphin trophy sailing, 7½ miles; time limit, 3 hours. The canoe winning first place in trophy race will not compete.

Event No. 8.—One man paddling, double blade, ½-mile straightaway. First prize.

Event No. 9.—Tandem paddling, double blade, ½-mile straightaway. Two first prizes.

*Event No. 10.—Atlantic Division trophy.

*Event No. 11.—Central Division trophy.

*Event No. 12.—Northern Division trophy.

Races for Open Canoes (Under Rule No. 1).

	For one and two men.	For four men.	For War Canoes.
Maximum length	16ft.	20ft.	30ft.
Minimum beam	29½in.	29½in.	36in.
Minimum depth	10in.	12in.	17in.
Minimum weight	50lbs.	70lbs.	120lbs

One and two men canoes weighing less than 50lbs. may make up a deficiency of not more than 5lbs. by ballast. War canoe limitations do not apply to canoes built prior to Oct. 1, 1897.

Event No. 13.—Combined sailing and paddling, ½-mile alternately; 1½ miles under sail. Single blades. Open or partially decked canoes allowed. First and second prizes.

Event No. 14.—Sailing, 1½ miles; time limit, 1½ hours. Open or partially decked canoes allowed. First and second prizes.

Event No. 15.—Sailing, 1½ miles; time limit, 1½ hours; for open canoes without side decks. First and second prizes.

In Events Nos. 14, 15 and 16 the sail area is limited to 40sq.ft. No rudder or seat projecting beyond gunwales allowed. One pair of detachable lee boards may be used. The paddle can only be used for steering except in Event No. 14 on the paddling leg. The same canoe, sail and lee boards will be used in Events Nos. 14 and 15. In Events Nos. 14 and 15 canoes may have the usual bow and stern decks of about 32in. and side decks of about 2in. wide with combing about 1½in. high. Canvas covers or other substitutes for decks will be measured as decks. As these races are provided for the sport of owners of general purpose open canoes, and are not for the purpose of developing the open canoe into a racing machine, any palpable evasion of the letter or spirit of the rules will result in the canoe being ruled out.

Event No. 16.—Trophy paddling, 1 mile straightaway. First and second prizes in addition to trophy. Paddle optional.

Event No. 17.—One-man paddling, single blade, ½-mile straightaway. First prize.

Event No. 18.—Two-men paddling, single blade, ½-mile straightaway. Two first prizes.

Event No. 19.—Four-men paddling (club or division), single blade, ½-mile straightaway. One first prize.

Event No. 20.—War canoes, ½-mile straightaway. First and second prizes.

Event No. 21.—Relay race (club or division), open or decked canoes (paddles optional), over sailing course. Three men from each club or division. Starters paddle to and around first buoy, and pass some article to second men, who paddle to and around second buoy, passing to third men who finish. Three first prizes.

* Sailing races held during first week of camp, provided they have not been sailed at division meets. Special conditions will be posted on the bulletin board.

Event No. 22.—One lady paddling, ¼-mile straightaway, single blades. First prize.

Event No. 23.—Two ladies paddling, ¼-mile straightaway, single blades. Two first prizes.

Event No. 24.—Hurry-scurry, paddle optional. First prize.

Event No. 25.—Upset paddling, paddle optional. First prize.

Event No. 26.—Swimming, 100yds. First and second prizes.

As many as possible of the minor events will be run off during the first week of camp, probably commencing on Wednesday, Aug. 10. These events are Nos. 5, 8, 9, 10, 11, 12, 13, 14, 15, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26.

Intending competitors in all races are recommended to carefully study the racing regulations as contained in the Year Book. Particular attention is directed to Rules Nos. 4, 6, 7, 9 and 13, which will be rigidly adhered to.

Five minutes before the start a signal will be given and a blue flag hoisted, and four minutes later a second signal will be given and a yellow flag hoisted, and one minute later a third signal will be given to start and an A. C. A. flag hoisted and left up.

Any canoe which crosses to the course side or the starting line prior to the third signal must return **above** the line and recross it, keeping out of the way of all competing canoes, using the paddle if necessary; but after the third signal the start shall be considered as made, and all canoes on either side of the line shall be amenable to the sailing rules. Canoes may take any position for starting, and prior to the third signal may be sailed and worked in any manner (outside aid not allowed). A green flag displayed signifies that buoys are to be left starboard, a red flag means to port. The regatta committee may vary the manner of starting at their discretion, but all sailing races should be started to windward when practicable.

Notice as to Punctuality.—The regatta committee and their assistants will make every effort to start races punctually on time, in justice to those members who are at the line ready. Any canoe entered may, if late, cross the line and join the race at any time after the start, but will not expect the race to await her arrival. All members will recognize the necessity of avoiding those delays, which tire out the punctual men before the race begins.

Special prizes are offered by the commodore for Events Nos. 14 and 20.

Regatta Committee: Percy F. Hogan, chairman, 243 Pearl street, New York; Raymond Apollonio, C. Howard Williams.

Camp Site Committee: F. S. Thorn, chairman, 394 Main street, Buffalo, N. Y.; Henry C. Morse, Peoria, Ill.; H. L. Quick, Yonkers, N. Y.; George L. Kelley, Buffalo, N. Y.

Bugler: Seventh Regiment, N. G., N. Y.

Atlantic Division.

Instructions to Members Attending the A. C. A. Meet at Stave Island, St. Lawrence River, Aug. 5 to 19.

For the convenience of members of the Atlantic Division A. C. A., a special transportation car has been arranged for and will carry canoes and duffle, free of expense, to Clayton, N. Y., and return. The car will be stationed at the Thirtieth Street Depot, New York City, of the New York Central & Hudson River Railroad Company on Saturday, July 30; at Manhattan Station, 130th street and Hudson River, on Sunday, July 31, and Monday, Aug. 1; at Yonkers, Tuesday, Aug. 2, and Sing Sing, Wednesday, Aug. 3. Canoes and duffle may be loaded on the car at any of these points, the car remaining all day at the stations.

Mark all canoes and packages plainly with your name, care "Wm. E. Barlow, Transportation Car for Clayton, N. Y., A. C. A. Camp." Advise Mr. Barlow, Sing Sing, N. Y., as soon as possible, of the number of canoes and packages you will have, and from which point you will ship, so that proper arrangements may be made for handling and stowing same. Be sure and prepay all freight and express charges to the car.

Arrangements have been made for a special sleeping car, leaving Grand Central Station, New York City, for Clayton, Aug. 5, at 7:40 P. M. The pleasure of being amongst A. C. A. friends on this private car has always been one of the delights of going to camp, and it is hoped you will avail yourself of this privilege, at no extra expense, from the regular sleeping cars, and make early application for berth, inclosing two dollars ($2) to Mr. Henry M. Dater, 215 Montague street, Brooklyn, N. Y., not later than July 20, who will mail you sleeping car ticket. Purchase your regular ticket for Clayton at any New York Central & Hudson River Railroad ticket office, as stated in general circular, asking for "trunk line certificate" for A. C. A. camp, so as to obtain the concession in fare returning. Any further information will be gladly given, as to above, by writing to Mr. Dater, or the undersigned.

F. M. PINKNEY, 111 Broadway, N. Y.
Acting Vice-Commodore Atlantic Division.

30. Taunton, ladies' cruise, Taunton, Mass.
30. New Jersey Ath., cup, Newark Bay.
30. Woods Holl, open, Sussett Harbor.
30. Shelter Island, special, Gardiner's Bay.
30. Indian Harbor, annual, Long Island Sound.
30-Aug. 7. Corinthian San Francisco, cruise.
30. Royal St. Lawrence, 25, 18 and 15ft. classes, Dorval.
30. Baltimore, Rear-Com. cup, Chesapeake Bay.
30. Queen City, 27ft. class, Toronto.
31-Aug. 1. East Gloucester, cruise, Gloucester, Mass.

THE results of the Seawanhaka trial races, after five days, are very inadequate, unsatisfactory, and far from conclusive. As far as the two Crane boats are concerned, it is evident that Seawanhaka, as handled by Mr. Clinton H. Crane, is fast and a good all-round boat; but it is by no means certain how Cicada compares with her. Seawanhaka has been under way for over a month, and her crew has had time to become familiar with her. Cicada, on the other hand, has been out but a short time, and her owner and his friends had small opportunity to get her into racing shape or to become familiar with her; while they are strangers to the Oyster Bay waters. Under these circumstances it is impossible to compare her with Seawanhaka, boat for boat and rig for rig. The rigs, as noted in our report, differ considerably in proportions, and a good deal may be learned by a thorough trial of the two boats with different rigs and a change of crews from one to the other.

The question of ultimate possibilities of these two boats, both evidently fast, and of a third of Mr. Crane's design, now building at Ogdensburg, is of itself a sufficient puzzle for the race committee, but it is complicated by the performance of the Huntington boat, Akabo.

She has been sailing for some weeks, handled by the Huntingtons and her owner; she has been in several races, and presumably is in good racing form. She has shown great speed and a far better average performance than the previous Huntington boats, especially in light weather. In the first day's drift she quite held Seawanhaka to windward, under conditions in which Skate or Question would have been far astern; and she is fast in moderate as well as in very strong breezes. Theoretically she is deficient in windward work, failing to point or hold on with Seawanhaka. At the same time, after apparently crabbing off to leeward, she has managed to get out to the windward mark at about the same time as the others, sometimes a little sooner. Taking this into account, with her proved speed on a reach, and her very good performance down wind, it will take some further racing yet to prove which is the best boat to send to Canada. As to type, Akabo is more of a freak than the Crane boats, so far as that goes in these progressive days, and she is probably not quite so even in her all-round performance under a variety of conditions; but she has certain get-there qualities which demand a very careful trial before a final decision is reached.

THE Royal St. Lawrence Y. C. is busy in its efforts to defend the cup for the second time, and in addition to the races already held, a new boat, designed by Mr. Duggan, was launched on July 11. So far as reports go, the new boats are at least faster than Glencairn II.; though it is doubtful whether they differ very much from that successful craft.

THE first of the present week witnessed the beginning of the work of removing the submarine mines from New York Harbor, the War Department having given discretion to the authorities in various northern ports to remove all mines, all danger of attack by Spanish vessels having passed. The regulations as to the closing of the harbor at sunset will probably be relaxed very shortly.

THE Atlantic Y. C. has taken a very wise step in requesting the opinion of yacht owners as to the advisability of an annual cruise this year, and if the attempt be made it will probably be quite as successful as anything of the kind in previous years. Com. Adams has sent out letters to owners, and if favorable replies are received arrangements will at once be made.

In our opinion there has been no ground whatever for the position taken by many yacht clubs, that the sport should be ignored entirely this season. The avowed object of all yacht clubs is to encourage yachting, and yet at a time when the sport is sorely in need of support a large number of clubs, led by some of the greatest, have deliberately abandoned both cruises and races. It is easily conceivable that in the case of a serious war the circumstances might be such as to call for the abandonment of all amusements and frivolous pursuits, as in the case of our antagonist in the present conflict; but as far as this country is concerned, there has never been a day since the Maine was blown up when the greater part of the people have been called on to depart from the ordinary pursuits and amusements of life. To judge from the result throughout the country, the consensus of opinion has been that, whatever demands the war has made upon the patriotism of the average citizen, except in the case of the comparatively small number actually engaged at the front, there has been no emergency which called for a departure from the ordinary course of life. There is in the business and social life of the country no evidence that war exists, or that matters are at all different from last year.

There are, of course, many who through anxiety over absent ones or actual bereavement have no heart for sport or amusement of any kind; but the average American, unless in actual service, is practically unaffected by the war. Just how a man displays his patriotism by foreswearing yachting and taking a trip to Europe or staying ashore to play golf and shoot pigeons is a matter that passes our comprehension, and yet that is what it actually amounts to; as yachting is the only sport which has been openly tabooed by its devotees on account of the war.

The condition of yachting at the present time, as for several years past, is such as to call for serious consideration on the part of all American yachtsmen. To mention only one detail, while the building and racing of yachts of large size goes on regularly every year in Great Britain, with a corresponding advance, on this side it has ceased entirely; there is no attempt at improvement in design and construction, the old racing crews have been broken up, and nothing is being done to keep up the supply of skilled skippers and seamen. In the event of an international race, which must come sooner or later in some way, America cannot fail to be placed at a serious disadvantage in the important matters of design, construction and above all in handling. The present season has been entirely wasted, and with results that are likely to be apparent next year.

The example of some of the large clubs in deliberately abandoning all their fixtures in advance has been followed in a little different way by many smaller clubs, which have accepted their dates, announced races, and then, with no warning to outside yachtsmen, made no preparation for a race, but let the whole thing go by default. Such unsportsmanlike conduct not only hurts a club, but hurts the sport at large.

Seawanhaka Corinthian Y. C.

Trial Races and Annual Corinthian Race.

Oyster Bay, Long Island Sound.

July 11 to 15.

EVEN with yacht racing in a prosperous condition, the middle of July is the dullest part of the season, marking the interval between the early summer racing and the New York Y. C. cruise. This year, however, a fairly busy week was promised at Oyster Bay through the programme of the Seawanhaka C. Y. C., including several days of interesting trial races for the Seawanhaka international challenge cup; the annual race, for which quite a good entry list was ready; and a special race on Saturday for the Alfred Roosevelt memorial cup, this year offered in the 25ft. class, including the one-design knockabouts; a dance at the club house was also announced for Saturday evening. A series of unfortunate events marred this programme; the first trial on Monday failed for lack of wind; on Tuesday a very good race was sailed, but the gale of Wednesday prevented a trial race, and also kept away yachts which were expected for Thursday's race, reducing the starters on that day. On Friday, with a fine breeze, one of the contestants was crippled through the accidental burning of her mainsail, stopping the trial races before a thoroughly satisfactory test had been made; and on the same afternoon one of the old members of the club, James A. Roosevelt, of Oyster Bay, died suddenly of apoplexy on the train while on his way home from New York. Mr. Roosevelt, who was seventy-four years of age, was the father of the late Alfred Roosevelt, who was killed in boarding a railway train in 1891, and in whose memory the Roosevelt memorial cup was established. The tragic event naturally led to the abandonment of Saturday's programme.

The conditions of the cup and trial races are practically the same as in previous years, with one important exception, that the crew allowance has been increased by one, the boats still being measured with 450lbs. of dead weight on board, but being allowed a crew of four provided the weight of crew does not exceed 600lbs. This gives an opportunity to carry an extra hand for the light sails, and also removes the inducement to select very heavy men. A slight change has been made in the method of measuring the head triangle, and in the trial races the method originated by the Royal St. Lawrence Y. C. last year, of sailing the races in several heats of one round each, with a short interval between, has been adopted. The courses were laid off, as usual, from the Center Island Buoy, two miles to windward or leeward, or a triangle of two-mile sides.

The number of competitors was smaller this year than ever before, practically but three boats. In the first trial races, 1895, with the 15ft. class, there were seven starters; in 1896 the same class showed twenty-eight starters; and in 1897 the 20ft. class brought out seven boats.

This year Mr. Clinton H. Crane has designed three boats, most of the work being done as a part of his studies at the School of Naval Architecture at Glasgow University. One of these is for a syndicate made up in the Seawanhaka C. Y. C.; one is for Mr. H. L. Eno, and one, not yet completed, is for Mr. Crane. All were built and rigged by the Spalding St. Lawrence Boat Co. at Ogdensburg, and canvased by Wilson & Silsby, Boston.

The two which have been at Oyster Bay for the past month, Seawanhaka and Cicada, are very similar in model, the latter being the wider by about 6in. They differ from Momo in several important details. The general form of the hull is the same, as well as the dimensions, except that the bow is not snubbed in short, but is carried out as in Glencairn II.; at the same time the freeboard is some 2in. greater than in Momo.

The crown of deck has been increased considerably, the bathtub cockpit has been abandoned in favor of an open well of large size, without bulkheads, and the solid plate centerboards have been discarded for much heavier ones of composite construction, filled with lead.

The construction of the hulls is radically different from that of Momo, every effort being made to save weight. The planking is of white cedar in place of mahogany, reduced in thickness. Seawanhaka is planked with hollow-and-round strips, edge-nailed, as in Shark last year, and Cicada is of the rib-and-batten construction of the old Rice Lake canoes, light bent ribs, with thin strips nailed over each seam between them. The decks are of thin white cedar laid in-and-out instead of flush. The workmanship on hulls, spars, rigging and centerboards is excellent, the spars of course being hollow. The interiors of the hulls are trussed and strapped in every direction. Seawanhaka is painted white and Cicada is varnished all over. Neither has a bowsprit, and the sail plans are high and narrow, as in Momo. Both use the Y tiller of last year, and narrow, deep rudders, but the latter have more breadth below than in Momo and Al Anka.

Akabo, the new Huntington boat, is quite a departure from last year's Skate and Keneu. Her deck plan is almost a parallelogram, the point of the bow being cut off square and finished with a transom just like the stern. The sheer is reversed, the ends being slightly lower than the middle at the sides, in addition to quite a crown to the deck. There is the usual small oval opening in the deck. The bottom is perfectly flat in the middle, but the bilge is round and not square, as in Question and the early Huntington boats. The hull is carvel built, with a canvased deck. A short bowsprit is used, and the rig is lower than on the Crane boats. The centerboard is a plain sliding plate of metal—a fin with no bulb. The hull is painted a light tint.

There was another new boat in the first trial: Gold Bug, designed and built by Thomas Clapham. She is a peculiar craft, with double bottom and straight sides, a bow very much cut away immediately over the water, an ordinary wooden centerboard and a second centerboard dropping through her rudder. Her mast is made of two flat pieces trussed together. Asthore, a fin-keel, designed and built by Chas. Olmstead for the class last year, now owned by F. B. Jones, also started on two days.

First Day, Monday, July 11.

After a hot Sunday, Monday was clear and bright; cooler, but with no wind. The fleet went out about noon, and after a wait for a breeze it was determined to make a start. The wind, very light indeed, was from the south, so a mark was set two miles north of the Center Island Buoy, well out in the Sound, the start being thus to windward. The preparatory signal was given at 2:50 and the start at 2:55, all crossing on port tack, Akabo, followed by Seawanhaka, Cicada, Asthore and Gold Bug. Akabo made a good start and followed it by opening out clear of Seawanhaka. It was but little better than drifting, and the only point worth noting was that Akabo was doing the best work of the fleet under conditions in which the older Huntington boats showed at their worst. As they slowly neared the shore, the leaders caught a little more wind for a time, Akabo and Seawanhaka kept together and left Asthore, Cicada and Gold Bug a long way astern. At 3:45 there was no wind to speak of; Seawanhaka was close aboard Akabo, but the two were almost drifting. At 4 o'clock they were side by side, and a few minutes later they set spinakers to port to catch a light westerly air. They jibed over, drifted for a time, and Akabo lowered her jib, as it was evident that the race could not be finished within the time limit of 1 hour and 40 minutes.

During the day a new and handsome steam launch was running about, following the boats closely. She was the Squid, a Herreshoff boat, with N. G. Herreshoff on board, on a cruise through the Sound. After the race was stopped she ran out and took Cicada and Asthore in tow, and the launches looked after the other two; Gold Bug was towed in by a catboat, her consort.

Second Day, Tuesday, July 12.

Tuesday morning brought a complete change of weather, a hard N.E. wind and rough sea. Gold Bug did not attempt to start, her crew of two sailing on Asthore. Akabo was hauled out at Oyster Bay on Monday night, and the low tide and heavy wind delayed the launching, so she was late at the line. The weather mark was set just off Lloyd's Neck, as close inshore as possible, the wind being N.N.E.

First Round.

When the preparatory signal was given at 12:30 only three boats were in sight—Seawanhaka, Cicada and Asthore—all with three reefs in and storm jibs. Asthore made a very good start, followed by Cicada, but Seawanhaka failed to cross, a lashing between the block and the ring on her main traveler having parted just before the whistle. The others were recalled and Seawanhaka started to make repairs. At 12:50 a new start was made, Akabo being then near the line. Cicada and Asthore crossed together, on starboard tack, but Seawanhaka started inshore on port tack. Akabo did not start until hailed from the committee boat, being 2m. 43s. late. she luffed around the outer mark and started after Seawanhaka, carrying two reefs and a storm jib. She sailed very fast and pointed high, soon working into second place. Asthore and Cicada soon tacked after the others, and all stood well up the harbor mouth and then worked the shore along Lloyd's Neck, there being a strong flood tide. Akabo overtook Seawanhaka from the start, and they came for the mark close together, the handicap of 2m. 43s. having been cut down to a lead of but 17s. They tacked around the mark and started in with a heavy following sea. Asthore did very good work and was third boat, Cicada being a long way astern.

As soon as they were off the wind the leaders started to set spinakers, but it was some minutes before they were drawing. Just after rounding, Akabo ran down on a sea and stuck the starboard corner of her bow into a wave, burying her fore deck. Seawanhaka finally set her big spinaker and picked up in speed. Akabo had a smaller one, and not so well set, while Cicada set a balloon jib. Seawanhaka made a gain of 38s. on Akabo in the two-mile run. The times are given in the table below.

Second Round.

There was less wind and sea when the second round was started at 2:20. Akabo was first over, with Seawanhaka on her weather quarter, followed by Asthore. Cicada crossed alone at the inshore end of the line. Asthore held offshore, but the others started in as before for the bluffs. Five minutes after the start Seawanhaka started to shake out her third reef, the maneuver being very skillfully done, as it took little time and the

boat was kept going. Akabo followed with her second reef, but lost so much time that she dropped from first to fourth place, and in fact did poor work for a long time after the reef was out. They followed the same course as on the first round, Cicada doing much better. Seawanhaka and Akabo were but 15s. apart at the mark. Off the wind Akabo picked up and ran by Seawanhaka, while both were busy with spinakers, but Seawanhaka set her big sail and soon ran ahead again. Akabo was slow with her spinaker, and after it was set she had trouble with it. Seawanhaka gained 47s. on the run.

Third Round.

They started for the third time at 3:30, Seawanhaka first over, then Cicada and Akabo, Asthore having withdrawn. Seawanhaka had a good start on port tack at the outer end of line, but Akabo, as she came for the line, met Cicada on starboard tack and was forced about. They stood in toward the bluffs, and when they tacked 10m. later Akabo was well to windward. Seawanhaka shook out her second reef and Cicada followed. Akabo continued to gain until she had a lead of 1m. 39s. at the mark, while Cicada was but a little astern of Seawanhaka. On the way hme Cicada shook ut her last reef, but the others carried theirs tied in to the finish. Akabo tore a big hole in her spinaker, but the sail held to the line. As before, she lost about a half-minute to Seawanhaka. The full times of the three rounds were:

Tuesday, July 12, First Race.

First round, preparatory, 12:45; start, 12:50:

	1st Mark.	Finish.	Elapsed.
Seawanhaka	1 30 53	1 46 20	0 56 20
Cicada	1 36 10	1 53 20	1 03 20
Asthore	1 32 28	1 52 45	1 02 45
Akabo	1 31 10	1 47 15	0 57 15
		Beat.	Run.
Akabo gained and lost on Seawanhaka		+0 02 04	—0 00 38

Second round, preparatory, 2:10; start, 2:15:

	1st Mark.	Finish.	Elapsed.
Seawanhaka	2 53 30	3 08 36	0 53 36
Cicada	2 54 50	3 11 39	0 56 39
Asthore	2 57 40	3 16 02	1 01 02
Akabo	2 53 45	3 09 38	0 54 38
		Beat.	Run.
Akabo gained and lost on Seawanhaka		—0 00 06	—0 00 47

Tird round, preparatory, 3:17; start 3:22:

	1st Mark.	Finish.	Elapsed.
Seawanhaka	3 56 22	4 11 24	0 49 24
Cicada	3 56 41	4 12 40	0 50 40
Akabo	3 55 20	4 10 56	0 48 56
Asthore	Did not start.		
		Beat.	Run.
Akabo gained and lost on Seawanhaka		+0 01 39	—0 00 34

Akabo beat Seawanhaka 1m. 28s., allowing for difference over line at start.

The Squid followed the racers all day, starting East immediately after the finish. The deck of Seawanhaka is very light and not canvased. In previous sailing a plank on each side near the gunwale was split, and in the rough water the hole in the lee deck poured in a steady stream during the windward work, so that in spite of such pumping as could be done off the wind she had a good deal of water aboard before the finish of each round.

Wednesday morning broke with a hard N.E. blow, a heavy gale that did serious damage to yachts, piers and waterside constructions generally along the Sound and New Jersey coasts. The sea and wind were so bad at Oyster Bay that no attempt at a race was made, all hands staying ashore and blessing the man who started the club's new library.

Twenty-eighth Annual Race, Thursday, July 14.

The club's annual race has been postponed twice this year; the first date, June 25, being exchanged for June 29 in order to leave time for the knockabout race to New London. The sudden death of Vice-Com. Cruger made another postponement necessary, and July 14 was selected. A fairly good entry list was made for that date, but the storm of Wednesday, with a very light breeze on Thursday morning, kept away some of the entries.

The race was open to the 60ft., 51ft. 43ft., 36ft., 30ft., 25ft., 20ft., and 15ft. cutter and sloop classes, the open and cabin cat classes, the special 30ft. class, and the club knockabout class. The starting line was outside the lighthouse, two triangles of three and two-mile sides being laid off, the former for the 36ft. and larger classes, two rounds, making 18 miles; the latter, 12 miles, for all under 36ft.

There was a clear sunrise and a light southerly breeze on Thursday morning, the wind increasing by noon. At about 10 o'clock the schoolship St. Marys, which has laid at anchor off the club house for a month, refitting, set her blue peter, shook out her topsails and got under way. She stood up the Sound for a few miles, setting sail, then turned and started east on her long summer cruise to Greenland. With everything set, she made a fine picture as she passed the yachts.

At the line were Syce, Norota, Albicore and Anoatok, all in different classes and with no competitors, the largest starters being the 30ft. cats. The starters were:

30ft. class sloops: Daisy, R. M. Hyde, Jr.

25ft. class sloops: Mariposa, Herbert McCord.

20ft. class sloops: Seawanhaka, syndicate; Cicada, H. L. Eno; Asthore, F. B. Jones; Akabo, Clark Miller.

Knockabout class: Dacoit, H. L. Maxwell; Gloria, J. R. Maxwell, Jr.; Nakodo, J. T. Sherman; Taifu, Geo. Bullock; Tosto, Lloyd M. Scott; Midge, F. W. Boyer.

30ft. class: Dosoris, T. B. Vail; Dot, C. T. Pierce; Wanda, F. T. Bedford, Jr.

20ft. class, open cats: Minnetonka, A. Bryan Alley; Gosbird, R. Nevins.

The first leg was a reach, with booms to starboard, jibing at the first mark for another reach, followed by a beat in to the line. The preparatory was given at 1 o'clock, but the first class to cross was the 30ft. cat, with Wanda in the lead. Five minutes later Mariposa crossed, followed by the 20-footers Asthore, Seawanhaka, Akabo and Cicada. The boats ran off at a good speed, with smooth water and plenty of wind, the 20-footers overtaking the large cats. No times were taken at the first mark, but the second was timed:

First round, second mark:

Seawanhaka	2 18 28	Minnetonka	2 30 40
Dot	2 16 47	Gloria	2 31 55
Wanda	2 18 49	Nakodo	2 32 25
Dosoris	2 19 09	Dacoit	2 32 40
Akabo	2 19 36	Taifu	2 33 00
Daisy	2 19 36	Tosto	2 33 31
Cicada	2 19 50	Midge	2 34 27
Mariposa	2 24 45	Gosbird	2 43 30
Asthore	2 25 16		

They headed inshore on starboard tack, Seawanhaka well out to windward all the time, pointing high and footing fast. Akabo was looking quite another way, failing to point with the Crane boats, but her skipper made no attempt to pinch, and she slid through the water at a wonderful pace. Seawanhaka was bothered for a time by Wanda, but the cat made a short tack and got clear of the little 20-footer. Akabo was first to tack, under the Lloyd's Neck shore, going along the shore on port tack. The breeze was lighter in here than out at the line and over the first leg, though enough for whole sail; on this windward leg Akabo was not doing as well as in the very light air of Monday and the strong breeze of Tuesday. In spite of her very fast reaching, Akabo lost 1m. 57s. to Seawanhaka and 27s. to Cicada on this two-mile beat. As they neared the line they ran into more wind, and there was a threat of a squall to windward. The first round was timed:

First round—end:

Dot	2 54 10	Dacoit	3 11 52
Wanda	2 54 15	Gloria	3 13 32
Seawanhaka	2 56 00	Nakodo	3 14 51
Cicada	2 58 52	Tosto	3 15 02
Akabo	2 59 05	Midge	3 15 51
Mariposa	3 01 57	Taifu	3 17 42
Daisy	3 09 50	Minnetonka	Not timed.
Asthore	3 10 00	Gosbird	Not timed.

They found a fresh breeze as they reached out for first mark again, and as Dosoris withdrew at the end of the round Dot turned in a couple of reefs, Wanda following her, the knockabouts also tied in a single reef each. They were not timed at the first mark, but Seawanhaka was still in the lead; just after turning it, however, she tied in one reef. Running free, Akabo took one of her dives, heading for the moment somewhere in the direction of the Philippines. She was traveling very fast, however, and made up almost two minutes on Seawanhaka. The only times taken at the second mark were:

Second round, second mark:

Seawanhaka	3 28 24	Wanda	3 32 33
Akabo	3 29 33	Dot	3 34 10
Cicada	3 30 07	Mariposa	3 39 48

Others not timed.

On the last windward leg Akabo did much better, but still relied on her reaching and not on her pointing, it was an even thing as to the winner at the last, but Seawanhaka managed to cross Akabo's bows very near the line. The latter took a knockdown and sailed for some distance just on her edge, with rudder and centerboard out of water, and eight legs waving wildly in the air to windward, there seemed no possibility of righting her as she hung for a time, but she finally came out bottom side down, crossing the line but 16 seconds astern of Seawanhaka, and nearly 4 minutes ahead of Cicada. The final times for the fleet were:

30ft. Class Sloops—Start 1:40.

	Finish.	Elapsed.
Daisy	3 09 50	1 29 50

25ft. Class Sloops—Start 1:45.

Mariposa	4 13 56	2 28 56

20ft. Class Sloops—Start 1:45.

Seawanhaka	4 02 39	2 17 39
Akabo	4 02 55	2 17 55
Cicada	4 06 40	2 21 40
Asthore	4 25 37	2 40 37

Knockabout Class—Start 1:50.

Dacoit	4 30 12	2 40 12
Gloria	4 34 10	2 44 10
Nakodo	4 34 36	2 44 36
Midge	4 34 55	2 44 55
Tosto	4 36 41	2 46 41
Taifu	4 37 55	2 47 55

30ft. Class Cabin Cats—Start 1:40.

Wanda	4 08 12	2 28 12
Dot	4 16 50	2 36 50
Dosoris II.	Withdrew.	

20ft. Class Open Cats—Start 1:45.

Minnetonka	4 55 26	3 10 26
Gosbird	5 28 40	3 43 40

After the race Dot entered a protest on the ground that she was not notified that Wanda had been moved up to her class, and that she only reefed because she saw that her class opponent, Dosoris II., had withdrawn.

Friday, July 15—Second Trial Race.

Friday was an ideal day for a trial, a fresh N.W. wind, with a light lop outside on the Sound, clear sky and warm sun. There was a good breeze from sunrise through the morning, and the race was called for noon. During the whole morning the crews of Seawanhaka and Cicada were busy in shifting the rigs from one boat to the other; Seawanhaka had a lighter and narrower rig than Cicada by about 2ft. in each dimension, and it was desired to try the effect of the different rig on each boat.

It was not until 1:45 that the preparatory signal was given, Akabo being out at the line with her second mainsail bent. The course was a triangle of 1 1-3 mile sides, starting from Center Island buoy, one mark being off Lloyd's Neck. The wind was N.W., and as the boats were sent to the outer buoy first, they had a reach, a run and a close reach over the last leg. Seawanhaka went over the line shortly after the run, at 1:50, with Cicada close on her weather quarter, and Akabo a little astern. They all traveled fast, but at the end of half a mile Akabo was ahead, while Cicada about held Seawanhaka. They were timed as they jibed at the first mark:

		Elapsed.
Akabo	2 00 02	0 10 02
Seawanhaka	2 00 43	0 10 43
Cicada	2 00 56	0 10 56

All handled their spinakers promptly and quickly, and they ran off easily before a good breeze, Cicada having the best of the run. The times were:

		Elapsed.
Cicada	2 14 48	0 13 52
Seawanhaka	2 14 57	0 14 14
Akabo	2 15 00	0 14 58

They luffed by the mark and trimmed for a close reach across the harbor mouth, Seawanhaka to windward, Cicada next, and Akabo reaching along in the lee. Akabo's speed on this leg was not up to her showing at other times during the trials; while Seawanhaka weathered the committee boat, Akabo had to tack for it, and at the same time she was well astern of the other two:

		Elapsed.	
	Finish.	Leg.	Course.
Seawanhaka	2 30 49	0 15 52	0 40 49
Cicada	2 31 21	0 16 33	0 41 21
Akabo	2 31 55	0 16 55	0 41 55

Cicada had shown better than in any previous race, both on and off the wind.

The next round was started at 2:55, being sailed in the opposite direction so as to get a true windward leg. Seawanhaka was first over, setting her spinaker to port, though the wind was not enough aft to warrant such a move. Cicada followed her very closely, setting balloon jib, as did Akabo. The latter, to leeward, soon ran ahead, but was passed in turn by Cicada, Seawanhaka losing time in bothering with her spinaker and finally taking it in. They were timed at the lee mark:

		Elapsed.
Cicada	3 06 52	0 11 52
Akabo	3 07 08	0 12 08
Seawanhaka	3 07 38	0 12 38

Cicada and Seawanhaka each stood by the mark before tacking, but Akabo turned short and was quickly off to leeward of the pair. There was a fresh, true breeze, with a light lop, and everything was favorable for a fair trial to windward. Akabo reached ahead very fast, but Seawanhaka was all the time working out to windward of her, with Cicada between the two. After nearly ten minutes on this first leg, Akabo went on port tack, but only crossed close under Cicada's stern, Seawanhaka being at the time perhaps 50yds. clear to windward of Cicada. Just after Akabo crossed Cicada's wake, Seawanhaka lowered her mainsail and gave up, the forward strut on her mast having broken. Her position at the time of withdrawal is somewhat important, from the fact that it has been generally reported that Akabo had already passed her. At the time when Akabo tacked Seawanhaka was fully as far to windward of Cicada, and well abeam, as Cicada was to windward of Akabo, though the latter was ahead of both the others. As Akabo only succeeded in crossing Cicada's wake, it was not possible for her to have been ahead of Seawanhaka at any time immediately preceding. More wind and sea were met as the two survivors worked out and Akabo did better work all the time, she was soon clearly to windward of Cicada. Both crews were hiking in the fresh puffs, with all the sail they wanted. At the weather mark Akabo showed a good lead, the times being:

		Elapsed.
Akabo	3 35 50	0 28 42
Cicada	3 36 34	0 29 42

Akabo started sheet and was off quickly for the line on an easy reach; Cicada stopped to set a spinaker which, with the course and the strength of the breeze, did more harm than good. The finish was timed:

		Elapsed.	
	Finish.	Leg.	Course.
Akabo	3 44 28	0 08 38	0 49 28
Cicada	3 46 14	0 09 40	0 51 14

Akabo wins by 1m. 46s.

The disabling of Seawanhaka spoiled a most interesting race under the circumstances, as the chances between her and Akabo were very even. She had a good weather berth and was doing well when she withdrew; on the other hand, the conditions were more and more to Akabo's liking as they went out toward the mark. They would have turned very close together, and Akabo would probably have shown a safe gain on the last reach.

After returning to the club house the committee announced that another race would be sailed next day; but Mr. Miller declined to sail again with the cotton mainsail, and asked for a postponement until the middle of the week, by which time a new silk sail could be had from Boston. This would have necessitated keeping the crews of the Crane boats together for the following week, a very difficult matter, and the committee decided to order a race for Saturday in any event. The news of the sudden death of Mr. Roosevelt reached the club house shortly after this decision had been reached, and the postponement of all of Saturday's events was immediately announced. The trial races will be resumed on Wednesday, July 20, continuing until a conclusive test has been made.

Canarsie Y. C. Annual Regatta.

Canarsie—Jamaica Bay.

Saturday, July 9.

THE Canarsie Y. C. sailed its annual regatta on July 9 in a light S.W. wind, the times being:

Class 1—Sloops.

	Start.	Finish.	Elapsed.	Corrected.
Cornelia	2 55 22	5 23 46	2 28 24	2 28 24
Plover	2 55 35	5 42 17	2 46 42	2 35 42
Class 2—Cabin Cats.				
Spray	2 53 00	5 34 06	2 46 06	2 41 06
Kate	2 55 00	Did not finish.		
Class 3—Open Cats.

Winthrop Y. C. Carnival.

Winthrop—Boston Harbor.

July 7, 8, 9.

THE Winthrop Y. C. carried out very successfully a series of three races on July 7, 8, 9, to the enjoyment of many spectators in addition to the participants. The first day was devoted to a sham battle of Manila and to general sports, in addition to the yacht race. The latter was started at 3 P. M. in an easterly breeze that called for a single reef for a time. The times were:

25ft. Class.

	Elapsed.
Eleanor, D. B. Clapp	1 18 06
Hermes, A. W. Chesterton	1 22 24
Little Peter, H. Moebs	1 23 50
Tantram, F. Coleman	1 30 26
Beatrice, J. Cavanagh	1 32 24

21ft. Class.

Cleopatra, H. M. Faxon	1 17 57
Tacoma, Elmer Pryor	1 18 31

21ft. Cabin Class.

Harriet, L. T. Harrington	1 15 56
Privateer, A. E. Schaaf	1 16 24
Omeme, W. P. Barker	1 17 24

18ft. Class.

Alpine, C. J. Blethen	1 18 58
Vamoose, R. M. Benner	1 19 49
Boboling, L. B. Goodspeed	1 23 20
Goblin, G. W. Canterbury	1 40 16
Sphinx, A. Keith	1 42 12

15ft. Class.

Witesse, E. H. Clapp	0 48 17
Katydid, J. F. Small	0 49 25
Glide, G. D. Silsbee	0 53 13
Ray, S. A. Freeman	Withdrew.

Prize winners.—First prizes, Eleanor, $12; Cleopatra, $10; Harriet, $10; Alpine, $10; Vitesse, $8. Second prizes, Hermes, $8; Privateer, $7; Vamoose, $7; Katydid, $5. Third prizes, Little Peter, $5; Bobolink, $5.

In the battle of Manila the American and Spanish fleets were represented by boats, with the Cavite Fort. A spirited contest of half an hour, during which plenty of powder was burned, resulted in the destruction of the Spanish fleet. Owing to delay at the start, the tide fell and interfered with the battle, but the spectators enjoyed it all. Swimming and other races took place during the afternoon, resulting as follows:

Half-mile tandem canoe paddling race, single paddles (two starters).—Won by Wawbewawa team, Heele and May. No time.

Greased pole contest (eight starters).—Won by W. T. Harrison, Braintree.

Local swimming race (five starters).—Won by J. E. McNamara; A. M. Peabody, second.

Open swimming race, 100yds. (five starters).—Won by D. H. Holm; R. J. McCormick, second. Time, 1:37 3-5.

Tug of war, singles, one-minute heats.—First heat won by Howard Gerrish, disqualified; second heat won by Philip Fox.

On Friday there was again a good breeze, and a fine race resulted, the times being:

25ft. Class.

	Elapsed.
Eleanor, D. B. Clapp	1 22 02
Hermes, A. W. Chesterton	1 23 55
Little Peter, H. Moebs	1 25 01
Nettie, W. Burgess	1 29 36
Beatrice, J. Cavanagh	1 29 54
Tantrum, F. Coleman	1 34 47

21ft. Class.

Recruit, F. C. Rice	1 12 31
Tacoma, Elmer Prior	1 22 09
Elsa, H. M. Crane	1 32 23
Yahoo, K. Horton	Withdrew.

Cabin 21ft. Class.

Privateer, A. E. Schaaf	1 12 40
Harriet, L. T. Harrington	1 17 18
Omeme, W. P. Barker	Disabled.

18ft. Class.

Alpine, C. J. Blethen	1 24 44
Vamoose, R. M. Brenner	1 26 45
Bobolink, L. B. Goodspeed	1 30 10
Woodbine, F. T. Wood	1 38 22
Zoe, J. McCarthy	Withdrew.
Goblin, G. W. Canterbury	Withdrew.

15ft. Class.

Katydid, J. F. Small et al	0 46 55
Vitesse, E. H. Clapp	0 47 44
Glide, G. D. Silsbee	0 50 01
Ray, S. A. Freeman	0 51 08
Attilla, A. L. Lincoln	0 55 17

The winners were: First prizes, Eleanor, $12; Recruit, $10; Privateer, $10; Alpine, $10, and Katydid, $8. Second prizes, Hermes, $8; Tacoma, $5; Harriet, $7 (subject to protest); Vamoose, $7, and Vitesse, $5. Third prizes, Little Peter, $5, and Bobolink, $5.

Recruit is the new Purdon boat for the Quincy cup defender. Harriet and Omeme were in collision at the line, the latter withdrawing and each entering a protest. The miscellaneous water sports resulted as follows:

Open swimming match, 75yds.—First heat, starters: H. D. Holm, T. J. Driscoll, R. J. McCormack, G. R. Ainsworth, P. Fox; won by Holm, Fox second; time, 1m. 5¾s. Second heat, starters: W. T. Harrison, A. S. Potter, W. W. Holm, S. F. Strickland; won by W. W. Holm, Potter second; time, 1m. 5s. Final heat, starters: H. D. Holm, P. Fox, A. S. Potter, W. W. Holm; won by H. D. Holm, W. W. Holm second; time, 1m. 3 3-5s.

Local swimmers, 75yds.—Entries, H. Poole, J. E. McNamara, L. G. Wadsworth, F. H. Richardson, Robert Sample, F. J. Hibbard, W. E. Laman, J. J. Miller, A. M. Peabody. Won by J. E. McNamara, 1m. 6 3-5s.; F. J. Hibbard second, A. M. Peabody third.

Blindfold rowing race, quarter-mile, with turn.—Entries, H. O. Walker, Charles Gerrish, Charles Martin, Walter Bliss, J. R. McCormack, Philip Fox, George R. Ainsworth. Won by Charles Gerrish, Philip Fox second, George Ainsworth third.

Rowing race, mile, with turn.—Entries, Walter Bliss, Howard Gerrish, Gardner Freeman, Charles Gerrish, Clarence Martin, Philip Fox, George Ainsworth. Won by Clarence Martin; time, 9m. 11s.; Walter Bliss second.

Tandem tug of war.—First heat, C. E. Fox and Philip Fox vs. Walter Bliss and Clarence Martin; won by Bliss and Martin. Second heat, S. T. Strickland and G. R. Ainsworth vs. Gerrish brothers; won by Gerrish brothers. Final, Bliss and Martin won by 3ft.

Hurry-scurry race.—Starters, Harry B. Demmick, Philip Fox, H. D. Holm, W. M. Holm, G. R. Ainsworth, J. B. May, G. R. Heckle. Fox won, Demmick second.

Saturday was as good as its predecessors, clear and warm, with a fresh breeze, some boats reefing. The times were:

25ft. Class.

	Elapsed.
Eleanor, D. B. Clapp	1 17 57
Hermes, A. W. Chesterton	1 19 43
Little Peter, H. Moebs	1 21 46
Nettie, W. Burgess	1 27 15
Beatrice, J. Cavanagh	1 30 02

21ft. Class.

Cleopatra, H. M. Faxon	1 19 47
Tacoma, Elmer Prior	1 21 02

18ft. Class.

Duchess, C. D. Mower	1 14 46
Vamoose, R. M. Benner	1 24 59
Bobolink, L. B. Goodspeed	1 26 06
Alpine, B. J. Blethen	Disabled.
Sphinx, A. Keith	Withdrew.

15ft. Class.

Katydid, J. F. Small et al	0 47 27
Ray, S. A. Freeman	0 53 12
Attilla, A. L. Lincoln	0 56 45
Vitesse, E. H. Clapp	Disabled.

The prize winners were: First prizes, Eleanor, $12; Cleopatra, $10; Duchess, $10; Katydid, $8. Second prizes, Hermes, $8; Vamoose, $7; Ray, $5. Third prize, Little Peter, $5.

The judges for the three days were: Ex-Com. J. Stearns Cushing, A. T. Bliss, Col. Fred W. Wellington, Ex-Com. Albert W. Torrey, Charles G. Bird, Lieut. John E. Cotter, Capt. William Daly, Howard Gould, Capt. Thomas J. Olys, Harry Hutchinson, W. A. McKenney, Dr. F. H. Osgood. James Bertram was official measurer.

The battle of Manila was successfully repeated after the finish of the water sports, and a hop was given in the evening. The carnival was in every way a success.

Riverside Y. C. Annual Regatta.

Riverside—Lond Island Sound.

Saturday, July 9.

THE Riverside Y. C. sailed its annual regatta on July 9, in spite of bad weather, a drizzling rain and a calm, making things very unpleasant in the morning. The start was postponed until 2 P. M., when the sky cleared and a moderate S.W. wind came in, making a good race. The times were:

Cabin Sloops—43ft. Class.

	Length.	Elapsed.	Corrected.
Hussar, J. D. Baird	43.00	2 13 04	2 13 04

Cabin Sloops—36ft. Class.

Acushla, C. T. Wills	34.06	2 19 33	2 17 18
Anoatok, Oswald Sanderson	34.15	2 19 00	2 16 54
Vorant II., George G. Tyson	34.00	2 27 05	2 24 44

Open Sloops—20ft. Class.

Asthore, F. B. Jones	20.00	2 07 10	2 07 10

Open Sloops—15ft. Class.

Mermaid, G. N. Stanton	15.00	Did not finish.

Cabin Catboats—25ft. Class.

Wanda, F. T. Bedford	25.00	1 56 55	1 56 55

Open Catboats—25ft. Class.

Brant, J. C. Varian	21.20	2 24 00	2 21 44
Sirene, R. Outwater	25.00	2 16 09	2 16 09

Aspenet, H. A. Morse	1 44 00	1 42 00
Arbuka, F. P. Bowden	1 48 10	1 46 10

21ft. Class—Start 2:40.

Koorali, R. Robbins	1 34 17	1 34 17
Katydid, J. F. Small	Withdrew.	

Gilberts Bar Y. C.

WAVELAND, Fla., July 9.—The Gilberts Bar Y. C. held its Fourth of July celebration on Saturday, July 2. A heavy squall came up during the race. Results as follows:

First Class.

Albatross	1 48 37	Joker	1 58 40
Britannia	1 53 00	Penguin	Did not finish.

Winner, Albatross.

Second Class.

Swallow	2 04 03	Gypsy	Did not finish.

Com., H. E. Sewall, Sewall's Point, Fla.; Sec'y, P. M. Aston, Waveland, Fla.

The 30-footers at Newport.

ON July 9 a race was sailed in a light to moderate breeze over a triangular course, to Jamestown and Bishop's Rock, two rounds making twenty miles. The times were, start, 2:53:

	Finish.	Elapsed.
Vaquero III., H. B. Duryea	5 11 10	2 18 10
Dorothy II., H. P. Whitney	5 11 30	2 18 30
Carolina, P. Jones	5 12 08	2 19 08
Veda, C. Vanderbilt, Jr.	5 13 12	2 20 12

On July 11 the wind was light, south shifting to S.E., and the Dyers Island course was sailed, eighteen miles. The times were, start, 2:51:

	Finish.	Elapsed.
Wawa, Reginald Brooks	5 25 12	2 34 12
Vaquero III., H. B. Duryea	5 27 47	2 36 47
Puck, Edwin D. Morgan	5 29 42	2 38 42
Veda, Cornelius Vanderbilt, Jr.	5 31 50	2 40 50
Hera, Ralph N. Ellis	5 32 12	2 41 12
Carolina, Pembroke Jones	5 32 43	2 41 43

The same course was sailed on the following day in a fresh N.E. wind, the times being, start, 2:51:

	Finish.	Elapsed.
Hera, R. N. Ellis	5 05 31	2 14 31
Carolina, P. Jones	5 06 20	2 15 20
Wawa, R. Brooks	5 07 06	2 16 06
Puck, E. D. Morgan	5 07 19	2 16 19
Veda, C. Vanderbilt, Jr	5 12 02	2 21 02
Vaquero III., H. B. Duryea	5 12 27	2 21 27

On July 14 there was a strong S.W. wind, a run to Dyers Island, and a beat home; the times being, start, 2:55:

	Finish.	Elapsed.
Dorothy II., Harry P. Whitney	5 13 19	2 18 19
Vaquero III., Herman B. Duryea	5 13 40	2 18 40
Hera, Ralph N. Ellis	5 14 12	2 19 01
Puck, Edwin D. Morgan	5 15 07	2 20 07
Wawa, Reginald Brooks	5 15 56	2 20 56

A N.W. wind and sea made a lively race on July 15 over the same course for a cup presented by Reginald Brooks, the new owner of Wawa. The times were, start, 2:53:

	Finish.	Elapsed.
Vaquero III., H. B. Duryea	5 13 53	2 20 53
Dorothy II., H. P. Whitney	5 17 36	2 24 36
Hera, R. N. Ellis	5 20 47	2 27 47
Wawa, R. Brooks	5 22 30	2 29 30
Carolina, P. Jones	5 22 52	2 29 52
Puck, E. D. Morgan	Not timed.	

Saturday's race was a sweepstakes, sailed in a light W. wind, the course being triangular. The times were, start, 2:50:

	Finish.	Elapsed.
Veda, Cornelius Vanderbilt, Jr.	4 21 37	1 31 37
Wawa, Reginald Brooks	4 25 56	1 35 56
Carolina, Pembroke Jones	4 26 07	1 36 07
Dorothy II., Harry P. Whitney	4 27 25	1 37 25
Hera, Ralph N. Ellis	4 27 28	1 37 28
Vaquero III., H. B. Duryea	4 27 34	1 37 34
Puck, Edwin D. Morgan	4 27 48	1 37 48

Asahi, Bayard Thayer's 30-footer, has been sold to Lloyd Warren, of Newport, and will join the racing fleet.

Royal St. Lawrence Y. C.

Dorval—Lake St. Louis.

Saturday, July 9.

THE Royal St. Lawrence Y. C. was in danger of losing its handsome new club house by fire on the night of July 15, but by hard work the flames were extinguished before serious damage was done. On July 9 three races were sailed in a fresh whole-sail breeze, the times being:

	1st race.	2d race.	3d race.
Glencairn	2—4 17 20	1—5 14 40	1—5 56 10
Avoca	4—4 20 00	5—5 15 10	5—5 59 20
Glenowen	3—4 19 00	4—5 15 30	2—6 00 10
Manitou	6—4 21 30	6—5 16 08	4—5 59 00
Speculator	5—4 19 10	2—5 11 20	3—5 57 20
Strathcona	1—4 20 25	3—5 20 25	6—5 58 05

Mr. H. G. Eadie officiated as officer of the day.

On July 11 a third new Duggan boat was launched.

On July 16 five short rounds were sailed, to windward and return, in a fresh and puffy N.W. wind. Single reefs were carried by some of the boats on the first two rounds. The prize was the annual challenge cup presented by W. A. C. Hamilton. The competitors were:

Commodore Ross' new boat—Sailed by Duggan.
Speculator—Sailed by Arthur Hamilton.
Strathcona—Sailed by J. C. C. Almon.
Manitou—Sailed by Vincent Pelletier.
Glenowen—Sailed by Cam. Davidson.
Glencairn—Sailed by Chas. Routh.

The times were:

First Round—Start 3:49.

Duggan	4 13 04	Speculator	4 14 20
Glencairn	4 15 04	Strathcona	4 14 12
Manitou	4 15 00		

Second Round—Start 4:22:05.

Duggan	4 40 40	Speculator	4 42 00
Glencairn	4 41 30	Strathcona	4 42 17
Manitou	4 42 10		

Third Round—Start 4:47:17.

Duggan	5 07 36	Manitou	5 08 55
Glencairn	5 08 12	Speculator	5 06 32
Glenowen	5 08 04	Strathcona	5 08 10

Fourth Round—Start 5:08:35.

Duggan	5 34 47	Manitou	Disabled.
Glencairn	5 35 16	Speculator	5 35 55
Glenowen	5 34 37	Strathcona	5 36 35

Fifth Round—Start 5:36:35.

Duggan	6 02 50	Speculator	6 03 05
Glencairn	6 03 55	Strathcona	6 03 25
Glenowen	6 04 38		

Mr. Duggan won every race in the new boat.

Plymouth Y. C.

Plymouth, Mass.

Saturday, July 9.

THE Plymouth Y. C. sailed an open race on July 9 in a good southwest breeze. The times were:

18ft. Class.

	Corrected.
Amie, M. S. Weston	2 03 46
Dolphin, N. Morton	2 18 04
Trouble, T. S. Diman	Did not finish.
Maud, W. N. Mayers	2 05 22

15ft. Class.

Kittiwake, H. M. Jones	2 16 28
Waban, G. W. Shiverick	2 19 25
Scrap, A. B. Holmes	2 28 13
Veritas, Alex. Holmes	2 16 06
Olympia, T. W. Steele	2 16 07

Kittiwake was handicapped at the start by being over the line at the gun. She had to return twice and lost some minutes.

Interlake Y. R. A.

THE Interlake Y. R. A., of Lake Erie, will sail its annual races at Put-in-Bay as follows:

Tuesday, July 26.—Triangular course, twice around; 32ft. class, once around; 52ft. class, 42ft. class, 32ft. class.

Wednesday, July 27.—Triangular course; 37ft. class twice around; 27 and 22-footers once around; Power boats and half-raters, to first stake and return; 37ft. class, 27ft. class, 22ft. class, half-raters, Power boats.

Thursday, July 28.—Five miles to windward or leeward and return; 52, 42 and 37-footers twice around; 32, 27 and 22-footers once around; 52ft. class, 42ft. class, 37ft. class, 32ft. class, 27ft. class, 22ft. class.

Friday, July 29.—Course to be decided by the regatta committee; free-for-all race for Hotel Victory cup and other prizes, with time allowance.

Prizes for Each Race, Two Races for Each Class.

52ft. class, first champion flag and $20, second $10; 42ft. class, first champion flag and $20, second $10, third $3; 37ft class, first champion flag and $20, second $10, third $2; 32ft. class, first champion flag and $20, second $10, third $2; 27ft. class, first champion flag and $20, second $10, third $2; 22ft. class, first champion flag and $15, second $7, third $2; 15ft. class, first champion flag and $10, second $5, third $1.50; Power boats, champion flag.

The managers of Hotel Victory presented to the I. L. Y. A., in 1896, a handsome silver cup for annual competition. This cup was won by the Hamilton cutter Zelma in 1896, and by the Toledo fin-keel Typhoon in 1897, for the best corrected time in the free-for-all.

This cup is to be sailed for each year until some yacht has won it three times, when it becomes the property of such yacht.

Free-for-all, first, Hotel Victory cup and flag; second, $15; third, $7; fourth, $2.

Note.—One race only for 15-footers and Power boats. See programme of races.

Entries for all races must be made with the secretary-treasurer of the Association at headquarters, before 5 P. M. of Monday, July 25, previous to that date address Detroit, Mich.

A measurer's certificate from the home club must accompany each entry. This rule must and will be enforced.

In all cases the number of competing yachts must exceed the number of prizes given.

Each yacht must gets its number from the race committee at headquarters, where the committee bulletin will be.

The triangular course for all yachts will be from stake boat between the east end of Gibraltar and the west end of Middle Bass, to and around stake boat 3½ miles N.N.W., thence to and around stake boat 3½ miles S.W. ¾ S., thence 3½ miles E. ½ S. to and across starting line between judges' boat and stake boat. In finishing, yachts must cross the starting line in the opposite direction from the start. All stake boats must be passed to port.

The direction of the course to windward or leeward and return will be placed on the bulletin board one hour previous to such race.

All starts shall be flying, and shall be one gun starts. The preparatory gun will be fired at 8:20 A. M. sharp, standard time. At the expiration of ten minutes (exactly) the second gun will be fired as a signal to start.

The starting gun of each class shall be the preparatory gun for the next class to start. Each yacht shall be timed from the starting signal of her class.

Entrance fees shall be as follows: 52 and 42-footers, $3; 37 and 32-footers, $2; 27 and 22-footers, $2; free-for-all, $2; half-raters, $1.50; Power boats, $1.

For additional sailing rules, etc., see Y. R. U. rules.

The race committee reserves the right to alter this programme or any other instructions at any time.

Commodore Alex. I. McLeod, of the steam yacht Louise, will be in command of the fleet.

Please observe the rules governing yachting etiquette.

The steam yacht Louise will be the flag ship.

Guns must not be fired on Sunday.

The race committee will be at headquarters, Monday, July 25, until 6 P. M.

All clubs belonging to the Association are especially requested to hand in a complete list of measurements of all yachts expecting to attend the annual meet.

Guns must not be fired from the accompanying steamers or boats within thirty minutes of the start, and not until every yacht has crossed the starting line. Steamers and boats following the yachts around the course are requested to keep to leeward and out of the way.

Meeting of yachtsmen and smoker at Beebe House Hall, Monday evening, July 25, at 8 o'clock.

Tickets for the I. L. Y. A. ball to be held at Hotel Victory on Tuesday evening, July 26, can be secured from the secretary of the home club, from the secretary-treasurer of the I. L. Y. A., or from the ball committee. All yachtsmen are requested to appear in uniform at the ball.

Inspection of yachts by the commodore and officers of I. L. Y. A. Wednesday afternoon, July 27.

Fireworks and illumination of yachts on Wednesday evening, July 27, 1898.

Awarding of prizes at headquarters, Friday afternoon.

South Boston Y. C.

South Boston—Boston Harbor.

Saturday, July 16.

THE South Boston Y. C. sailed a handicap race on July 16, the times being:

	Elapsed.	Corrected.
Gypsy, Edward Rich	1 47 10	2 01 10
Fantasy, William Allerton	1 41 36	2 01 36

Lake Y. R. A. Races.

THE annual races of the Lake Y. R. A., of Lake Ontario, will begin on July 22 at Kingston, and yachts from Toronto, Hamilton, Rochester and other lake ports are now on the way to the rendezvous. On July 22 and 25 the races will be for the first, 32ft. and 22ft. classes; on July 23 and 26 for the 37ft., 27ft. and 22ft. knockabout classes.

The prize list is:

First-class yachts of over 37ft. corrected length—First prize, $80; second, $50; third, $30; fourth, $15.

37ft. class—First prize, $45; second, $25; third, $10.

32ft. class—First prize, $40; second, $25; third, $10.

27ft. class—First prize, $40; second, $25; third, $10.

22ft. class—First prize, $25; second, $15; third, $10.

22ft. knockabouts—First prize, $25; second, $15; third, $10.

The sailing instructions are: Each yacht shall carry her association number on both sides of her mainsail. Entries according to form prescribed by Rule II., L. Y. R. A., accompanied by certificate of measurement, must be in the hands of the Association officer not later than noon of the day before the race. Entries and certificates may be mailed to W. Q. Phillips, Association officer.

Five starters or no fourth prize; four starters or no third prize; three starters or no second prize. The Royal Hamilton Y. C. having expressed a desire that the Walker cup should be competed for at this regatta by the 32ft. class, the yachts racing in this class will be given points in the two races as follows: All starters one point and first three points, second two points, third one point; the winner of the greatest number of points to be the winner of the cup.

Penataquit Cor. Y C.

Bay Shore—Great South Bay.

Saturday, July 16.

THE Penataquit Corinthian Y. C., of Bay Shore, L. I., sailed its annual regatta on July 16 in a wind which came from all quarters in turn. The times were:

	Finish.	Elapsed.	Corrected.
Sloops—Class L—Start 2:05.			
Lorelei	4 24 33	2 19 33	2 19 33
Gayety	4 31 12	2 26 12	2 21 17
Muriel	4 30 18	2 25 18	2 19 00
Class M—Start 2:05.			
Squaw	4 33 10	2 28 10	2 28 10
Maysie	Not timed.		
*Kuckoo	4 39 50	2 34 50	.. .. ..
Jean	4 38 05	2 33 00	2 28 06
* Disqualified.

Remora, Chas. Cousins	6 13 55
Mildred, A. Bigelow, Jr.	6 20 25
Buzz, Mr. Burrage	6 24 25
15ft. Class—Start 3:40.	
Jap, B. L. M. Tower	6 06 00
Bee, Stanley Clark	6 11 30

YACHTING NEWS NOTES.

Cartoon, sloop, the new fin-keel for the 25ft. l.w.l. class, was sailed around the Cape last week, in charge of Capt. James Barr, son of Capt. John Barr. Off Pollock Rip on July 14 she lost her deep balance rudder, and drifted until picked up by the schooner Iolanthe, of Gloucester, who towed her into Marblehead. She has been hauled out at Stearns' yard for a new rudder.

The Corinthian fleet, of New Rochelle, will hold a special race for an open class of knockabouts and the 20-footers on July 23.

The Sachem's Head Y. C. announces the following races: Club races will be sailed on the following dates: July 18, Aug. 1, 8, 15 and 22. These races will be started at 11 A. M., or as soon thereafter as wind and weather will permit. The club races will be arranged, as far as possible, to include all classes represented in the club. The vice-commodore has offered a cup to the boat of the Sachem's Head Y. C. winning the most races during the season. The secretary has offered a cup for the boat of the Connecticut River type which first wins it three times; the boat first winning the cup to have the fact engraved thereon, and hold it until it is won by another boat, and so on until some one boat has won it three times, when it becomes the property of the owner of that boat. Other prizes will be offered, and the con-

ditions governing them will be duly published. The second annual regatta of the Sachem's Head Y. C. will be sailed on Monday, Sept. 5, 1898 (Labor Day), at 11 A. M. This regatta will be open to all clubs of the Yacht Racing Association of Long Island Sound for boats 30ft. and under. Edward C. Seward, Emerson R. Newell, Charles R. Clark, regatta committee.

Special races of the Eastern Y. C. will be sailed from Marblehead on Saturday, Monday and Tuesday, July 23, 25, 26, 1898, each day at 2:30 P. M., unless unfavorable weather necessitates postponement, for the following classes: 30ft. class, sloops not less than 25ft. and not over 30ft. l.w.l.; 25ft. class, cabin sloops or cat boats not less than 21ft. and not over 25ft. l.w.l.; raceabouts, according to the definition of the 21ft. racing class of the Knockabout Association; knockabouts, according to the definition of the Knockabout Association. All matters connected with the races, not otherwise specified herein, will be governed by the racing rules of this club, so far as they may apply. The races are open to all yachts which conform to the requirements of the respective classes. Entries in the knockabout class must be delivered in writing to the secretary of the regatta committee, at the club house, before 9 P. M. of the evening before the first race. Entries in the other classes may be made in like manner before 10 A. M. of the day of the race desired. The class of the yacht must be stated, and in the 25ft. and 30ft. classes the measurement must be stated under the Eastern Y. C. rule of waterline and sail area; such statement will be taken, subject to measurement under direction of the committee. Each yacht must carry a sail number on each side of the mainsail, as near the center as possible. Yachts may carry a Y. R. A. number, or a special number will be supplied by the committee on application at the club house. Prizes for each day (no "sail-over" allowed).—30ft. class, first prize, $25; second prize, if four or more start, $15; third prize, if seven or more start, $10. 25ft. class, raceabout class, knockabout class: first prize, $20; second prize, if four or more start, $12; third prize, if seven or more start, $8 in each class. In each class the club medal will be awarded to any yacht which sails in all three races and wins two first prizes. Special cup.—In the raceabout class a cup presented by Capt. Roger Upton will be awarded to any yacht which sails in all three races and wins two first prizes or a sail-off. Allowances in the 30ft. and 25ft. classes will be according to the rule and tables of this club; raceabouts will all race at scratch; for the knockabouts, handicaps will be fixed by the committee and published the morning of the race—one set for the series. Crews in the 30ft. class will be limited to seven persons; in the 25ft. class to six persons, and in the raceabout and knockabout classes to three persons. Sails will be restricted on the raceabouts and knockabouts by the rules of the Knockabout Association; in the other classes, only by the rules of this club. The rules of this club as to private signals and life preservers are waived for raceabouts and knockabouts. Protests must be presented in writing to the committee within one hour after the finish of the race. A race will be held on July 30, for schooners under 46ft. waterline and for sloops of seventh class. Henry H. Buck, chairman; Eben B. Clarke, Henry Howard, Odin B. Roberts, Francis A. Seamans, secretary, 57 Oliver street, Boston, regatta committee.

A meeting of the executive committee of the American Canoe Association will be held at the headquarters, Stave Island, on Saturday, Aug. 13, at 8 P. M., for the election of a commodore and secretary-treasurer for 1899, and to transact any other business.

Trap-Shooting.

Fixtures.

July 19-20.—Atlanta, Ga.—Two days' shoot of the Fulton Gun Club; targets. J. E. Avery, Sec'y.

July 19-21.—Palmyra, Mo.—Eight annual tournament of the Missouri Amateur Shooting Association, under the management of the Palmyra Gun Club. Targets and live birds. Added money announced later. W. N. Bates, Sec'y.

July 23.—Ogden, Ill.—Ogden Gun Club's third annual tournament for amateurs. Wm. McKinley, Sec'y.

July 26.—Brooklyn, N. Y.—Tournament and clam bake of the Hell Gate Gun Club.

July 26-28.—Little Rock, Ark.—Eighth annual tournament of the Arkansas State Sportsmen's Association, $500 added. Paul R. Litzke, Sec'y.

July 27-28.—Meriden, Conn.—Tournament of the Interstate Association, under the auspices of the Parker Gun Club. C. S. Howard, Sec'y.

July 29-31.—Milwaukee, Wis.—Milwaukee Gun Club's tournament. S. M. Du Val, Sec'y.

DRIVERS AND TWISTERS.

The following appeared last week in the sporting columns of a city daily: "A prominent figure around the sporting goods stores of this city during the early part of the week was Col. A. G. Courtney, a representative of the Remington Arms Co., of Ilion, N. Y. There are few sportsmen more popular than the Colonel, and certainly none more welcomed at any trap-shooting tournament at which he may turn up. Although fond of shooting, he says that he 'would just as soon visit as go to the score!' Among his successes this year are his win of the E. C. & Schultze trophy at the Pennsylvania State shoot last March, and his 20 straight on live birds in the Dean Richmond trophy contest at the recent New York State shoot at Rochester on June 20. In the last-named event he and his side partners, Harvey McMurchy and George Mosher, were the dark horses, coming out of the ruck and winning the trophy hands down with the magnificent team total of 58 out of 60 live birds. Their nearest competitors were the Rochester team, with 55 to their credit. The other half-dozen teams were nowhere." All of which is very true except in the matter of title. In times of war nothing should be tolerated other than the most punctilious observance of correct title. The point is that the above refers to Admiral Courtney, not Colonel. Colonel—that is, Admiral—Courtney confided to a listening and respectful group in Von Lengerke & Detmold's last week that he had resolved to become an admiral since the war commenced on account of the great number of colonels, generals, majors, etc., which had been commissioned of late, and which somewhat cheapened the title he had worn so long and so well—so he became an admiral. When asked by an overinquisitive listener as to the deeds which warranted his promotion, the Admiral, without winking an eye, explained that in a recent shoot he killed a pigeon which fell in the water, which therefore came under the head of naval events, and as he had killed everything in sight, thereby beating Dewey and Schley and Sampson, his promotion was a logical necessity.

Mr. R. O. Heikes has challenged Mr. Fred Gilbert to contest for the E. C. cup, emblematic of the inanimate target championship of the world. The conditions of the match are: 50 singles, unknown angles; 50 singles, expert rules; and 25 pairs; a most difficult proposition for any one to solve satisfactorily, other than those who are thorough experts. This match, if it is arranged between these famous experts, will engage national interest, and there is no doubt but what it will be very close, both of them being acknowledged as leaders in all the particulars of trap-shooting.

The programme of the second annual midsummer tournament, to be held at Ocean City, Md., Aug. 4, 5 and 6, is now ready for distribution. It can be obtained of Mr. J. R. Malone, 2671 Pennsylvania avenue, Baltimore. The first two days will be devoted to target shooting; the third to live birds. Guns and ammunition shipped care of Mr. John Kelly, New Congress Hall, Ocean City, will be cared for and delivered at the shooting grounds. The shooting grounds will be ready on Aug. 3 for those who desire to practice. To reach Ocean City leave Baltimore, Light street wharf, Pier No. 11, at 7 A. M. and 4:10 P. M. daily. This is a delightful trip down the Chesapeake Bay, on first-class steamers, with all modern accommodations. Eastern people not coming by way of Baltimore can take Pennsylvania Railroad, changing at Wilmington, Del., which runs direct to Ocean City. Arrangements have been made for reduced hotel rates, $1.50 per day; fare for round trip reduced to $2.50, by rail or water. All moneys in target events divided 40, 30, 20 and 10 per cent. Amateurs stand at 14yds., semi-experts 16yds., experts 18yds. Targets 2 cents. Live birds 25 cents. The first and second day's programme alike provide for ten events, two at 10 targets, $1; three at 15 targets, $1.25; four at 20 targets, $1.50; and one three-men team race, 25 targets, $6 per team. On the third day the first and second events are at $5 and $7 entrance, high guns, birds included. All stand at 30yds. The third event is the Ocean City handicap, 24 to 32yds., 50, 30 and 20 per cent., birds extra, class shooting. Nos. 4 and 5 are miss-and-outs.

The programme of the eighth annual shooting tournament of the Arkansas State Sportsmen's Association provides ten target events each day, eight at 15 targets, $1.50 entrance; two at 20 targets, $2 entrance and $15 added to each event. The tournament takes place at Little Rock, Ark., July 26, 27 and 28. The Rose system will govern the division of moneys. On Wednesday, the second day, the team championship race will take place. The conditions are: Entrance $10 per team, four men to a team, 25 targets per man. On Thursday the individual championship race takes place, entrance $2.50, five moneys, ratio 7, 5, 4, 3 and 2. The winner of this emblem will be subject to challenge every sixty days. There is $500 added money. Shooting commences at 9 o'clock. The tournament will be held on the club grounds, in North Little Rock. Shells shipped care of the Dickinson Arms Co. will be delivered on the grounds free of charge. There is $50 average money for those who shoot through the entire programme, to be divided among the seven high guns, $10, $9, $8, $7, $6, $5 and $4. Professionals may compete; must win first or second to share in any division of the purse. The annual convention of the Association will be held on July 26, at 8:30 o'clock, at the State House.

At Watson's Park, July 15, the Chicago challenge trophy was again won by Mr. A. C. Paterson, in a contest with Mr. Henry Levi, by a score of 24 to 19, Paterson shooting at 25 birds and standing at 32yds.; Levi shooting at 33 birds and standing at 27yds., a remarkably heavy handicap to compete against. Up to date it has been a Paterson trophy instead of a Chicago trophy, but there is no doubt but what there is a determination to change the possession of it, as immediately after the contest a number of challenges were sent in for it, among the challengers being Mr. V. L. Cunnyngham, who has had some experience in such matters heretofore, and Messrs. Thos. P. Hicks and Ed Bingham. Either of the latter two would be sure to give Mr. Paterson a real race for the trophy.

Mr. Wm. Hayes, of Newark, who made such astonishing competition in the great rifle contests at the shooting festival, is also a shotgun man as well as a rifleman. He is one of the oldest members of the old Essex Gun Club. Tom Keller, of the King Powder Co., who was present at Glendale Park, in a brief note informs us as follows: "Semi-smokeless captured first place, won by Wm. Hayes, of Newark, who broke all records; second was won by M. Dorrler, and L. P. Hansen won third, both of whom shot King's Semi-smokeless. This trio are all Jerseymen, so Jersey beats the world." Tom Keller is shooting in good form of late, breaking targets as if no effort was required to do so, and making friends for his King's Semi-smokeless even easier than he breaks targets.

On Saturday, July 16, at Fanwood, N. J., the Central New Jersey Trap-Shooters' League was formed, with officers as follows: President, Mr. John G. Lindzey; Vice-President, Mr. T. H. Keller; Secretary-Treasurer, Mr. U. G. Tingley, of Bound Brook. The Climax Gun Club, the Dunellen Gun Club and the Bound Brook Gun Club are the members, but this organization was intended as a nucleus for a greater organization, and all other clubs which are eligible are invited to join. The benefits to be derived from such organization are so self-evident that comment is unnecessary. The first shoot will be on the Dunellen Club's grounds, July 30. The next on the grounds of the Bound Brook Club, and the third on the grounds of the Climax Gun Club.

The programme of the sweepstake tournament on the grounds of the Brockton Gun Club, July 23, provides twelve events, known, unknown and reversed angles. Two events are at 10 targets, entrance 70 cents; six are at 15 targets, $1.30 entrance; two at 20 targets, entrance $1.40 and $2; one at 25, entrance $2.50. There is a total of $50 guaranteed, which will be shot for rain or shine. Twelve entries or over, money divided 40, 30, 20 and 10 per cent. North Easton cars leave Main street for the grounds fifteen minutes before and after the hour. B. Leroy Woodard, manager, Campello, Mass.

Elkwood Park is officially settled upon as the place for the next Grand American Handicap, April 11, 12 and 13, 1899. No grounds in America other than those of Elkwood Park have the necessary equipment to meet the multiplicity of exacting wants incident to the greatest trap-shooting event of America. Mr. Elmer E. Shaner's official announcement will be found elsewhere in our trap columns.

A very good 100-target race was that between Messrs. C. E. Forehand, of Worcester, Mass., and J. R. Hull, of Meriden, Conn., at Worcester, July 12. The scores were up in the expert class: Forehand 94, Hull 93. If both men continue to improve as rapidly as they have within the past few weeks there will be greater need of care on the part of the famous experts to watch their laurels.

The Hudson Gun Club has most delightful grounds. The greater part of the targets fly against a sky background. The electric pulls work with great satisfaction. Mr. L. Shortemeier, who was present at the last shoot of the Hudsons, was quite enthusiastic in his praise of the electric pull, and he showed special skill in pulverizing left-quartering targets.

Mr. Paul Litzke, in "Arkansas and the South," mentions that the $500 match between Mr. Jack Winston and Dr. Smith, of St. Louis, did not come off, but instead shot a target race for the target championship medal of the city. A match for $500 is never very serious until the forfeit is up; otherwise it comes under the head of "Important if True."

The new grounds of the Climax Gun Club are at the Fanwood Road House, a short distance from Fanwood Station, N. J. No pleasanter place can be found wherein to while away an afternoon either in shooting at the traps or in looking on.

The Sidell Gun Club, Sidell, Ill., will hold a tournament on Sept. 7 and 8, on targets. The amateur championship of Illinois, 100 targets, $75 added to the event. Write for programme to Mr. H. J. Sconce, manager, Sidell, Ill.

The Mount Shasta Gun Club, Shasta, Cal., is arranging for a two days' tournament, to be held in the early part of September next, one day to be devoted to targets, one to live birds.

The eight men who were in the final ties for the hammerless gun at the Chatham Gun Club shoot on July 16, Chatham, N. J., will shoot it off on July 30, at 2:30.

E. C. Cup Challenge.

NEW YORK, July 14.—*Editor Forest and Stream:* We have to-day received from Mr. R. O. Heikes, of Dayton, O., a letter containing a challenge to Mr. Fred Gilbert, of Spirit Lake, Ia., for the E. C. cup, emblematic of the inanimate target championship of the world, now held by Mr. Gilbert. Mr. Heikes' challenge was accompanied by a check for $25, the forfeit necessary to bind the above challenge.

Upon receipt of Mr. Heikes' communication as above, we at once notified Mr. Gilbert of its contents.

The conditions of the match are: 50 singles, unknown angles; 50 singles, expert rules, one man up standing in the center, and 25 pairs. The rules governing challenges for this trophy call for $25 forfeit, the remaining $25 to be paid at least five days prior to the date of the match. The holder posts the cup against the $50, winner taking cup and money, and loser paying expenses of the match.

The Am. E. C. & Schultze Powder Co.,
EDWARD BANKS, Sec'y.

Hudson River Trap-Shooters' League.

POUGHKEEPSIE, N. Y., July 15.—There were shooters who took part in the tournament of the Hudson River Trap-Shooters' League, held on the grounds of the Poughkeepsie Gun Club to-day. Of these five—Messrs. Courtney, Swiveller, Hull, Fanning and Keller—were agents, and therefore were privileged to enjoy themselves shooting at targets free of cost. Thirteen shot the programme through, which called for 150 targets. The five averages were: Mason first, Myers second, Halstead third, Tallman fourth, and Vanderbosh fifth; respectively .921, .850, .820, .790 and .770 per cent., $5, $4, $3, $2 and $1. All purses were divided by the Rose system. Targets 2 cents each, deducted from the purses. There were ten events on the regular programme, each with a uniform entrance of $1, with the price of the targets added thereto. The scores are as follows:

Events:	1	2	3	4	5	6	7	8	9	10	
Targets:	10	15	20	15	10	20	15	15	10	20	Broke.
Courtney	10	13	19	10	8	19	11	14	10	13	127

The trophy presented by the King's Smokeless Powder Co. was contested for in the team race. The United States Powder Co. presented thirty-five 1lb. cans of Gold Dust powder, eight cans to go to the eight high guns in the last programme event.

Trap Around Reading.

CAPT. ESSICK DEFEATS BROOKE HARRISON.

READING, Pa., July 11.—Much rivalry has for some time been existing between Brooke Harrison, the well-known local wing shot, and Capt. Wm. Essick, who is at present field captain of the South End Gun Club, of Reading, and who is also well known in local sporting circles as to their respective abilities for shooting bluerock targets. To-day's match was shot on the grounds of the South End Club, of which both contestants are members. On July 4 Harrison won the gold medal, defeating Essick in the club shoot, score 22 to 19; and this shoot to-day decided a wager which was made after that shoot. Capt. Essick won hands down in the 50-bird shoot, although both men shot very poorly. The weather was just the kind wanted for shooting, and the friends of the shooters, who had been informed of the match, and who were present, enjoyed the good breeze which came up from the river. Six matches followed the 50-bird race. Scores:

Event No. 1, 50-target race, for a purse:

Capt Essick	1100111111110101010111011111100111111111101110—38
B Harrison	1101111101011000100101111010000110111101111111100—32

Event No. 2, 25-target race, for a purse:

Capt Essick	1001101011010011010011111—15
J Shaaber	0101010001110101111111110—16

Event No. 3, 25 targets, for purse and targets:

B Harrison	0111010111111111111001101—19
J Shaaber	1011010101110111001111010—16

Event No. 4, 25 targets, for targets::

Capt Essick	0001101101111011101111001—16
Harrison	1011101111111110111110100—19

Event No. 5, 5 pairs of doubles, $1 entrance:

Capt. Essick ....11 11 10 10 00—6 Harrison .....00 11 01 00 10—4

Event No. 6, 5 pairs of doubles, for targets:

Capt Essick ....00 10 10 00 11—4 Harrison .....10 01 10 10 11—6

Event No. 7, 5 pairs of doubles, for targets:

Capt Essick ....01 00 00 11 00—3 Harrison .....11 10 11 01 11—8

Pottstown, Pa., July 13.—The Shuler Shooting Association held a target shoot to-day and some good scores were made. Practice at team shooting was the order of the day, so as to be in condition for the second match with Phoenix Gun Club at Phoenixville, July 23:

First event, teams of four men each, 15 targets per man:

W. J. Grubb's team—Hawkins 9, Saylor 8, Grubb 12, Stone 8—37.

Capt. Wickersham's team—Smith 10, Wickersham 12, Davis 9, Longacre 5—36.

Second event, teams of four men each, 10 targets per man:

Capt. Wickersham's team—Smith 7, Wickersham 9, Davis 10, Brown 6—32.

W. J. Grubb's team—Hawkins 7, Saylor 8, Grubb 7, Stone 7—29.

Third event, teams of four men each, 10 targets per man:

Grubb's team—Hawkins 3, Saylor 10, Grubb 9, Stone 6—28.

Wickersham's team—Smith 9, Wickersham 7, Davis 5, Brown 5—26.

The following events were at 10 targets:

Events:	4	5	6	7	Events:	4	5	6	7
Saylor	8	7	6	7	Davis	5	8	6	5
Wickersham	7	6	9	5	Longacre	4	..	..	..
Grubb	7	10	8	8	Brown	..	6	9	7
Smith	6	..	..	..	Hawkins	..	5	8	7

The following team shoot ended the shooting for the day. Teams of three men each, each man to shoot at 10 targets:

Wickersham's team—Smith 7, Wickersham 9, Davis 10—26.

Saylor's team—Brown 6, Saylor 7, Hawkins 5—18.

Grubb's team—Grubb 6, Stone 5, Longacre 7—18.

The Shuler Shooting Association received a challenge from the West Chester Gun Club to shoot a series of three matches: one at Pottstown, one at West Chester, and the third shoot on neutral grounds. The teams to consist of ten members, each man shooting at 25 targets. The Shuler Association at their next meeting will take action, and it is very probable that the two clubs will meet in the near future. The West Chester Club named July 23, but this will conflict with the date for the second shoot of the Phoenix-Shuler series.

Pottstown, Pa., July 16.—The Shuler Shooting Association held its weekly practice shoot over the magautrap to-day on its grounds at East End. Team and sweepstake shooting were the principal events. Several visiting sportsmen were present and took part in the different events. Summary:

First event, five-men team shoot, 25 targets per man:

L. H. Davis' team—L. H. Davis 21, Grubb 23, Scheffey 17, S. E. Davis 12, Reifsnyder 11—84.

Wickersham's team—Capt. Wickersham 17, Saylor 16, Lenhart 11, De Witt 17, Royer 13—74.

Second event, team shoot, five men, 10 targets each, regulars vs. Shuler reserves:

Grubb 8, Wickersham 7, L. H. Davis 7, Lenhart 5, Reifsnyder 3—30.

Capt. De Witt 6, Saylor 8, Scheffey 7, Cole 3, S. E. Davis 5—29.

The sweeps were as follows:

Events:	3	4	5	6	7	8	9	Events:	3	4	5	6	7	8	9
Targets:	10	7	10	7	7	10	7	Targets:	10	7	10	7	7	10	7

C V L	..	..	..	..	..	..	..	..	14	4	..	..	..
Tommy	..	..	..	..	..	..	..	..	..	9	5	4	5
Jones	7	..	..	..	..	..	..	..	..	..	..	..	..

No. 3 was at 5 pairs; No. 5 was the Star sweep.

July 16.—The Hudson Gun Club held during the week its second shoot for the month of July. The main event was the match between Rockaway Point Rod and Gun Club and the Hudsons, which was won by the former. The Hudsons desire to thank each and everyone of the shooters present, and to call attention to the fact that the club holds shoots twice a month the year round. The next shoot will be July 31. No. 5 was the team shoot; No. 12 was 10 singles and 5 pairs. Summaries:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13

Culbertson, 25	.....	12221211	.....

Nos. 1 and 2 were $5 miss-and-outs; No. 3, 10 birds, $10.

ROCKAWAYS DEFEAT THE HUDSONS.

July 18.—The fifth and last of the series of five matches between the Rockaway Point Gun Club and the Hudson Gun Club was shot on the grounds of the latter to-day. Each club had two wins to its credit, so that this was the decisive contest. The Rockaways were victorious by a score of 179 to 167. Each shot at 25 targets. The scores follow:

Rockaway Gun Club.

Fischer .....1011011111111111101111100101—19
Lentheuser .....0111111111101111111111000111—20

JEANETTE GUN CLUB.

July 15.—The July shoot of the Jeanette Gun Club took place to-day at the club grounds, inside the Guttenberg racetrack. The birds were an average summer lot, helped out of bounds somewhat by the fairly strong breeze blowing away from the shooters to the left. An old bird, once on the wing, went out in a hurry if not stopped quickly.

A number of the members labored under disadvantages. Mr. J. Vagts did not bring his gun with him and used one that did not quite fit him. This accounts for his 5 straight misses in the club contest. The right lock mainspring of Otten's gun broke and he used Mr. Steffen's Parker. Pop Bigelow didn't bring any gun either, but just used "any old gun," and won the Class B trophy with only one miss, using a U. M. C. machine load, 12ga., 3¼drs. E. C., 1¼oz. No. 7 chilled shot, with 11ga. wads loaded for the club. Mr. Rottman shot Mr. Chas. Meyer's high gun very well. Schorty shot in good form and won the Class A trophy from the 32yd. mark, using U. M. C. machine-loaded Schultze shells, but if the birds had been better he would not have got the 24 out of 25 that he luckily scored.

The club shoots a 50yd. boundary—an imaginary line between stakes—and every shooter will acknowledge that it is a more difficult one than a wire fence boundary, which oftentimes stops hard-hit, low-flying birds. Capt. Disch filled out the squad in the team race. He had not shot for years, and his score shows the lack of practice. The Captain has charge of arranging the boundary and is the official trap-puller of the club, and has been since the club was organized. It pained the members muchly to see our old charter member miss so often.

Club contest, 10 birds, club handicap, two classes:

Brunie, 28 .....1112202112— 9
Otten, 28 .....0111211110— 8
Schorty, 32 .....2121111222—10
C Meyer, 28 .....0111111122— 9

Gerdes, 25 .....20111—4
Disch, 25 .....00010—1—23

CLIMAX GUN CLUB.

July 16.—The opening of the new grounds of the Climax Gun Club, near Fanwood, N. J., was an event out of the common in the good sport afforded at the traps and the good fellowship which prevailed. The grounds are most pleasingly situated close by the hotel of Mr. Geo. Thatcher, of minstrel fame. Thos. H. Keller, of the King Smokeless Powder Co., was the club captain, and he was unceasing in his efforts to keep the shoot going and making the event a pleasure for all in attendance. He succeeded admirably well in both. Mr. Neaf Apgar assisted in the cashier's department. Mr. Keller's son acted as scorer.

The Climax Gun Club and Dunellen Gun Club had a team race, 20 targets per man, seven-men teams, Climax winning by a score of 101 to 94. The scores in the team race follow:

Dunellen Gun Club.

Barron .....11111111110011101000—14

G. B. James.

ON LONG ISLAND.

BROOKLYN GUN CLUB.

July 9.—The monthly shoot of the Brooklyn Gun Club, held to-day, had a fair support, considering that the dull season is now here. The main event was the club cup, at 50 targets. In this event there were ten competitors, all with a handicap excepting Mr. Banks, who was the only scratch man in the contest.

Amend and Waters, both with liberal handicaps, tied on 50. Amend, who now shoots a Winchester repeater, is improving greatly in his scores.

Following are the scores in the cup shoot, 50 targets, handicap:

Banks, 0 .....11111111110111111111111011—23
.....11111111111111111111110101—23 —46

Mr. E. S. Rice, of Chicago, has been making a two weeks' trip in the East. He was in New York last week, thence going to Wilmington, Del., to visit the Du Pont powder works.

Seattle Gun Club.

Seattle, Wash., July 11.—Inclosed you will find the scores of our last shoot at the West Seattle grounds. Ellis and W. A. Hardy carried off the honors at the shoot yesterday afternoon. In the medal shoot at 30 birds Ellis got his last 20 straight. He dropped his 10th bird, making his score 29, but with his handicap he got the maximum 30. W. A. Hardy fell off his pinnacle of fame a little in this event, and could only finish with 22, but he never shot his handicap. Chellis got his two extra birds and made his score 27. Hall got 4 of his 5, which gave him 28. Spencer got 9 out of his 12 allowance, and was in the same hole with Bige—28. Moreton though pulled out of the fire with 8 out of 12, and finished second with 29 to his credit.

W. A. Hardy and Chellis shot a match for the Norton medal, and Hardy won after a hard struggle. Hardy got 22 out of 25 and Chellis got 21; then they both shot at the number of birds they had missed and tied at 24 apiece. They concluded to shoot it off in the next event and Hardy won with 13 out of 15, as against 10 for Chellis.

Stevens, Hood and Churchill did not attend the shoot yesterday. Ellis, Chellis and Hardy are all doing good shooting now.

Seattle came out on top at the Vancouver shoot, winning four out of the six trophies, and they are all displayed in the windows of the Hardy, Hall Arms Co., and certainly make a very pretty showing.

The boys have five trophies now, as they also have the State cup.

Christianson, of Butte, Mont., has been in the city since the Vancouver shoot, and was over with the boys yesterday and did very good shooting, getting 27 out of 30 in the handicap shoot from the scratch. The visitors are always welcome.

Forester Gun Club.

Albany, N. Y., July 16.—The first tournament of the Forester Gun Club was held here July 13. The attendance was not as large as we anticipated. The day opened very cloudy, with every indication of rain; this alone kept several from attending. The wind blew hard in the face of the shooters, making the targets take some very erratic flights. Part of the background was a dark foliage and this in a measure is accountable for the rather low scores.

The trade was represented by W. L. Colville, who fully upheld the merit of the Gold Dust powder. There was a very pleasant expression in his dark eyes when he was informed that three out of the five averages were captured with this favorite brand. Mr. J. R. Hull, representing Parker Bros., makers of the celebrated Parker gun, was present, but arrived too late to take part in any of the regular events.

The programme consisted of twelve 15 bird events; entrance $1.30. Purses divided 35, 30, 20 and 15 per cent. In addition there were five merchandise prizes for average. The paid men were not permitted to win any of these. The average prizes were awarded as follows: Livingston, first; Valentine, second; Weeks, third; Arnold fourth; Doremus, fifth. The magautrap was used and it worked very satisfactorily in every way.

The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Shot at.	Broke.
Livingston	13	14	13	14	14	13	14	14	14	12	12	14	180	161

Mount Shasta Gun Club.

Shasta, Cal., July 6.—The scores of Mount Shasta and Sisson gun clubs, made at Sisson, July 4, are given below. The free-for-all was at 20 bluerocks to the man, and the team shoot was 15 to each man. The team shoot was for a silver cup, and the free-for-all for entrance money divided. Mount Shasta Gun Club is now making arrangements for a big two days' tournament, to be held about Sept. 8 and 9. One day will be devoted to live birds and the other to bluerocks.

Free-for-all shoot, purse divided 50, 30 and 20 per cent.:

Deboie 13
Leary 18
Cochran 10
Warren 13
De Freese 16
Pabst 9
Deyo 14
Sidney 15
Dobrowsky 15
Rinckle 13
Van Arsdale 10
Lawranson 11
Dittmar 16
Grotefend 9
Bryan 14

Team shoot:

Sisson Team.		Mount Shasta Team.	
Deyo	11	Leary	10
Lawrenson	22	Dittmar	6
Sidney	8	Deboie	5
Warren	12	Debrowsky	8
Cochran	10	Grotefend	9
Rinckle	9	Bryan	10
Woods	10—72	De Freese	13—61

The Grand American Handicap.

Pittsburg, Pa., July 14.—*Editor Forest and Stream:* The Interstate Association has arranged all preliminary details pertaining to the seventh annual Grand American Handicap tournament, and contracts have been signed for the holding of this great event at Elkwood Park, Long Branch, N. J., April 11, 12 and 13, 1899.

The requirements and exacting details connected with a tournament of the scope of the Grand American Handicap are of such a nature as would necessitate the securing of the most perfectly appointed shooting grounds obtainable for the holding of the event. The Elkwood Park grounds to-day are unrivaled. No finer arrangements could be made for live-bird shooting, and none equal to them exist in this or any other country. Therefore the Interstate Association feels confident that its selection of these grounds will meet with the hearty approval of a great majority of those who contemplate taking part in the tournament.

Elmer E. Shaner, Manager.

WESTERN TRAPS.

THE CHICAGO CHALLENGE TROPHY.

THE race for the Chicago challenge trophy took place between A. C. Paterson, holder, and Henry Levi, challenger, on Friday, July 15, at Watson's Park, Burnside Crossing, Ill.

There was a large and enthusiastic crowd present, among whom were Mr. and Mrs. Thomas P. Hicks, Mr. and Mrs. W. P. Mussey, A. W. Adams, J. L. Jones, "Old" John Glover, Abe Kleinman, C. S. Wilcox, J. M. Gillespie, Ben Dicks, Bill Cutler, W. M. Wegg, C. P. Richards, C. C. Hess J. H. Amberg, Silas Palmer, Charles Hadwin, Joseph Beem, Mr. Howe, Rice and many others. Excitement ran high, and continued throughout the race. Mr. Levi had previously stated that with the handicap given he was certain to win, and it is said he even went so far as to wager something like one hundred dollars on his skill and ability to win, under the conditions existing. Paterson simply sawed wood with the result as shown hereafter.

The wind blew hard from the left quarter, and the sky was overcast. The birds were an excellent lot and got away quick, largely tailers and right-quarterers.

The best run made by Mr. Levi was on his last eight birds, which he grassed in fine style. Many good kills were made by both contestants. Paterson showed himself equal to the occasion even at 32yds., and made some remarkable second barrel kills, which drew applause from the audience.

Levi, who lost the toss, went to the score and killed his first and second birds in good form; his third and fourth, both right-quartering incomers, he missed clean. His seventh, a good, swift outgoer right quartering, he killed nicely with the first barrel. His eighth was a similar one, which took two barrels. His seventeenth was a swift left-quartering which was nicely stopped with the second barrel. Paterson made good kills on his fourth, fifth, fifteenth and nineteenth; his twentieth, the easiest bird of them all, was a left-quartering incomer which he shot behind, not allowing for the wind. Several good kills were made of low, swift outgoers.

Following are detailed scores of the contest. Henry Levi shot at 33 birds, 27yds. rise. A. C. Paterson 25 birds, 32yds. rise:

```

Levi shot a Jordan Krupp gun, with 3¼ and 3½ Schultze powder, No. 7 shot. Paterson shot a B. E. O. Remington, with 3½, 1¼ No. 7 shot.

On the termination of the contest, several challenges were sent to the proper persons. Among those were V. L. Cunnyngham, Thos. P. Hicks and Ed. Bingham. As near as can be ascertained, it appears that Mr. Cunnyngham was first in, and will be the next contestant. Mr. Cunnyngham has twice contested for the trophy, tieing the first time and meeting with defeat the second.

EUREKA GUN CLUB.

THE Eureka Gun Club, of Chicago, held its regular weekly target contest on the club grounds, corner Seventy-ninth and Vincennes avenue, on the afternoon of July 16, with a fair attendance. The day was very warm, with a mild breeze from the right quarter and an overcast sky.

Following are the scores in the practice events, Nos. 1 and 2 were at 3 unknown traps; Nos. 4, 5 and 6 were from the magautrap:

Events:	1	2	4	5	6
Targets:	15	15	15	15	15

GARFIELD GUN CLUB.

THE Garfield Gun Club held its regular weekly target contest on the club grounds, corner Fifty-second avenue and Monroe street, Chicago, on the afternoon of July 16.

There was a fairly good attendance, and the shooting continued well into the afternoon, notwithstanding the intense heat of the sun.

Following are scores in the practice events. Nos. 1, 2, 3, 4 and 5 were known traps, unknown angles. No. 7 was 15 singles, known traps, unknown angles, and 5 pairs:

Events:	1	2	3	4	5	7

Johnson .....0110110110111010100l—12
J Bauman .....1111111000110100000l—11
```

In a practice shoot the following good scores were made: Parmelee 20, Snapper 20, Welch 20, Brucker 19, Curtis 19, Schnieder 19, Snapper 17, W T Townsend 18, Curtis 17.

Shoot-off, miss-and-out: Snapper 23, Curtis 24.

JOHN-LEWIS.

Worcester Sportsmen's Club.

WORCESTER, Mass., July 15.—The afternoon tournament of the Worcester Sportsmen's Club, Tuesday, July 12, was unusually well attended. On the club house balcony were nearly 100 spectators, and among them such old-timers as E. S. Knowles, J. G. Rugg, E. T. Smith, A. B. F. Kinney, C. W. Walls, G. Russell, who came to see the 100-bird race between Jack Hull, of Meriden, Conn., and Charlie Forehand, of this city. Besides the large number of the home guard there were representatives from several towns. Uxbridge sent Johnson, Whitin, Day, Rawson; Leominster was represented by Rice, Burbank, Spring and Stone; Griffith and Campbell came all the way from Providence to see the race; Dickey represented Boston alone; of the Worcester shooters Snell, Buck, Davis, Forehand, Bucklin, Emory, Kinney, Roach Knowles, Tolman, Parker, Goodell, Tom Davis and Nick shot in the sweepstake events.

Things are moving in the right direction for a rousing two days' shoot here Aug. 3 and 4, with about $200 added money. Programmes will be mailed at short notice before the shoot. Following are the scores of July 12:

Events:	1	2	3	4	5		
Targets:	10	15	10	10	25	Shot at.	Broke.
Snell	10	15	8	10	23	70	66

```

Arkansas and the South.

THE Memphis shoot, which took place July 9, was a nice interesting affair. There were not many visitors on hand, the only out-of-town shooter being W. R. Elliston, of Nashville, but the local shooters turned out to a man. The chief event of the day was the E. C. cup race, 50 targets per man, which was won by Dr. Gragg, who scored 46. He was easily first, no one being even in hailing distance. Edrington and Elliston were second, with 41, while Poston, Bennett, Neely, Duncan and Walker scored 40. Frank, Schmidt, Tate, Scaife, Scruggs, Joiner, Weaver and Saunders had 39 to their credit. There were a number of others who scored 38 or less. Abe Frank was master of ceremonies, and perhaps for this reason he was up in the air. The balance of the day was put in shooting sweeps, and a very pleasant time was had by those who participated.

ST. LOUIS.

That $500 race between Dr. Smith and Jack Winston did not come off as per schedule, but they shot a target race for the target championship medal of the city. It was a handicap event, consisting of allowing each contestant to shoot at the number of targets he misses in the original event, and a few in addition. In the main race Winston scored 87 and Dr. Smith 77, thus Winston was permitted to shoot at 13 birds and the Doctor at 28. Winston scored but 7 out of his allowance, making his total 94. The Doctor broke enough to beat Winston 1 bird, thus still retaining possession of the medal.

PAUL R. LITZKE.

Uxbridge Gun Club.

UXBRIDGE, Mass., July 9.—Johnson was the winner of the medal, his score being 42 out of 50. Nos. 1, 3, 5 and 7 were regular; the remainder unknown angles. Nos. 5, 6, 7 and 8 were the medal shoot:

Events:	1	2	3	4	5	6	7	8	Shot		
Targets:	15	10	15	10	15	10	15	10	at.	Broke.	Av.

Rifle Range and Gallery.

Rifle at Shell Mound.

SAN FRANCISCO, July 11.—Yesterday was medal day for most of the Shell Mound clubs. Attendance was not great. Messrs. McLaughlin, Young and Gorman are in New York attending the triennial Bund shoot. They were missed by their fellow shooters of the Columbia Club, but we get reports of their good work in the great shoot. The only extra good scoring yesterday was done by President Rodgers, of the Columbia Club. He is a member of the Germania Club and shot his medal score after taking one sighting shot. In this club 20 shots, no re-entry, 25-ring target, one score a month, are the conditions. His score was 451 rings; first 10 shots, 226; second 10 shots, 225.

The marksmen here are much delghted over the decision of the Bund to hold the 1901 festival in San Francisco.

Scores of the day:

Rifle, Columbia target, 200yds.: Champion class—A. H. Pape 56, F. E. Mason 65. First class—O. A. Bruner 61, A. B. Dorrell 82. Second Class—M. J. White 120, G. M. Barley 134. Third class—E. M. Moor 91, C. F. Waltham 111, G. Mannel 123, Mrs. White 176.

Members' rifle medal, re-entry matches, 200yds.: A. B. Dorrell 59, G. Mannel 83.

All comers' rifle medal: Dr. Rodgers 50, F. E. Mason 75.

Bushnell military rifle medal: C. F. Waltham 45.

Columbia target, medals for members only, pistol, 50yds.: Champion class—Dr. Rodgers 43, M. J. White 56, A. B. Dorrell 65. First Class—F. E. Mason 56, G. M. Barley 72. Second class—Mrs. M. J. White 70, C. F. Waltham 95. Third class—J. P. Cosgrave 58, Mrs. C. F. Waltham 103.

Re-entry, open to all comers, Siebe medal: A. B. Dorrell 45, 54; G. M. Barley 56, 58, 68, 69; J. P. Cosgrave 68.

Twenty-five and .22cal. rifle, for ladies, 50yds., and Roos trophy for ladies: F. E. Mason 19, 20, 20, 21, 22, 23, 26, 26; Mrs. G. Mannell 30, 38, 39; Mrs. C. F. Waltham 34, 38, 39.

First champion class, Dr. L. Rodgers, 451; second champion class L. Bendel, 411; first class, John Thode, 381; second class, E. Goetze, 414; third class, W. Goetze, 380; first best shot, D. B. Faktor, 23; last best shot, F. P. Schuster, 25.

A. H. Pape, 437, champion medal; second class, Frank Koch, 398; third class, Otto Lemcke, 395; fourth class, John Beuttler, 362; first best shot, F. P. Schuster, 24; last best shot, A. H. Pape, 25.

ROEEL.

Rifle Contest.

THE Calumet Heights Club held its annual celebration on the club grounds, at Grand Calumet Heights, Ind., on July 4. The rifle range was open the entire day, and quite a few participated in the contests for prizes. Following are the scores made, Class A, 200yds., off-hand, any caliber rifle. The trophy the first day was won by A. W. Harlan, and on the second day by L. L. Davis, C. C. Hess winning the merchandise in the 10-shot event, with S. H. Greeley in the 5-shot event:

Dr Harlan	4	8	5	4	4	5	3	7	3	5—48
Davis	2	0	2	8	5	7	3	4	6	2—41
Lamphere	5	3	5	1	3	4	0	3	0	0—24

Mrs Dougherty	7	3	3	2	0—15	Mrs Twitty	3	2	0	0 0— 5

A. C. PATERSON.

Mr. Talbot's Score.

SPRINGFIELD, Mass., July 16.—*Editor Forest and Stream:* In regard to that 99 score of mine: It was made under the following conditions at the Smith & Wesson pistol range: There is a standing offer to the club of $50 for a score of 100. We are all trying to capture it. The night I shot this score Mr. Albert Smith, who is acting for Mr. Wesson as official scorer, said: "I can beat you to-night." I replied, "I am glad you think so, for I know just what to do now." This was the first score of the evening. I started with a 9 10 10 10 10 10 10 10 10 10—99. Mr. Smith was scoring each shot through the telescope. There are several of the members who have made 99, and some of us are going to make the total 100. We shoot Wednesday and Friday evenings. I have shot many scores from 96 to 98, but only one 99. If any shooter doubts the score I refer him to Mr. Albert Smith, of Smith & Wesson.

Z. C. TALBOT.

285 Quincy Street, Springfield, Mass.

The National Schuetzenfest.

IT was voted that the next festival of the National Sharpshooters' Union be held in San Francisco, Cal., three years hence. Cincinnati, Boston, Hoboken and New York were making an effort to secure it, with San Francisco and Hoboken racing for it at the finish, San Francisco securing it finally by a vote of 27 to 19.

The veteran William Hayes achieved the much-sought distinction of king of the festival, thus demonstrating that though he has been a practical rifle shooter for many years, he belongs to the "isers" and not the "has beens."

Answers to Correspondents.

J. D. H., Elizabeth City, N. C.—You will find in Fred Mather's two papers on black bass fishing in our issues of April 30 and May 14 full instructions for the various ways of taking this fish.

W. V. W., Charlottesville, Va.—Can any of your readers tell me how to catch turtles. I guess they are "snapping" turtles. Ans. Bait with meat a place in the pond where the turtles are found, and after a few days of this bait a set line (with large hook) with meat.

B. I. N., Cortland, N. Y.—We have just taken in a few trout from the river here which seem filled with a small white thread worm or hair snake. Do you know anything about this, or is it quite common in some waters? Ans. Parasites are not uncommon in fishes; intestinal parasites are harmless; certain of those found in the flesh should be avoided, through their capacity for harm is counteracted by thorough cooking.

E. S. L., Troy, N. Y.—I have a mouse that sings as sweetly as any canary; some of his notes are similar to the twitter of a woodcock in breeding time. Have you ever heard of such a thing before? Ans. Yes; many instances of singing mice have been recorded, and we have had in our Natural History columns notes of several. Mr. Hough's book of "Singing Mouse Stories" is based upon the conceit of visions called up by the enchanting music of a singing mouse.

Spa, Grand Rapids, Mich.—In a fly-casting contest A and B tie for first with a score of 90, C scores 89½, D scores 88. C is declared winner of second prize, D of third prize, while A and B are ordered to cast off the tie, which is won by A. Now in the absence of any special rules to govern this contest (only general rules to govern, as in any similar event), who is entitled to second prize? Does it belong to C, or does it go to B? he having made a higher score than C? Ans. In the absence of any agreement beforehand, this is a question which cannot be decided by any fly-casting precedents; but giving consideration to actual performance and merit it is clear that second prize should go to B, whose score was higher than that of C.

F. L., Haslin, N. C.—Please tell me about when I should plant wild rice and how to sow it. Ans. We quote what has been printed in earlier issues: "Wild rice is very prolific and grows annually on the same grounds, requiring no care to cultivate. It will grow well in almost any water that has a muddy bottom; is not too cold, and has not a strong current and is not more than 8ft. deep. It will succeed in any of the Middle States and northwest as far as latitude 50°. Rice has been found doing well on the prairie sloughs of Minnesota, the water of which is tinctured more or less with alkali; it has been successfully introduced into many of the salt marshes of the Hudson River and Long Island, and it grows well in fresh-water marshes and on the banks of slow-running streams. The proper time for sowing the seeds is immediately after it is gathered ripe, i. e., in September. The plant is hardy, prolific and aggressive, and usually more than maintains a footing once established. Its failure to grow in so many cases is due to the fact that the seed has been impaired by too long keeping, and in a number of cases the seed used has been threshed by the Indians, who scorch the grain to facilitate the operation. A few months seems sufficient to destroy the vital germ, so that, though spring sowing has succeeded in some few cases, the trial of winter storage is usually too much for this delicate grain."

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JULY 30, 1898.

VOL. LI.—No. 5. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

PRIZES FOR AMATEUR PHOTOGRAPHS.

THE FOREST AND STREAM offers prizes for meritorious work with the camera, under conditions which follow:

The prizes will be divided into three series: (1) for live wild game; (2) for game in parks; (3) for other subjects relating to shooting and fishing.

(1) For live game photographs three prizes are offered, the first of $50, the second of $25, and the third of $10.

(2) For live game in parks, for the best picture, a prize of $10.

(3) For the best pictures relating to FOREST AND STREAM'S field—shooting and fishing, the camp, campers and camp life, sportsman travel by land and water, incidents of field and stream—a first prize of $20, a second of $15, a third of $10, and for fourth place two prizes of $5 each.

There is no restriction as to the time nor as to where the pictures have been made or may be made.

Pictures will be received up to Dec. 31 this year.

All work must be original; that is to say, it must not have been submitted to any other competition or have been published.

There are no restrictions as to the make or style of camera, nor as to size of plate.

A competitor need not be a subscriber to the FOREST AND STREAM.

All work must be that of amateurs.

The photographs will be submitted to a committee, who, in making their award, will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities, and other things being equal, the unique and difficult nature of the subject.

Photographs should be marked for identification with initials or a pseudonym only, and with each photograph should be given, answering to the initials, the name of sender, title of view, locality, date and names of camera, and plate or film.

ZOOS AND THE PUBLIC.

When a representative of the New York Zoological Society appeared before the Board of Estimate to ask for the appropriation of funds for constructing the buildings, the Mayor protested: "The law allowing us to appropriate money for this garden was made before we came into office," said the Mayor, "and we always obey the law." Nevertheless, the system which has grown up during the past few years of allowing private corporations to control public affairs is wrong. The city is rich enough and old enough to own its own public library, as well as its own zoological garden." Which is very true; but if we were to wait for the city of New York to provide its own zoo on any adequate scale and under any other than pull and spoils management, we should wait until most of the wild animals of all the continents were extinct.

Moreover, the scheme of management by an incorporated zoological society is one of which the wisdom has been abundantly demonstrated by European experience with such institutions. Of the fourteen largest public zoological gardens in Europe, including those of London, Paris, Berlin, Hamburg, Cologne, Dresden, Hanover, Frankfort, Breslau, Amsterdam, Antwerp, The Hague, Vienna and St. Petersburg, all but those of Paris are maintained by zoological societies; and the attitude of the municipalities toward them as institutions affording public entertainment and instruction is shown by the fact that eight of the gardens are located on lands which have been set apart for them in public parks without the exaction of any concessions whatever as to free privileges for the public. With the exception of the Jardin des Plantes, of Paris, none of the gardens of Europe are ever opened to the free admission of the public, while the New York Society proposes to admit the public to the park absolutely free for six days in the week, including Sunday.

The enterprise of the Zoological Society is in the highest sense public spirited. In extent and scope, value of the collections, thoroughness and intelligence of equipment and management, the park will be developed upon a scale rendered practicable only by the generous gifts and endowments of individuals, and it will be subject neither to restrictions placed upon it by a board of estimate governed by considerations of the tax levy, nor to the incompetence or dishonesty of political jobbers. As the undertaking of a responsible incorporated society, the enterprise will be conducted in a way impossible of attainment under political control, and its collections will be enriched by presentations from contributors who would never dream of entrusting their gifts to the ignorant, blundering, brutal and outrageous mismanagement which has marked the control of the Central Park menagerie.

THE ABIDING CHARM.

WE observe that the bicycle dealers are given to speculating and debating very seriously whether wheeling is a fad or a recreation of abiding popularity. Every sport has in it somewhat of the nature of both of these qualities, for every sport has followers who take it up as a fad or craze and pursue it so enthusiastically and devotedly that they are perceived by their sober-minded fellows to be daft on it. This is a common manifestation of the human nature that is in man, and of the proclivities and passions which sway him. There is a political parallel in the recurring campaigns, when most of the people of the country permit themselves to become worked up over life-and-death issues, which they discuss and quarrel over, and deliver orations about from early dawn to dewy eve, until election, and then forget all about. Again a reading fad or craze seizes the community, and thousands take to reading "Trilby" or "Quo Vadis," or some like worthless trash, for no better reason at all than that everybody else is doing the same thing. Human nature is as prone to fads and crazes as a herd of cattle to stampedes in the night. In these later days we have had archery and lawn tennis and wheeling manias just as in old time they had dancing manias or went on crusades to the Holy Land.

The sports of shooting and fishing also have their imitative followers, who take up the rod or the gun because it is the thing to do so, or because, by adopting the outward forms of the sport, they think to experience the gratifications and rewards which they see enjoyed by other people. Whether or not one shall remain a wheelman or shooter or angler depends altogether upon what he finds in it, what its rewards are to him individually, and whether he actually proves for himself the genuine and lasting pleasures each affords.

The hold that shooting and fishing have on the sportsman is due in a measure to this, that in their very nature these pursuits draw one away from his every-day familiar scenes, and conventional routine and surroundings, and give him something fresh and new to see, to breathe, to smell. For when one goes into the woods everything contributes to the novelty and freshness and gratefulness of the surroundings—landscape and foliage, the sunlight and the shadow, the glint and shimmer of the light on the water, the fragrance of the forest, the woodsy odors of bark and moss and shrub and mold.

No man can be an angler who does not actually in some degree enjoy the practice of angling. There are, of course, tens of thousands of unfortunate individuals who care nothing about taking a fish, and never could bring themselves to care for it. An angler must be born, as Walton said; he must have within himself the latent possibility of an angler's enjoyment in the art, though for years it may lie latent and unsuspected. Without this, though he follow the sport as a fad and according to rules and regulations, providing himself with every equipment of the sport, and acquiring skill in its practice, yet the essence being wanting his participation will cease with the passing of the whim. It is the same with shooting; the imitative sportsman is known to all of us; the man who shoots because it is the correct thing to shoot, who seeks to kill game that he may kill time. He who follows field sports in this fashion rarely has an eye for the things in nature which delight and lure on the genuine sportsman; the satisfaction of unraveling the intricacies of a baffling trail is wanting in his experience; he never finds the exultation of success in a difficult cast or shot; in short, those very elements are denied him which give lasting interest and charm and fascination to field pursuits.

Every sport then may be reckoned as at some time or other in its development a popular fad, whose recruits will stay in it to become veterans or will shortly abandon it for some new fancy. Whether or not they shall continue the pursuit will depend altogether upon whether they shall find in it that gratification which comes of something besides going through the forms. Monkeys have been trained to imitate the ceremonial ways of man, but no monkey ever got beyond the imitating from a purely monkey point of view.

As shooting and fishing, of all outdoor sports, have in them the richest rewards for their followers, so are they the most enduring of popular recreations. Count up the fad sports; the list is long or short, as you may be old or young; the older one may be the more crazes can he recall; but no man's memory runs back to a time when shooting and fishing had not their followers; nor will that time come, to put it in the old, old formula—while the sun shines and the rivers run to the sea.

NO PERSONS.

THE Legislatures of most of the States will convene next winter, and game law amendments will be the order of the day. It would be an excellent plan in nine of every ten States to undertake the task of converting the existing statutes into harmonious, consistent and intelligible laws, without attempting to change the actual intent of any of the provisions. To bring order out of chaos would be an achievement in itself. Game and fish legislation is often slovenly, stupid and ridiculous as English composition.

Here, for example, is a specimen piece of blundering in the New York woodcock and grouse clause, relative to the lawful number which may be killed in a season. It was manifestly the intention to prescribe that no person shall kill more than thirty-six birds in one season—though whether it was intended that the limit should be thirty-six woodcock and grouse, or thirty-six woodcock and thirty-six grouse, there is no way of finding out. But the law reads: "No person or persons shall kill, catch or take alive more than thirty-six of the above-named birds, under the above provisions, in any one year." That means that only thirty-six birds may be killed in a year; this is the legal limit for the State of New York. After the first thirty-six woodcock and grouse, or woodcock or grouse, shall have been killed, it will be unlawful for any one to kill another bird. This is the English of the law, and is what it says, but is not what the Legislature intended it to say. In effect, the "persons" provision will be a dead letter; and each "person" will be permitted to take his limit.

In fact, there will be no way to prevent a shooter from exceeding his limit. The law is one which cannot be enforced under existing conditions. The only method by which such a limitation could be made practically binding upon those whose conscience might not provide the required restriction would be in a system of individual espionage of every man with a gun. Without a game protector to accompany him in his outing, the shooter himself alone—and no one else—knows how many birds fall to his gun in a season.

SNAP SHOTS.

If the American fisherman can get away from business to improve the angling opportunities afforded by this continent, he may enjoy a wonderful variety of grand fishing. Mr. F. H. Burton, whose tarpon prize in Biscayne Bay, Florida, was recently illustrated in our columns, has now returned from the Grand Discharge, where he has been taking ouananiche on a 6oz. fly-rod.

Shooting mishaps may be classified under the general divisions: (1) The man target, shot at by the hunter who thought that it was game. (2) Didn't-know-it-was-loaded. (3) Bunglers. (4) Fence, boat and wagon, usually the gun pulled muzzle foremost toward the victim. (5) Unaccountable, unforeseen, purely accidental and not to be provided against.

The Sportsman Tourist.

Calamity.

"SEE the calamity!"

The exclamation came with a shout from an irreverent small boy that did not know he was "hooting at" the minister and one of his chief supporters, meekly and gladly following the example of an apostle.

Calamity is a name more or less locally applied to a two-wheeled canoe cart, towed behind a buggy, on which in this case bounced a crate folding canoe and a bundle of blankets; while in the buggy bounced ourselves and the grub and kit. Literally bounced, for the road was rough and the horse of the kind that makes a long road short.

Twenty-eight miles that morning found us hailing Uncle Solomon before midday for stabling for the horse and transportation for the dunnage over the remaining eight miles, six of which was tote road, to the lake.

A hearty host and a hearty meal are good companions for hungry travelers, but we lingered little, desiring to be far on the way to camp before long shadows fell.

That team was a queer combination, if we include the load. A preacher and a tinsmith, crate canoe and camp outfit, pulled by a contrary horse which was driven by a member of the State Legislature, for such was Uncle Solomon.

For two miles all went smoothly, the smooth road extended that far; then we turned to brooks and rocks, logs and stumps, mud and mire. Patient Uncle Solomon managed the balky horse finely until half the distance was passed, when the beast thought he had been bossed long enough, and cut short the matter by running against a rock of forbidding height, with the result of breaking the shafts and spilling the load.

Uncle Solomon wisely determined to go home horseback. We unwisely determined to carry in the rest of the way.

Now, that road was crooked and branched in many places. We did not know, until experience proved it, that Uncle Solomon had taken us on to a wrong branch of the road.

Everything was awkward to carry. We had said in our might, "Bother the horse," but he had bothered us instead. All the fun was in prospective; the only realization just then was the sweat of our brows as we slumped and stumbled along. That was an elastic road. It stretched out.

Just as shadows were merging into blackness, we caught sight of water where we did not expect it, and turning away from the trail, found ourselves alongside of a small duck pond, through which the outlet of the lake we sought flowed; but that lake was miles away.

Heavy clouds were sweeping over the sky, and rain was beginning to fall. Fortunately we had struck the pond at a clearing made by the wangan camp of the spring river drivers, and a pile of camp wood and the tent poles they had left made it possible for us to be quickly sheltered and enjoying a rousing fire, while we prepared a hearty supper.

Fifteen minutes' work took all the roots and stumps out of our bed, and we cut brush enough and dried it piece by piece in the fire, to make a comfortable shakedown. You don't catch experienced campers rolling and twisting in discomfort all night unless they are beastly lazy.

It rained all night, but we did not know it until the next morning. From the time that Ad. blew out the lantern until daylight we were in sweet, restful oblivion.

To stretch the canoe, joint the rods and paddle to where the stream swirled into the lake was but a few minutes' work. How the trout did bite! A dozen satisfied us for the present, and they were hardly done swimming in water before they were swimming in pork fat, with just enough butter added, as they were nearly done, to brown them.

Glorious fire, sheltering tent, delicious trout, A1 coffee, huge appetites. What a combination!

After breakfast the tent came down and we prepared to go up stream. A flat-bottomed folding canoe, but 12ft. long, is not much good to pole up rapids, as we found out by experience.

The first plunge we tried succeeded in plunging us head first into the deep pool at its base, from which we were compelled to rescue fry pan and kettle by diving for them. The grub firkin and bedding floated.

As the stream came down too much to permit us to go up in the canoe, we found the driver's path on the right bank and carried for half a mile. From here all was easy. We passed over one lake, then through a thoroughfare of dead water, and found ourselves at last where we had expected to be last night, in the old log camp near the spring brook. This camp was sheathed with splits and had a shingled roof, almost a palace in a wilderness.

After a day of successful fishing and a night of rest, the longing to explore came upon us, and we determined to run the stream and lakes to Chase's Mill.

A late start brought us to the original duck pond just in time to see a buck of respectable size taking his bath and lunching on the tender weeds along the water's edge. Before he saw us we had drifted so near him that he stood astonished for an instant and then, telegraphing his heels that the case was urgent, my! how he did make the water fly!

Just below the pond we found rapids down on a line until darkness compelled us to camp. This was easily done, in a beautiful thicket of fir and cedar, intermingled with white birch. The lantern gave us abundance of light, and the little axe quickly provided for our comfort.

Thanks to the man who invented the baker tent! Stripping off our wet clothes, we donned the dry undergarments that common sense had brought along, and while we slept the fire warmed us and dried our clothes.

Three miles more of navigable stream, from which we picked out many a fine trout as we passed along, then we took the last plunge into Rockabema Lake and swinging to the landing prepared dinner. This lake has some large trout in it. We had no bait pail, but packed the trout already caught in the firkin, and with the dip net caught a host of red fins and silver chub from an eddy near by. Putting the little fellows in the fish basket, we fastened down the cover and laboriously towed the basket to a good fishing ground some distance from the inlet.

"This is a good place, Ad. Give me a bait."

Ad. pulled up the basket, opened it, and looked in, also looked blank. Every shiner had gone out through a strap hole.

"Calamity. Calamity!"

We got more bait, and also some fine large fish to make the string look big when we showed off at home, then ran the remaining two miles of stream; hired conveyance across seven miles of country to Uncle Solomon's, hitched up the frisky horse, and started in the darkness for our distant home.

The first mile was all down hill. The horse was hard bitted and we let him go, with the result that at a particularly hard jounce the pole of the calamity broke short off and flop went the contents of the cart.

Did some one have an experience like this early in that vehicle's history? And was that the origin of its present name?

Yankee grit came along just as that pole came off. Luckily by the roadside we found a crotch that lashed into place on the cart and made as good a pole as heart could wish.

Our calamities were ended, but not our ride. The reflector lantern gave us good command of the road. The anxious horse drove better and better as he neared his stable; good companionship shortened the hours.

The last experience that night was to rouse up the cook and give order to:

"Have some of those small trout fried for breakfast, sure."

KTAADN.

The Colonel.

IT is over.

In the ripeness of time he has passed away to the happy hunting grounds.

He was eighty-five years old when he died, they tell me, but who would have thought it? So strong was he, so upright and so active to the very last moment, when the works of that most mysterious of nature's workmanship, after eighty-five years of unceasing motion, suddenly stopped and refused to move further.

And the old-timer has made his final bivouac to awaken no more until the dawn of that fairer day.

We laid him to rest in the place of his choice, beneath the wide-spreading branches of a venerable live oak, on the very spot where, two and sixty years before, he had stood rifle in hand and faced the murderous Mexicans throughout two long bloody days, in defense of the helpless babes and hearthstone of his neighbor.

He had seen life. Yes, there was nothing left in the pitcher for him to drink when it was broken at the fountain.

He had hunted the buffalo across the plains of the mighty West when they were as thick as the leaves of the forests when the autumn frosts have stripped the trees of their summer garb.

He has lassoed the flying mustang, and stalked the good red deer, with no one to dispute his lordly claim save the savage red man of the plains.

He had been hunter, scout and guide when the white-winged fleets of prairie schooners navigated the pathless plains, long before the civilizing bands of steel had heralded the onward march of progress across the trackless wilderness.

He is an honored figure in the panorama of his country's history, and while no braggart, he loved to take down from his scant shelves a certain history from Bancroft's pen wherein the great writer pays him a glowing tribute as a soldier and patriot.

He was a hunter to the last.

How often, by the glow of the cheerful camp-fire, have I listened in wrapt silence to the quaint and simple stories of the past as they fell from his lips. It seemed like an echo of the ghosts of the dead this listening to living words of history, of times almost as remote, in point of progress, as the crusades from the reform.

It sounded so strangely weird and unusual, those tales of the days when the telegraph and the telephone existed only in the dreams of the inventors; when it took six months to cross the plains; when the cap and patched ball were the pride of the hunter's heart, and the flintlock still held an honored place in the affections of the woodsmen.

He had kept a kind of diary of the more exciting portions of his life, and a short time before he died it was my fortune to prevail upon him to give me the collection of dingy scrawls, a precious heritage to the lover of old portraits of the past. I am going to cull those portions that I deem of most interest to the readers of FOREST AND STREAM, and they shall be the subject of future sketches.

As an index to the old Colonel's daring nature, I will narrate an occurrence which happened a short time before his death.

He owned a plantation about a dozen miles from town, and was in the habit of spending much of his time there, as it was on the borders of the San Jacinto canebrakes, the best place in the whole country for hunting. He had a pack of about twenty dogs, and half of them followed him around wherever he went. One day the old man started back to town, attended by a single servant and the usual retinue of dogs. While riding through the bottom the dogs struck a fresh trail, and he could not resist the music of their baying, so, urging his old mule to a run he followed, with the negro boy at his heels. After two or three miles' chase the hounds brought the quarry to bay in a large moss-festooned live oak.

Dismounting, the Colonel managed to locate the object of their ire in a crotch of the tree about 20ft. from the ground; it was a big panther, one of the fiercest brutes that infest the Texas forests. He was in a quandary as he stood there looking the grinning creature in the eyes. He was without arms of any kind, and the negro had nothing of an offensive or defensive nature save an old spring back jack-knife, and that would be of little use against the cruel claws of one of the most active of animals.

However, he could not stand letting the beast get away without something of a brush, anyhow, so cutting a long sapling the old man split one end, and by means of buckskin thongs, cut from his saddle, made the jack-knife fast in the cleft, thus forming a crude spear. He then ordered the negro to climb up the tree a few feet within reach of the panther and punch him out, but Sambo claimed he could not climb "wuth a cent." The Colonel threatened him with his whip, but terror stripped it of its potency to enforce his master's commands, and he protested that he dared not go where so brave a man as the "Kunnel war 'fraid to go."

This was all that was required to bring the Colonel's dander up to the right pitch, and shinning up the tree as lively as a youth of twenty, he gave the panther a vicious jab in the neck with his rickety spear.

Now, according to the Colonel's knowledge of the animal, as a well-behaved, gentlemanly panther, and according to his calculations and expectations, it should have jumped among the dogs and fought a battle royal for life and liberty, or succumbed gracefully to its fate, but it is always the unexpected in life which happens.

The panther turned loose all holds, and came down upon the astonished Colonel like a bag of bricks.

The Colonel, taken by surprise and at a disadvantage, let go his grip on the tree, and they hit the ground on the same spot.

Had the Colonel been alone, I fear me there would have been little more to tell, but the dogs were there, old Tige, Hector and Tip, and a dozen others of the younger members of the tribe, the doughty champions of a hundred fights, and while they loved their master well, their untutored canine hearts were too doggily bred to stand back and look on while he was having all the fun to himself. So when he and the panther struck the ground the yelling pack arrived on top, and those that could not find a place to grab hold of the panther grabbed each other and their master.

For about thirty seconds everybody was happy, and the air was filled with fur and scraps of clothing, and profanity, but after a while the Colonel managed to turn loose and withdraw from action, a sadly demoralized and much scratched combatant.

As for the faithful Sambo, he suddenly bethought himself of his wife and babes and growing crops, and left for home.

In the meantime the fight was on, all rules disregarded. The varmint tried to get back on the tree, but could not climb with his wonted ease while handicapped with about fourteen hundredweight of dogs linked to him like a string of sausages, so he became resigned to the inevitable and concluded he would as leave fight anyway.

The scale of battle swerved up and down on either side, now it was the dogs and now the panther that would be on top of the revolving mass. Presently old Tige, the Colonel's pet pup, withdrew, one of his ears had vanished and a major section of his scalp was pulled down over his eyes. He would fight anything on earth he could lay his eyes on, the Colonel said, but it was a mean trick to render him hors de combat by blindfolding him with his own hide, and the Colonel could stand it no longer, especially as Tige's discomfiture seemed to have its effect on the younger dogs.

Taking his heavy quirt, leaded at the butt, the Colonel wound the lash around his waist, and drew close to the fight to watch for a chance to get in his work. Then the panther turned up on top, and the old man let drive with all his might, but unluckily they reversed just at the wrong moment, and the mighty blow fell across the spine of Tige's only living son, and the spine gave way with a snap. But he was more fortunate the next time, and managed to plant a disabling blow across the creature's hindquarters, which paralyzed its use of the terrible hind claws, and the dogs were not slow to recognize their new ally and take advantage of his work, and so after a few moments' pounding with the quirt and mauling by the dogs, the brute became quiet enough for the Colonel to cut his throat.

And then the procession wound its way sadly townward; the Colonel, as he afterward put it, looking as though he had taken a trip through one of his own cotton gins, and the dogs were minus most of their ears and skins.

The panther was one of the largest I ever beheld, and few men would have cared to tackle the ugly thing even though backed by a dozen dogs.

I have the Colonel's memoirs of the more exciting incidents of his lifetime. He placed them in my hands to satisfy a desire on my part to read something of the frontier in early days, and after his death his son kindly permitted me to keep them, knowing the liking the old man had taken to me.

He had been the friend and companion of John C. Calhoun, had fought a duel at the age of seventeen, and killed his man, and in consequence had been forced to fly to the then wilds of Texas, and had taken an active part in the stirring incidents of Texas history, as well as played a glorious game of cunning and skill with the beasts of the woods and the plains.

He was the friend of Crocket and of Bowie, and together they had roamed the plains when the buffalo and the mustang was as plentiful as the leaves of the forest in autumn time, and had lerned woodcraft from the cunning red man, the children of the woods.

And so the last of the old-timers is gone, and we will soon have to look to tradition alone for our tales of what has been.

DAVID LLEWELLYN.

TEXAS.

Thorns vs. Tacks—"I refuse to give you money with which to purchase a wheel," said the stern parent. "You are a thorn in my flesh."—"And you," replied the disappointed youth, "are a tack in my path."—Chicago News.

Yukon Notes.—IX.

Winds and Waves.

LAKE BENNETT occupies a fiord-like cleft in the mountains running due north for the first twelve miles, and then turning almost at right angles to the east. Just beyond the angle in the lake the West Arm enters, though, as in the case of the Taku arm of Tagish Lake, the arm is really the main lake by right of size and conformity to the general direction of the lake basin. The Windy Arm of Tagish is perhaps more honestly entitled to be called an arm, though it does not appear to have any exclusive monopoly of the winds over the other channels of the mountain lakes, Bennett and Tagish. These lakes and their bifurcations are mountain troughs, serving as funnels for the wind, and in the passes of the Coast Range the word wind means something more than is generally understood by men who were not raised over cyclone cellars.

It means a force that shoves and boosts, that carries a man along like a chip on a mountain torrent till an eddy is reached and then whirls him round and round and tosses him in a corner flat, breathless and devoid of the conceit that comes with the ability to walk on two legs. Perhaps the bather who has been buffeted by the surf on a rough day can realize better the hold such a wind has on a man.

It pulsates like the billows of the ocean, and when the rush is greatest one might as well try to stand against a cataract of water.

In Chilcoot Pass last winter we were repeatedly knocked down by the wind, and it was there that I got my full and realizing sense of its power. On the lakes, when frozen, the ordinary winds are sufficient to move heavily loaded sleds, provided with sails, over a surface that is anything but smooth. When it blows a little harder the sledgers have to look out. McNeally, the venturesome leader of the men working their way down to Dawson over the ice, was out one day without a sail when Boreas let out a few extra notches in the wind, and man and sled were whisked up and carried away. McNeally had the sled tied to him or he was in harness and could not get loose, which amounted to the same thing, and for a while he thought his checks had been called for, as he was being carried rapidly toward a part of Lake Bennett which was still open water. Fortunately a little stony island intervened, and he managed to throw the slight of the sled rope over a rock and so checked his dangerous course.

Shipwrecks before the lake closed were of hourly occurrence. Scarcely a party succeeded in crossing without swamping and damaging their supplies. The boats, as a rule, were overloaded. The builders had little idea of their carrying capacity when knocking them together, and when the time came for loading no one would hear of leaving a pound of the outfit behind, no matter if the gunwales were awash.

A popular young fellow, athletic and handsome, named McManus, and a Russian who was a member of the same party, were drowned at the time we crossed Bennett. In all we had personal knowledge of six other cases of accidental drowning, and heard rumors of a great many more.

A Lesson in Rowing.

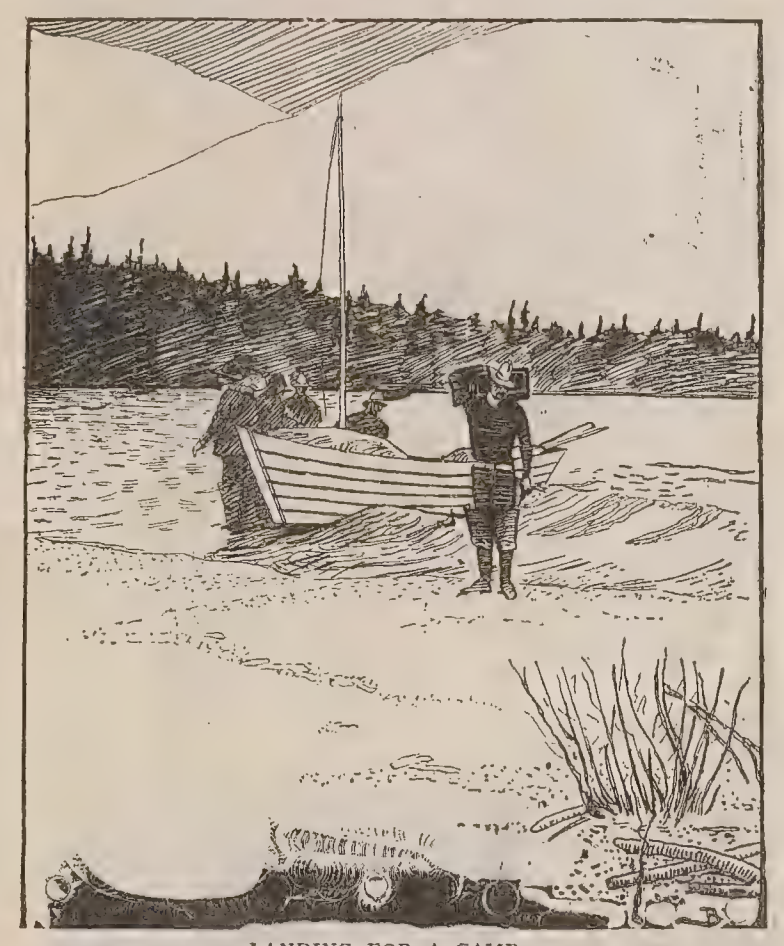
The morning following our midnight experience with a gale we were on the water again at 6 o'clock. The wind had abated and the lake was comparatively smooth. We tried sailing for a while and Mac got along fairly well until nearly noon, when he drifted on a lee shore again. The wind had died away almost entirely, and there was nothing for it but to row. But here there was a hitch. Mac knew no more about rowing than he did about sailing, and he had two boats to propel, which for a beginner is about twice as hard a task as rowing a single boat. I think he could have managed from the start with only one boat, but the rear boat of the tandem gave no end of trouble. Following in the ground swell, it had an aggravating way of running ahead diagonally at the most inopportune times, jerking Mac's boat around at right angles with the course he wished to pursue, and tangling him up hopelessly at times. It was no uncommon thing for the two boats to be lying side by side pointing in opposite directions, with Mac in a brown study over the problem, which on paper would have been plain as day, but which for practical solution required the cultivation of hand and eye, which is second nature.

In a matter like this training is everything and advice and theory of the smallest possible value. Realizing this fact at length, we hit upon a plan which gave Mac the help he stood in need of, and by means of which he soon mastered the elements of rowing and managing a second boat towed astern. We made our four boats fast in single file as the night before, mine leading and Mac's following, and after I got them started Mac dipped his oars in and for a while tried going through the motions of rowing without pulling hard enough to throw his boats out of line. He soon gained confidence, and before long he was doing half the work of propelling our little flotilla. Occasionally his boat became unruly, but fastened as it was I could easily jerk it round into line, and for the first time since starting our rate of progress was satisfactory.

Mac had plenty of aptitude for outdoor life, and it only required a little coaching of this kind to make an oarsman of him. Down at Fort Selkirk one day in November he fired his rifle for the first ime, and in a few hours he had killed three or four red squirrels with half a dozen cartridges.

At nightfall we turned at right angles with our former course around a rocky promontory, and found ourselves in the main part of Lake Bennett.

A pall of fierce, black clouds was rapidly approaching, carrying in their wake as we soon learned wind and snow, and it was highly desirable that we should gain some shelter before the storm broke. Nothing in the nature of a harbor was visible, but before we had a chance to become very miserable at the prospect we espied, just astern, the tiniest kind of a bay—Mac called it "a dent in the rocks"—and into this we steered as night settled down and the snow began to fly.



Never was a harbor of refuge more welcome. The little bay had an entrance less than 100ft. in width. Across this we stretched an inch cable, making it fast to rocks at either end, and at intervals we tied the boats to the cable. The Indians had had some kind of a fishing station here, and there was a space leveled off on shore just large enough for our tent. Firewood was not lacking, and as soon as we had finished our preparations for the night we had a rousing good supper, rolled oats, hot biscuits, horse meat, bacon and brown gravy, stewed peaches and tea. We also started some beans for another meal.

Horse Meat on the Bill of Fare.

Perhaps the horse meat needs explanation. In cold type the thing seems to need defense. To men who had seen all the brutality and suffering of the trail the idea was at first repulsive to a degree. Death came to the poor animals in horrible form, and the mute evidences on all sides were not conducive to a sharpened appetite.

It came about in this way: Herrington went over to Shallow Lake one day to try to collect a debt owed us for freighting, and stopped over night with a man named Kline. Incidentally Herrington has since joined Kline's party.

At supper he had some savory steak, juicy and tender, which possessed a characteristic flavor that, while it was grateful to the palate, proved conclusively the article did not come from any of the sources commonly called

LANDING FOR A CAMP.

The typical Yukon boat is a craft 30 or 35ft. over all, made of whipsawn unseasoned planks. It is commonly built lap-streak and the seams caulked with oakum and daubed with a line of pitch a couple of inches wide, giving the boat a striped appearance. Square sails are generally provided, and from two to four sweeps for rowing, and a long oar at the stern for steering. At nightfall the boat is beached, the cargo taken out and cached on shore above the reach of waves, and camp made. In many cases last fall tents were not pitched. The night was divided into watches, with one man constantly on the lookout for storms or thieves, while the others of the party stretched themselves on the ground around an enormous camp-fire, which was kept blazing brightly all night.

upon by the butcher. Herrington decided it was venison, and the conviction made the meat taste the nicer. He was loud in his praise of the steak, and Kline and Cusick and the others were evidently pleased at his appreciation, but in one way or another they managed to turn the conversation to other channels until after the meal was over.

When they told him what he had been eating Herrington felt almost as badly as if it had been crow or turkey buzzard. The laugh was on him, and he wished the meat and what he had said about it were both in the oblivion from whence they had originated.

But the words could not be recalled, though Herrington avers in his present condition the meat very easily might have been. A moment's reflection showed him the only thing to do was to bluff it out, and so he redoubled his praises of the dish.

He not only did this, but he also inveigled me into eating some of it the following day, and then together we foisted the meat on the remaining members of the party. The upshot of this matter was that after the first qualms of outraged confidence were over we all were obliged to confess that the meat was good—far superior to the stringy ox meat of the trail. We procured part of a hindquarter and loin, and for several weeks horse meat was one of the leading items of our bill of fare.

Mr. Kline had slaughtered a fine young horse in first-class condition, especially for food. He had no ailment and was properly bled and dressed. There seemed to be no reason why such meat should not be good, and as a result of eating it I have come to the conclusion that prime horse is one of the best of meats.

Long Working Days.

I am giving in detail a diary of our movements at the start, not so much that they are worthy of record as because they are typical of what other people were doing. Every man leaving in October knew that he must work night and day if he could hope to reach the gold country before the Yukon closed, and work days of twenty-four hours like ours at starting were not uncommon. I talked with one party of three men who had rowed and sailed without rest from Bennett to Marsh Lake, nearly seventy miles. They had had unusually good luck in making time, but had been more than two days without sleep.

After our first twenty-four hours of work Mac and I had three hours' sleep. The second day we were in our boats twelve hours and had about eight hours' rest. The third day we rowed all day and till 3 o'clock the following morning. It took us till 6 A. M. to care for our boats, pitch camp and breakfast, and we were up again at 10 A. M.

A mail carrier coming up the river from Dawson in a canoe propelled by two Indians sighted our boats, anchored in front of camp, and because he knew the Mounted Police had some canvas boats inferred that we must belong to that body. He had mail for the police and he hailed us from the water so long and persistently that at last an impression was made on our numbed senses and we awoke. I went down to the water to see what the man wanted, and he began inquiring for Inspector this and Sergeant that. It dawned on me that he had broken our precious rest through a blunder, and I grew hot under the collar. The mail carrier had an inflated bossy way that was riling, and I wished for a good ripe rotten egg to throw at him. Unfortunately eggs of any kind are scarce and costly on the Yukon, but after I had talked to the man awhile I felt more comfortable, and it is just possible that he learned there are other ways of locating a police camp than by green canvas boats. A fellow who has rowed all night is apt to be a little cross when he is waked for no reason and asked fool questions by a man who acts as if he owned you and was boss of creation besides. While we were making preparations to start Mac pointed out a diving duck in a little bay just below our camp. A rifle was at hand, and taking advantage of the moments when the duck was under water I walked out on a sand spit to within easy shooting distance. I fired and the bullet hit the duck, carrying away part of its neck and chest. It had seen me and begun to dive, and despite the terrible wound it actually got under water, and for a second it looked as if I had missed, the next moment, however, the duck was floating helplessly on the surface. Ducks were wild along the Yukon last fall, and were no easier to shoot than elsewhere. They were kept continually on the move by passing boats, and most of the shots offered were at long range.

Chance Meetings.

A number of little things about the boats required attention, and it was two in the afternoon before we got off from our Caribou Crossing Camp. It was a beautifully calm afternoon, and we set for ourselves the task of getting beyond the Windy Arm of the Tagish.

As we rowed along we found ourselves in company with half a dozen other boats, each carrying a crew of five or six men.

In one of these boats was Fred Simpson, of Mission San Jose, Cal., the man who carried 1,700 newspapers through to Dawson, from which he cleared about $1,200, selling most of the papers of a date six weeks back for $1 apiece. The next time I saw Simpson was on a dog sled on the frozen Yukon near Rink Rapids in January. He was traveling with one of the members of the Canadian Provincial Legislature from Maple Leaf, Alberta, and had sprained some of the muscles of his foot, so that he could not walk. Later, by the merest chance, I traveled from Skagway to Seattle on the same steamer with him.

In another boat was the Myers outfit, from Rochester, N. Y. They had passed us at our dent-in-the-rock camp, and the following morning were destined to rouse us from much needed rest, much as the mail carrier had done, only in their case we felt no ill will, as it was the occasion of a hearty good-natured greeting. Mr. Myers told us that his party had bought canvas boats for the descent of the river, but discarded them when they saw the rough water of Lake Bennett.

We crossed Lake Nares, and passing through the connecting stream entered Tagish. It was an ideally tranquil scene that met our gaze. The low land at this end of the lake is well wooded with brilliant green forests of fir, spruce and pine, which, with the towering mountains behind, were reflected in the Swiss blue waters of the lake. On a yellow beach of shingle boats were drawn up here and there, and men were walking to and fro, some carrying stores or supplies ashore, some pitching tents, others caching the cargoes above high-water mark.

Columns of smoke ascended among the trees, and from time to time we heard rifle shots from the eastward, where no doubt some one had found a flock of grouse, interspersed with the sound of chopping from all directions or the fall of some tree destined for fire or bed.

Some one on the nearest shore called out that there was a good camp site near by, and advised us to land. The thought of a hot supper and pleasant bed was enticing, but our work was laid out before us, and we did not turn aside.

Hour after hour we rowed, while the sound of camp life gradually subsided till presently there was no other sign of life beneath the full round moon except occasional camp-fires on the beach.

A breathless calm enveloped us when we passed the Windy Arm. The only ripples breaking the silvery expanse were those made by the passage of our boats. The night was eerie, and we tried to penetrate the distance, which limited our vision, and discern if somewhere there was not a trap set for us, some ambush of wind and wave, cunningly devised for our destruction.

We could find no good bottom for our boats or suitable protected bay for anchoring them, and it was well along toward morning that we finally found a slope of clay and beached them near the spot, I believe, where Henderson murdered his partner.

That was an atrocious crime, loathsome in detail and cruel in execution. The miners fastened the murderer to a tree with a long chain until he was turned over to Capt. Harper, who happened along with a detachment of Mounted Police bound for Dawson. The dead man and his slayer were put in the same boat, and it is recorded that living and dead lay side by side on the bottom, the murderer sleeping and evincing no sign of regret for his deed.

In January I saw Judge McGuire at the Little Salmon River. Henderson's case was one of the first that would be brought before him after reaching Dawson. He said that he hoped he would be relieved from trying him, and thought it likely that justice would soon be meted

out by a higher tribunal, as the man was "rotten with disease," and only had a short time anyhow to live.

How Storms are Brewed.

The Taku or Big Windy Arm of Tagish is estimated to be thirty miles in length, or nearly twice as long as the so-called lake. It runs between bare walls like ranges of limestone which are absolutely devoid of vegetation, and which are appallingly steep and lofty. Looking at the sheer descents one holds his breath and imagines how it would feel to fall from the summit down into the absymal voil below.

While looking at the mountains an irrelevant incident occurred to memory that had no connection whatever with the Yukon. In one of the New York shooting galleries those present were discussing the case of a man who had fallen from a high factory chimney, breaking through scaffolding and glancing off house roofs in his descent. When found the man was still conscious and had strength to ask how far he had fallen. Bubb Rosenbaum, who won high honors at the recent National Schuetzenfest, in a moment of quiet that followed remarked, "If that had been me I'd have asked the distance to the nearest morgue." It takes an original genius to find humor in matters that terrify the average run of mankind. To me there is nothing more frightful than the nightmare idea of a fall from some great height.

Our worst forebodings of the night before were realized when we came to cross the Taku Arm. We were favored by quiet water until nearly across, when of a sudden we heard a noise in the distance like an approaching railroad train. Far off, next the horizon, an inky line appeared. The surface of the lake began undulating with a ground swell, which momentarily increased till before we fully realized its import our boats were tossing in a wildly agitated sea. We were directly opposite the Arm and on a lee shore, and to cap our troubles a snow squall came up which, combined with the approaching night, completely blotted out from sight the shore.

In less that five minutes from the time we saw the first indications of storm, or rather heard them, the white curling waves were washing completely over our decked freight boats, which appeared to be more under water than out, and we were drenched to the skin by the spray.

There was only one way of escaping the waves, and that was to row across the lake to the lee of the point, marking the northern boundary of the Arm. The further we continued on in our present course the rougher the water threatened to become, and a retreat was out of the question. The lake is nearly two miles wide at this place, and our only guide for the greater part of the distance was the wind. The water was a tumbling, scathing chaldron, the waves apparently coming from all directions at once, instead of in regular swells, and as we could see no landmarks we had to depend entirely upon the wind for direction, keeping our course according to the angle at which it struck our cheeks and backs.

The most soul-harrowing part of the performance was the way in which the freight boats acted, at times jerking back as if they would pull the stem and stern pieces of the combination out, and at other times running ahead as if intent on ramming the towing boats and sending them to perdition. One had to be constantly on the alert to meet the blow when it came. This was accomplished by throwing the leading boat a trifle sideways, so that the rear boat would not hit squarely, but glance aside.

I felt for Mac, and gave him what encouragement I could. It was a hard experience for a man who knew nothing of the water.

The latter part of the time we had a beacon light to guide us. As the snow began slackening we could see the fitful flashes of a camp-fire on the shore we had left, and this gave us a good stern mark to row by.

Eventually we ran into a little cove with gentle lapping waves, and soon after located a small stream, giving us an ideal landlocked harbor. To reach this we had to jump overboard and wade and tow our boats through a narrow channel in a bar 50yds. or so out in the lake, and when we reached the stream we had to break ice that would bear our weight before we could get the boats in.

When they were tied up to the bank we felt we could sleep easily in the assurance that they were perfectly safe from wind and wave. As the snow was again falling heavily we carried our tent ashore and pitched it a few yards back from the boats.

J. B. BURNHAM.

Ransacker's "Bees."

ST. AUGUSTINE, Fla.—*Editor Forest and Stream:* I have a wife who enjoys a streak of real wit as an epicure does an oyster, but who can wade through the funny things (so called) of Twain without so much as a loud smile affecting her stoical face. She hasn't the sporting tastes of her husband and seldom wastes a glance at the numbersome FOREST AND STREAMS that are always lying loose about her, but one evening as we were reading the table began to shake like an infant South Carolina earthquake, and I wondered what was up. I looked at my wife and saw that she was shaking and hiding her face as if ashamed of her weakness.

A new number of FOREST AND STREAM was in her hand, and I asked her what she'd found to do her up like that; but it was some time before she was calm enough to utter "Bees!" I asked her to read it, but she couldn't do it, and handed it to me. I immediately looked for "Bees" and found 'em, and before many minutes had gone the way of all time I was in the same convulsive condition that she was in.

With the exception of now and then a touch in the Pickwick Papers, the wit of Dickens is dull compared to "Bees," and leaving out Bret Harte nothing in our language is spicier, and should such a fountain of wit be shut up in the dull recesses of the Shasta Mountains? Never!

Let Ransacker go out in the world where frolic and fun abound, depict every little incident in his inimitable way, and he will cast the reputation of Mark Twain into darkness that may be felt. DIDYMUS.

Natural History.

Florida Otter Pets.

THAT Florida is a fur-producing State will strike many readers with surprise. Such nevertheless is the case. It is the home of the otter, whose fur is valuable and always commands a good price in the market, quotations on Florida otter skins, cased, ranging from $5 to $8 each.

The otter is a quaint, attractive, cunning and decidedly affectionate little animal. Terrestrial and aquatic, he is an interesting anomaly. In his native haunts he is one of the shyest and most timid of wild creatures. In the domain of civilization he is bold, venturesome and ever ready to investigate and make acquaintance with friends and foes alike. He has a type of beauty distinct and wholly his own. His exquisite glossy coat is a rich seal brown; his face is quaint and winsome. His eyes are small and jet black, and set forward in his head. The nostrils are large and open, and a considerable portion of the muzzle is bare. His ears are small and set on the side of the head, giving him a cunning appearance. The mouth is large and full of snow-white teeth—the front teeth are small and set close to each other; four large tusks and twenty peculiarly shaped grinders complete the set. His whiskers, though not so pronounced, greatly resemble those of the seal. The body is long and flexible, the legs short and stout. The paws have each five toes, with sharp claws, which enable him to dig, climb or hold his prey. The otter when grown is about 4½ft. in length, of which 1½ft. is

THE OTTER'S HAUNT.

tail. The tail is flat and very broad at the base—tapering to a point. The weight of a full-grown otter varies from 20 to 25lbs. The female has young once a year, the number varying from three to five, although instances are known where eight young have been found with the mother. Very little, if anything, of the habits of the Florida otter is known to science. Every effort has been exhausted in attempts to collect useful data on the character of this artful little denizen of the swamps.

Florida is the natural home of the otter, but like the American bison of the West, and the alligator of the South, he is fast being exterminated. In the swamps of the Everglades, where few but the stealthy footed Seminole wander, he is still found.

For years it has been an ambition to possess a pair of these animals, in order to study the habits of so timid and wild a creature. All the trappers of the section had been solicited for their aid, while the Seminole Indians, who know every nook and corner of the great swamp, have been untiring in their efforts to obtain a pair of the young, word frequently coming from the chief, "Me hunt, hunt. Little otter no find. Little boys hunt; no find."

After many efforts two very young otters were secured, but of such a tender age as to render it necessary to rear them by hand with the bottle. As soon as they passed the infant stage, when they ate and slept, and slept and ate, they became a continuous study, developing into most interesting pets, showing quickness and affection both surprising and gratifying.

The study of these little creatures, fresh from their native haunts, and whose wild instincts for countless generations have been affected by no human influence, has resulted in many interesting developments as to their character, intelligence and acute perceptions.

Scarcely possible would it be to find a more playful animal than the otter; he is never still except when asleep, but is ever rolling, tumbling or chasing some moving object. Occasionally this rollicking pair have been allowed to come into the house, when the spirit of discovery has displayed itself strongly. Curtains and rugs would be investigated, and buckets and pans thoroughly examined. Their love for bright objects was one of the first characteristics observed. A silver dollar was a delight; picking it up in his mouth, the one would carry it away, the other closely following until a quiet nook was reached. Lying on his back, with the silver piece upheld by the forepaws, he would chirp and chatter over it like a playful child, the mate dodging and tumbling, awaiting her turn at the coveted plaything. After playing until they were tired, they would seek the fur rug, twist and turn upon it for a while, then like a restless, nervous child, gradually grow quieter and quieter, until the little black eyes would close. A few more turns and rolls, a few more nervous quivers, and the young otters were asleep, as limp and unconscious of the surroundings as if they were dead. As drowsiness came on each would hunt a paw, and the two otters, curled into a circle, sucked their paws and dreamt the hours away.

The affection displayed by the otter for his mate is indeed full of poetry. Sleeping or waking, playing or eating, they are never separated. Should one in rolling or tumbling stray away, unseen by the other, quickly the "chirp, chirp," a call only used for the mate, is heard, and the lost one returns, and the rejoicing is as great apparently as if the separation had been for a length of time, caressing, leaping, sporting, into the water and out, as joyous as it is possible for two creatures to be.

The otter is a methodical little animal, and a very cleanly one too. In his domestic state, and especially after a heavy supper, he sleeps late. When all nature is asleep he crawls from his nest, stops to yawn, then a few steps and another long, open-mouthed yawn, till he is fully awake. Into his bath he goes, head first, when he dives and swims, stopping frequently, as if by instinct, to peer out and see that no enemy is near. As his little head is seen above the pool, with the glimmer and gloss of the water upon him, he might easily be taken for a young seal. Coming from his bath, he is miserable and uneasy until he has dried off, which he can do so thoroughly by rolling in the sand, looking in a few minutes so slick and dry that one is surprised. After the bath he is ready for his breakfast, and the grotesque little face appears at the wire-netted fence begging with all the seductive entreaty an animal could show. No other animal, lest it be the squirrel, feeds in such an attractive, fascinating manner. Taking a bite daintily, he throws his head backward and his paws forward, and with an expression depicting supreme satisfaction on his face, shows two rows of white teeth at each movement of the jaw, and chews and chews the most tender morsel as if his life depended upon the proper mastication of it.

Few animals equal the otter in agility and address; his long flexible body is enveloped in a skin so loose that he almost seems able to turn himself over in it. His forebody is like the seal's, his paws are webbed and fitted for swimming, which he does with the greatest celerity. The fur is short, glossy and closely set to the skin, so as not to interfere with his movements in the water, where he displays the greatest grace—floating, swimming, gliding, circling or diving. Encyclopedias describe the otter as awkward on land. Far from it, as has been demonstrated in his romps with the setter dog, where he is quick and agile, and every movement is full of ease and grace. In this he differs from the seal, while in many other ways his physical characteristics are very similar. He can dart or turn himself in the water with as much celerity as a fish, and is therefore an expert fisher. Small fish he eats while in the water, while large ones he brings out on dry ground, where his first act is to break every bone in the body, then beginning at the tail he eats toward the head.

The otter in a domesticated state is easily taught to fish for his master and to retrieve to hand, for in bringing captive fish to shore he is only following his natural inclinations. In his native haunts he feeds on fish, turtles, frogs, snakes and young birds, but in captivity soon learns to prefer cooked food as well as fruits, often refusing raw fish to dine on bread and milk, eggs, cabbage, sweet potatoes, peaches and watermelon or oranges.

In his Everglade home the otter is a lazy little animal; he inhabits some hole in the bank of a lake, generally choosing one which already exists, seldom if ever burrowing for himself. In his domesticated state he has progressed enough to make his own bed, carrying moss, shavings or paper to the spot which suits him best. With the instinct of the woods clinging to him, he continually changes his sleeping quarters, often making three or four moves in a day.

A gentleman of Florida, who once owned a family of otters, says of them: "They played about the house with the dogs, were petted by the children and indulged in all sorts of cunning antics. They were great climbers, climbing for the mere pleasure of it. During the heat of the day they would go off to the lake to bathe and to fish, returning after a few hours."

Frequently they would wander to the field back of the house, and when their owner thought it time for them to come home he would send his dogs after them—otters and dogs playing along the way as they returned. Were any strange dogs to attack the home dogs, the otters rushed right into the fight, making the bravest allies.

The Florida otter, while native to a tropical climate, can endure but very little exercise in the sun, as was learned while attempting to get them in focus of the camera. They were very hungry and eager to go to eating, but could not endure the warm rays long enough to be gotten into position. No amount of force or coaxing could keep them in place, and they would retire to the shade panting and exhausted.

A few years ago, before the hunter and the trapper had made such sad havoc with the wild animals of Florida, it was no uncommon sight to see a family of otters playing along the banks of the Kissimmee River. At the first sight of the boat, down they would glide into the water, occasionally raising their heads above the surface, but so alert were they that the rifle balls passed over them. Some hunters have a superstitious belief that the otter possesses some magical power, by which he dodges shot and ball. Sportsmen tell of the spell of an otter's eyes—a pathos, a tenderness which make gun murderers hesitate. A noted huntsman, after describing the sensation produced by the gaze of an otter's eyes, says: "The otter, I think, hypnotized me,

for I did not shoot, although my impression is that we looked at one another for a minute or two."

In the lakes and streams of Florida are floating masses of tangled vegetation, and just as the sea otter rests and floats on the narcocystus of Asiatic seas, so does the Florida otter ride and float on the matted beds of lily-pads and hyacinths of Florida waters.

"Sliding" is one of the peculiar characteristics of the habits of the otter. When the otters slide is the time when the Everglade trapper is on the alert, for this is the mating season, the time when the animal is bolder and more sportive, and the time too when the fur is at its prime. They never slide at any other time of the year. The sliding is apparently for sport, the "slide" becoming as smooth as glass by the constant use. The otter makes his home on a watercourse whose grassy borders reach back and extend over a low marshy ground, which is thickly dotted with tall lilies, brakes and cypress trees. Here the female builds her nest, so cunningly devised that an old trapper might pass it by many times without any suspicion of its location. A hunter who captured a nest of three young otters describes it as being built in the shape of an Indian shack, made of tall marsh lilies, and so dextrously woven and closed at the top as completely to conceal the occupants within. The inside of the nest was lined with leaves and grasses, from which snug retreat the baby otters were taken, they to partake of a life of civilization and its consequent sorrows, the mother to go through a period of mourning for the loss of her young.

The opportunity to purchase a second pair of these wild and timid little creatures was presented, and with the thought that they might be consigned to a worse captivity we bought them and turned them loose with the first captives. It was a delight to see the affectionate greeting they received—all immediately making friends, biting and licking each other in the most affectionate manner. The imprisonment for a day or two was painful, but at the end of that time they accepted their captivity with as much complacency as two kittens, eating out of the same pan with the older otters. They teased the cat, who considered it beneath her dignity to rollick with an uncivilized creature, and with a blow from her paw they would scamper off, but the next moment would find them teasing and chasing the setter pup. During the first day of their captivity, while yet feeling a mute rebellion in the imprisonment, one of the pair escaped from the wire netted inclosure and hid himself in a keg. Being discovered suddenly, and feeling himself powerless to retreat, he looked up with a pleading, pitiful expression, and as we peered still closer into his face he gave one long cry, so human in its sound, so like the wail of a frightened infant, as to cause every fiber of our nature to pulse with tenderest pity for the little captive.

The jealousy in the nature of these wild animals was always apparent when there was the slightest provocation for it. With each other, it was as with two generous-hearted children, not an objection to the one being petted, but the manifest desire, "love me too." When one was being fondled, with a quickness that was surprising came the coaxing and pleading from the other for a similar attention. Were the cat or the dog to receive too much consideration, very soon came a very different reminder from the sharp little otter teeth that the act was objectionable. Their devotion to each other

READY FOR BREAKFAST.

was indeed touching. When the one received a whipping for some offense the mate sat by crying pitifully, apparently much more affected than the culprit who was receiving the punishment.

With reference to these captive otters the question has been frequently asked: Have they reasoning capacity? Yes, not of the same character as the dog, but they are guided by a keen, quick, artful perception. A dry crust of bread will be carried to the water and softened; a piece of meat accidentally dropped in the sand is quickly washed and carried to a grassy plot before eating.

One of the most pleasing recognitions of their intelligence is observed in the home coming of their owner. It is the custom of the pet cranes, who occupy the large yard, to welcome him with a loud whooping call, at which signal and before he is in view of the otters they fairly leap and tumble over each other in their efforts to reach the south end of the inclosure, the nearest point to the master's entrance to the yard, and a place they never frequent except at such a time. They quickly learned that after the greeting of the birds their owner must soon appear.*

The careful study of the otter has shown what marked individuality he possesses, exhibiting characteristics as diverse as are observed in a group of children. A picture, quaint and always pleasing, may be witnessed many times during the day. The male, large otter that he is, continues his baby habit of sucking his paw—the female has long since outgrown the habit. Getting into his tub and in a half standing posture, with his forebody leaning on the edge of the basin, with head resting on his right paw, he sucks the left with an utter disregard of surroundings. Always by his side, but outside the tub, pensively sits his mate, with her comical little face resting against the netting, waiting until her liege lord has had his nap.

One of the most touching scenes, and one that must ever send a dull thud through the heart of the writer as the recollection of it recurs, was the death scene of little Juliet. Was the name prophetic when the happy little pair were christened Romeo and Juliet? How quaint they were as they played around the yard, as happy and as joyous as two kittens. "Where thou goest

A HAPPY FAMILY.

Young Otters, Setter Pup and Cranes.

I will go," was their watchword. A night came, however, when the gentler one took sick and died. The living one soon realized that something wrong had happened, and tried to arouse the mate by caressing and licking the body. Finding this of no avail, he left the bed and no amount of coaxing would induce him to return to it. All day long following the death of little Juliet the male called and cried, and when night came his sorrow grew intense. The scene was a simple one—a tropical yard, dimly shadowed, and a half-grown otter in the foreground—nothing more; but the pathos in that "chirp, chirp," as he hunted for the mate that never would answer, was an exquisite pain to the bystanders. Strong men on the battlefield can witness the death of a comrade with a tearless eye, but there is a peculiar pathos attending the grief of a dumb creature. As the little otter silently wandered from one side of the wire-netted fence to the other, every fiber of his little body was tense with earnest listening. Standing erect, with his forepaws holding on to the netting, he would peer out into the night, startled at every quiver of a leaf. Moving a few steps, as if bewildered, he would seek the open space in the yard, and rising on his hindlegs listen with a passionate earnestness and with an expression so like humanity on his face that to those who watched the moment was one of intense grief. Like a discordant note came the song of the mockingbird as he mimicked the crying otter. The agony of that moment was tragical, and the memory of it too sad to dwell upon.

Every effort was made to interest the sad little creature, but for days he seemed to have only one absorbing thought. The other pair would come to him and caress him, as was their usual fashion, inviting a roll and a tumble. He would turn his little black eyes from one to the other with a pitiful look of anguish, and quietly walk away. He did not repel; he simply refused to be comforted. When exhausted he sought some secluded spot, refusing to sleep with his playfellows, as had been his custom before the death of the mate, when the four cuddled in one nest. To follow him or attempt any kindness was indeed a hollow mockery and only tended to increase his sorrow. With a heart yearning for the sorrowing little creature, the irresistible impulse was to divert him; in short, it seemed impossible to remain away from him. Being approached as he crouched in some corner he would raise his head, and with a pitying cry, like some human creature, seemed to plead to be let alone with his sorrow. Around his little eyes and running down his face were tears—the tears of a dumb creature for his mate.

The study of the least of God's creatures must open a window into the sphere of spiritual sympathy, teaching pity and gentleness for all living things.

MINNIE MOORE-WILLSON.

KISSIMMEE, Florida.

* See "Florida Pet Cranes" in issue of July 16.

THE University of the State of New York has just issued as Museum Bulletin 20 a very interesting and practical monograph on the elm-leaf beetle, by E. P. Felt, acting State entomologist. The bulletin treats of the ravages, life history and enemies of this destructive beetle, and gives the best methods of protecting the trees. It is hoped that this bulletin will have a wide distribution among our citizens, who, acting on the valuable suggestions given, may thus save many of the trees at present threatened with destruction. The bulletin will be sent postpaid to any address by the University of the State of New York, Albany, on receipt of 5 cents.

East African Mammals.

BY D. G. ELLIOT, F.R.S.E.

(*Continued from page 444.*)

THE LEOPARD (*Felis pardus*, Linn). NATIVE NAME, *Shabel.*

Leopards are pretty well distributed all over Somali-land, and are the most dangerous of all its wild animals. A leopard is very bold and fearless, and does not hesitate to enter a zareba or village, and seize upon any man or beast he can conveniently reach. They do not appear to attack camels, and these animals pay no attention to a leopard even if crawling in their midst, while a lion's roar will cause them to stampede. Leopards are wonderfully agile and very powerful considering their size; for, like the lion, the Somali leopard is smaller than his brethren from other places. I have known one of these beasts to take a carcass (entire) of a spotted hyena, full grown, and carry it up a tree and deposit it in a fork 15ft. from the ground. The wonder was not only how it was possible for him to carry such a heavy mass up the tree, but how he could even lift it from the ground. But the fact that he did it was evident, for the carcass was up the tree, and the sand beneath was tracked all over by the leopard's feet. Although smaller than the usual size of leopards from other localities, there is no other difference, and it is absurd to make even separate races either of the lion or leopard found in Somali-land. I went all over this question years ago with ample material at my command, and there is no character existing upon which more than one species can be established. Thickness of coat and length of hair vary with the climate; size is no criterion, for it is not the same even in members of one family, while color is equally unreliable, it often depending on individual condition. Nor is there any osteological character to be found upon which more than one species can be based. No two skulls are exactly alike, but while they have a general structure and shape, there is endless individual variation. Leopards make their dens in caves in the sides of high rocky cliffs, and their hoarse cough can often be heard during the day. Like all cats they prefer to commit their depredations at night, although on several occasions we met them hunting in the daytime. They doubtless kill many of the young of various species of antelope and of the wart hog, for leopards are very fond of pork. We surprised one just at dusk stalking a herd of oryx, among which were a number of young ones about half-grown, and on observing us he made the best time through the bush of any animal we met with in the country. His bounds were prodigious, and as he had a good start we could not overtake him on our horses before he managed to disappear in the bush. Many sheep and goats of the natives are carried away by this bold robber, and it is said young children also are killed by it when it steals into the villages and even huts at night.

THE CHEETAH (*Cynailurus jubatus*, Schreib). NATIVE NAME, *Shabel.*

The natives do not seem to have two names for the leopard and cheetah, although I think they recognize them as distinct species. The young are so much alike that it is not to be wondered that they consider them all the same, and some young cheetahs we had alive were considered by all my men to be only the ordinary leopards. We never met with this species, except perhaps on one occasion, in Ogaden, where an animal was seen running at a considerable distance from us, and was first thought to be a wild dog (*Lycaon pictus*), but afterward we came to the conclusion that it must have been a cheetah. I bought some fine skins from the natives, some of which were said to have been killed

WAITING FOR THEIR BATH.

in the Golis range, not many miles from Berbera. The skins I obtained were of the usual style in color and markings, and of course being in a very hot country the coats were rather thin, which would not be the case if the animals inhabited elevated districts with cold temperature, as witness the so-called *Felis lanea* (Sclater), which, though dwelling in South Africa, possesses a heavy coat to protect it from the cold of the lofty country it inhabits. The same effect upon the quality of the coat produced by a low temperature is seen in the tigers and leopards from the Amur and various other high elevations in China, etc., where the fur becomes so long and thick as to almost woolly. I think the cheetah is rather scarce in Somali-land, although the young are not infrequently kept alive by the natives for sale to the caravans passing through their territories to the coast.

SPOTTED HYENA (*Hyæna crocuta*, Erxl). NATIVE NAME, *Wardba.*

The spotted hyena was met with everywhere we traveled, except in the wild ass country to the west of

Berbera, where its place was taken by the following species. At least that seemed to be the case, as all the hyenas we saw or killed there were of the striped species. As we penetrated the country these animals became more numerous, and in parts of Ogaden they fairly swarmed. Males seemed to preponderate, and we did not succeed in getting an old female, although we shot a good many of the beasts. Of all animals I think the spotted hyena is the most loathsome and repulsive. It is usually covered with scabs and sores, caused either by fighting with each other or from the impure condition of its blood, or perhaps both, and some individuals were so offensive that it was very disagreeable not only to go near them, but even to stand to leeward of their carcasses.

The hyena is exceedingly cowardly, and does its best to save its malodorous body from getting into any danger, but it is a great sneak, and woe betide any unfortunate native it comes upon sleeping at night, for with one snap of its powerful jaws it will carry away the whole face of its victim, this being the place usually attacked. Donkeys, sheep, etc., are usually seized by the belly from behind, and the bowels torn out. The power of a hyena's jaw is tremendous, and with a single snap they are able to inflict dreadful wounds, while their appetites are boundless, and they are always asking for more. In the role of scavengers these animals with the vultures perform a most useful and necessary service in removing all carrion and offal from the ground, and birds and beasts often have a race as to which shall arrive at the attractive feast first. This hyena, among its other accomplishments, is possessed of a powerful voice, which it is accustomed to display in two ways; one by a succession of long drawn out mournful notes, beginning low and ending in a high key, and the other by sounds resembling the laughter of a maniac. The first is that usually heard when the animals are calling to each other, or when they come about the camp at night and scent the meat or whatever excites their longing desires; while the latter seems to be uttered generally when the creature is laboring under great excitement either caused by hunger or sexual emotions. It is a good-sized beast, low in the hindquarters, which are weak, but with powerful shoulders, neck and head. Altogether it cannot be regarded as possessing any attractive qualities, and can only be tolerated on account of its usefulness as a scavenger. The natives always expressed great delight whenever we killed one of these beasts, as they commit such havoc among their flocks and herds, often even carrying away the young children. From the crafty, cowardly way of the creature the natives are not often able to get near enough to kill them with spears, and so are too happy to witness their destruction by the more certain and far-reaching rifle. Although this species is found quite near to the coast, even visiting the vicinity of the markets at Berbera at night to steal scraps of meat, it is not found in any considerable numbers until the interior is reached.

STRIPED HYENA (*Hyæna striata*, Zimm). NATIVE NAMES, *Dedar, Werra.*

This striped hyena was much less frequently met with than the previous species, although it appears to be about as widely distributed throughout the country. We did not find it on the Haud, although it is very probable that it is there, but the list of places recorded where we preserved specimens shows that it was met with from the vicinity of the sea to the furthest point in the interior reached by us. There are two recognizable forms of this species, known to the natives as dedar and werra. The latter, they say, is much more destructive than the other, and kills their sheep and goats apparently merely to indulge its propensities for slaughter, destroying many more animals than it can possibly consume at one time. It is smaller than the dedar and the stripes are more numerous and intensely black, standing out clearly and distinct from the other colors of its coat. The natives also say it is abroad much oftener by day than the spotted hyena, and does not wait for the cover of darkness to commit its depredations. The striped hyena is a much more cleanly animal than its relative, and I never saw one covered with scars and sores, as is often the case with the spotted hyena, nor does it seem to possess a like offensive odor. It may be that it lives more on freshly killed animals, and has not an especial liking for carrion, but this of course I cannot vouch for. I have known it to eat carcasses of animals killed the same day and thrown outside our camp, but as this animal is a hyena it is fair to presume, I suppose, it would have eaten them even if tainted.

It is rather a handsome animal, the fur is long and thick, and the tail bushy, and when the stripes are well defined it does not present an unattractive appearance. There seems to be a very considerable difference in the shape and size of the skulls of this species, which is probably merely an individual variation, but as that belonging to the adult specimen of the werra was destroyed and the other belonged to an immature individual I could not make a satisfactory comparison with the adult skulls of the dedar. The difference in size and markings between the two forms may have no specific value, but it requires investigation when sufficient material is available.

JACKAL (*Canis anthus*, F. Cuvier). NATIVE NAME, *Dowdo.*

This jackal was very common all over the country, and was constantly met with in our hunting trips. It was not especially shy, and would often trot carelessly along in full view and within easy rifle shot. If at such time one whistled, the little animal would stop and gaze at the intruder on his grounds often for a long while, and if not shot at, after satisfying its curiosity, would continue on its travels. But should a rifle bullet go whizzing in its vicinity, then it stood not on the order of its going, but went at once. This and the succeeding species are very destructive to the kids and lambs in the flocks of the natives, and may possibly, if several act in concert, kill sheep and goats, though I fancy the latter, especially the rams, would with their horns be more than a match for this jackal. It seemed to be constantly on the move, going along in the quick, slouching trot so characteristic of this class of animals, and only breaking into a canter when alarmed. It follows the hyena and helps them dispose of any carcass lying about, and sits at a respectable distance from the lion when engaged with his prey in hopes of obtaining some scraps left by the lord of the jungle from his feast. The jackal is keen of scent, and quickly discovers the presence of any flesh in his vicinity, and loses no time in getting to it. Its voice is often heard in a long drawn, plaintive howl, especially at night, when it finds courage in the darkness to draw near the camp and serenade its inmates, excited by the smell of meat to this effort of questionable melody and song. This species may catch small animals, possibly does, and also various species of the jungle fowl, although I have no proof of this, but as it is constantly hunting for something to eat I doubt if it passes any living thing of which it is capable of making a meal. When captured alive it shrinks from any one who approaches, and in only a few instances have I seen it assume the aggressive and attempt to bite. When taken in a trap it generally lies quiet, and it was the exception when one struggled to free itself. With the hyenas and vultures, the jackal is a humble assistant in the necessary duties of a scavenger, and helps to remove all fleshy material from remaining exposed to the baneful effects of the sun.

Preserving Iowa Records.

IN a late issue of FOREST AND STREAM I read with much interest an article on "Changes in the Fauna and Flora of Iowa," by Clement L. Webster. In perusing this interesting and valuable paper, an additional interest was experienced from the fact that it has been my good fortune to have had an intimate acquaintance with its author, and to know much of his work.

FOREST AND STREAM has long urged the necessity and

CLEMENT S. WEBSTER.

great importance of gathering up and preserving every available fact relating to the fast fading, primitive fauna and flora of all portions of our great country, realizing the impossibility of securing a few years hence much that is of priceless value in this line. To this journal certainly the scientific and sporting world owes much.

Would that those competent to do so would follow out the suggestions of the FOREST AND STREAM, and also emulate the example in this regard already set by Mr. Webster. Mr. Webster was born on the frontier of Iowa "way back in the fifties," and "grew up with the country." He is a born naturalist, as well as one by profession; and his love for the "wild things of nature" has been a marked characteristic since his earliest childhood. His early and trying experiences with poverty and hardships in a pioneer country, instead of crushing and destroying his early love, had the effect only to intensify it, until it finally grew to be the crowning passion of his life.

Very early in life he conceived the idea of keeping accurate notes regarding the things in nature which interested him. A study of the fauna and flora of the region then, and accounts of it for long years previous, as given to him by old hunters and trappers of the region, he treasured up and preserved.

From that early day when northern Iowa was first taken possession of by the whites, to the present time, his records in this and other lines have been kept up, until now he has a mass of facts, notes and drawings of priceless value.

Comparatively little of this valuable material has been published; but for a long time he has been engaged in writing out and systematizing the facts, and making beautiful colored drawings and sketches (for he is an artist of recognized merit as well), and binding all into large volumes for permanent preservation.

Facts of the greatest value and scientific interest relating to the primitive fauna and flora which existed in Iowa long before the first white man came, have been gathered by Mr. Webster from the large number of ancient moundbuilders, burial mounds and earthworks which he has carefully explored in the region.

The material, mainly scientific, which he has collected during these years, and which is for the most part yet unpublished, would fill at least ten or twelve printed volumes. His published reports and papers even now number more than 100 titles, and have appeared mainly in leading scientific journals of the country; and he is now recognized as one of the foremost among our younger scientific workers.

One work of his, now going through the press, and which will prove of much value and interest, is devoted to the pioneer history, the general natural history, etc., of northern Iowa.

The subject of this sketch has traveled quite extensively in the West, Southwest and in Mexico; and a better or more genial camp fellow I never met. He is a true sportsman, and an ardent lover of field sports and camp life; but is bitterly opposed to the wanton destruction of game or animal life of any kind. He combines traits as a naturalist and a sportsman such as are not usually met with.

His earlier and later hunting and other experiences are most interesting, and often very amusing. He has contributed numerous articles to FOREST AND STREAM.

FLORIDA.

European Starlings on Long Island.

BAY RIDGE, N. Y., July 15.—Early this spring I heard a new voice among the trees, and after much prying about succeeded in identifying the performer. "Wheezy, wheezy, wheezy!" then a long run down the scale to a finish of finely drawn out notes. Day after day from the tops of our largest oaks and chestnuts came the unfamiliar strain. I finally located one of the birds in a wild cherry, and to my surprise discovered it to be the European starling (*Sturnus vulgaris*). Pairing commenced about first week in May, about the 10th the song ceased entirely, and save for an occasional glimpse of the birds as they passed in the tree tops their presence was unnoticed.

I knew they were nesting, but could not definitely locate them, as they confined themselves almost wholly to the larger trees. Finally I managed to locate three pair in a general way, and of these one was at last found, but not until the young were hatched and I could follow the old birds on their return from foraging.

The nest was at least 40ft. from the ground, in a hole in the trunk of an oak. A large limb had some time been broken off, and though the bark had almost closed the wound, there was a hole left where the decayed wood had weathered away. The cavity concealed the nest, and was large enough to entirely hide the parent bird from view when she entered with food.

The nestlings remained in this snug retreat until seemingly fully able to fly, for although I saw but two of them take their departure, there was apparently none of the weak preliminary flutter often seen in many of our native bird children.

The first flight was a strong one, and landed them some 50yds. away in a tall chestnut. This flight was taken between 9 and 10 A. M., and at intervals thereafter they would launch out, accompanied by both parents. They flew silently for short distances, circling back to point of departure, save once, when one youngster with a burst of speed darted off quite a distance, rising as he went. When he turned to come back, the immensity of space between his perch and himself seemed to appal him, and for an instant he lost his head. With a terrified squawk he dropped like a plummet some 10ft. In a flash one of the old birds was beneath him, encouraging him in quiet tones. He at once seemed to take heart, and steadying himself, regained his perch a moment later, where he squatted panting with open bill.

I have seen at least twenty of these birds this season.

They seem to hold aloof, and do not fraternize with our natives. Passing most of their time in the taller trees, I have found them difficult to observe satisfactorily. On the ground they hold themselves very erect, walk about sedately, or run for long stretches at good speed. Their flight is steady, with strong wing beats, and they have a peculiarly graceful upward glide when approaching to alight.

I had heard of the English starling being seen in this vicinity a year ago, but not having observed them myself, did not care to write you on hearsay evidence.

We have an unusual number of birds with us this season.

Nesting has been practically undisturbed in our vicinity, and at this writing the second brood of robins are testing their voices. I have not seen as many of our native songsters in ten years past. Perchance they have the news that our friend Hornaday and his associates mean business when they say, "our birds must be protected." At any rate, their cheerful notes are ringing in the trees and among the hedges as I write.

WILMOT TOWNSEND.

The Angler's Reverie.

Ah! my heart is sick with wishing
For my old fly rod—
Wishing for my next vacation,
Health and rest and recreation;
Do you think it odd?
How I long to go a-fishing
With my old fly rod!

Oft in Willowemoc's Valley
And the Beaverkills
We have wandered and have waded,
From the dawn till daylight faded,
O'er the Western hills,
With the speckled trout to dally
And forget life's ills.

Evermore shall we remember
The swift Delaware,
When the bass were freely rising
To our lures so appetizing;
Oh, what sport was there!
Through October and November
In the clear, cool air.

Shall we have such days entrancing
In the coming year?
Will the trout rise to our hackle
And the bass strain well-tried tackle
Till a break seems near?
Lo! the season is advancing—
It will soon be here. —*Summer Home.*

Game Bag and Gun.

Indian Mode of Hunting.

I.—Beaver.

WA-SA-KEJIC came over to the post early one October, and said his boy had cut his foot, and that he had no one to steer his canoe on a proposed beaver hunt. Now nice, fat beaver, just before the ice takes, is one of the tidbits that come to the trader's table, and having spare time just then I volunteered to accompany him, knowing I would get a share of the game.

As we made our way over the several small portages between the large lake on which the post is built and the one in which he had located the beaver, he told me there were two lodges on the lake to which we were making our way.

We pitched our tent on the last portage, so as not to make a fire near the beaver. Beavers have very poor eyesight, but very acute hearing and smell, and once they are frightened the sport for that night at all events is finished.

We had something to eat and then started for the lake, leaving our tent and things ready to return to after dark. Smoking and talking are forbidden when one is in a beaver lake; care also must be taken that the paddle does not rasp the side of the canoe.

The beavers had built an immense dam across the discharge of the lake, and left a small cut in the middle for the overflow to pass. Here Wa-sa-Kejic placed a No. 4 Newhouse trap in about 4in. of water. On a twig 9in. high and set back about a foot from the trap he placed a small piece of castorum. The smell of this attracts a beaver. Then he lengthened the trap chain with three strands of No. 9 twine, tying it to a stout pole, which he planted very, very securely in deep water, out from the dam.

The beaver, when he finds himself caught, springs backward into the deep water and dives to the bottom; here he struggles to get away until shortness of breath compels him to rise to the surface, and this is repeated until the weight of the trap is too much for his exhausted condition, and he dies at the bottom, from whence he is hauled up by the hunter when next visiting his traps.

After placing the trap on the dam Wa-sa-Kejic opened another ready for setting, tied the poles, and had everything ready; then giving me implicit injunctions not to make the last noise, told me to steer the canoe quietly to the lodge, which was fixed in a small bay out in the lake. When we reached the beaver's house, he carefully placed the trap in the same depth of water as he had done the previous one, with this difference, that he omitted the castorum, because, as he told me afterward, the beavers went on top of the house every night, the young ones to slide down into the water, and the old ones to do any necessary plastering.

Another trap was set at the next house, and from there we paddled the canoe a considerable distance from the beaver works, and figuratively rested on our oars until sundown.

We were now going to try still-shooting them. Before night sets in about sundown each fine evening in the fall the beavers leave their lodge, first, to eat the young willows along the shore, and after satisfying their hunger to patch the dam, plaster their houses and cut young trees to store up for their next winter's food!

They come to the surface on leaving the lodge, and unless something frightens them swim on the surface in and out along the borders of the lake until they see a favorable spot to go ashore; and here they set to nibbling the bark of young birch or poplar, and if the hunter is careful may be shot at close range.

As I said before, talking while hunting beaver is forbidden; and the hunter conveys his wishes to the steersman by signs, thus: To draw his attention he oscillates the canoe slightly; to move the canoe ahead the motion of paddling made by throwing the open hand inboard; to alter the course of the canoe is done by signing with the hand either to the right or to the left, as desired; to stop the canoe's headway when getting too close to the game is done by gentle downward patting of the hand, etc.

Being already versed in this dumb language, we shoved away and took up a position near the lodge, but to the leeward of it, and waited. The sun having already gone down behind the forest, on the other side of the lake, we had not long to wait until a beaver broke water and swam away in a direction from us. Wa-sa-Kejic shook his head, as much as to say, "We will go after that fellow later on." The first was followed quickly by a second, a third and a fourth! Then, after waiting for fully fifteen minutes and no other appearing, Wa-sa-Kejic made signs to go ahead; this we did slowly, without taking the sharp-bladed paddle from the water.

Presently we heard a noise as if a pig were supping up from a trough. This was one of the beavers crunching up young twigs in the water. The canoe was edged slowly toward the land, with Wa-sa-Kejic on the alert, both dogheads full-cocked and ready for action. Presently the downward motion of the hand was given, the gun brought deliberately up to the shoulder, and the next instant the explosion, followed almost as one shot by the second barrel! A thick smoke hung between us and the shore, but we could hear kicking and splashing of the water; that told the shot was true. The beaver had ceased to struggle by the time we reached the shore. "But for what was the other shot?" I asked Wa-sa-Kejic.

"For that," he answered, pointing to another beaver, stone dead on the bank; and then he laughed, for there was no necessity of keeping quiet any longer, for the shots had frightened any other beaver in the vicinity.

"We may as well go to camp now," continued Wa-sa-Kejic, "and we will see our traps in the morning."

From the fact of our having come ashore late, and perhaps more because of the hearty supper we made off of roast beaver, we did not awake until the sun was high. We immediately partook of a hasty breakfast of tea Gallette and pork and went to see the traps.

"Fortunate?" Well, yes! We found one in each trap; and returned during the afternoon to the post. The Indian gave me the meat of two beavers for myself.

He left his traps set to visit at some future time, because there were several animals yet in the lake.

Describing the mode of killing beaver would not be complete unless we explained that of "trenching." This method of killing them is largely practiced by the Indians after the lakes and rivers are frozen over. I cannot do better than to describe a small lake that Wa-sa-Kejic and I went to trench in December. This beaver lodge I had found the very last day of open water, for that night the wind turned round north and froze up everything! As it was close to the post, and I had found it, I simply made a bargain with Wa-sa-Kejic to do the trenching for a pound of tea. In those days tea was tea in the remote interior, and meant many a cheering cup to the Indian.

Wa-sa-Kejic whistled his dogs after him when we left camp in the morning. The lake lay in the hollow of a mountain of considerable height, and could be compared to an inch of water in the bottom of a teacup. Before we were half down the precipitous sides we saw the dogs nosing around the shore, scenting for the beavers in their "washes" or breathing holes. Wa-sa-Kejic, when he cast his eye around the small body of water, said, "This is an easy lake, and the beaver will soon all be dead."

He now produced an ordinary socket chisel of 1½in. point, and in a few minutes had this handled with a young tamarack about 6ft. long. We each carried an axe, and the first order I got was to cut some dry sticks that stood at the discharge, each stick to be about 4ft. long. These, as fast as cut, the Indian drove across the creek after he had cut a trench in the thin ice from shore to shore. This was to prevent the beaver from going down the creek.

The next thing was to break open the lodge from the top. This was done to scare the beavers out into the lake and make them resort to the washes. The beaver washes have their entrances under water, and go up sometimes a considerable distance from the shore, terminating generally under the roots of a tree. The beavers flee from wash to wash, as the hunter finds them out, and as each wash is discovered by the dogs (which scent the beavers through the frozen surface) the hunter stakes up the entrance to prevent them from returning.

Beaver washes vary in number according to the formation of the lake, from two to three up to twenty. The practiced eye of the hunter tells him at once if the lake has few or many. And this is why Wa-sa-Kejic said we would soon kill the beaver. At last the three dogs remained pointing and listening about 12ft. from the shore under a spruce of considerable size. The Indian set to work to stake up the entrance, which he did as fast as I could furnish the sticks.

On the shore of this barricade he cleared away the ice and snow, making an opening about the size of a barrel head, and then he paused, and pointing to the water said, "See that! That's the beaver breathing!" This was shown by the water's surface gently rising and falling.

He now took off his coat, and baring his right arm up to the shoulder he gave me the ice chisel and told me to pierce the ground where the dogs were pointing. I had hardly given a blow or two before I saw Wa-sa-Kejic stoop over the hole and plunge his naked arm into the water. Instantly it was withdrawn, and a big fat beaver, securely seized by the tail, was struggling in his grasp. A blow of his axe on the spine finished him in quick order, and this was repeated from time to time as I continued to enlarge the hole where the beavers were huddled together under the roots.

We got six out of this wash, and two out of another, which constituted all that were in the lake. Two each made a very good load for us going home, and the next day I sent a man with a flat sled to bring home the remaining four.

The three principal modes of killing beavers are by shooting, trapping, trenching.

MARTIN HUNTER.

SAGUENAY COUNTY, Quebec.

A Miscellaneous Bag.

A Sketch of Sport in Scotland.

Written for FOREST AND STREAM by W. R. Gilbert.

ALTHOUGH the blasé sportsman may sneer at small bags, and vow that a hard day's tramp is not to be compared with a "hot corner," where rocketing pheasants come galore, and hares stream out in ropes; or with two guns in a "butt" with grouse coming in countless numbers; still I venture to say—after a long experience—that no shooting equals the delight of getting a mixed bag, fairly worked for and therefore fairly earned, in the last months of the year. The charming uncertainty as to what game is going to get up next is delightful. Not that I wish to decry big shoots; given a jolly set of fellows, they are good fun, but they do not seem to linger in one's mind as does the day we got a little of everything. This is the sort of day I mean; enjoyed through the kindness of my old friend M.

"Well, what would you like to do to-day?" queries my host, as I come down to an early breakfast served in the lodge on his Scotch shooting. "Shall we have a few grouse drives, try the lowlands for partridges, beat the coverts for woodcock and a few stray pheasants, or what?"

I did not take long to make up my mind, even with such a menu put before me. "If you leave it to me, I vote for trying for a mixed bag; I am sure we ought to get a few snipe in the meadows, and there ought to be some woodcock in after this frost."

"Very well," returned M., "so be it. I think I can give you a sight of most game even if you don't get a shot; but I am afraid the ducks may be gone, the frost sending them down to the sea."

We were soon on our way, accompanied by Mac, the keeper, three boys to beat, a retriever and a little cocker spaniel. The first ground tried was the kitchen garden and laurels round the lodge, as the gardener reported seeing a "good few cock pheasan's there the morn." They were not to be found, however. We decided to have a couple of short grouse drives, so sending the beaters round, we went to take up our "butts" on the moor, about two miles distant. On our way we expected to get a shot at snipe, but all we flushed was a large covey of partridges, which got up out of shot. Just before we reached the moor we came to a pond noted for holding ducks. True to its traditions, it did so now, for as we got within 25yds. up rose three mallards, of which we secured two. We then crept to our positions, and had time for a whiff of the weed, when I saw three packs of grouse skimming over the heather toward where M. was stationed, but unfortunately they turned down out of shot. Then "Ma-a-rk" came borne on the frosty air, and five grouse flashed by me about 35yds. to my left, but my two barrels resulted in misses. "Ma-r-rk" again, and I could see two old cock grouse sailing down wind straight at me. When within 40yds. I show myself; they turn, showing up the white under their wings, and both succumb to the first barrel. More birds come, but scarcely within shot, and I only succeed in getting three more birds. Another short drive follows, and results in M. getting a brace and a half of grouse and an old gray hen, while I had to be content with firing a volley of regrets after several packs that would not face the guns.

"Now for the snipe," I say. We clamber over a wall and wend our way to a boggy tract of land below. We beat this well, but to no purpose, save killing a hare, until we come to the very edge, where up get two "long bills"—a long shot—going away unharmed, showing their satisfaction by giving vent to their peculiar note.

Soon after I did better, getting seven birds out of ten shots. By this time we had come round to where our second drive had ended. "Now," said M., "you get forward. There are sure to be some woodcock here, and they generally lie in those bushes and heather at the top of the glen." I climbed over a highish wall, and made my way on through heather knee deep. Hardly had I gone 50yds. when an old cock grouse sprang up under my feet, giving a defiant crow; being taken unawares I carefully missed him with the first barrel, but got him with the second. We never saw a thing till getting to the end of the beat, when some black game came sailing over, too high to shoot.

Then was heard the welcome "Ma-a-rk cock"; and the bird came sailing down the glen—an easy shot; but woe is me, for I missed both barrels, over anxiety to bag him accounting for the disaster. More than one sportsman can "shake" with me, when they remember having missed just such an easy shot at cock. We found two more birds before finishing the beat, each of us getting one. Then to lunch.

We were soon on the tramp again, our way leading over sedgy, swampy pastures. Hardly had we entered when a rabbit fell to M.'s gun. After I had killed a big hare, and missed a long shot at a grouse, and M. had bagged a snipe, we went on to another bit of snipe ground, which resulted in our bagging three snipe and two jack snipe.

Having now a fairly mixed bag, we thought we would try and add one more variety by getting a partridge. We tried several stubbles and also a couple of turnip fields, but saw nothing but some plover, which rose out of shot. We walked till we were tired to get a shot at those partridges, but luck was against us; first the birds that we did see were very wild, and then when poor M. did have a beautiful right and left he never touched a feather. We had now come to a very small covert, which generally yielded a woodcock, but on this occasion the game was absent, but we managed to get an old cock pheasant and a wood pigeon.

M. and myself were now both rather uneasy in our minds as to the chances of getting a partridge, when on the opposite side of the hedge we heard the well-known call. We peeped over, and instantly up rose two large coveys, a very long distance, but we were so anxious to get a bird that—"tell it not in Gath, mention it not in Ascalon"—I fear we pulled into the "brown." One bird was the result. That poor unfortunate bird did us a lot of good, we had secured a specimen of nearly every game bird inhabiting this wild district, save the duck.

Liege Firearms.

CONSUL GILBERT sends to the State Department from Liege this table, showing the number and description of firearms tested at the proving station in Liege for the years named:

Description.	1894.	1895.	1896.	1897.
Guns:				
Double barrel ...	198,780	227,432	224,071	208,301
Single barrel	266,713	330,776	300,264	315,144
Flintlocks	27,052	18,460	18,680	13,146
Military rifles	130,696	74,255	80,410	50,628
Revolvers	388,450	407,612	416,681	436,166
Pistols:				
Pocket, by pairs..	2,515	600	1,031	761
Cavalry, by pairs..	25,559	28,581	22,711	13,341
Total	1,039,765	1,082,716	1,063,848	1,037,487

The official value of firearms exported from Liege to foreign countries during the year 1896 was $3,160,713; during 1895, $2,960,000; in 1894, $2,500,000; which shows an increase of more than 25 per cent. in two years. The importations of firearms into Belgium from all countries in 1896 were to the value of $312,000, and consisted almost entirely of old military rifles.

Gun barrels are subjected to three proofs for black powder, and four for smokeless powder.

North Carolina Quail.

HASLIN, N. C., July 4.—Birds are nesting and hatching well with us and we should have excellent shooting as usual next fall. F. P. L.

CHICAGO AND THE WEST.

The Lost Park Buffalo.

The killing of the buffalo cow in Lost Park, Colo., last June has attracted much attention, and as is well known, State Warden Swan some days ago caused the arrest of two Leadville gentlemen, charging them with the act. The result of the case is not yet determined. The Miner, of Leadville, Colo., gives the other side of the story in the following words:

"One of the gentlemen is Frank W. Bartlett, the taxidermist, of 112 East Third street. On being interviewed he stated that a few weeks ago he and his wife and child, accompanied by Henry M. Blakely, the dry goods man of East Sixth street, went to the Lost Park country for an outing. A number of other parties had talked of going along, but when the day for starting came the above named persons only were prepared to go.

"When they arrived at Mr. Derley's place, near Lost Park, that gentleman and his wife accompanied them. The party camped on Rock Creek during their stay and never saw a buffalo, not even a track of one, while they were there. They never heard of the killing of the buffalo until they came out of the park. Mr. Bartlett remarked, when hearing of the affair, that they would accuse him of the killing because he was a taxidermist.

"'Sheriff Wilson, of Park county,' said Mr. Bartlett, 'placed Mr. Blakely and myself under arrest and we gave bonds in the sum of $500 to appear at the September term of court to answer the charge. We deny having killed a buffalo, and we are prepared to prove our innocence.'

"Mr. Blakely in his interview said they had neither seen nor heard of a buffalo on their camping out trip, and that the whole affair seemed to him to be the work of some malicious person who would be called to account for the prosecution and attempted persecution."

It is to be hoped that justice will be brought to the proper parties, whoever they may be. The gradual killing of the Yellowstone herd is one of the disgraces of the West, and the butchery of one of the little band of buffalo still left in Colorado, a female at that, and suckling a young calf, is also a disgrace to the State of Colorado, every man of which ought to be proud of the fact that his State has a few, a very few, specimens left of an animal hardly to be found anywhere else in the whole world.

Prairie Chickens.

Those gentlemen of Illinois who think that the chicken law of this State is "unconstitutional," and that they can shoot chickens on Sept. 1, or earlier if they feel so inclined, would do well to proceed with extreme caution. Warden Loveday stands on the date of Sept. 15. He will make it interesting to all sheriffs, attorneys, justices of the peace and other persons of high degree, as well as common people, who may feel a need of prairie chickens too urgent to be restrained until Sept. 15.

There is reason to suppose that we shall have a fair supply of prairie chickens scattered here and there over a wide extent of the State of Illinois. By the date of Sept. 20 most of the shooting at these birds will have been done. There are so many guns and so many good shots nowadays, both in town and country, all of whom are well posted as to the chicken country, that the supply of these big birds is sufficient to last but a short while. In this regard I think the State of Illinois is not very different from that of Minnesota or Nebraska. I have reports from both of these States that the chicken crop this year is unusually good. This is the stereotyped form of chicken information in the West these days. A month or so before the season the birds are reported "more numerous than they have been for years." Ten days after the opening date the story runs that the birds must have been killed off by a wet spring, or a dry summer, or by minks, hawks or some other evil-minded creatures. I presume that there are about as many prairie chickens in Illinois as in Minnesota. Mr. W. S. Phillips, of this city, is just back from a trip through the West. He says that Nebraska is full of quail and prairie chickens, the latter being especially abundant in the northwestern part of that State. He also says that there is a great deal of sporting travel going on in the West, numbers of parties going into the mountains. From other sources I hear that the season in Nebraska has been exceptionally favorable for prairie chickens. There has been a good crop, probably as good a crop as that State will ever again see in its history. It is also the case that shooting of market hunters and so-called sportsmen is even now going on over a wide part of Nebraska. When the opening day arrives the crop will have been largely harvested.

Rough on the Gun Club.

The Sioux Falls Press, a newspaper published in one of the best chicken regions of the country, gives utterance to some harsh comment on the methods of the members of the local gun club, which comment I trust is entirely erroneous. While it does not reflect a spirit appropriate to the present, I know that such acts as those charged were at one time all too prevalent over a great portion of the West.

The Press remarks:

"It's about time for the president of the Sioux Falls Gun Club to quote the game law of the State, and warn gunners not to shoot prairie chickens out of season. The members of the gun club in the past always accepted the president's warning as a license to go out into the fields and bag a few birds. In fact, all citizens inclined to field sports of this character played the warning in the light of an invitation to accompany the members on their first appearance among the young birds, and no longer stood upon the order of going, but went boldly forth and shot everything in sight. Whatever poaching has been indulged in thus far this season has been performed very quietly. Still it is known that several wing shots have been out and brought in young prairie chickens. It is nearly a month yet before the expiration of the game law in South Dakota, but the birds in many coveys, it is reported, are nearly full grown. Joe Dunn, of Ellis, who is authority on prairie chickens, says these game birds are much more numerous and larger at this date than any year since his advent into the country. He requested that this information should not be promulgated, 'because I have a couple of young dogs I want to train before the gun club members enter the field,' was the excuse he offered for the suppression of the chicken situation. They are all on the same lay. Every chicken hunter regards it legal to disregard the game law."

Sporting Resources of the South.

I have often been glad to note the fact that the game of the South is more abundant and apt to continue more abundant than that of the North. I was talking over this fact the other day with Mr. Joseph Irwin, of Little Rock, Ark., who was in Chicago on a brief visit. Mr. Irwin says that close about his town he has the finest of bass fishing and quail shooting. He can still get some prairie chickens earlier in the season on the prairies, and within a few hours' run can get into a camp where bears and deer will be hung up. He says that last year he made some long trips further into the South and found some splendid country. FOREST AND STREAM earlier printed his story of the sport they had while stopping at the Sea View Hotel, at High Island, Texas. He says that the mallard shooting there was magnificent, and the snipe shooting the finest ever seen. He intends some time to visit this country again, and also to join a gentleman who owns a plantation in Louisiana, where the wildfowl shooting is fine. The High Island country, so Mr. Irwin tells me, is along the sea marsh, less than fifty miles from where I was shooting a few years ago with Billy Griggs and the Stevensons, where I am sure I had the finest snipe shooting I ever saw in all my life, not trying for any ducks, although they were there in thousands. There was no place at our point where shooters could get in or could be accommodated, and I am glad to call attention to this High Island country, and to give the indorsement of so practical a sportsman as Mr. Irwin.

Speaking of the South, I am sorry to have missed this week the call of Mr. J. Bowmar Dabney, of Vicksburg, Miss., superintendent of education. Mr. Dabney is a son of Coahoma, who lives at Clarksdale, Miss., and I should have been glad to talk with him about snakes, bears and other things.

An Odd Case.

An odd case in game protection is that of J. A. Marks, of Detroit, Mich. Mr. Marks is a trap shooter, and while attending the trap shoot at Grand Rapids, Mich., in the early part of last month, he shot a plover which flew past the firing line where the shooters stood. Many saw the act. Mr. Ben Bush, of Kalamazoo, filed complaint, and State Deputy C. E. Brewster will arrest Mr. Marks and push the case. As the latter was a guest of Grand Rapids, which was holding open house that week, the local sportsmen did not feel like pushing the case.

Minnesota Quail.

It is gratifying to know that as the prairie chicken lessens in number in Minnesota, the quail appears to be increasing. Unless all appearances prove deceitful, the sportsmen of Minnesota will have fine sport on quail over a large area of the southern portion of the State, where in the old chicken days no one would have thought of looking for quail or shooting them if any had perchance been found. The Bob White will long outlive the prairie grouse in America.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

Hunting Deer in South Florida.

DEER—They were everywhere. But we had been out on seven or eight camp hunts, and I still had my first running deer to see. The dogs had run deer off the hills and out of the swamps; different members of our various parties had shot within hearing, and afterward told of large bucks seen. I had covered stands and sprinted fast miles till guard duty and foot racing had become a vocation, but after awhile I feared that I would never even see a deer. Indeed, I still carried all the shells taken on the first trip.

A person fond of nature might have found means to amuse himself in another part of the country, but I found it lonesome out in the pine forests of South Florida, where I seldom heard a sound, except the lull of tree tops and the occasional low of a cow. One morning I did detect a covey of quail approaching under palmettoes, the tree behind which I hid, and was glad that being on a stand by the law of the hunt prevented shooting at them, for I soon became interested in their peculiar actions, preceded by musical warning notes when they discovered my presence. First a large, ragged, plumed cock, probably the hero of every fight in his tribe for years, ascended a burnt log and inspected me cautiously, then other males joined him, and all of them nodded and chattered for some time in a very human way; but I think it was wrong for them to tell those girl-birds down in the leaves such outrageous yarns, for when the males descended, how everybody did foot it to the nearest thicket. When one is on a stand, however, such incidents as this one even are rare.

The membership of our hunts varied each time that we went into the woods, and the three others with the Doctor and me on the trip I was to see my first deer had never been out with us before. We had made camp on the side of a flatwoods belt several miles wide, beyond which there was a nearly impassable swamp, and one morning three of us crossed into the flat several miles above the camp, while the other two of the party entered some distance below with the purpose of hunting to meet. The two foxhounds with us soon led on a fresh trail in a fast half-mile race over grass slippery with dew to a circular cypress pond of about three acres, then turned back to flush a number of large gobblers. When Morgan had urged the hounds into the pond again, he ran for the upper end of it, and Ben for the other end, while I remained where dogs and men had left me.

Now the dogs were yowling with certainty in their tones, then they shouted with wild jubilation as a large animal seemed to plunge through the shallows in the timber; all of this had occurred so often; if it would only come my way this time, and there it was. Oh, such a big, big creature, as it broke from the timber 40yds. off and cleared the belt of palmettoes in leaps that seemed sky high! Would I ever get those gyrating gun barrels to bear on that gray mass of erratic motion? What luck that the first time my aim and the bounding stag seemed to be in unison. Morgan was in the line of destruction as he still ran off at the top of his speed; then, as the deer struck an evener gait beyond the palmettoes, there was the report of a gun, perhaps my own, when the animal flinched slightly and resolved itself into a gray streak that extended to the swamp half a mile away, as I delivered a second load into my end of this evasive line.

How hard it was to face the intelligent eyes of those dogs when they came and I broke them off. I could not have changed their opinion of me, it seemed, by reminding them of when, time and again, they had chased coons up trees or had done other unsportsmanlike things for deer dogs; my failure had cut too deep into their hearts to be easily rubbed out. Then Morgan came up. Morgan, with whom I had eaten so many sweet potatoes and had bunked in such a friendly way back to back, closer than brothers, cool nights when the fire was low, and the withering look of pity he gave me made it seem possible for me to crawl through the barrels of my gun. But both of us had noticed a fact which I had attributed to impudence and Morgan to a wound—the deer had waved its tail twice while in sight, so we urged the dogs on the trail and soon heard them, to my great relief, baying some distance in the swamp beyond.

I have a dim recollection of wading a cow path into a dense swamp, where I found Morgan and Ben with kindness in their faces standing over a large buck that lay on a green hummock, while our dog Tom, the noblest foxhound that ever sent music to reverberating hills, licked my gun hand in an apologetic manner. They wanted me to shout, I believe, but I felt as if it would be more agreeable to my condition at that time to go where I could straighten out alone the events of that unusual morning; that first sight of a deer, the eccentric action of my gun when steadiness was most needed, those random shots into a gray atmosphere, the drumming of my heart afterward, and the bitter disappointment with a subsequent reaction. I would shout to-morrow and the next day, for all time to come if they wished it, but just then I wanted to recover my lost nerve.

H. R. STEIGER.

DE LAND, Florida.

The Destructive Skin Hunter.

WHEREVER big game has entirely disappeared from districts where it formerly abounded, and wherever whole species have been exterminated, the mischief has in nearly every case been done, not to procure food, but solely to obtain the creatures' skins. It is not the big-game hunter, or the savage, or even the agriculturist, who destroys the creatures, but the "skin hunter." In every "new country" this wasteful and relentless enemy of animal life has always appeared with the regularity of some recurring plague, and made it his business to destroy every creature larger than a hare.

The advent of the skin hunter takes place at a particular period of development in recent settlements. He is never among the early pioneers, but is a kind of parasite in half-occupied territories, often intensely disliked by the resident squatters, as he destroys the game on which they partly depend, though he sometimes succeeds in converting these to his own evil ways. In South Africa, for instance, the early Boer settlers, like the early pioneers of North America, killed the antelopes for meat, and used their skins for clothing. They ate the venison, and from the hides they made suits of leather—"shamoyed," not tanned—supple, soft, and comfortable garments, well suited for the life on the veldt. The number of animals killed was limited by their own personal needs and those of their families.

About 1850 the Boers learned that the myriads of antelope, quagga, and zebra which wandered over the plains had a marketable value other than as food or supplying leather hunting shirts. The skin hunters taught them that, though the bodies of the creatures might be left to rot on the veldt, the hides, not tanned or dressed, but merely stripped from the body, were marketable, to supply the European demand for leather. The country was just sufficiently opened up to have arrived at the stage at which the business of the skin hunter pays. Freight is high, but not too high; and, though hides of countless cattle and sheep may be had for little enough in the settled districts, the skins of the wild animals cost nothing at all, except the value of powder and shot.

Even this was economized in South Africa. "The Boers of the pastoral republic became perfect adepts at skin hunting," writes Mr. Bryden. "They put in just sufficient powder to drive the missile home, and carefully cut out their bullets for use on future occasions. So lately as 1876, when I first wandered in Cape Colony, I well remember the wagon coming down from the Free State and Transvaal loaded up with nothing but the skins of blesbok, wildebeest, and springbok. This miserable system of skin hunting has been and still is, where any game remains, pursued in all native states of South Africa. Between 1850 and 1875 it is certain that some millions of these animals must have been destroyed in the Transvaal and Orange Free State." The slaughter was so prodigious, and the variety of wild animals so great, in these wild regions of South Africa, that the result made a sensible difference in the leather industry of Europe. The markets were filled with skins which, when tanned, gave leather of a quality and excellence never known before, but the origin of which, as the material was still sold under old names, purchasers never suspected. Hides of the zebra and quagga arrived in tens of thousands; and good as horse hide is for the uppers of first-class boots, these were even better. Smart Englishmen for years wore boots the uppers of which were made of zebra and quagga skin, or from the hides of elands, oryx and gemsbok disguised under the names of "calf" or patent leathers.—London Spectator.

The Arkansas Tax.

Editor Forest and Stream:

In your issue of July 23 is an article from J. M. R. that breathes forth a true sportsman's spirit. The present non-resident tax in Arkansas is a failure. Men who are mean enough to do real damage to the game interests of the State are none too good to manipulate their schemes to evade the tax. Those who pay it are those who would not injure the game interests of the State if there was no tax. J. M. R. has the right idea exactly. Stop the shipment of game. Make it impractical for the railroads and market hunters to combine for the defrauding of game interests of the State, and then those who hunt for the mere pleasure of the outing will never seriously affect the quantity of game.

Arkansas is beyond all question the finest game State in the Middle West. The swamps, canebrakes and vast stretches of woods will prove a sure retreat for many years to come, if the horde of game hogs that now make their living out of game butchery can be effectually checked.

There are several clubs of sober, staid, solid citizens in Kentucky and Tennessee with whom I am personally acquainted, who have been wont to take an annual outing in Arkansas. They usually stay about two weeks. They keep only what game they need while in camp. They buy all their provisions from Arkansas merchants, and hire the wagons and teams of Arkansas citizens to haul them out to camp and back again. They leave two or three hundred dollars every fall with the Arkansas people. The game they kill would not be worth the tenth of what they pay out, and they pay it cheerfully just for the pleasure of the outing. Now that non-resident tax has put a stop to all these men, and leaves all the more game for the market hunters, who are not worth one cent to the State! Is it good business management for any State to thus work a total prohibition on men who do cheerfully pay for all they get, while they leave a loophole for those who abuse their privileges, trample underfoot the law, and destroy all the game and fish they possibly can?

I assure J. M. R. that he has the sympathy of the non-residents in his desire to save the game, and at the same time treat clean, white men fairly. PRO BONO.

Bears in the Dismal Swamp.

THE Dismal Swamp perhaps holds more bears than any place of its size in America, and there is little trouble about bagging them in the late summer and early fall. I have not hunted them in fifteen years, and hardly know what is considered the best way of doing so now. In those days we used about a dozen fine dogs and two or three hounds. Bob Flora, of Shawboro, N. C., on the Norfolk & Southern R. R., told me about shooting a big bear with No. 8 shot, killing it instantly, only a few days ago.

I used to hunt near Moyock, north of Shawboro, on the same road, but my old friend Wm. Cox, who had killed over 300 bears, is dead.

Mr. M. C. Poyner, of Moyock, could no doubt tell you the best bear hunter in that section now and the best time to hunt them. J. B. WHITE.

Sea and River Fishing.

Bass Fishing in the Greenbrier.

IT is with a full heart that I write of the bass of Greenbrier River, for to that king of game fishes I owe a great deal of what has made life worth living. Unfortunately I am addicted to the fishing habit. I am one of the worst victims in this whole section. I do to point a moral and adorn a tale. I rely for the excitement and the stimulus that such an anglomaniac requires on the wild fight for freedom the bass makes when I have ensnared him. I can scarcely remember when I had not yet tasted of the fruit of knowledge. If it had been given me to extract a fish or two with a pole better fitted for a "hand spike," I would have led the life of an exemplary citizen, and in time probably been elevated to the position of justice of the peace, but as it is now I have sacrificed fortune and position to revel in the delights of those who endeavor to get a fish on an angle. I take it that it is owing to circumstance principally that makes the fisherman. No man who ever gave a fine fish half a chance could resist the temptation to experience the exquisite sensation again and again, until he is only saved from his worthless ways by winter.

But this is not intended for a rhapsody. To get down to facts, we return to the Greenbrier. This river is perhaps 170 miles long. Its whole course lies parallel to the Alleghany Mountains in West Virginia. Its waters are as clear as crystal. I live 100 miles from its mouth. The stream here has an average width of about 100yds. Its fall is uniform and about 8ft. to the miles. A man in a boat can easily see the bottom through 10ft. of water.

About 1880 a fish commissioner came idling along and saw the stream. He put some bass in it, and when he dies we will erect a monument over his grave. The food was plentiful, and in five years the river swarmed with the fish. They were of the small-mouth variety, as is best suited to clear streams with rocky bottom. The fish commissioner had placed the bass in the stream near the mouth, where he could reach it from the railroad, and went his way.

In a few years they had gone 100 miles up stream, far from the madding crowd and the farmers of Pocahontas county, a county without a railroad, had a new problem to solve. The day of going down to the river on days when the water was muddy and hauling out big catfish was past. We all have our gifts, and some of the Pocahontas people went to catching them as if to the manner born, while others went down to their graves trying to catch a bass.

I well remember my experience in 1886, when I struck my first bass with a birch pole, and found him all "hot sand and ginger." In those days, when I had mastered the art, the taking of a basketful was as certain as taking meat out of the smoke house, and many a time, when things to eat were scarce, my mother has sent me to the river to catch bass, as many a less gifted youth has been sent to the barn to gather eggs.

That was in the first flush of the bass fishing. I have been told that it is the history of every stream where the conditions are favorable. The new fish increase with too great rapidity, and a term of years is required to bring down the number to a normal quantity. Now the number is quite sufficient to make it interesting to those who can take them.

It is clearly recognized here that bass fishers are divided in two classes: They who can and they who can't. The ones that catch them get great quantities, and those who can't none at all.

I very early realized that it was necessary to cast a long line. In those days I had read of fly-rods and seen Englishmen fish down the river with rods that cost pounds. I went to the woods and searched for days until I found a rod nature had grown for me that had a spring to it, that I look back to now with pleasure, since I have reveled in fly-rods of my own. With it I could throw a line 35ft. at least, and perhaps take a bass weighing 2lbs. Giving him the "spring of the pole," I would wade to the shore and land him high and dry on the shingle.

It was with boyish, fiendish, socialistic glee that I have caught bass after bass, when the effete summer boarder with rod and reel, and other highly important paraphernalia, stood alongside and caught nothing. This carries out Washington Irving's picture of the bare-footed boy who with pin hook and worm caught more fish than a gang of well-equipped sportsmen, who no doubt were well bottled up and cared not whether the fish bit or not.

I have seen these presumptuous mortals try their hand on bass. They came from the pegged down fishing on the banks of a carp pond, and tried their hand on the sensitive natures of the bass, and found they could wait forever and get no fish. It could be truly said of them they "toiled" all day and caught nothing.

The gifted fisherman toils no more than any other artist who depends upon a skillful touch and delicate handling.

Our bass season opens June 15. Then minnows are the best bait. Patent minnows are used by a number with some success. One of the best old men in our country took a patent minnow and sank it in a pool 20ft. deep, and let it lie on the bottom for three hours, and didn't get a bite! He had more respect for bass fishers after his failure. Crawfish, tadpoles, young frogs, bacon, grasshoppers, hellgramites, are all used with great success, and later in the season the fly-fisher gets in his work. Under favorable circumstances from ten to thirty good sized bass should be caught in the Greenbrier in half a day's fishing.

My experience with bass has taught me that they will choose their own time to bite, and it is a privilege that cannot be denied them. As a rule, when mountains begin to cast their evening shadows on hot summer days, bass can be caught, but the most likely times often bring the fisherman no return. There is no way to tell when they are in the mood. I verily believe, however, that an hour after the slightest rise in the water will stop any fishing.

My scheme is to be prepared to offer bass all that the market affords, and by this means I have, after hours of fishing, changed defeat into a comparative victory. But it takes forging to do it.

This seems more of an autobiography than I could have wished, but I know about this subject by experience. I believe that 5lbs. will weigh any bass ever taken in the Greenbrier. We hear of heavier fish, but their weight cannot be proven. I caught my largest bass at the mouth of Knapp's Creek, and it weighed 4¾lbs. on the steelyards, but I have never caught another that weighed more than half so much. It was on a sultry morning when the sun was shining red through the clouds. I was fishing in the deepest water for miles, and using carefully selected crawfish. I had caught sixteen and during the time I had been trying to cast underneath a limb which projected above the water from a sunken tree. The place looked likely enough, and I at length succeeded in placing the bait there. The bass came to the top of the water, and when I saw it I was rattled. I had a light rod and a cheap reel. The bass was safely hooked and the reel fouled, and for about two weeks I stood in the water and let the bass have the "spring of the pole." It was a very glorious sight, and when the bass turned he seemed to light up the whole pool. Finally the fish was tired out, and having it safely landed, I quit fishing. I had had enough. It has been the dream of my life to catch another such a bass on a light trout rod in this cold, clear mountain stream, but ten years have passed without it materializing.

My next largest bass was caught in a manner that is now illegal: I drove it ashore and picked it up with my hands. This river is a great stream to gig suckers and catfish. The pine torches throw a bright gleam upon the water, and every pebble on the bottom is revealed with a distinctness that outclasses the sunlight. The light on the water, with the impenetrable darkness beyond, forms a scene very weird and beautiful. The fish blinded lie still and are speared. The bass go crazy. Occasionally one is gigged as it lies dazed, but they generally shoot away and hardly a night passes but what a bass or two scoots out on dry land and is picked up. One night a party of two were gigging up the river. We entered a cove, and heard farther up a weighty splashing. As we advanced a big fish came charging down, fairly making the water foam. Nearly opposite the light he struck the neck of land on the river side, and no doubt thinking the river lay before him, charged the other bank and struck a clump of bulrushes. In a moment I was on him and dribbled him out upon the bank as I would a football. The fish was the catch of the night, and would have probably weighed 2½lbs.

If your gifts run toward catching bass you can find good sport in Greenbrier River. They push their frontier lines further up the river each year, and have driven the trout back into the forks. The old-time fish have been sacrificed, but it was a grand exchange.

MARLINTON, W. Va. ANDREW PRICE.

Wild Fishers I Have Fished With.

BY FRED MATHER.

(*Continued from page 71.*)

THE list of birds with which I have fished, as recorded last week, was quite long, and the pelican and cormorant might have been added. When we think of all the birds, mammals, reptiles and insects that live wholly or in part on fish, in addition to the piscivorous kinds of fish, we see why it is necessary for some fishes to produce many thousand eggs in order to preserve their species from extermination.

The Muskrat?

The question mark denotes that I am in doubt about this animal being the least bit of a fish eater. Its food is largely vegetable in the warm months, but I do not know what it lives on during the winter. I have always suspected it of eating fish, because we know that it eats the *Unio*, or fresh-water mussel, and has often left mounds of their shells in evidence. How many hundred stomachs of this animal I have opened in search of fish is not recorded, but a great number were examined without finding a fish bone.

This sociable rodent is more like a beaver than a rat. Every angler who fishes in ponds has observed it swim to the beds of flags or rushes, cut a bundle and swim off with a mouthful to help its kindred build a house for winter, and later in the season has seen the house rising above the water like a haycock, but with no entrance above water. Those muskrats which I have killed were mostly burrowing about my trout ponds, and in summer, for in my fur trapping days in Wisconsin, long years ago, we were on small streams where there were no ponds such as the musquash loves. I have fished in his company hundreds of times, but cannot say that he eats fish. Can any one prove that the muskrat eats fish in winter when vegetation is scant?

The Mink.

Once upon a time I was a boy and looked with joy to the day when I could fish or shoot with the village Natty Bumpo, "Old Port" Tyler, if he would allow. We had been shooting rail down the Popskinny, and had rowed up near the bridge to get a shot or two at the evening flight of ducks. The boat was made fast, and we were taking a bite when I touched the old man's arm and pointed to a small animal on the opposite shore, about 100ft. distant.

"That's a mink," said Porter, "an' about three months from now his hide'll be a-dryin' back o' my house. If I didn't trap for fur I'd kill that fellow now, for they're the meanest an' cruelest animal on four legs. A mink 'll kill for the fun of it, an' keep on when he can't begin to use what he has killed, and I believe that a mink would kill every living thing on earth, if it could, and starve to death to-morrow. An' I dunno but there's some men that's just like minks; I see 'em a-shootin' away at chipmunks an' all the little song birds, as well as the hawks an' owls, and anything that lives. Now I never shoot at anything 'less I want it."

The mink had gone, but the words of the old trapper remained. Years after, when a mink got among my tame wood ducks and killed fourteen, the whole flock, Port Tyler's sketch of the character of the mink came up as I sat down and cried like a child. Then my heart hardened when my terriers told me that the fiend was among the loose stones that were the foundation of an old house then used as a fish hatchery. Men could not get under the building, and several times the dogs drove him out, but we dared not shoot on account of the dogs, and the villain dodged back. Next morning I had him in a trap, and the many tortures that I had planned were given up. The terriers shook his life out, but he should have had thirteen more in order to pay for my beautiful pets.

A mink loves muskrat meat, and the trapper prefers this for bait. Once when Henry Neaville and I were fishing the sloos of the Mississippi, in Grant county, Wisconsin, we saw a mink capture a muskrat and roll into the water with it, but while musky has a formidable set of incisors, they are no match for the canines of the mink.

A steel trap is a cruel thing, and I have taken animals which brought a feeling of compassion, but never such feeling for a mink. I have taken them when they had frozen to death in the trap, and when their leg bones were crushed, but I have a more tender feeling for a rattlesnake than for a mink.

When I had trout ponds at Honeoye Falls, N. Y., I saw a mink enter a pond, and by the time I could get a gun it was out and galloping off with a 2lb. trout. A charge of duck shot and the skin of that mink changed ownership. I got $3 for the skin, and had the trout for dinner. It is said that a mink can roll itself into a ball and drift down under a fish and seize it; that it catches fish we know, but how it does it is another thing. These wild animals do things when men are not about, and it is only by chance that a man has an opportunity to see them take their food, and then it might happen under the nose of a man who took no interest in watching or in recording it—the kind of man to whom a primrose by the river bank was just an ordinary every-day primrose.

The neck of a mink is as large as its head, and is all muscle. I have known one to kill an adult tame goose, and if any reader ever got a walloping from the wings of a goose, wings which have broken a man's arm, they can form some idea of the strength of a mink. I have kept them in confinement, and a few years ago sent one in a tin-lined box with a wire-cloth front to Washington, and the mink actually chewed through that wire and escaped on the way. The late Prof. Goode wrote me: "I would not have believed this if I had not seen the hole in the wire."

Once, while camping with a party of three, on the Hudson, there was a great commotion on the opposite shore of a little brook, a flopping, squealing, squawking babel of sounds, and then all was still. In the morning there was the body of a night heron, or quawk, with its throat cut, and the tracks of a mink. The mink will eat but little flesh if it can get plenty of warm blood; that is

why it kills off a whole henroost or a flock of tame wood ducks in a night.

The Swamp and Water Hares.

To turn from the contemplation of a bloodthirsty mink to the timid and harmless hare is a pleasure. The fact that my countrymen call all hares "rabbits" does not deter me from telling them that if there are wild rabbits in America they have been brought here, for the true rabbit is gregarious, like the prairie dog, and lives in colonies, constructs burrows and brings forth its young blind and naked. Our little "cottontail" does not burrow, but uses holes in the ground as its "form." Our American hares are like all hares, solitary. We have about five species, including the "jack rabbit" of the West, the "great northern hare," which is white in winter, our common "molly cotton" and two which live about the water and swim when they wish to swim.

This explanation seems necessary when the hare is included among the "wild fishers I have fished with." When I first went fishing in the Southern States, I did not know of the existence of any more hares than the three enumerated above. One summer day I was lazily fishing a Louisiana bayou in company with a white-headed darky of most uncertain years, whom I knew only as "Uncle Eph." I love to fish with men of this kind, because they are natural, and therefore are interesting studies. They know how to catch fish, and are filled with practical knowledge, say 40 per cent., mixed with 10 per cent. of tradition and 50 per cent. of superstition. Then, with only such a man for a companion, the party is complete. The addition of another white man would make the "Uncle" suspicious when he found that the two were enjoying if not guying him, and another colored man would make him jealous and taciturn.

As I came around the bend I saw an aged colored man sitting in a dugout in the shade of several large gum trees, and he was fishing with a cane pole. As I paddled past in a lighter dugout, he applied himself to baling out his craft with a tin cup, without a sign of being aware of the presence of a stranger. Here is a character worth cultivating, I thought, he has seen me, but does not care to have his privacy intruded upon. Just my man!

"Good morning, Uncle, are the fish biting well to-day?"

He dropped his cup, and touching what he regarded to be a hat, for he had been born a slave, replied: "Mawnin', sah. Dey doan bite too fas'," and then turned his attention to his one suspender and plainly intimated that the interview should close. I pulled in alongside him, and asked him if he would; he did, and we were friends.

In answer to a question, he said: "Dey calls me Unc. Eph 'bout yah; fo' I was raised in Tangipahoa, an' since I'se been free I'se done lived by fishin', but I could do de same if I wasn't 'mancipated. I done seen yo' 'bout de village, and I knows dey say yo' is a Yankee, but I do' know dat 'mancipation is good fo' de ole man, who is like de ole hoss w'at is tu'ned out to die. How yo' t'ink?"

I had been busy in rigging up for fishing, and while I had heard what the old man said, did not reply, for I wanted to hear him talk. As the minnow was put on the hook, with the hook below the dorsal fin, and I was ready for a cast, an animal, which I thought to be a muskrat, swam past and I cast my hook over it. Why I did this is a problem that I can't answer to-day. I did not want a muskrat at that time. Its fur was not good, and better meat could be had. If the French saying is true, that an Englishman says: "It is a fine morning, let us go out and kill something," that must be the reason why I threw my hook over the back of that swimming animal and caught it in the back of the neck. It cried as I reeled it in, and when I saw that it was a hare the hook was taken out and the little animal swam across to the other side.

"Uncle Eph," said I, "how do you suppose that rabbit got in the water?"

"W'y, sah, he jess walk in w'en he wants fo' to swim. Did yo' nebba see a rabbit swim befo'?"

"Never did. The rabbits don't swim where I came from. I've seen them on the snow over frozen swamps gnawing willow bark and other things, and have seen them on swampy ground in summer, but never heard of one going into the water, they must be a different kind down here."

"Yas sah, I 'spects dey is. We got two kinds 'bout yah, one he got a slim head an' a white tail, an' de odder he got broader head an' no w'ite awn he's tail. De w'ite tail one we calls watah rabbit, and w'at yo' cotch was swamp rabbit, he got no w'ite awn hees tail."

I had often learned a little about birds, beasts and fishes from just such men and had also learned that they were often mistaken in some things, but my rabbit was not gray, nor was it white below like the familiar "cottontail" of boyhood, and there was a chance that the old man was right and that the yellowish brown animal which I hooked was a different species. While fishing afterward I saw several hares swimming and knew that they had not tumbled in accidentally. Study of this family in books, years later, shows that "Uncle Eph" was correct; the "marsh hare" (*L. palustris*) has no white on belly nor tail, and its skull is half as wide as long, while the "water hare" (*L. aquaticus*) has a white tail and a narrower skull. Both species are colored a yellow-brown.

To carelessly throw a hook over what was thought to be a muskrat and to pull a crying rabbit out of the water was not only a new experience, but it led up to an inquiry which developed the fact, new to me, that we have two species of swimming hares in America.

The Dragon-Fly and its Larva.

Uncle Eph. had not spoken for some time; we had each been busy with our thoughts and our fishing since the rabbit episode. He coughed, probably to attract attention, and said: "Look a' dat ole snake feedah a-crawlin' up dat grass, he gwine bus' out an' fly 'way soon." I turned and there on a stem of some water plant was the pupa of what is popularly known as dragon-fly, devil's darning-needle, demoiselle, snake-feeder and mosquito-hawk. I was familiar with this interesting insect in its different stages, had seen thousands of empty pupa cases clinging to aquatic plants above water, but had never seen the insect in the act of casting the pupa case. Here was a chance.

The pupa was slowly crawling, and Uncle Eph. having fixed my attention, ostentatiously rinsed his tin cup and dipped up some of the warm water to drink. The scheme worked, and while he knew nothing of microbes, disease germs and such unwholesome things, he knew in his simple way that swamp river water was not considered wholesome by most white men, and then when they were forced to drink it they added some germ-killer to it. When he resumed conversation he was more fluent and said: "Now dat ah t'ing he got mighty tired a-clim'in' outen de watah, an' he stop fo' to get hees breff. He's been a-crawlin' roun' de bottom awn his six laigs fo' two yeahs, an' now he gwine fly. See how he stretches an' tries to bu'st. Dah, now! Hees back split open an' now hees shiny head an' big eyes come out an look 'roun'; now he drags hees laigs out fum de skin an' crawls out, an' dah he shakes out hees wings an' dries 'em an' den he crawls up and drags out hees long body, longer dan what he was befo', dat w'at puzzles me, wha he keep all dat long body and dem wings in da little shuck wat he lef' on de grass?"

This was something I could not answer, and after watching it emerge from the pupa to the perfect or imago state, I watched this insect take wing and dart about our boats after insects. Its appetite seems to be insatiable. I have transfixed one with a pin through the thorax and then fed house-flies to it until I was tired. It would be a big contract for an able-bodied man with nets, or other machinery, to feed one able-bodied dragon-fly. I never saw such an appetite attached to any animal. It feeds ravenously as a larva, after hatching from the egg, when it breathes through its tail, like the larva of a mosquito, but has a formidable extension of its nippers which has two joints, the first at the extreme under side of the head, bending back, and the second under the thorax. This apparatus terminates in a pair of sharp pincers, and can be thrown out to seize a fish fully ¾in. distant. Once I put a larva of this insect in a bowl with five young gold fish about 1in. long, and in an hour it had devoured the last one. It feeds in the pupa state, a thing which few insects do.

"Why do you call that insect a snake feeder, Uncle Eph.?"

"'Cause he got a bargain wid de snake not to eat him if he bring de snake big fat bugs. Now a snake like some o' dese bugs dats got big, hard, shiny scales on top dey wings, an' de snake can't cotch 'nuff, so he bargain wid de snake feeder to bring him fat bugs, an' de snake spare hees life. W'at yo' call 'em wha you live?"

"Most people call 'em dragon-flies, but the boys call 'em the devil's darning-needle, and believe that they will sew a boy's ears up."

"Yah, hah! Dattah's funny, fo' a fac'; sow up dey years! He ain' got no needle and no string, but w'en he's a wum in de water crawlin' awn legs he's got sho' nuff pinchers, an' he pinch a little fish o' a frog, he will; I see 'em do it." I was much pleased with this keen observer, but pushed off when he began looking for his cup again.

Tortoises and Turtles.

In America we popularly call them all "turtles," and the distinction of "tortoise" for the land and fresh-water kinds is almost unknown, while the principal exception is that delicate box of gelatinous meat, the diamond-back terrapin of the salt-water marshes. I never knew the box tortoise to eat fish, and I have had them in captivity for years; they seemed fond of fruits, melons and tomatoes.

All the pond and river turtles are great fish eaters. They will float up quietly under a fish and make a grab for it. Some years ago I was using a live minnow for black bass, on Long Island, when I saw a great snapping turtle take the minnow and go below. A few pulls showed that a trout rod would never stir a 30lb. turtle from the mud and weeds, and I kept weaving the rod from side to side in order to cut the snell on the reptile's jaw in order not to lose the entire leader. The game worked, and a hook was the only loss. I have taken these brutes on night lines set for eels, but there were hooks selected for that work, and no gut snells.

The large, soft-shelled turtles of the Great Lake region and the South are also savage fellows. A young man who was fishing near me in the Pamunky River, and using strong tackle, pulled in one of these critters and held it up to show me. Soon he yelled for help, and I rowed over to him and found the turtle fast to his shoe and biting his foot. He was in too much agony to help himself, and I did not know what to do. The first impulse was to seize the long neck and shut off the turtle's wind; as I did this I realized that it could do without breathing for an hour or two, and all the while the man was in agony with the cruel beak forcing itself through the thin upper of his shoe and into his foot. On a seat beyond him lay one of those strong dirk knives which are sold to would-be sportsmen as "hunting knives." Fortunately it was sharp as well as strong, and the way I vivisected the lower jaw out of that turtle put all my strength, and would have won applause from the cruelty society. The young man fainted at the finish, but a little water and fanning brought him around. When his shoe was removed there was much blood in it, and on taking off his stocking I found that the little toe was nearly severed, and the next one was injured. I bound up his foot in his handkerchief and towed his boat to White House landing, where he had friends. He lost one toe, however. He said that the turtle had swallowed the hook, and he had cut the line to let him have it, when the turtle began running around to escape, and he kicked at it. "Well," said I, "you keep that hunting knife as a reminder, not only of the loss of your toe, but as the first instance known where such a knife was found to be useful."

Passing from turtles, which are truly dangerous, down to the little "skillypots" which sun themselves on logs is like descending from tiger hunting to shooting rabbits. The turtles before mentioned never sun themselves on logs. They may float on the water a few minutes when they come up for air, but they remain in the water at all times, except when eggs are to be laid on land for the sun to hatch. Here is a grand division not noticed in the books. From the big "sliders" of the South to the painted and spotted pond turtles of the North, they are all fish eaters.

Last September I fished Lake Hopatcong, N. J., with Capt. W. A. Clark and Charles W. Romaine, both of Newark, N. J. Black bass was the objective, but incidentally Romaine hooked a "painted tortoise" of about 6in., nearly the limit of their growth. When you know that Clark chewed hardtack and "beef dried on the hoof" with me in the long ago, and that our friend is just "of age" and not familiar with reptiles, you will understand how it was when he had a fierce bite and reeled in when he could. The line was under the boat, but the landing net was ready, and I landed the little turtle in the boat. This was a new problem to Charley; he could unhook a fish, but a fish had no such jaws of hard bone that might take a fellow's finger off.

The turtle was seeking a way to escape, and Charley was holding a stiff rod on it. "What shall I do?" he asked.

"Stick your finger down his throat and tickle his gullet and he will throw up the hook," said Clark.

Charley looked at me in despair and said: "I don't want that thing, and I don't want to lose my tackle; what shall I do?"

There had been fun enough, so I took the turtle in my left hand, pried its jaws open with a pocket knife, unhooked the little fellow and tossed it overboard. As it paddled down into the weeds unhurt, there was a streak of bubbles behind it, which seemed to be a sort of jubilation at its escape. Charley drew a long breath, but made no remark. "Charley," said I, "you see a special providence in this; you did not understand the management of turtles, and Capt. Clark, having left one arm at Cold Harbor, Va., could not have done it, but you asked me to join you, and there you are. Charley, my boy, remember this day, and always invite me when you go a-fishing."

Water Snakes.

Few sportsmen know more about snakes than to have about half a dozen names to cover them all, yet few men see more snakes than the men who fish and shoot. yet Jordan, Manual of the Vertebrates, gives us twenty-four genera and fifty-three species in the northern United States. Of these there are four which haunt marshy places and feed mainly on fish and frogs, although none of them would neglect a bird if it offered, whether the bird was nesting on the ground or feeding. And the other species may also take fish for all I know, while it is sure that none of them would decline a frog.

These four piscivorous serpents have come frequently under my notice at times when I have been fishing alone from a boat or a log as a "contemplative angler." That is the way to see not only snakes, but other life, and I have fished with the four fish eaters and have seen them fish. I do not kill all snakes; in fact, I love to pet the "puff-adder" or "hog-nosed viper," for it is kind and likes petting; it is not poisonous, as the majority say it is, but it flattens its head and threatens, then I pick it up and we are friends. But the "four," the "big four," and we might add, "the dirty four," I kill them on sight. Two of them are as poisonous as the rattlesnake, and the others are vile beasts.

The common water snake of the North (*Tropidonotus sipedon*) grows to a length of 4ft. It is of a dirty brown color, with darker squares. It ranges from Maine to Texas, and is found along the streams, a cross, disagreeable reptile. From 1868 to 1876 I had trout ponds at Honeoye Falls, Monroe county, N. Y., and this snake was a pest. The soil was a stiff clay, and a crawfish hole would never cave in, but made a good place for *Tropidonotus sipedon* to hide in. On approaching the ponds in summer there would be many of these snakes seen to dodge into the water and hide under the overhanging grass. It was fun to see lady visitors screech when I threw off my coat and plunged the left arm under the bank, bringing out the angry beast, which, if not taken too near the neck, vented its wrath in sinking its teeth into my hand. But it was only like a brier scratch; not half as severe afterward as the prick from the spine of a catfish, but when my good right hand took the reptile by the head and twisted it from its body, some people thought it cruel. To me it was "cruel" to see a snake take a trout, especially one that I had raised. Yet that snake filled its place in nature; the main trouble is that man writes up all these things from his point of view, just as I am doing.

The other non-poisonous water snake which I know, although others are recorded, is the Southern one, *T. fasciatus*, which has dark vertical bands on its sides, and has a reddish-brown belly. This snake is seldom found north of Georgia. I knew it quite well, having looked it over for poison fangs and found it to be harmless, so when a lady from Ponchitoula landed one and was about to spring out of the boat, I called to her to swing it over to me. She did so, and I was tempted to bite the animal's head off, just for bravado, but merely unhooked it and killed it with my heel.

The Northern sportsman should remember this: Our North American poisonous serpents have triangular heads and also have a deep pit between the eye and the nostril, like a second nostril. The snake known as a copperhead in the North and cottonmouth in the South (*Ancistrodon contortrix*) has the top of its head a coppery-red, and a lot of V-shaped blotches on its back. If I am not mistaken, it is called "pilot" and "rattlesnake's mate" in Pennsylvania. It is very poisonous, but is not as common as it was. While fishing for black bass in the Delaware River, one crawled out of the water with a perch in its mouth so near me that I killed it with a stone.

From Illinois south dwells the water moccasin (*A. piscivorus*), said by Jordan to be the most dangerous of our snakes. I have seen them hanging on bushes over the water ready for fish or frog, and have killed several that had fish in them. When fishing in Southern waters I keep a good lookout for these animals, which give no warning rattle, but carry small doses of sudden death ready to be injected into the leg of a peaceful angler.

[TO BE CONTINUED.]

CHICAGO AND THE WEST.

Another Chance.

CAMP FOREST AND STREAM, Wisconsin, July 15.—J. B. H. and I have come back once more to our little lake and our hill and our oak trees. The tent pins of the little tents are in the same holes they held last year and years before. This is the tenth annual camp of J. B. H. and myself, although it does not seem so long as that since we began to explore this country about Mukwonago. This year is much as the other years. The small axes stick in the same tree, the same nails support the dish cloth, and the gridiron and the lantern, the same aluminum frying-pans glisten in the sun, and the same little black coffee pot does not glisten at all, but leans its fat body against the same log which has for four years served us for a seat. The little lake is not changed, but is beautiful as ever, and our spring is as clean and cold. The sun sets red and big as it did the first time we came here, and the lake is as empty of summer resorters as it ever was. Not a cottage holds a duck-trousered dude to bother us; not an oar wrinkles our lake; not a tent shows in all the circle of green about it except our own. We might go further and fare worse. We have fishing and resting as much as one may need, and it is not for us to break records. Nowhere have we seen a prettier spot, or one more free from resorters, mosquitoes and other insects. Why then should we long, or why wander blindly on beyond the comforts of living? In this I agree, and think with him that our camp is perfect. For J. B. H. no daily mail and no telegrams cause distraction from the simple routine of pleasure, and he cares not that we have no place for writing in all our camp. I have tried our table, but it is too low. There is not a box about the place, and only one chair, which appertains to J. B. H. exclusively. The best makeshift for a writing table I have yet found is the bottom of our biggest frying-pan, the latter held upon my knees. Thus I write, now and again looking out from our hilltop, whence I can see J. B. H. in our red-painted punt at anchor on the bar in front of our camp, his straw hat now and again rising and bending over as he puts some small fish in the live box. It is the very picture of contentment that he makes. He had four fish when last I heard from him, and wanted to know when I was coming out. Alas! if frying-pans were typewriters!

It is ten years since we first came to the country, and now J. B. H. is growing old. The years show their mark too plainly now. Once 6ft. tall and more powerful than it is given many men to be, he now is thin and stooped, and his feet are heavier, which chafes the spirit of him, which still is strong. The path of the face of our hill is too steep, so we have engineered a double Z, on which he takes his time, bearing never any burden now. Yet his eye is keen, and he casts a decent line, and would stay here all summer if I could be in camp so long. We take our time in all our sport, and not the least of our pleasure is the hour about the fire; for, though the day may be hot and lazy, the night is always cool.

We talk, and speculate, and philosophize, wishing we might be with the army at the front of the war; wishing that the war were over; wondering why there is any war in the world, and wondering at the smoothness of the world after the losses of all its wars. In our fire sometimes fly myriads of gnats, nameless, incomputable; and these we liken to the hundreds of thousands slain in the wars told of in the Scriptures, hundreds of thousands, nameless, uncomputed, leaving the world smooth and careless, spinning on just the same. I tell J. B. H. that it does not matter, man or gnat, but he thinks it does. He says that every man has another chance, some day, somewhere, where his mistakes are not weighed forever and ever against him; where perhaps he has wings—not wings such as we see given angels in books, perhaps, but wings sufficient to bear him up above the things of no avail. When I tell him I can see only the war of life, and nothing to indicate that weakness will ever mean strength, or that failure will ever grow into success, he picks from his sleeve the winged fly which has come up out of the grub in the water. This, he says, is and was not, and has lived in three elements—air, earth and water—life enduring with it always, until now it has become a creature beautiful, care free, with wings tenderly brilliant, such as may carry it far from the broken husk it has abandoned. For this reason J. B. H. thinks those who have fallen in war or in the unchronicled fight of life may some time have another chance. Nearing fourscore now, and with limbs that lag, J. B. H. has never preached, except silently. Yet this was what he said, by the fire, and as in his life he has cheered many, perhaps what he says may cheer some who are weary, and who may one day see the imago that has risen from below.

Vicissitudes.

We have had some vicissitudes of a mild sort in our angling. It is too late for frog-casting in the shallows, so we pursue the bass in deep water. Making a trip through the crooked channel which connects our lake with Eagle Lake, where Billy Tuohey's hotel offered fresh bread and eggs for our larders, we observed that there were some good bass in the deep bends of the creek. One bass I saw which I thought would weigh over 5lbs., and thinking to capture Billy's gold medal for the biggest bass we went back the next day and made overtures with a frog about as long as your arm. This the bass promptly took and carried back some yards under the floating bog, whence we never could evict him. In preparation we had put on a brand-new line, with a swivel and a No. 3 gimp sproat, the line so strong that one could not break it in his hands. Any one finding the above concealed about his person will please return it to the Western office of FOREST AND STREAM. The bass wrapped the line around the grass roots and twisted it off in some way, and though he twice rose for us in later days, we never got him into the net, and Billy still has his medal. But we caught four other bass in the creek one day, one that weighed 3¼lbs., not a very large one from the standpoint of Camp Forest and Stream.

Our crappie bar we discovered to be in the same place this year, and it has proved good for all the fat crappies that we need. Fishing here one day with small minnows, in about 15ft. of water, we struck some heavy fish that seemed bound not to come up to see us, and preferred to dig into the weed beds. J. B. H. much bemoaned my lack of skill in this bout, but half an hour later the opportunity for redemption came. Apparently the same fish struck again, and this time the light rod lifted him till we could see he was a pike of goodly size. On the pocket scales he weighed but 5lbs., but J. B. H. said the scales were obviously and glaringly wrong, as any one could see the fish would weigh 8lbs. at least!

Conveniences.

At Camp Forest and Stream all things are ready at hand when needed. A little pond in the woods near by yesterday yielded us a dozen nice bait frogs, which we took on the fly, not bothering to net them. A sandy beach near at hand on our lake shore always has a big school of minnows swimming up and down waiting for us to come and catch them. At first we caught them a score at a haul in our minnow seine, but then they grew wise, hugging the bottom and dodging under the lead line most exasperatingly, so that often we got none at all after a careful draw. We have reinforced our seine with mosquito bar, and meditate planting side wings to impound our prey the more readily. At times we need minnows badly, as the other day when we had invited seven guests—cottagers from Eagle Lake—to dinner, and when they arrived before we had the fish caught for dinner. Yet fortune favored us so that we fed all abundantly on crappie that evening, to the pleasure of those who had never before eaten of skinned crappie. We have discovered this summer that it improves our fish to skin them, and we no longer scale fish, but skin them. It is a very easy operation. A double rip from head to tail on each side of the back fin, and a similar cut along the belly, and the skin pulls off in two halves, taking off all back of the pectoral fins. These latter fins no one can eat, but for many generations fish mongers have sold them and servants have cooked them. We just leave them for the turtles in Camp Forest and Stream. Moreover, when you have taken off your two halves of your fish skin, you can begin at the back end of your back fin and pull it it out whole, with the bones which project down from it into the best part of your fish. When you have thus prepared your fish it has shrunken to one-third its original size, but you have thrown away nothing which is useful to you, and the remainder is sweet and free from muddy or fishy flavor. Bass should always be skinned, and we so prepare pickerel, perch, crappies, rock bass and all other sorts of fish that fall into our hands. What with catching our minnows, catching our fish and cooking them, we manage to put in the greater part of the day without any trouble. If we happen to get any big fish, we carry them to neighbor Schwartz, who has a family larger than ours. Some days we do not fish at all, but fix things, or make stools, or mend the table. One way or another the days glide by very easily and quickly, so that already we see the unwelcome end approaching. We build our table and our stools so that they may be here next year.

Last night the wind fell at sunset, and the lake was absolutely still, mirroring all the green hills about it and all the rosy clouds above it, so that our boat floated in a wondrous medium, surrounded by wondrous things, intangible and unreal in their beauty, as must seem the things of the new world into which arise creatures abandoning the imperfect bodies of an earlier sphere.

American Fisheries Society.

CHICAGO, Ill., July 23.—The twenty-seventh annual convention of the Fisheries Society met at Omaha, Neb., in three days' session, July 20, 21, 22. No evening sessions were held, members preferring to spend the time in the enjoyment of the beauties of the Omaha Exposition. The following members were present at the opening day: Messrs. George F. Peabody, Appleton, Wis.; Seymour Bower, Detroit, Mich.; J. J. Stranahan, Put-in-Bay, O.; J. E. Gunckel, Toledo, O.; E. N. Clark, Northville, Mich.; James Nevin and Prof. E. A. Birge, Madison, Wis.; C. Spensley, Mineral Point, Wis.; President Lew May, Omaha; Secretary Herschel Whitaker, Detroit, Mich., and J. A. Dale, York, Pa.

The programme for the reading of papers was established as follows:

First Day.—Dr. H. B. Ward, professor of zoology, University of Nebraska, "Aquacultural Experiment Stations and Their Work"; James Nevin, superintendent Wisconsin Fish Commission, "The Propagation of Fish"; Livingstone Stone, superintendent U. S. Fish Commission Station, Cape Vincent, N. Y., "The Origin and Infancy of the American Fisheries Societies."

Second Day, Morning Session.—Hon. J. W. Titcomb, Commissioner of Fisheries and Game, Vermont, "Desirability of State Organizations for the Promotion of Fishculture and the Passage of Legislation by the Several States for the Propagation and Protection of Food and Game Fish"; J. J. Stranahan, Superintendent U. S. Fish Commission Station, Put-in-Bay, O., "The Microscope as Practically Applied to Fishculture"; Dr. H. C. Bumpus, professor of zoology, Brown University, R. I., "The Identification of Adult Fish that have been Artificially Hatched."

Second Day, Afternoon Session.—Dr. J. A. Henshall, Superintendent United States Fish Commission, Bozeman, Mont., "The Artificial Culture of the Grayling"; Hon. F. B. Dickerson, Commissioner of Fisheries of Michigan, "The Protection of Fish and a Closed Season"; Jacob Reighard, professor of animal morphology, University of Michigan, "How Can Biological Investigation of Fresh Waters be Made of Most Value?" J. E. Gunckel, Toledo, O., "Fish and Fishing."

Third Day, Friday, Morning Session.—F. N. Clark, Superintendent United States Commission, "Notes in Connection with the United States Fish Hatcheries in Michigan"; Prof. E. A. Birge, dean of College of Letters and Sciences, University of Wisconsin, "The Relation Between the Areas of Inland Lakes and the Temperature of the Water"; Herschel Whitaker, Commissioner of Fisheries of Michigan, "Some Popular Errors Needing Correction"; Dr. Bushrod W. James, Philadelphia, Pa., "The Protection of the Pacific Coast as Related to its Food Supply"; Seymour Bower, Superintendent Michigan Fish Commission, "The Justice of a License Fee for Commercial Fishermen and for Anglers."

Western Season Waning.

The Western angling season is now about at its worst. The coming of the grasshoppers will mean good fishing for large trout on some of the better streams, but the bass and muscallonge season is now at low ebb. In August the fishing will improve and remain good until cold weather. Some big-mouth bass continue to be caught in the lakes north of us, and I hear of one very fine string of bass taken by Mr. F. R. Bissel, of Chicago, at La Crosse, Wiss. These were small-mouth bass, and the catch was fifty-five in two hours, certainly a fine one. Mr. Carter, chief engineer of the Northwestern R. R., tells me that he is going to try the Mississippi between La Crosse and Winona next week, and he expects fine sport for bass. For the most part, the lake bass fishing is not so good, having been marked this season by extreme patchiness. The bass in lower Wisconsin spawned all the way from April into July, and the fishing has been good and bad alternately. At Billy Tuohy's place, on Eagle Lake, Waukesha county, Wis., there was some bass fishing a week ago, a Mr. White, of Chicago, taking on one day nineteen bass, and on another twenty-three. This was by skittering a frog. I have not heard a great deal from the Wisconsin muscallonge country. The last word from the Minnesota muscallonge country, at Kabekona Camp, stated that muscallonge had quit biting. On June 28 Mr. A. B. Proctor, of Kansas City, killed a 24lb. lunge, and Frank S. Proctor took one weighing 20½lbs. On June 29 Mr. and Mrs. E. F. Hunter, of Chillicothe, Ill., killed two fish weighing 11½ and 12lbs. On the same day Mr. A. B. Porter, of Evanston, Ill., caught in Baby Lake a muscallonge weighing 30lbs. When Billy Mussey came back from that country he brought one muscallonge with him weighing 31lbs., and had others weighing 14lbs., 16lbs., etc.

Reports from the Nipigon country of Canada state that but few parties have as yet appeared, though there will be more on the stream in the month of August. The largest Nipigon trout of which I hear thus far this season is 4½lbs., taken by Mr. Ward Ames, of Duluth.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

Boston and New England.

BOSTON, July 25.—A large party from the Boston Young Men's Christian Association is camping on the shores of Sebago Lake. They are fishing to some extent, but there is not yet any particular record of catches. Mr. R. O. Harding has been absent for some weeks, by reason of illness, but late reports are encouraging. He has been stopping at Ossipee, New Hampshire. He writes E. H. Wakefield, Jr., that the boys are still trying Dan Hole Pond for landlocked salmon, and that a couple of them, from a town in that section, took a salmon last week weighing over 15lbs. They also hooked on to another big one and lost him. Richard is in for trying the pond again, though it is very late, and Wakefield is tempted.

Codfishing off the south and north shores is now in order, and Boston merchants and business men get a good deal of pleasure out of such fishing, when they might be unable to get away on longer trips to the trout and salmon waters. Mr. Mathew Luce, with his boatman, Johnson, is at it again this year, and taking a good many pounds of fish. He fishes purely for the love of the sport, while the fish are invariably saved and well cured. They go to Mr. Luce's friends and where they will do the most good. Bluefishing trips are still in order to Martha's Vineyard and Nantucket. The capture of a big swordfish off Nantucket Shoals the other day gave some Boston bluefishermen a taste of that sort of big fish game. The smelt fishermen are also getting some good strings down the harbor. The owners of steam launches and other craft have several points where they go for early morning smelt fishing.

A letter from Mr. John Fottler, Jr., yesterday at his place of business stated that his first salmon this season had just been taken on his river, the St. John, at Gaspé, Quebec. Messrs. John E. Devlin, L. B. Dana and son are with Mr. Fottler. The weather has been dry and made the fishing poor for some days, but a good run of salmon is expected since the rains.

Mr. E. C. Stevens has just received, from Lake Dunmore, Salisbury, Vt., the king pickerel of the season. It was sent him by a friend at that point on a fishing trip. It was almost upon a level with a man's arms extended and weighed 14½lbs. This lake is noted for its big pickerel, one having been taken there formerly weighing up into the twenties of pounds.

Now the other fishing resorts are all reported to be green with envy—or foliage—since Belgrade Mills, Me., is expecting Grover Cleveland and Joseph Jefferson to help take the black bass and white perch. This report may not be correct, but the Maine papers are sending it broadcast. Those renowned sporting gentlemen could scarcely find a better location for bass fishing, if recent reports are to be credited. Bass fishing all along the Belgrade and Winthrop chain of lakes is reported to continue good.

The Maine papers are shouting the praises of Miss Lenora Jordan, of Blue Hill. She, with a number of little girls—so one paper has it—went the other day into a woodland pasture after raspberries. The girls had been in the woods but a short time when they came upon two cubs, which the little girls mistook for woodchucks, till they run squealing up a tree. The children's shouts brought Miss Jordan, who was picking berries at some distance, and also the mother bear. The young woman screamed. Then catching her breath she uttered another volley: "Run, girls, run! Run, girls, run! A bear! A bear-r-r! Oh-o-o-o! Run, girls, run!"

They did run. So did Miss Jordan, and so did the bear. But they ran in different directions.

Lenora made straight for the house, while the children scattered in different directions into the woods. When she arrived at the door she found that nobody was there to hear her call. Instead of fainting away as most girls would, she went to her brother's room and took his rifle and ran back to find the children. When she got into the woods she could hear them crying at some distance away. While making toward them she again encountered the animal and a well-directed rifle ball stopped the beast, which was making rapidly toward the girl, on its hind feet, erect. She then threw down the rifle and crowded through the bushes till she found all of the children, and saw that they were unhurt. The men in the fields heard the screaming and the rifle shots, and came to the scene. They found the young woman almost in a dead faint, with the children crying about her. She directed them to where the rifle was fired, which they soon found, also the bear, dead from the effects of the young lady's well-directed shot. The cubs are reported not to have been found yet, but the hide of the old bear will help to buy the young woman—only nineteen—a bicycle.

SPECIAL.

Tuna and Tarpon.

SAN ANTONIO, Tex., July 21.—*Editor Forest and Stream:* I see in your issue of July 2 an interesting communication from Mr. Chas. Frederick Holder, describing his play in landing with rod and reel a tuna of 183lbs. at Catalina, California.

I claim some experience in angling for the "silver king" and other large fish, having landed this summer already, with rod and reel, twenty-eight tarpon, from the waters of Aransas Pass on the Texas coast, and am therefore much interested in some of the statements made by Mr. Holder, and without any disposition to be hypercritical with reference to "fish stories" as a rule, I am inclined to doubt the accuracy of some of these. In an experience of a number of years I have never been able to find a 21-strand line which would tow a yawl boat with two men in it against the oars of the boatman; and if Mr. Holder has secured such a line I should like to know its make and where I can procure one. I have used the Conroy and the Hall (considered among the best), and in fact many other lines in the market, and none of them will tow an ordinary skiff against the oars of the boatman with a 100lb. tarpon at the other end, yet Mr. Holder states that his 21-strand line towed his yawl boat against the oars of his boatman for six or more miles—sometimes against a heavy sea. I have no doubt the tuna is a magnificent game fish, and that it is difficult to land one weighing 183lbs., and that the angler who does so on a 21-thread line is quite expert in never permitting the fish to get a pull on his line strong enough to tow his boat.

I am not disposed to credit the statement that the tuna is superior sport to the tarpon. It does not leap in the air after being hooked, and the dead pull of any fish in the water must fail to excite the same pleasurable sensations as the first furious rushes and wild leaps of a tarpon on the Gulf coast, and I am doubtful if as great skill and cool judgment be required to hold the tension upon the tackle necessary to ultimately kill the tuna in the water as is requisite to the handling of the "silver king."

All fish with the propeller tail, like the tuna and others of the mackerel family, are strong, fast swimmers, and good fighters, but my experience with them is that they soon grow tired and are afterward easily brought to gaff.

The statement that the tuna can fight for three or four hours and then be as fresh as when hooked seems incredible; if such were the character of the tarpon, no fish over 5ft. long would ever be landed with rod and reel. After a three or four hour fight the angler must be weary, and if the fish by that time were not considerably exhausted I feel sure he could not be landed.

I write this to you with no purpose of entering into a controversy with Mr. Holder, and would send direct to him for the desired information if I had his address.

A. W. HOUSTON.

Canadian Angling Notes.

SOME very excellent sport has been had lately by ouananiche fishermen at Lake St. John, especially in the Grand Décharge. Among other fortunate anglers at this point may be mentioned the Count of Turin, and Captain Levita, of the Royal Artillery, Halifax. One American fisherman and his wife, in little over a week at the end of last month, killed over 300 of these fish, and a well-known Quebecer took over seventy last Sunday week, but returned most of them to the water. Larger fish are probably to be taken now in the Peribonca, the Mistassini, the Ashuapmouchouan and Lac á Jien and Tschotogama. The young fish in the hatchery at Roberval are doing well, and Mr. L. N. Joncas, Superintendent of Fisheries and Game for the Province of Quebec, who has inspected them, reports them as exceedingly healthy. The splendid ouananiche pools in the Grande Décharge, hitherto the property of Mr. W. A. Griffiths, have been purchased by Mr. B. A. Scott, of Roberval, for $5,000.

On most of the salmon rivers the sport has been very indifferent this year, though a few anglers, including Mr. Adams, of the American Net and Twine Company, report good luck in the Gaspé district. Mr. Cabot, of Boston, has just gone home after enjoying good sport on the Grand River, of Gaspé, and his partner, Mr. Joncas, of Quebec, with a party of friends, will fish it during this coming week. Mr. J. Fottler, Jr., of Boston, is on the St. Johns River. Mr. Frank Ross has enjoyed fair sport on the Magdalen, accompanied by his son, F. Ross, Jr., and Mr. Campbell Howard, of Montreal. Some of the Restigouche fishermen have done fairly well, and others have had no sport at all. A Montreal angler took only three fish in three weeks' fishing, and a Quebecer who returned from the famous stream quite recently had but one trout to his credit, and no salmon at all. Mr. C. B. Barnes, of Boston, and some of the members of the Restigouche Salmon Club, made good catches, however. As a rule, the water lowered rapidly in most of the streams this year, and became too clear for successful fishing. On the St. Marguerite the season opened fairly well, and Mr. Elton, of Waterbury, took seven large fish in six days. It soon fell off, however, and taken all in all the fishing here was quite poor, and most of the fish caught bore marks of having recently escaped from the nets. The Trinity, which was fished by Mr. Morton Paton and friends, yielded between forty and fifty fish. The Moisie did remarkably well. The catch averaged over forty fish per rod, and that of Mr. Edson Fitch averaged 21lbs. per fish.

Messrs. R. R. McCormick and W. F. McCormick have had good sport in the vicinity of Lake Edward, and also on the Tourilli tract. In the waters of the last-mentioned locality they found an abundance of trout, but on this last trip none were taken over 2½lbs. Yellow perch are being freely taken now in the shallows of Lake Edward, and as the month of August approaches the large trout in this lake may be expected to take bait again. The fly-fishing in the adjacent lakes, which yielded so well in the spring, has been neglected for the last three or four weeks, on account of the plague of flies in the woods, which was never worse than this year. It is now, fortunately, abating.

Messrs. McCormick are about to leave here for Lake Chibougamon, which discharges into the Nottaway River. This splendid body of water is within a few days' journey of grand Lake Mistassini. The intrepid anglers will probably be five to six weeks on the trip. They will go up by the Ashuapmouchouan and Chigobiche rivers, and descend by the chief branch of the Ashuapmouchouan. They expect to meet with good sport, for an Indian who has been up to the lake has brought back the skin of a speckled trout over 30in. in length. They take four canoes and eight guides.

E. T. D. CHAMBERS.

A Fishing Camp Plunder.

Editor Forest and Stream:

I sent you to-day a couple of pictures I made of my camping outfit. I had been camping for the month of October down near the mouth of Fox River near Wedron, Ill., and when I was about to put away my plunder for another year I thought perhaps a picture of the outfit might be pleasant to look at until it was time to get it out again; so I moved everything out of one of my rooms and in one corner I hung the fly of my

DUFFLE.

Photo by Mr. Chas. Hayward.

tent, and covered that with my minnow seine, and threw my tent and the rest of the plunder in front of it. The picture pleased me so well that I took two smaller plates and made a sterescopic view of it. I send you one of each. There is nothing extravagant about the picture, but I think it is a pretty fair outfit for this section of the country.

In my month's camp out on Fox River I had pretty fair luck with the black bass; my best day was eleven that weighed 31lbs., the largest being 3¼lbs., all on flies. I never, in my experience, caught a string of an average so even. I expect to spend about six weeks in northern Minnesota next fall, and if I have any experience worthy of mention will let you know.

CHAS. HAYWARD.

Round Mountain Lake.

EUSTIS, Maine, July 12.—The season here is one of the best ever known. The trout never rose better. Dr. Eastman, from New York, and his friends are bringing in fine catches every day, and the average weight is more than usual for this time of year. Mayor Dodge, of Worcester, with his wife and party of gentlemen, have had fine sport on stream and lake, and have taken some fine views, and also Dr. Denton, of New York, who is quite successful as an amateur. The weather has been fine for a few days, a little cooler than is usual for July. I have been here for several years, and never saw a more delightful spot or had better sport with rod and line than this season.

MEDICUS.

Growth of Black Bass.

SOME light on the oft-repeated question as to how fast bass usually grow may be afforded by the fact that in the spring of 1889 I received through the Fish Commission seven cans containing about fifty each of small-mouth bass for stocking the waters of Sand Lake, Mich. The little fellows varied from 2 to 4in. in length at that time. In the summer of 1894 several specimens were taken with hook and line, the largest weighing 4lbs., making a gain of nearly 1lb. per year. The lake was the natural home of black bass of the large-mouth variety, pickerel and perch—all minnow eaters.

JAMES H. BRAYMAN.

How Things Used to Be.

Is it not a fact that the man who now sits in a reserved seat at the circus or occupies a chair on the grand stand at a baseball match feels that he sees less and derives not the enjoyment he did when, as a boy, he peeped under the canvas or squinted through knot holes in the fence. The elephants look smaller and the batsmen don't slug the ball half as hard as they did thirty years ago. When you got up before daylight and with home-made pole and can of worms you slashed around in the water all day, stopping your hunger with a piece of dry bread and oily cheese, you somehow enjoyed the fishing more and you caught larger fish than you do to-day. You spend a day on a trout lake seated in a comfortably arm-chaired boat, propelled by a guide second to none. Your tackle is of the best and most modern in every way. Your rod is like a watch spring, and as true as the finest of tempered steel. But somehow or other the struggling trout, despite the fact that he bends the tip across the butt, gives you no such nervous thrills as did the brook trout on the end of your alder pole in your boyhood days.

Your guide knows the likely spots so well that before you have been fishing an hour you find yourself freeing the fish from your landing net and dropping them with a flourish of the hand again into their native element. You didn't do that when you were a boy. No. You worked hard for your trout, and when you got them you saved them, and when you made your count at the end of the day, if you had one or two more than young Jones, your rival, you felt happy. You threw no trout back into the brook those days; they were far too precious.

You get under a shady, moss-covered, wooden giant on the beach and puffing away at your cigar watch the guide fry your trout, and at the proper moment see him draw from the box of ice stowed away in the bow of the boat your ice-cold bottled beer. But it doesn't somehow or other taste half so good as the bread and cheese and cold spring water of your boyhood days. Tempora mutantur et nos mutamur in illis.

The trout may be larger, of course, than those in the old farm brooks, but proportionately they do not fight as they used to years ago. They give up more quickly, you think, and have not the sand in them of the trout of your youth.

They surely have degenerated as far as spots and coloring are concerned, for they are not near as gorgeous as those from your old-time brooks. Where is the fault? Is it really as you suppose as to the size of the fish and their prowess, or are you in the same position as the college graduate, returning ten years after to his alma mater, and wondering how the colleges dare now to turn out such kids as graduates! Or is it a case of visiting your old village after thirty years of absence, and finding things which you left very large and imposing now diminutive and commonplace? The church steeple of unknown height now proves to be of ordinary meeting house dimensions. The ball field of magnificent distances dwindles down to a village common of such limited proportions that you wonder how you played ball and failed daily to wreck the window lights of the surrounding dwellings. Is it because you have been to the great cities and have seen greater sky-piercing steeples that the village belfry looks so small and lowly? Or is it because your ideas have so broadened in maturer years that you now see things as they are, uncoupled with the elusive adjunct of imagination?

We think it is the latter. The flush of youth, with all its attendant pleasures of excitement and imagination, has lent enchantment to all the actions and surroundings of childhood and boyhood.

Every trout was a whale, and every spring hole of 4 or 5ft. in depth a sea of unknown size. The knights of the olden fables fighting fiery dragons in the enchanted woods of wonderland were in reality not to be compared with the active-minded, healthy youth abroad for the first time in the stream-bisected woods, creeping and crawling through the underbrush with worm-baited line carefully wound round quivering pole as he thrusts it through the tangled opening and carefully lets drop his worm in the dark and shaded water, where the moss-covered rock shelves out into the stream. The king of the brook taking the wriggling worm, a lively royal follows between boy and trout, that, if properly described, would put to shame the old chroniclers of the feats at arms of Saladin, Godfrey, Tancred and Robert Cœur de Lion.

And when the quivering, gasping, conquered trout is at last stretched upon the moss-clad bank, his coloring standing out like so many garnets, opals and sapphires from his silver-frosted sides, the excited hero of a boy fisherman stands over him with perspiring brow and shaking hand as no mail-clad knight of old in fortunate tourney watched his unhorsed adversary as he lay outstretched and helpless on the jousting sands. Could we wipe out the intervening years between manhood and youth and bring into our sports and outings the zest, enthusiasm and imagination of youth, things then would be encircled in a halo of pleasure where to-day they at best appear blasé and commonplace. It is the ennui of life that is upon us, only that and nothing more.

CHARLES CRISTADORO.

ST. PAUL, Minn.

Chicago Fly-Casting Club.

CHICAGO, July 23.—*Editor Forest and Stream:* The weekly contest to-day resulted in the following record:

	Long Distance Fly, Feet.	Distance and Acc'y, Per Cent.	Accuracy and Del'cy, Per Cent.	Bait Casting, Per Cent.
L. H. Bellows	114	86 1-3	94	86
L. I. Blackman		75 1-3		84 2-5
B. W. Goodsell	109	94 2-3	94 2-3	95 1-5

G. W. Strell		57		

Holders of Medals: Long Distance Fly—I. H. Bellows. Distance and Accuracy—B. W. Goodsell. Accuracy and Delicacy—B. W. Goodsell. Bait Casting—G. A. Murrell.

G. A. MURRELL, Sec'y.

The Canochogala Trail.

Editor Forest and Stream:

As was told the other day, the Adirondack League has put a man at North Lake for the purpose of stopping any one, not members or guests of that organization, from passing over the Canochogala Lake trail. My informant expressed the action as, "The League is getting pretty gay." The woodsmen, who at first protested that the League had no right to prevent people from hunting on their vast tract of forest land, who still believe that the woods were made for all men to hunt in, are more wrathful than ever.

When the cloth and tin trespass notices first showed white down the trails in those woods, forbidding hunting and fishing there, the men were startled as they had never been before. They did not know what to make of it. They saw the only virtuous pleasure open to them vanishing behind a screen so powerful that they dreaded to investigate it. They felt, too, that man's right to property must be respected.

Since these notices appeared, no outside party has gone to that region, so far as I know, to hunt on what was undeniably League land. They have hunted north of it, but not on it. The right-thinking have never for an instant looked for trouble with the League. What they wished to know was what are the League rights and what are theirs? The matter has not been satisfactorily answered. The riparian and forestry rights seem to be yet a matter of dispute.

Now comes this question about the trail—a question which only affects the woodsmen and a few "city folks" directly. Yet to these woodsmen it means a very great deal. The only deer region worthy of the name, accessible to woodsmen of Herkimer county at all, is closed to them if the Canochogala Lake is closed.

The trail had been in use for dozens of years. It had been followed by the fathers of the old-time hunters now living. Moose hides have come over it still wet with the animal's moisture. Every year since moose days the trail has been followed by scores of men, often a dozen at a time. It was blazed, that it might be followed in the winter time in the days when it was lawful to crust deer, and the old-time blaze marks have been renewed from time to time as the bark crusted over and obscured them.

It had been in use so long, indeed, and followed by so many each year, that no one ever dreamed that it would ever be closed to the public seeking the State lands in the neighborhood of the State dam in Moose River.

"The term highway," according to Bouvier's Law Dictionary, "is the generic name for all kinds of public ways, whether they be carriage ways, bridle ways, foot ways, bridges, turnpike roads, railroads, canals, ferries or navigable rivers." A trail, the woodsmen contend, is a "foot way," a highway in the light of the law. They turn, with eyes that are pitiful in their eager look, to the New York Laws of 1890, Chapter 568, Section 100. The section says:

"Highway by Use.—All lands which shall have been used by the public as a highway for the period of twenty years, or more, shall be a highway, with the same force and effect as if it had been duly laid out and recorded as a highway, and the commissioners of highways shall order the overseers of highways to open all such highways to the width of at least two rods."

The woodsmen hope that this will keep the only way they have of getting to the Moose River country open, if the League does not generously grant them the opportunity of freely passing along the trail.

The State authorities cut and cleared a wagon road to Canochogala Lake along the old trail a year ago, renewing a road cut through years ago. The road was a necessity, because that was the only route by which lumber and other supplies for the raising of the dams, which make Canochogala Lake a reservoir for the storage of water needed in the Black River Canal during dry seasons. The attendants of the dams must pass over the trail if they would get to that lake.

RAYMOND S. SPEARS.

NEW YORK CITY, July 18.

A Small Fish Remembered Sixty Years.

GORHAM, Maine.—For twenty-five years I have read your clean and noble paper. The "Men I have Fished With" has called up memories of my boyhood days in Maine; and I am back again to spend the few years that are left for me this side of the river that has no trout.

Some sixty years ago my mother kept me from school one day to carry the dinner of my father and brothers to the upper field, a mile from home. As there were three brooks near the field, strange to say, somehow or other I had a line and hook in my pocket; and getting a worm I moved to a well-known hole called the stump hole, where my older brothers were sure to get a bite. My line was quickly jerked under the foam, and I struck with all the strength a six-year-old boy could put on.

I threw a beauty of a trout into the air. He broke the line and fell on the bank a foot or two from the edge of the pool. I threw myself on the fish and slipped my straw hat over it; but the hat did not cover him, so lying down on the hat I yelled for help. Two big brothers and father soon assisted me to secure the prize.

Many years have passed and many salmon and trout have I taken since that first trout, but its beauty and sweetness still linger. To-day you can get but minnows and memories where once the trout were plenty.

L. McL.

Here is Heterodoxy.

IF I dared to do so I would say (not for publication, but as a guarantee of good faith) that there is a lot of humbug about a great deal of fly-fishing talk that we see sometimes in print, especially as pertaining to black bass. In fishing for bass I would not give one lively 3in. chub for several flies, though I have caught bass with fly and minnow both at the same time—that is to say, a double catch. Still I am a

FLY-FISHERMAN.

An Apathetic Angler.

THE typical old native sat dreamily upon the banks, and two rude poles were set just in front of him. There was no style about his angling outfit. His rods were the old familiar pawpaw, and his lines were coarse and strong. There was no red-pointed float in sight; the lines were just cast out with old iron for sinkers, and big trout-line hooks, baited with little sunfish, attached. The old man was gray and bent, and worm and weary looking. There were deep lines on his weather-beaten face, and his hands showed marks of toil. Half reclining, half sitting, under the shade of an elm, I first thought he was sleeping.

"Any good luck, uncle?" I called out from my boat.

"Naw."

"Isn't this a good place for fish?"

"Recken. Water ginerally is."

"Well, is this good fishing water?"

"It looks likely—never tried it afore."

"Haven't you caught anything yet?"

"Reckon I have."

"What kind?"

"Chills."

"No fish?"

"Naw."

"Expect to catch some?"

"Mebbe."

"Don't you care?"

"Naw."

"What do you fish for then?"

"Fur fish."

"If you don't care for fish, what do you fish for them for?"

"Fur a rest."

Just then the end of one of the pawpaws began bobbling up and down.

"You've got a bite there, uncle," I said.

"Let 'em bite. I'm restin'," and the pole began swaying, and the line fairly whizzed through the water.

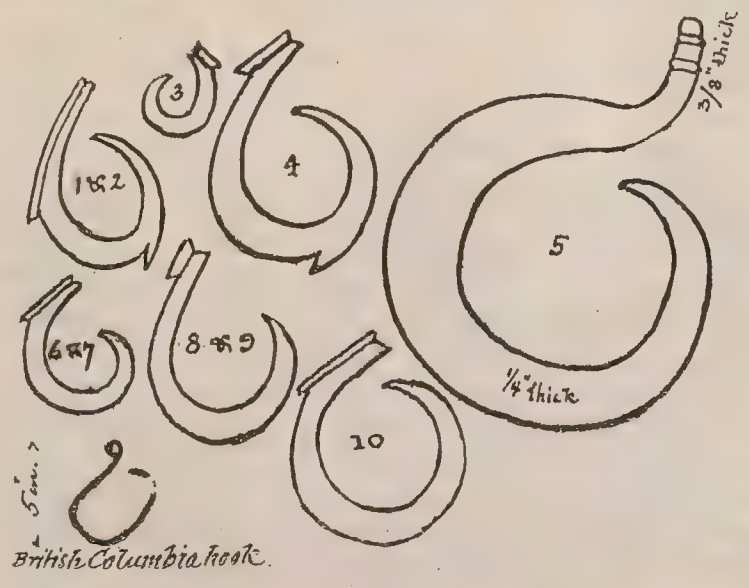
"It's a big one," I said.

"Reckon it be. When I'm tired I allus get big ones," and then the old native rose up slowly and painfully, and, after tugging away for a second or two, lifted a big jack salmon out on the bank.

"The durn fool fish oughter know I'm tired an' bin a chillin'. I allus said them jacks never had no sense, now I know it. Just lay right there till the ole woman comes down an' gits ye. I'm tired an' I want ter rest," and then the old fellow sat down again beside the tree.

"Are you not going to set that line again and take care of your fish?" I ventured to ask.

"Naw," he drawled. "I'm tired and want ter rest. I've been a-chillin', and just come down here to hear the red birds sing, and the quails whistle, and to see the water run, an' the sun go down beyond that bluff. No fish; just rest is what I want."



And then I left him sitting by that old elm, while the big jack salmon floundered about in the dry leaves.—St. Louis Globe-Democrat.

Indian Fish Hooks.

Editor Forest and Stream:

In the Chamber of Commerce here are exhibited numerous relics found generally in the burial places of the extinct race of Indians who inhabited the shores and islands of southern California. Among these are eleven perfect specimens labeled fish hooks, of which I have made full size pencil sketches; the first five shown are made of bone and the others of abalone shell. They are all beautiful specimens, the edges rounded and smooth, the points polished and sharp, and all parts perfect, and the curves easy and graceful.

You will notice that the points generally reach to

about one-quarter of an inch of the shaft, and by almost no possibility could a fish be hooked by one of them.

It is judged by those who consider them fish hooks that they were used as gorge hooks, the fish taking the hook and bait into its stomach.

Those that say they are not fish hooks, but personal ornaments, call attention to the small space between the point and shaft, and ask in what way could a fish be hooked.

You will readily see that if a fishing line was attached to the shank, the draft would be at right angles to the point of the hook and not in line of it.

Will you be kind enough to have an expert pass upon the sketches and inform us as to what purpose and how they were used.

There are also two one-quarter inch hooks used in the British Columbia Islands for catching large halibut and dog fish, which measure about 5in. one the diagonal, and approximate the form of the first mentioned hooks.

J. MILTON TITLOW.

LOS ANGELES, Cal.

The Fly and the Day.

CHARLESTOWN, N. H., July 20.—Black bass seem to be decreasing in the Connecticut River; I hear of very few being caught, but the pike-perch, introduced from Canada in '75 or '76 by my old colleague on the Fish Commission, the late A. H. Powers, are said to be on the increase. I was called to the door one day last week to identify one by a young friend of mine, who did not know what he had caught, as it was new to him. It was a very good specimen, weighing 3¼lbs. Pike and pickerel are said to be quite plenty in the river, but the brooks are all drying up, and I fear there will be no trout next year, though this has been an uncommonly good season for them, and many fine baskets have been taken.

I read Mr. Van Cleef's letter with great interest, and so far as the results of actual fishing go am quite inclined to agree with him that the old rule is a fallacy. I do not know about bright flies hatching out more freely on bright days, and dark flies on dark ones, but I do believe the trout are guided to some extent by the natural flies on the water at the time. I have been successful on large bodies of water on bright days with such flies as the professor and the scarlet-ibis, when the trout would not touch a Montreal, while on small ponds of clear spring water nothing would answer but a black-gnat or some such small fly, particularly if the water was shallow. I have found the white-miller and coachman both excellent after sunset, and am especially partial to a white-hackle on a scarlet body for evening fishing.

I think the depth of water has something to do with the question, and that deep waters call for both a larger and a brighter fly than shallow ones. I should like to hear the views of our friend A. N. Cheney, who is a more thorough expert than I claim to be on this question.

VON W.

The Ouananiche Spell.

OUANANICHE fishing is like the opium habit, once acquired it drags its victim further and further from all the other pleasures of life, and impairs his mental equipoise until he becomes a monomaniac on the subject and loses all sense of responsibility. To indulge this propensity he will face cold, wet, hunger and flies. His impedimenta of rods and tackle show an utter want of regard for expenditure, and his last cent will go for a ticket to Lake St. John and return. If he fishes from the shore, watch his behavior as the first thrill of a ouananiche hooked passes through his tautened line and rod into the arm, and directly to the brain. An unrestrainable delirium seizes him, the face flushes, the eyes flash, the nostrils dilate and the whole body seems possessed of springs. He rushes wildly up and down the rocks and talks excitedly to himself. His madness communicates itself to the fish, incessant flashes of silver fill the air. Out and across the boiling waters of the rapid the crazed fish wildly dashes in its frantic efforts to escape its implacable enemy, and only when completely exhausted will it allow itself to be reeled in and fallen upon bodily by the insane angler, who rends the air with exultant shrieks of laughter. If he fishes from his canoe the guides will watch him with assiduous care to prevent him from throwing himself overboard in one of those wild paroxysms of excitement. He is incurable, and the milder delights of trout fishing pall upon his shattered nerves and diseased brain.—G. H. Fairchild in Quebec's Adirondacks.

New Hampshire Fishing.

HUDSON CENTER, July 21.—*Editor Forest and Stream:* Your letter written to Samuel Webber, asking about bass fishing south of Concord, was sent to me to reply. It is true there are bass in many ponds south of Concord, but not what we call good fishing. At Sunapee, Winnepesaukee and Wentworth lakes, all north of Concord, fine bass fishing can be had. We have never had good bass fishing south of Concord.

We have had one of the best trout seasons for years, for both lake and brook trout. Fishermen are having great sport at Sunapee Lake; landlocked salmon are showing up in good numbers there. Ike Rawson, one of Sunapee's best guides, told me ten days ago that there had been twenty-five salmon caught in his boat this season. Four Loch Leven trout have been caught in Sunapee this season, the largest by Dr. F. H. Thurston, of Manchester; it weighed 10½lbs. The smallest was 7lbs. There is no question that these are the result of a plant made by Dr. John D. Quackenboss, of New York city. Some fine catches of aureolus or white trout are being made there. Winnepesaukee is one of the best lake trout waters in the State, and is sure to be in the near future one of the best landlocked salmon waters in New England.

Excellent brook trout fishing may be had at Diamond Ponds and other waters in the north country.

Deer are increasing wonderfully in the lower part of the State. We hear of but few woodcock and ruffed grouse.

N. WENTWORTH.

A Poet's Brook.

Editor Forest and Stream:

Many years ago there appeared in the FOREST AND STREAM a piece of poetry with one verse something like this:

I've angled in many waters;
On many a summer day.
On many a murmuring river,
On many a tangled way;
But the voice of that brooklet has never
Lost its pathos and charm for me,
As it ripples and runs forever
To its home in the mighty sea.

Can you not give us this in the FOREST AND STREAM again?

W. O. WATSON.

[We cannot place this poem; but we agree with Mr. Watson that it is worthy of reprinting.]

Some Wisconsin Fishing.

TOMAHAWK LAKE, Wis., July 21.—W. T. Davis leaves to-day for Chicago; was here sixteen days, fished ten days, caught 365lbs. fish, largest day's catch 75lbs., largest musky 24lbs., largest pike 11½lbs., largest bass 4lbs.

Green Lake, Wis., July 21.—Fish caught to-day by A. D. Morris, Chicago, twenty-six pickerel; by Platt and Foster, St. Louis, 40 pickerel, one 12, one 10, several 8-pounders.

Green Lake, Wis., July 12.—Some reports of luck are: Geo. A. Gilbert, 25 pickerel; Geo. E. Highley and J. F. Richards, 31 pickerel; Mrs. E. W. Heath, 32 pickerel; I. A. Schoon, 24 pickerel, 1 bass.

July 13.—Two parties from St. Louis, 45 pickerel; Norton, 23 pickerel.

July 15.—Mrs. Heath, 25 pickerel; John Maudlin, 14 pickerel.

July 16.—Mrs. Heath, 32 pickerel.

Meenah and Menasha, Wis.—Mr. S. D. Anderson, of Chicago, caught twenty black bass Saturday (16th) P. M. in about an hour; there were several other catches made, but of no special interest.

The following record, made at Gogebic from July 10 to 17:

Monday, July 11.—Mr. H. E. Dick and two sons caught nine black bass, weighing 19lbs; Mr. Withington caught 5lb. bass.

Wednesday, July 13.—Mr. Fuller caught thirteen black bass, 18lbs.

Thursday, July 14.—J. L. McLain and J. H. Stover caught in Pelton Creek 110 brook trout, weighing 18lbs.

Friday, July 15.—Mr. Chas. Truax caught 124 brook trout, 22lbs. weight (dressed), in Slate River.

Saturday.—Messrs. McLain and Stover caught 124 brook trout, weighing 18lbs.

Chas. Truax caught in Slate River 86 brook trout, 15lbs. weight (dressed).

Tuesday.—Chas. Truax caught 65 brook trout, 8lbs. weight (dressed).

J. F. K.

New Jersey Coast Fishing.

ASBURY PARK, N. J., July 23.—Not within many years has coast fishing been better than at present, and indications are of the best for the continuance of the same, our rivers and bays are fairly teeming with fish life, attracted thither by the enormous quantities of bait and bait fish. There is almost a surfeit of weakfish in Barnegat, 400 to 500 to a boat in a single day is a common report, and of large size and well conditioned fish. One night recently I was astounded at the condition of affairs there. Schools of menhaden many acres in extent were in evidence everywhere, and the continual threshing of the weakfish at the surface as they dashed among them made music to the enthusiastic ear.

While the striped bass are apparently lessening in number, still enough are being taken to keep the pursuit up. Kingfish, which had almost entirely stopped biting two weeks ago, are back at the old stand, and are taking the hook freely again. Some splendid catches have been made the past week, and finer specimens I never met with. Bluefish are very abundant off shore, and are beginning to make their presence known in the surf, which is a great delight to all, as their place in the affections of the angler is second only to the bass. Their bulldog propensities are well brought out in a contest with rod and reel, and they are always an object of eager pursuit. I am still nursing a crippled thumb, received more than ten days ago in a battle with a savage blue, but he made a very fine dinner.

LEONARD HULIT.

Lake Champlain Fishing.

ESSEX, N. Y., July 16.—The perch have begun to school and are on the surface. Fishing with a submerged fly is in order and will afford good returns.

The other evening I took two ladies out in a boat and they caught fifteen perch and one wall-eyed pike, the latter almost 18in. in length. The fishing occupied one hour and a half.

A man fishing near Salmon Rock recently caught a landlocked salmon 4in. long. He said that he saw a number in the water, and at the same time a very large pike. The pike, in his opinion, was feeding on the young salmon.

J. B. B.

North Carolina Streams Flooded.

SAPPHIRE, N. C., July 18.—We have had incessant rains, which have roiled the water and swelled the streams, so that there is no trout fishing. The roads too are badly gullied, and once the mail rider couldn't cross the ford. Mornings are apt to be bright, but heavy showers fall by noon and a soaking follows.

CHAS. HALLOCK.

Along o' My Old Reed Rod.

I'm sittin' on th' old wood dike,
Along o' my old reed rod;
A-watchin' th' ripples come an' go,
A-watchin' th' fresh twigs nod.

This is th' sixtieth consec'tive spring
A-fishin' this good old stream;
Th' sixtieth year th' waters sing
To cozen me into er dream.

Th' sixtieth consec'tive spring, dear Lord,
An' I cannot deem it er waste;
I ne'er have taken ag'in th' law,
Nor never been in haste.

An' every time there came a May
I've guessed it was th' last;
But sixty summers rolled away—
Th' autumns come an' passed.

An' when th' final reckonin' comes—
'Tis my dearest prayer, dear God—
Grant it to be on th' old wood dike,
Along o' my old reed rod.

W. H. B., JR.

Long Island Fishing.

SAYVILLE, Long Island, July 25.—The score for one day here last week was 400 bluefish. One of the fish weighed 12lbs. The catches for numbers and for size of fish have been remarkable, and the fishing still continues in the Great South Bay.

A Chase to a Finish.

THE scene of this story is about three miles from Troy, N. H. One morning a farmer friend of mine on looking down toward his wood lot saw a large red fox half climb, half tumble, over a wall and come very slowly toward him for five or six rods and lie down. The fox had hardly stopped when a hound poked his nose over the wall and crawled up to the fox and tried to bite him; but every time the dog was near enough to bite the fox would crawl along a rod or so. They worked this way until they got to the next wall, over which the fox went, but the hound fell back, completely done for. The farmer thought it about time to help out his dog, so getting a cane he walked over to the fox and gave it a rap on the head. Picking up the fox, he showed it to the hound and tried to call him to the house, but the poor dog could not get up; so with the fox under one arm and the hound under the other my friend went to the house. The dog stayed with him until he was thoroughly rested, and then went away, as my friend told me, he supposed for good; but on the

HIS FIRST POINT.
Photo by Mr. G. Hills.

Monday before Thanksgiving Day it returned in an unexpected manner. On that day my friend had been dressing chickens for market, and had a few hanging all nicely picked in the well-house, and all in sight of his dinner table. All at once he saw a dog come running into the yard, and the next minute it had jumped up and ran away with one of his fat chickens. This was done so quickly that he had hardly got out of doors when dog and poultry were both gone. Following the way he thought the dog had gone, he met two hunters in a team, and on inquiry and finding out they had a dog with them, he demanded pay—and good pay too, he told me, for he was pretty mad. "The hunters were true blue," he said, "and telling me to wait, they up the road calling their dog, for they said they had a foxhound bitch with them, and could not believe that she would touch a chicken. But all the same they came back to the team in a few minutes, leading the dog and bringing my chicken half eaten up. With their pocketbooks open and saying they were sorry in the same breath, I stopped them and said, 'Boys, that dog is too good a dog to mind any little tricks like that.' For it was the same bitch I had fed and sheltered the winter before; and I added: 'Come in and have some dinner.' While we were eating they told me they were from Massachusetts; and their dog was a fine young bitch two years old at the time and was called Chase's Spot."

Perhaps if she has not run herself to death she may be living, and some of the readers of this paper may have shot at game in front of this staying foxhound.

11. Massachusetts Y. R. A., review, Hull.
17-18. Corinthian San Francisco, cruise, Vallejo.
17. American, cruise to Plum Island.
17. Baltimore, Rear-Com. cup, Chesapeake Bay.
17. Queen City, 22ft. K class, Toronto.
26. Newport, ladies' day, Narragansett Bay.
29. Miramichi, Gould cup, Newcastle.
30. Taunton, ladies' day, Taunton, Mass.

OCTOBER.

14. Miramichi, Watt cup, Chatham.

THE outcome of the Baltic races, held early this month, was a victory for Germany which may have important effects upon further international racing. The competitors in the Ib. class, not over seventy sail units by the German rule, included three new yachts, the Fife boat Senta, the Payne boat Tutty, of fifty-eight and fifty-nine sail units (practically 65ft. R. L. by the Y. R. A. rule), and a new German boat, Kommodore, of fifty-five sail units. The Fife and Payne boats are new craft, both built in Great Britain this year, while Kommodore, owned by a syndicate, of which Krupp, of gun fame, is the head, was designed by R. Hagen, of the Germania

Werft, Kiel, the builders of the yacht. The German boat, sailed by a German crew, scored a fair and decisive victory over the two British-built craft. At the ceremonies attending the races, Mr. Cecil Quintin, owner of Merry Thought, winner of the Emperor's cup in the Dover-Heligoland race, offered, with the aid of some other British yachtsmen, to build and race in German waters next season a yacht of the same class, of British design, and manned and sailed by a British crew, against a representative German yacht; promising that whether successful or otherwise the yacht would be presented to the Imperial German Yacht Club as a training ship for yacht crews. The German Emperor immediately guaranteed to contribute £1,000 toward the German boat, and an additional sum of £1,500 has since been subscribed by German yachtsmen.

In such a contest as this, in a useful and practical size of yacht, and comparatively close at hand, British yachtsmen are likely to find all they want in the way of international sport, without going on their knees to the New York Y. C. for generous concessions and special interpretations which will allow them to challenge for the America's Cup.

There is much food for reflection on this side of the water in the material progress in yachting which the continental nations, led by Germany and France, have made of late years. The importation of the American skimming dish, which began in the fifties, stopped years ago; and the importation of British yachts, beginning with the old, narrow cutters and continued later with all classes of modern racing machines from Meteor down to Mr. Linton Hope's lightest productions, is decidedly on the wane, as the native products have improved in all classes. The stimulus of international rivalry, which was missing so long as British yachts met nothing but vessels of their own nationality under the French flag in the Mediterranean and the German flag in the Baltic, is rapidly increasing with the production of such craft as the French Esterel and the German Kommodore. It can hardly be supposed that either of the three nations, Great Britain, Germany or France, is blind to the great value of international matches as a needed stimulus to yachting, or that either would be in the least loth to see the establishment of an international trophy in which America should have no part whatever. To be sure, the Coupe de France was carried to England with no great difficulty, and the proposed race with Germany may possibly prove a mere temporary affair; but at the same time the indications are that if something is not done speedily toward a race for the America Cup on perfectly fair conditions, and in a much smaller class than the 90ft. cutters, its place in international sport will be taken by some newer trophy.

MR. JOHN HYSLOP, official measurer of the Seawanhaka, New York and Larchmont Yacht Clubs, sailed for London on July 16, on a visit of several months. In his absence H. C. Wintringham has been appointed to act for him by the New York Y. C., and W. P. Stephens by the Seawanhaka C. Y. C. This is Mr. Hyslop's first visit to England in twenty-seven years. He takes a wheel with him, and will make land cruises in different parts of the country.

THE first day's racing of the Lake Y. R. A. meet at Kingston resulted in a win for Merry Thought, owned and sailed by Com. Jarvis, over Canada, by 2m. 12s. elapsed and 27s. corrected time. Merry Thought is of heavy construction, but has been thoroughly overhauled and rerigged by Com. Jarvis.

Seawanhaka Corinthian Y. C. Trial Races.

Oyster Bay—Long Island Sound.

Third Trial Race, Wednesday, July 20.

THE continuation of the Seawanhaka trial races being postponed to July 20, as told in our report last week, a new silk mainsail was ordered from Wilson & Silsby, of Boston, to replace that burned on Akabo on July 15. Akabo was towed over to her builder's yard at New Rochelle, where her bowsprit was lengthened about 2ft., to bring her nearer to the allowed area. Seawanhaka was safely hauled out on the beach, Mr. Crane taking advantage of the time to run up to Ogdensburg to inspect his third boat. The club has this year laid down a very good marine railway, principally for the benefit of the knockabouts, but capable of handling larger yachts. This was not used for Seawanhaka and Cicada, however, Mr. Crane having laid a temporary set of wooden rails on the smooth, sandy beach, with an ordinary four-wheeled railway baggage truck as a cradle. Seawanhaka was hauled up on this nearly every night, being struck over to one side when the same cradle was needed for Cicada. A stout derrick was provided for handling the very heavy centerboards, in shipping and unshipping them, and for masts as well. By means of a ladder lashed upright on the gangway leading to the landing stage, it was possible at low water to reach the mastheads when the boats were afloat, for any changes or repairs. The arrangements this year for caring for the racing boats were better than ever before, and the crews worked hard, the bottoms being constantly polished and every detail of hull and rigging kept in good shape. On Saturday Cicada went over to Westport in tow of her escort, the sloop Imperia.

By Wednesday morning Seawanhaka and Akabo were ready off the club house, the latter having received her new mainsail on Tuesday, but there was no wind and no Cicada. The club steamer Seawanhaka, with the race committee on board, ran out to the Center Island Buoy and sighted the missing boats becalmed well to the westward of Lloyd's Neck. She steamed over and towed them to the line, and about 1:45 a very light breeze came in from S. by E. By 2:15 it was strong enough to warrant a start, and the preparatory whistle was given, followed by the start at 2:20. The course was two miles to leeward, N. by W., so as to make it unnecessary to run out into the Sound for the start. The maneuvering was done with spinakers mastheaded to port, Akabo coming to the line too soon and luffing up along its length. When the whistle sounded she had lost way and was almost motionless, her crew working to head her on her course. Seawanhaka, crossing a little after the signal, cut the line under good headway, setting her spinaker at the same time. As she crossed her boom end touched that of Akabo, but they cleared without damage. Cicada came over a little late, but with good way, carrying it and soon running ahead of Seawanhaka, while by the time Akabo was really under way she was in the last place.

COURSES OF SEAWANHAKA TRIAL RACES, OFF OYSTER BAY.

The triangular course this year was but 1 1-3 miles to a side instead of 2 miles, as shown in the chart.

The boats were heeled, with crews to leeward, and spinaker booms were braced well forward. At the end of the first ten minutes Seawanhaka, in second place, just held Cicada, but Akabo had dropped some 300yds. astern. The wind was quite light, and a different breeze was visible down the Sound, vessels coming up before the wind. Cicada was becalmed at 2:43, her spinaker being taken aback, and at 2:45 she jibed her boom over to the port quarter and reset her spinaker on the other side. Seawanhaka was caught just a minute later than Cicada, and finally Akabo, coming up astern, took the new wind.

The short portion of the leg which remained was soon covered on a reach, and the outer mark was timed:

	Time.	Elapsed.	Loss.
Cicada	2 50 59	0 30 59	
Seawanhaka	2 51 29	0 31 29	0 00 30
Akabo	2 57 12	0 37 12	0 06 13

They started in on an easy reach with balloon jibs set, but at 2:57 the two leaders were headed by a moderate southerly wind, down came the big jibs and working jibs were set for a beat home. Akabo after rounding came on port tack, up the Sound to the westward, the other two working in with shorter legs. Seawanhaka steadily gained on Cicada, while Akabo, off by herself, was apparently doing very well. As she closed in for the mark, however, she fell in company with a working schooner, getting under the lee for a time. At 3:12 Seawanhaka was to windward, and clearly ahead of Cicada, Akabo being still too far astern to threaten either. The wind, now well west of south, was steady and put them plank-sheer to, and with smooth water and a clear summer sky the conditions, both for the men on the boats and the spectators, were ideal. The round was timed:

	Finish.	Elapsed.	Loss.	Whole round. Elapsed.	Loss.
Seawanhaka	3 29 22	0 37 53	0 02 11	1 09 22	
Cicada	3 29 35	0 38 36	0 02 54	1 09 35	0 00 13
Akabo	3 32 54	0 35 42		1 12 54	0 03 32

As the times show, Akabo covered the leg in the least time, but the wind over the whole course was so fluky and variable that this race, as a whole, was not a satisfactory test. Akabo did not fairly lose as much as the times show on the first leg, or gain as much on the second.

Second Round.

Very little time was wasted between the rounds, and at 3:50 the preparatory was given, the course being as before. The wind was moderate, a little west of south and fairly steady in force and direction. It was not a dead run, but the windward course was sufficiently close to give the needed test. This time the three made a fine start, all over the time with a rush, with spinakers ready to port, as the whistle sounded at 3:50. Cicada was first, followed closely by Seawanhaka, then Akabo; but all made good starts. For a time Akabo dropped astern of the other two, but she picked up before the end of the round, and the turn was very even, the times being:

	Time.	Elapsed.	Loss.
Seawanhaka	4 15 59	0 20 59	
Cicada	4 16 06	0 21 06	0 00 07
Akabo	4 16 13	0 21 13	0 00 14

They started with Seawanhaka and Cicada jammed on the wind, while Akabo with lighted sheets went reaching out to the westward on port tack. The wind freshened as they worked toward the shore, until Cicada, when about half-way in, turned in her first reef. After sailing different courses for some time, Seawanhaka and Akabo finally drew together, the latter reaching fast and well ahead in distance, so that when Seawanhaka went on starboard tack, heading for the line, Akabo had a good berth to windward. There was now a fresh scupper breeze and the two were under perfectly fair and even conditions for a windward test. As they went along it was plainly perceptible that Seawanhaka was doing by far the better work, and the proof came after a time, when Akabo dropped directly into her wake. While Seawanhaka kept on until she weathered the finish on this tack, Akabo was forced to make a short extra hitch. The times were:

	Finish.	Elapsed.	Loss.	Whole round. Elapsed.	Loss.
Seawanhaka	4 49 01	0 33 02		0 54 01	
Akabo	4 49 55	0 33 42	0 00 40	0 54 55	0 00 54
Cicada	4 53 37	0 37 31	0 04 29	0 58 37	0 04 36

Cicada's loss is in part due to the useless reefing, an error of judgment. There were apperances of a squall in the N.W., and it was expected that it would break during the third round, but it held off, and the wind held steady.

Third Round.

The preparatory for the third round was given at 4:56, with the start at 5:01; Seawanhaka for the third time making a particularly good start. Akabo was second over the line, but she soon had trouble with her spinaker as the boom was slacked well forward, three of her crew working forward of the mast at one time in the effort to save the spar. With spinaker booms well over the port bows, and the sails sheeted to leeward, they all traveled fast, Seawanhaka soon being 50yds. in the lead. Akabo and Cicada fought it out for a time, the latter passing ahead to windward about the middle of the leg. As they neared the buoy Cicada again reefed as in the previous round, there being a good breeze and the squall still threatening in the western sky. The mark was timed:

	Turn.	Elapsed.	Loss.
Seawanhaka	5 20 07	0 19 07	
Cicada	5 20 44	0 19 44	0 00 37
Akabo	5 21 03	0 20 03	0 00 56

Again on the wind Akabo went ahead, and really passed Cicada, while the latter was shaking out her reef, but Seawanhaka was in her usual windward posi-

tion. While Seawanhaka did most of her work on starboard tack, Akabo, as before, made a long port tack up the Sound, the two being far apart for a time, with Cicada between. When they came together Seawanhaka was well ahead of Akabo, and after a time on the same tack Akabo drew back and to leeward. She was caught again in too close proximity to a working schooner. On the last long tack Seawanhaka weathered the line, while Akabo had to make a short tack to cross. The times were:

		Leg.		Whole round.	
	Finish.	Elapsed.	Loss.	Elapsed.	Loss.
Seawanhaka	5 55 00	0 34 53		0 54 00	
Akabo	5 56 02	0 34 59	0 00 06	0 55 02	0 01 02
Cicada	5 57 33	0 36 49	0 01 56	0 56 33	0 02 33

On the windward work Akabo lost but 6s. to Seawanhaka. The times for the three rounds were:

	Elapsed.	Loss.
Seawanhaka	2 57 23	
Akabo	3 02 51	0 05 28
Cicada	3 04 45	0 07 22

After the race Mr. Miller, owner of Akabo, expressed himself as being satisfied with the fairness of the test, but the race committee suggested that an extra race be sailed next day.

Extra Trial Race, Thursday, July 21.

Thursday was another fine day, with a light wind, N.E. by E., when the boats reached the starting line at noon. The weather was clear and warm, and the water smooth, with the tide on the ebb. The usual triangular course was laid off, with one mark off Lloyd's Neck, but the legs were shortened to 1 1-3 miles, or 4 miles for the round. The start was to windward, the preparatory at 1:15 and the start at 1:20, Seawanhaka leading over the line, with Cicada and Akabo in order, all on starboard tack. They soon came about and stood inshore, Seawanhaka and Akabo working well up the harbor, while Cicada made a long starboard tack outside. Seawanhaka gained on Akabo, and when the latter fell in with Cicada at 1:40 Cicada went across her bows. The mark was timed:

	Turn.	Elapsed.	Loss.
Seawanhaka	1 49 09	0 29 09	
Cicada	1 50 55	0 30 55	0 01 46
Akabo	1 52 46	0 32 46	0 03 37

Balloon jibs were set on the second leg for a reach to the outer mark, the times there being:

	Turn.	Elapsed.	Loss.
Seawanhaka	2 11 47	0 22 38	0 01 33
Cicada	2 12 00	0 21 05	
Akabo	2 16 45	0 23 59	0 02 54

Cicada gained considerably on Seawanhaka on this leg, and still more on Akabo. The last leg was a reach, covered in quick time, as below:

		Leg.		Whole round.	
	Finish.	Elapsed.	Loss.	Elapsed.	Loss.
Seawanhaka	2 26 41	0 14 54		1 06 41	
Cicada	2 28 35	0 16 35	0 01 41	1 08 35	0 01 54
Akabo	2 31 50	0 15 05	0 00 11	1 11 50	0 05 09

Akabo's best work was done on this leg, as she lost but 11s. to Seawanhaka.

Second Round.

The second round was started under the same conditions except that the wind was lighter at 2:40, Cicada crossing first, Akabo second and Seawanhaka third, all together and moving slowly. For ten minutes they did little more than drift, then a nice southerly wind came out of the harbor, catching Seawanhaka first and Akabo immediately afterward, and sending them reaching at a good pace for the first mark. Seawanhaka and Akabo were sufficiently close to indulge in several sharp luffing bouts, interesting to the spectators, but of little gain to either boat. They all luffed by the Lloyd's Neck mark:

	Turn.	Elapsed.	Loss.
Seawanhaka	3 01 41	0 21 41	
Akabo	3 01 50	0 21 50	0 00 09
Cicada	3 02 13	0 22 13	0 00 32

The new wind was now settled steadily to work, and with booms to starboard all reached out for the second mark. Seawanhaka and Akabo fought for the lead in a series of lively luffing matches to the gain of Cicada, but they were all bunched at the turn, as below:

	Turn.	Elapsed.	Loss.
Cicada	3 19 25	0 17 12	
Akabo	3 19 34	0 17 44	0 00 32
Seawanhaka	3 19 42	0 18 01	0 00 49

Working jibs were set before luffing round the mark, the way home being to windward. Seawanhaka began to work out from under Cicada's lee, while Akabo, to leeward of both, was reaching ahead. At the end of five minutes Seawanhaka was clear by 30yds. of Cicada's lee bow, while Akabo was 200yds. to leeward, but well in front. When she came about, some five minutes later, she was able to cross Seawanhaka's bows, while Cicada had dropped to Seawanhaka's weather quarter. The wind freshened to a good wholesail breeze for these little boats; as they worked along Akabo failed to hold Seawanhaka, and the round ended as in previous ones, with Seawanhaka crossing on a long tack, while Akabo fetched the lee end of the line and had to make a short extra tack. The times were:

		Leg.		Whole round.	
	Finish.	Elapsed.	Loss.	Elapsed.	Loss.
Seawanhaka	3 43 02	0 23 20		1 03 02	
Akabo	3 43 31	0 23 57	0 00 37	1 03 31	0 00 29
Cicada	3 43 46	0 24 21	0 01 01	1 03 46	0 00 44

Third Round.

The third round was started at 3:55 with more wind, the three going over together, Seawanhaka in the lead, with Akabo, traveling very fast, a little astern. As soon as Akabo struck Seawanhaka's lee she slacked up, and the two were presentuly luffing up the harbor. When they had had enough of this sport Akabo was first to bear away, but Cicada was now the leader. The first mark was timed:

	Turn.	Elapsed.	Loss.
Cicada	4 07 09	0 12 09	
Akabo	4 07 12	0 12 12	0 00 03
Seawanhaka	4 07 28	0 12 28	0 00 19

They luffed around and started to reach for the second mark. Akabo took a bad knockdown, but luffed out all right. Cicada was 200yds. ahead of Akabo in the middle of the leg, and the latter led Seawanhaka by 30yds. As they neared the mark Akabo ran up so that all turned together:

	Turn.	Elapsed.	Loss.
Akabo	4 24 04	0 16 52	
Cicada	4 24 20	0 17 11	0 00 19
Seawanhaka	4 24 27	0 17 19	0 00 27

Once on the wind, Akabo started for the westward on port tack, the others again inshore of her. At the end of ten minutes all were strung out on the same tack—port—Seawanhaka being at least a quarter of a mile astern of Akabo, but to windward of her wake; Cicada in a line between them being about 150yds. from Akabo's weather quarter. As they went on, Seawanhaka steadily improved her windward position, pointing high and eating out in a most excellent manner. Akabo was a long way from her, so that a close comparison of loss and gain was impossible until all neared the mark. It was now cloudy and cool, with a threatening of a squall in the northwest, but the wind held steady, all the boats wanted. When Cicada and Seawanhaka met, the former passed clear ahead. As Akabo came down from the west it was plain that she had lost considerably, as before, in spite of her speed through the water. The finish was timed:

		Leg.		Whole round.	
	Finish.	Elapsed.	Loss.	Elapsed.	Loss.
Seawanhaka	4 53 04	0 28 17		0 58 04	
Cicada	4 53 14	0 28 54	0 00 34	0 58 19	0 00 15
Akabo	4 54 12	0 30 08	0 01 51	0 59 12	0 01 08

The times for the three rounds were:

	Elapsed.	Loss.
Seawanhaka	3 07 47	
Cicada	3 10 40	0 02 53
Akabo	3 14 33	0 06 46

This day's racing shows the advantage of sailing trial races in a series of separate rounds; Akabo lost a good deal through a very bad start in the first round, and had the race been sailed in three continuous rounds she could not have made this up, and would never have been near Seawanhaka after the start. As it was, the two were close together many times, with equal opportunities to each. The numerous opportunities for timing show exactly what each boat did; and the slight flukes at different times are thus practically eliminated.

Taken all together, the series of trials has resulted in a very satisfactory test of the three boats, and has shown beyond question that Seawanhaka was the proper and safe choice. Since her first race at Larchmont, on July 4, in which she was defeated by Akabo, she has steadily improved in performance, and Mr. Crane and his crew have done better work with each successive race, both in the handling and in the starting. In the latter particular Mr. Crane has been very successful, putting his boat over the line promptly and also in the proper position and with good way on. The change of rig with Cicada on July 15, the lower and broader rig being shipped on Seawanhaka, and carried through the later races, proved its superiority to the high and narrow rig, a distinctive feature of Momo last year; and it will be carried in the cup races.

Cicada suffered in the trials through the fact that her crew had not sailed her at all, and the four men were not used to working together in this type of boat. Under these circumstances a close comparison with Seawanhaka is impossible, but it is, we believe, the opinion of Mr. Crane that Seawanhaka, with 6in. less extreme beam and a little harder bilge, and less flare to her side would, under equal conditions of handling, prove the better boat in the end. It may be said of Cicada's crew that it improved greatly in its work in the last races. It is unfortunate that the two boats were not ready in season for thorough private trials prior to the actual trial races, being sailed against each other with both crews and rigs changed from time to time. Such an experiment would have shown conclusively which combination of boat, crew and rig was the best, and also would have put both boats in better racing form for the trial races.

Owing to the accident to her silk mainsail, Akabo sailed the last two races with a brand new sail. While it showed a good deal of fullness, it was by no means a bad sail, and very little allowance need be made on this score. When first measured, Akabo's total sail area was about 25ft. under the limit (500sq.ft.), the two Crane boats each being about 12ft. under. To make up this deficiency Akabo's head triangle was increased by her designer, a remeasurement on July 20 showing about 12ft. less than the allowed area, or the same as the other boats. The sail plan of Akabo showed a very short hoist and long boom and base line.

In spite of her good work at times and her high speed through the water, it was plainly demonstrated that, even if her peculiar method of going to windward were a safe one to trust to in an international race, she was actually not as fast as Seawanhaka over the ordinary windward and leeward or triangular courses. During the whole series, including the annual race, twelve separate starts were made and twelve finishes timed; while thirty-three legs were sailed, of which all were accurately timed, except the first leg on each round of the annual race. The three boats competed on every leg except that Seawanhaka withdrew on the last leg of the July 15 race. Out of the eleven races thus finished by both Seawanhaka won nine and Akabo two; while of the thirty-two legs sailed by both Seawanhaka won twenty-one and Akabo eleven. A comparison of the total times shows that the elapsed time of Seawanhaka for the entire series of races was less than that of Akabo by 14m. 55s.

While it is absolutely impossible to gauge the relative advance made by both sides, America and Canada, since last year, it is certain that Seawanhaka is a great improvement over Momo in model, construction and rig, and also that Mr. Crane, with the aid of a very good crew, is handling her decidedly better. She is now on her way to Dorval, Mr. Crane going to Ogdensburg to superintend the finishing of his third boat, which he will take down the St. Lawrence direct to Dorval in time to try her with Seawanhaka before the cup races.

Racing Over Measurement.

THE executive committee of the Y. R. A. of Massachusetts has given its decision on the protests on measurement against Katydid and Vitesse in the city's open regatta, July 4. The decision on the Katydid protest is as follows:

"Katydid (yawl) was properly entered and sailed in the 15ft. class, her official measurement, after allowance for rig provided for in Rule 8, being under 15ft. Under the option allowed in Section 2 of Rule 6 she was measured without ballast.

"On July 4 Katydid, having taken aboard extra ballast without notice to the secretary of the Association or to the judges of the Fourth of July race, as required by Section 7 of Rule 6, sailed in an Association race. An official measurement taken at that time showed that she was too large for the class by a good margin. The owner of the Katydid admitted that he deliberately violated the rule.

"The committee rules that Katydid be, and hereby is, disqualified as to all Association races and racing for the period of twenty-one days, beginning July 4, 1898."

As to the Vitesse, the committee decides as follows:

"Vitesse was properly entered and sailed in the 15ft. class, her official measurement being under 15ft. Upon remeasurement, after the race of July 4, she was found to be too large for the class.

"The facts, about which there was no controversy, appear to be as follows: Vitesse, after sailing several races with an official measurement of less than 15ft., was sold to the present owner, who received from the former owner the certificate of measurement, together with a statement in writing that the weight of ballast was just the same as that which the boat had when measured. The present owner has not changed the trim of the boat in any way and had no reason to believe that she exceeded the limits of the class. Further, since the remeasurement of July 4, Vitesse has been again remeasured with the same ballast and fittings and found to be under 15ft.

"Upon these facts the committee are of the opinion that there has been no such flagrant breach of the rules as is provided for in Rule 27, but that Vitesse must be, and is, disqualified as to the race of July 4, for the reason that she at that time measured more than 15ft. The purpose of the measurement rule is to measure the longest length at which a boat sails any race, and any owner who sails his boat with more weight aboard than she had when measured, from whatever cause, should be disqualified if the class limit is exceeded."

Corinthian Fleet Y. C. Special Races.

New Rochelle—Long Island Sound.

July 22, 23.

THE Corinthian Fleet, of New Rochelle, held two special races open to knockabouts and the 20ft. class, the prize for the former being the Dewar cup, one leg for which was already held by Mongoose. On Friday there was a strong E.N.E. breeze, the course being the usual club triangle. Akabo was present, and having no competitors she stowed her jib and sailed as a cat against Minnetonka and Lobster, allowing them a handicap of 8m. each. She beat them and the knockabouts very easily, the times being:

Knockabouts—Start 3:43.

	Elapsed.	Corrected.
Mongoose, Simeon Ford	1 40 12	1 40 12
Mariposa, Herbert McCord	1 41 44	1 41 44

Mainsail Yachts—Start 3:48.

Akabo, Clark Miller	1 29 33	1 29 33
Minnetonka, A. B. Alley	1 47 47	1 33 47
Lobster, T. S. S. Flint	Did not finish.	

The winners were Mongoose and Akabo.

On Saturday there was no wind in the morning, and Indianola and Mariposa were not able to get to New Rochelle. The race was sailed in a very light easterly breeze, the times being:

Knockabouts—Start 3:18.

	Elapsed.	Corrected.
Mongoose, Simeon Ford	1 01 17	. . . .

Open 20ft. Sloops—Start 3:13.

Akabo, Clark Miller	0 56 33	0 56 33
Asthore, F. B. Jones	0 58 35	0 58 35

Mongoose holds the Dewar cup permanently.

Annisquam Y. C.

Saturday, July 16.

THE second race of the 15ft. class of the Annisquan Y. C. was started at 12 M. on July 16, in a very light northerly wind. The fleet split tacks and after slow work Schatz turned the first mark with a lead, and finished the first round with a lead of 1m. 30s. on Lynx, and 3m. 30c. on Gertrude, with Gaboo and Scooter astern, Imp and Tabasco having withdrawn. There was a good breeze on the beat out the second time, and Schatz had three minutes on Lynx at the weather mark. On the way home the wind fell and Lynx ran up, the finish being timed:

Schatz, Bent Bros.	3 12 30
Lynx, Cunningham Bros.	3 13 30
Gaboo, Walter Adams	3 17 15
Scooter, D. H. Woodbury	3 18 15
Gertrude, Harry Damon	3 19 15
Tabasco, Harry Wiggin	Did not finish.
Imp, Oscar Perkins	Did not finish.

Owing to the drift at the start, the race occupied 12m. more than the time limit, three hours, so will be resailed.

Wood's Holl Y. C.

Wood's Holl, Mass.

Saturday, July 23.

THE Wood's Holl Y. C. sailed a championship race for knockabouts and spritsail boats off Quissett on July 23 in a fresh S.E. wind, the times being:

Knockabouts.

	Length.	Elapsed.
Royal Blue, C. Dennison	21.00	2 02 22
Micaboo, C. Harding	21.00	2 10 21

Spritsails.

Success, J. F. Perry	2 16 30

The Thirty-Footers at Newport.

THE 30-footers sailed a race off Newport on July 18, the course being from Brenton's Cove around Beaver Tail and Bishop's Rock, sailed in a fresh S.W. wind. The times were, start, 2:49:

	Finish.	Elapsed.
Carolina, Pembroke Jones	5 05 32	2 16 32
Vaquero, H. B. Duryea	5 06 12	2 19 12
Veda, C. Vanderbilt, Jr.	5 06 50	2 17 50
Hera, R. N. Ellis	5 09 38	2 20 38

On July 19 a sweepstakes race was sailed, the times being, start 3:04:50:

	Finish.	Elapsed.
Hera, R. N. Ellis	4 55 50	1 51 50
Carolina, Pembroke Jones	4 56 19	1 52 10
Vaquero III., H. B. Duryea	4 56 52	1 52 52
Puck, E. D. Morgan	4 57 28	1 53 28
Veda, C. Vanderbilt, Jr.	4 58 30	1 54 30

On July 22 the Dyer's Island course was sailed in a strong N.E. breeze, the prize being a trophy offered by the Newport Y. R. A. The times were, start 2:59:

	Finish.	Elapsed.
Veda, C. Vanderbilt, Jr.	5 43 03	2 46 13
Dorothy, H. P. Whitney	5 46 37	2 47 37
Vaquero, H. B. Duryea	5 48 08	2 49 06
Puck, E. D. Morgan	5 52 19	2 53 19
Wawa, R. Brooks	5 52 37	2 53 37
Carolina, Pembroke Jones	5 54 30	2 55 30
Hera, R. N. Ellis	5 57 31	2 58 30

A race was scheduled for July 23 at Potter's Cove, for cups offered by Wm. Bannigan, under the auspices of the Rhode Island Y. C., but the steamer, with the fleet in tow, broke down and all returned to Newport. In the afternoon a sweepstakes race, $20 entry, the second to save her fee, was sailed in a fresh S.E. breeze over a course from off Castle Hill, the course being to Beaver Tail, to Seal Rock, back to Beaver Tail and Seal Rock again, thence to the finish, about twenty miles.

Vaquero fouled Dorothy and withdrew, the times being, start 2:13:

	Finish.	Elapsed.
Carolina, Pembroke Jones	4 11 10	1 58 10
Hera, R. N. Ellis	4 13 38	2 00 38
Dorothy II., H. Whitney	4 13 50	2 00 50
Veda, C. Vanderbilt, Jr.	4 15 42	2 02 42
Wawa, R. Brooks	4 15 50	2 02 50
Vaquero II., H. B. Duryea	Did not finish.	

On July 25 the Jamestown-Bishop's Rock course was sailed in a light S.W. wind, with several mishaps. Dorothy crossed before the gun and failed to return. Hera and Dorothy collided, and Vaquero and Wawa each fouled a mark. The times were, start 2:57:

	Finish.	Elapsed.
Dorothy II., H. P. Whitney	5 00 01	2 03 10
Carolina, Pembroke Jones	5 01 12	2 04 12
Veda, C. Vanderbilt, Jr.	5 02 40	2 05 40
Puck, E. D. Morgan	5 03 24	2 06 24
Wawa, R. Brooks	Withdrew.	
Vaquero III., H. B. Duryea	Withdrew.	
Hera, R. N. Ellis	Withdrew.	

Quincy Y. C.

Quincy—Boston Harbor.
Saturday, July 23.

THE Quincy Y. C. sailed a very successful open race on July 23 in a fresh east wind. The times were:

30ft. Class.

	Elapsed.
Meemer, R. C. Nickerson	1 36 56
Emma C., P. C. Coupal	1 48 51

25ft. Class.

Hermes, A. W. Chesterton	1 25 20
Eleanor, D. B. Clapp	1 26 03

21ft. Class.

Recruit, F. B. Rice	1 07 00
Tacoma, Elmer Prior	1 14 45
Elsa, H. M. Crane	Withdrew.

21ft. Class.

Privateer, A. E. Schaaf	1 10 21
Arab IV., W. F. Scott	1 12 10
Autocrat, J. W. Nightengale	1 12 24
Omeme, W. P. Barker	1 13 15

18ft. Class.

Circe, F. L. Pigeon	1 14 33
Vamoose, R. M. Benner	1 15 05
Alpine, C. J. Blethen	1 16 24
Fantasy, W. Allerton	1 18 22
Helmi, W. C. Harrison	1 20 35
Woodbine, F. T. Wood	1 26 53
Sphinx, Arthur Keith	Withdrew.

15ft. Class.

Vitesse, E. H. Clapp	1 21 32
Chewink, G. D. Silsbee	1 28 08
Attilla, A. L. Lincoln	1 34 19

The winners were: Meemer $15, Emma C. $10, Hermes $12, Eleanor $8, Recruit $10, Tacoma $5, Privateer $10, Arab IV. $5, Circe $10, Vamoose $5, Vitesse $8, Chewink $4.

The judges were: Com. Fred B. Rice, chairman; Vice-Com. Edwin E. Davis, ex-Com. John W. Sanborn, ex-Com. Charles F. Pettengill, Dr. Frederick E. Jones, Fleet Capt. George G. Saville, Walter B. Burrell, James S. Whiting, secretary.

Royal St. Lawrence Y. C.

THE first of the trial contests of the Royal St. Lawrance Y. C. was sailed on July 23, three short races filling up the afternoon. The wind was moderate, S.W., with a light sea. The course was a triangle of 2½ miles. The wind was light in the final race. Mr. Duggan sailed his new boat, which is described as something of the double-hull type, far uglier than last year's boats. As the times show, he led over the course and won in every race:

First Race—Start 3:57.

	1st mark.	2d mark.	Finish.	Elapsed.
Duggan's	4 06 30	4 18 00	4 27 16	0 30 16
Glencairn	4 07 15	4 20 35	4 31 11	0 34 11
Strathcona	4 07 35	4 19 15	4 28 31	0 31 41
Speculator	4 08 23	4 19 47	4 29 55	0 32 55

Second Race—Start 4:41.

Duggan's	4 51 50	5 00 00	5 16 15	0 34 30
Speculator	4 52 10	5 02 35	5 17 37	0 35 37
Strathcona	4 52 22	5 04 10	5 18 50	0 36 35
Glencairn	4 53 45	5 05 50	5 20 25	0 37 55
Manitou	4 54 17	5 04 39	5 19 40	0 35 25

Third Race—Start 5:25:25.

Duggan's	5 40 40	6 08 35	6 18 32	0 52 07
Speculator	5 41 25	6 17 20	6 23 47	1 03 22
Strathcona	5 42 20	6 12 31	6 23 12	0 56 42
Manitou	5 42 50	6 15 36	6 26 34	1 00 37
Glencairn	5 44 10	6 19 00	6 31 02	1 04 15

The races will be continued next Saturday.
Mr. Duggan has another new boat now in the shop.

Eastern Y. C. Special Races.

Marblehead—Massachusetts Bay.
July 23, 25, 26.

THE first of the series of three races arranged by the Eastern Y. C., the conditions of which were printed last week, was sailed on July 23 with a fleet of twenty-eight starters. The wind was light E.S.E., with a little roll to the sea. The times were:

30ft. Class.

	Length.	Elapsed.	Corrected.
Elfreda, Hall & Johnson	32.41	3 00 02	2 53 23
Handsel, J. R. Hooper	31.98	3 01 12	2 54 13
Ashumet, C. Fred Bache	38.25	3 00 14	3 00 14

25ft. Class.

Cartoon, H Parker		2 57 30	.. ..
Little Peter, H. Moebs		3 06 19	.. ..
Sally IV., L. F. Percival, Jr.		3 14 42	.. ..
Dragoon, C. M. Barker		3 16 09	.. ..

Raceabouts.

Hazard, H. M. Sears		1 55 20	.. ..
Tanipoo, J. S. Brewer		1 55 43	.. ..
Spindrift, W. S. H. Lathrop		1 56 50	.. ..
Jilt, W. O. Gay		1 56 59	.. ..
Fancy, C. F. Lyman		1 58 18	.. ..
Mongoose II., J. D. Irving		1 59 11	.. ..
Chinook, C. F. Adams 2d		1 59 42	.. ..
Gosling, North & Clark		1 59 59	.. ..
Suzanne, Frank Brewster		2 00 25	.. ..
Typhoon, E. V. R. Thayer		2 01 41	.. ..
Sintram, W. P. Fowle		2 02 19	.. ..
Dafila, W. Turner		2 08 08	.. ..
Darthea, E. C. Lambert		Disabled.	

Knockabouts.

Lorelei, J. S. Cochrane		2 10 28	2 08 12
Polly, E. Wadsworth		2 09 07	2 09 07
Carina, J. P. Clark		2 13 59	2 11 43
Jenny Wren, F. E. Peabody		2 14 54	2 11 57
Mayona, C. S. Stearns		2 16 12	2 14 35
Aspenet, H. A. Morris		2 20 20	2 16 28
Comet, J. S. Lawrence		2 20 48	2 16 58
Ruth, R. B. Wiggin		2 20 05	2 18 28

Elfreda, Cartoon, Hazard and Lorelei each wins a cash prize and a leg for the series medal. Hazard wins a leg for the Upton cup. Second and third prizes go to Tanipoo and Spindrift and Polly and Carina.

Beverly Y. C.

Buzzard's Bay.
Saturday, July 23.

THE Beverly Y. C. sailed a race on July 23 on Buzzard's Bay in a light S.E. breeze, a new Herreshoff knockabout, Gadfly, making a very successful début, though protested for fouling a mark, the protest not being decided. The times were:

Knockabout Cruisers.

	Elapsed.	Corrected.
Gadfly, Mr. Geary	2 28 44	.. ..
Edith, C. M. Baker	2 31 25	.. ..
Eina, John Parkinson	2 32 42	.. ..
Nulma, W. F. Harrison	2 33 34	.. ..
Apteryx, L. S. Dabney	2 34 37	.. ..
Kalama, David Rice	2 38 48	.. ..
Aminita	2 40 20	.. ..

Second Class Cats.

Thordis, T. B. Wales	2 26 29	.. ..
Nokomis, A. Winsor	.. ..	.. ..

Third Class Cats.

Melro, D. L. Whittemore	1 42 53	.. ..
Sally Brass, Howard Sargent	1 50 07	.. ..

Fourth Class Cats.

Hope, J. H. Ellis	2 23 00	.. ..
Daisy, Howard Stockton	2 23 22	.. ..

Fifth Class Cats.

Imp, George Dabney	2 21 15	2 19 57
Pedro, Howard Miller	2 20 47	2 20 47
Kolea, Mrs. J. Crane	2 22 23	2 22 23

After the race Capelin, with only young Mr. Eustis on board, was struck by a squall and capsized. Her skipper climbed on the bottom and finally righted her and sailed in.

Duxbury Y. C.

Duxbury, Mass.
Saturday, July 23.

THE open race of the Duxbury Y. C. was sailed on July 23 in a strong east wind, with smooth water. The open boat Rooster and the cabin boat Geisha sailed together, each having no competitor. Bobolink was disqualified for fouling Maud on the line at the start. The times were:

21ft. Class.

	Elapsed.
Rooster, M. McDowell	2 17 16
Geisha, W. T. Whitman	Withdrew.

18ft. Class.

Bobolink, Goodspeed Bros. (disqualified)	1 14 42
Maud, W. M. Mayers	1 19 21
Oidono, Chas. Clapp	1 21 22
Fedora, J. H. Hunt	1 21 28
If, M. K. Norwood	1 21 58
Dolphin, N. Morton	1 22 16

Special Cat Class.

Olympia, G. W. Steele	1 26 30
Veritas, Alex. Holmes	1 28 55
Scrap, A. B. Holmes	1 30 07
Walrus, G. W. Shiverick	1 30 16
Frolic, J. C. Dawes	1 30 39
Kittiwake, H. M. Jones	1 30 41

Gaff and Spritsail Boats.

Solitaire, Baker	1 22 26
Alice B., J. F. Lowe	1 32 12

The winners were Rooster, Maud, Olympia and Solitaire.

Winthrop Y. C.

Winthrop—Boston Harbor.
Saturday, July 23.

THE first handicap race of the Winthrop Y. C. was sailed in a fresh S.E. breeze on July 23, the times being:

	Elapsed.	Corrected.
Nettie, W. Burgess	0 42 40	0 41 40
Active, J. R. Hadden	0 41 33	0 42 33
Alma, C. A. Heney	0 47 38	0 44 38
Ray, S. A. Freeman	0 50 00	0 45 00
Harolde, A. T. Bliss	0 48 43	0 45 03
Alert, J. McConnell	0 49 07	0 46 07
Winona, W. I. Kelley	0 59 55	0 46 25
Pippin, W. Traiser	0 58 53	0 52 53
Miss K., Clark	0 58 32	0 53 32
Anita, F. H. Byrne	1 01 00	0 35 50
Florrie, H. Wait	1 03 00	0 59 00
Grace, Jenkins	1 03 33	0 59 33
Harriet, L. T. Harrington	Disabled.	

Nettie won first prize.

Hull Mosquito Y. C.

Hull—Boston Harbor.
Saturday, July 23.

THE Hull Mosquito Y. C. sailed its third race in a light east wind on July 23, the times being:

First Class.

	Length.	Elapsed.
Mojave, Berry	17.10	1 30 32
Thelma, M. Cleverly	16.06	1 41 50
Rabbit, Walter Keyes	16.06	1 42 10

Second Class.

Tech, Fred Keyes	16.06	1 32 05
No Name, P. F. Folsom	16.00	1 41 45
Rita, C. W. King	15.02	1 42 37
Isidora, H. Cleverly	14.11	1 44 32
Fantee	....	1 49 30
Bubble, W. B. Field	12.00	1 52 25

The winners were Mojave, Thelma, Tech and No Name. Tech protests Rita for fouling, and Isidora protests No Name for fouling a mark at the start.

Burgess Y. C. Ladies' Race.

Marblehead—Massachusetts Bay.
Saturday, July 23.

THE Burgess Y. C. devoted July 23 to the ladies, with a race, followed by a reception in the evening. The times were:

Class I.

	Elapsed.	Corrected.
Sassacus, A. W. Erickson	1 43 30	1 42 00
Brenda, H. S. Goodwin	1 53 35	1 35 30

Class II.

Pointer, B. C. Melzard	1 44 00	1 40 30
Bubble, J. H. Goodwin	1 45 05	1 41 35
Dove, F. G. Macomber	1 45 45	1 41 45
Dora, Charles Stebbins	1 46 10	1 42 10
Ben My Chree, W. H. Stuart	1 42 30	1 42 30

Cohasset Y. C.

Cohasset, Mass.
Saturday, July 23.

THE race of the Cohasset Y. C. on July 23 was sailed in a fresh east wind, the times being:

Knockabouts—Start 2:55.

	Finish.
Remora, C. H. Cousens	4 49 40
Delta, R. B. Williams	4 51 00
Monsoon, J. A. Knowles	4 52 05
Harelda, A. Bigelow, Jr.	4 52 26
Barracuda, A. C. Burrage	4 53 40
Nereid, W. R. Sears	4 56 36

15ft. Class—Start 3:00.

Jap, B. L. Tower	4 18 19

Skipjacks—Start 3:00.

Merlin, Richard Townsend	3 52 00

Monsoon protests Delta for fouling a mark.

Cape Cod Y. C.

Orleans—Cape Cod.
Saturday, July 23.

THE Cape Cod Y. C. sailed a race for its smaller boats in the Town Cove on July 23, the wind being S.E. moderate. The times were:

	Length.	Elapsed.	Corrected.
Helen, A. Fulcher	18.03	1 23 57	0 57 37
Quahaug, Capt. Rogers	14.06	1 28 37	0 57 38
Little Daisy, D. Fulcher	14.05	1 29 30	0 58 31
Elsie, Capt. Penniman	14.06	1 29 25	0 58 56
Henrietta, Rich	14.06	1 30 53	0 59 54
Little Brave, Geo. Ryder	18.03	1 26 50	1 00 30

YACHTING NEWS NOTES.

The Corinthian Y. C., of Philadelphia, is having good sport with its knockabout series of races, the score up to July 9 standing as follows:

	Spider.	Farceda.	Kid.	Grilse.	Fly.
June 4	..	4	3	2	1
June 18	5	2	..	3	4
June 25	6	3	4	5	2
July 9	3	4	5	..	2
Total	14	13	12	10	9

Recruit, the new Quincy cup defender, was measured on July 21 and proved to be 5in. over the limit of 21ft. l.w.l. It is reported that she has proved weak and will require to be strengthened for further racing.

A regular meeting of the New York Y. C. was held on July 21 at Delmonico's, in Beaver street, with Com. Morgan in the chair. Mr. H. C. Wintringham was appointed acting measurer in the absence of Measurer John Hyslop. The following members were elected: Honorary, Rear-Admiral Dewey, U. S. N.; navy members: Capt. Charles D. Sigsbee, formerly in command of the Maine and now of the St. Paul; Lieut. James C. Gilmore, of the St. Paul; W. V. N. Powelson, Ensign C. S. Bookwalter, of the St. Paul, and George B. Wilson. Flag member, Mrs. Bessie Pardee Van Wickle, owner of the steam yacht Marjorie. Active members, A. Bleecker Banks, Joseph S. Fay, Jr., John D. Crimmins, Jr., Seymour J. Hyde, William P. Eno, J. C. Rhodes, Reginald Brooks, Thomas Hugh Kelly and Frederic R. Coudert.

Brunhilde, schooner, J. M. Masury, arrived at Norfolk on July 22 from Rio Janiero, where she was transferred to the British flag. She reported trouble with her crew and desired to land them, but was placed in quarantine.

Gaviota, yawl, owned by Col. David E. Austen, Atlantic Y. C., has had her name translated from Spanish into its English equivalent, and is now named Sea Gull.

The Quincy Y. C. has lately purchased from the Massachusetts Humane Society the lifeboat John Adams, with all of her life-saving apparatus, and she is now in commission, ready for instant use off the club float.

The tenth annual regatta of the Indian Harbor Y. C. will be sailed on July 30. The classes are the 43, 36, 30, 25, 20 and 15ft. classes of sloops, cutters and yawls; 30, 25, 20 and 15ft. classes of cat boats; 21ft. racing knockabouts, and the one-design dory class. These are open to yachts enrolled in recognized clubs. Entries will be received by F. B. Jones, chairman, New York, or at the club house, Greenwich, Conn., up to Friday, July 29.

Waikiki, naphtha yacht, H. C. Roome, New York Y. C., arrived at New York on July 13, after a cruise, begun last November, down the Atlantic coast, through the Gulf of Mexico, up the Mississippi, through the lakes and St. Lawrence, and thence down the coast to New York. She is but 54ft. long.

The new one-design schooner Clorita, P. T. Dodge, was launched on July 9, and is now in commission in New York waters. Her sister boat, for C. P. Buchanan, is not yet launched.

Levanter, steam yacht, has been sold by Alfred Marshall to J. M. Sears, of Boston; Mr. Marshall replacing her by a new 30ft. cabin naphtha launch. Levanter was designed and built by the C. L. Seabury Company, and has proved a very fast boat.

The Beach Haven (N. J.) Y. C. has elected the following officers: Com., Harlan Page, Philadelphia; Vice-Com., John T. Burton, Tuckerton; Sec'y, John T. Fox; Ass't Sec'y, J. G. Downs; Treas., Samuel R. Cowperthwaite; Trustees, John T. Fox, John T. Burton and Timothy Seaman; Fleet Surgeon, Dr. Edward H. Williams, Philadelphia; Chaplain, S. R. Cowperthwaite.

Owing to the death of James A. Roosevelt, the race for the Alfred Roosevelt memorial cup, of the Seawanhaka C. Y. C., was postponed to Saturday, July 30, when it will be sailed from the gun at 3 P. M. over knockabout course No. 2, Oyster Bay. The race is open to the 25ft. class, club boats only, including the one-design knockabouts.

Margarita II., steam yacht, A. J. Drexel, has just been sold to King Leopold of Belgium, who had partly purchased Mayflower, of the Goelet estate, at the time the latter yacht was sold to the Government.

A special race of small catboats was sailed on New York Bay on July 23, over a course of three miles, from the foot of East Forty-sixth street, Bayonne, around the Robbins Reef Buoy, two rounds, making twelve miles. The starters were: Chic, 16ft. 10in., John Wilson, Bayonne; Maggie P., 16ft. 3in., Clarence Lissenden, Staten Island; Cinch, 16ft. 7in., Charles Foster, Brooklyn, and Adele Rae, 16ft. 6in., Charles Rae, Harlem. The wind was from the east, light, but freshened during the race. The course was to windward and return. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Chic	2 59 00	5 38 30	2 39 30	2 39 30
Maggie P.	2 57 30	5 39 30	2 41 30	2 40 45
Adele Rae	2 58 00	5 40 00	4 42 00	2 41 35
Cinch	2 55 30	5 39 30	2 44 00	2 44 00

America, schooner, Paul Butler, is fitting out for a cruise to Cuba, carrying Mr. Butler's sister, Mrs. Ames, who will visit her husband, Brigadier-General Adelbert Ames, and her son, Lieut. Butler, the canoeist, now Adjutant of the Sixth Massachusetts Volunteers.

The June number of the Badminton Magazine contains an interesting yachting sketch, "Across the Channel in a Four-Tonner," by Maude Speed, telling in detail of a trip from Yarmouth, Isle of Wight, to Cherbourg and back. Mrs. Speed is the wife of the Rev. H. Fiennes Speed, of Yarmouth, the author of "Cruises in Small Yachts and Big Canoes," so well known to our readers. Mr. Speed's "big canoes" of fifteen years ago, Viper and Water Rat, have been replaced by a snug cruising cutter of four tons, Lerna, of which he is skipper, and Mrs. Speed steward and cook. Their vacations are spent afloat, in cruises about the Solent, up and down the Channel, and even into Dutch waters.

The Joseph Dixon Crucible Company, of Jersey City, N. J., has issued a little handbook entitled "Graphite as a Lubricant," describing the pure graphite manufactured by it for lubricating purposes, and specially adapted to all high speed machinery, such as launches and steam yachts. The firm also manufactures all varieties of graphite for vessels' bottoms.

Our boys of Company G did an act the other day that shows they have true American hearts. Out on the parade grounds is seen a little group of sticks, and if you notice when the 3,000 soldiers are on the field drilling they never approach those little sticks stuck up in the ground. If you go to the spot you will find a lark's nest, built before war's alarm had been sounded. Here in the armed camp the bird, her nest and six eggs are safe. Members of Company G found the nest as they swept across the field in company formation. The boys opened ranks and passed on. Succeeding companies of soldiers opened ranks as they passed the spot. Then our boys set up sticks around it, and now the mother bird sits on her eggs, an emblem of peace, while all around are the trappings of war.—Austin (Minn.) Herald.

Rifle Range and Gallery.

Rifle at Wilkes-Barre.

THE Keystone Rifle Association, of Pittston, and the Wilkes-Barre Rifle Club met at the new rifle range of the latter club, near Hanover Park, recently and held a shooting contest. The ranges are situated between Lee Park and Hanover Park. One is 200 and the other 500yds. The shooter can ascertain how near he comes to the bullseye by flag signalling, which is maneuvered by the man who has the target house in charge.

There were eight contestants on each side, with W. A. Banfield as captain of the Wilkes-Barre Club and G. W. Burns captain of the Pittston Club. The Pittston Club won by 242 points.

After the contest a clam bake was held in a ravine near the range. The scores:

Wilkes-Barre—W. A. Banfield 118, H. H. Hughes 116, H. G. Liem 144, H. Y. Klinges 47, G. A. Schied 81, J. Miller 82, A. A. Kaiser 144, F. J. Niemyer 113.

Pittston—J. P. Delhontey 146, Phil Raider 127, T. B. Moffat 122, D. O. Snyder 169, J. T. McAndrew 140, J. J. Farrell 126, E. R. Shephard 133, G. W. Burns 135.

New Jersey State Rifle Association.

PASSAIC, N. J., July 18.—*Editor Forest and Stream:* With the approval of Gen. Geo. W. Wingate, president of the National Rifle Association, it has been decided to postpone the meeting of the New Jersey State Rifle Association and the National Rifle Association this year until next. This course is taken because of the absence from their homes of the large majority of National Guardsmen, who ordinarily participate in the competitions.

BIRD W. SPENCER,
Treasuror and Executive Officer.

Bisley Rifle Meeting, England.

THE National Rifle Association meeting of 1898 at Bisley began on July 10. The German Manlicher rifle seems to be on top at most of the competitions where it is allowed against the English Government Lee-Metford rifle.

At the revolver and pistol ranges the Council of the National Rifle Association have made one of those rules which make them so beloved (?) by the competitors. Two rival makers of automatic repeating pistols have given prizes at 20 and 50yds., open to all repeating pistols and revolvers, meaning of course to give their pistols a chance to show how they compare in accuracy with revolvers. The Council have added to these rules that the pistols used must have not less than 200-foot pounds muzzle velocity. The result is that one of these pistol makers finds his pistols are barred for his own prize by his own (or rather made for him by the Council) rules from competing for his own prize. Now there is a rumor that the other pistol maker is also barred for the same reason, so the revolvers will have these prizes to themselves, and instead of the competitions being an advertisement for the automatic pistol makers they will be just the reverse, as the result of the competitions will look to the superficial observer as if the revolvers won all the prizes when pitted against the automatic pistols.

Mr. Walter Winans is not shooting revolver this year at Bisley or at any of the clubs.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

July 26-28.—Little Rock, Ark.—Eighth annual tournament of the Arkansas State Sportsmen's Association, $500 added. Paul R. Litzke, Sec'y.

July 27-28.—Meriden, Conn.—Tournament of the Interstate Association, under the auspices of the Parker Gun Club. C. S. Howard, Sec'y.

July 29-31.—Milwaukee, Wis.—Milwaukee Gun Club's tournament. S. M. Du Val, Sec'y.

Aug. 3-4.—Worcester, Mass.—Tournament of the Worcester Sportsmen's Club. Targets.

Aug. 4-6.—Baltimore, Md.—Ocean City midsummer tournament; two days at targets; last day at live birds. James R. Malone, Manager.

Aug. 9.—Hobart, Ind.—All-day shoot of the Hobart Gun Club. C. M. Townsend, Sec'y.

Aug. 10-11.—Sherburne, N. Y.—Two days' shoot of Sherburne Gun Club, at targets. L. D. Branard, Sec'y.

Aug. 10-11.—Duluth, Minn.—Central Gun Club's sixth annual tournament; targets. E. C. Maxfield, Sec'y.

Aug. 11.—Marlborough, N. Y.—Trophy shoot, Hudson River Trap-Shooters' League, on grounds of Marlborough Gun Club. J. B. Rogers, Manager.

Aug. 17-18.—Waterville, Me.—Tournament of the Interstate Association, under the auspices of the Waterville Gun Club. E. T. Wyman, Sec'y.

Aug. 17-18.—Warsaw, Ind.—Lake City Gun Club's tournament. J. S. Campfield, Sec'y.

Aug. 24.—Warwick, N. Y.—Special shoot, Hudson River Trap-Shooters' League, on grounds of Warwick Gun Club. J. B. Rogers, Manager.

Aug. 24-25.—Minneapolis, Minn.—Tournament of the Minneapolis Gun Club. G. J. McGraw, Sec'y.

Sept. 6-8.—St. Paul, Minn.—St. Paul Gun Club's twenty-first annual tournament at Minnesota State Fair grounds during fair week. H. C. Lawrence, Sec'y.

Sept. 6-9.—Kansas City, Mo.—Schmelzer Arms Co.'s fifth annual tournament; targets and live birds.

Sept. 7-8.—Kingston, N. Y.—Tournament of Hudson River League, on grounds of Kingston Gun Club.

Sept. 7-8.—Haverhill, Mass.—Tournament of the Interstate Association, under the auspices of the Haverhill Gun Club. Geo. F. Stevens, Sec'y.

Sept. 7-8.—Sidell, Ill.—Sidell Gun Club's tournament; targets only. H. J. Sconce, Manager.

Oct. 4-6.—Newburgh, N. Y.—West Newburgh Gun and Rifle Association's fall tournament.

Oct. 12-13.—Greensburgh, Ind.—Greensburgh Gun Club's tournament. W. Woodfill, Sec'y.

Postponed.

— —.—Portsmouth, Va.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club. W. N. White, Sec'y.

1899.

April 11-13.—Elkwood Park, Long Branch, N. J.—The Interstate Association's seventh annual Grand American Handicap tournament.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in hese columns, also any news notes they may care to have printed. Tiee in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Mr. Hough, in his excellent report of the Missouri State amateur shoot, relates a peculiar instance of the vagaries of class shooting. As is customary when there are three moneys, the division was 50, 30 and 20 per cent. The money to be divided amounted to $8. There were five ties for first, three for second, and two for third, each of whom won 80 cents. The sole strength of class shooting is the strong hope it fosters in the shooter that he will be the lucky man to get in a place alone, and thereby make a "killing" or an interesting part of a killing. The disposition to take 100 to 1 chances seems to be universal. Mr. Hough further mentions that the next tournament of the Association will be held at Kansas City, under the auspices of the Washington Park Gun Club.

Mr. A. W. Adams, of the Eureka Gun Club, has returned to Chicago after quite a visit in the East. He and his brother, Mr. Platt Adams, of New York city, are very earnest and skillful trap-shooters, the latter though afflicted at times with that most annoying destroyer of good scores, fudging. However, by persistent effort Mr. Adams has steadied down to even work, as shown by his win of the Troisdorf cup at the New Utrecht shoot last Saturday, which he won after shooting off two ties for it. Both of the Messrs. Adams are enthusiastic amateur photographers, and some of the views taken in the country about New York show a high degree of artistic skill and rare good taste in the selection of subjects.

Under date of July 21, Mr. John M. Lilly, secretary of the Limited Gun Club, Indianapolis, Ind., writes us as follows: "Mr. Alvin Grube, of Southport, Ind., challenged Mr. E. E. Neal, of Bloomfield, Ind., for the possession of the Grand Hotel cup, supposing that the race could be shot at Indianapolis, but as Mr. Neal, owing to the wishes of his friends at home to see a championship race, has decided to name Bloomfield as the place for holding the shoot, the challenge has been withdrawn without prejudice to either party. This action places the cup open to challenge to any one who can comply with the liberal conditions governing the contests for the trophy."

From certain signs appertaining to the Chicago challenge trophy, in its few moments of doubt in respect to its ownership, or holdership while Mr. Paterson was perfecting title to it, it would seem to be that the conditions have been entirely wrong. We would suggest setting Patti back to 43yds., and give his opponent 59 birds to shoot at, so as to equalize conditions. Patti has now won it five times, and with a sixth win, which seems to be impending, if he is so successful, it becomes his property.

The Philadelphia Trap-Shooters' League will hold its next team match and tournament under the auspices of the Frankford Gun Club, Bridesburg Station, July 30.

Mr. L. D. Branard, secretary of the Sherburne Gun Club, Sherburne, N. Y., informs us that his will club will hold a two days' shoot, Aug. 10 and 11, at targets.

Jack Fanning, of Gold Dust powder fame, has been traveling about from place to place at a lively rate. One week we read of him building up scores in the West, the next week he may be in the East. At present he is in New England, where he is likely to remain for about six weeks, making a tour in the interest of his company, the U. S. Smokeless Powder Co., of Batavia, N. Y. On Thursday of last week he was at the shoot of the Bellows Falls Gun Club, Bellows Falls, Vt., a new club comparatively, having been organized a few months since. Shooting at 100 targets, 75 unknown angles and 25 expert rules, Jack scored 95 out of 100, a pretty fair score for any one to make who can cut first-class capers with the shotgun.

Under date of July 24, Mr. L. H. Davis, Pottstown, Pa., writes us as follows: "The second of a series of target matches between teams of twelve men representing the Phoenix Gun Club, of Phoenixville, and the Shuler Shooting Club, of Pottstown, took place here yesterday. The home club won by the score of 216 to 206. Pottstown has won both matches shot, and the third will take place here on Aug. 20. On Aug. 4 the first of a series of matches with the West Chester Gun Club will take place. The conditions of yesterday's match were 25 targets per man, thrown from the magautrap."

The programme of the target tournament of the Sherburne Gun Club, Sherburne, N. Y., Aug. 10 and 11, provides thirteen events for each day, six 10-target events, six 15-target events, and one 20-target event, the total entrance for each day being $11.75. There is $15 average money, $5 each day, and $5 general average money for both days. Shooting begins at 10 A. M. Manufacturers' agents are barred.

The fourth monthly shoot of the Greenfield Gun Club, Pittsburg, Pa., is fixed for Aug. 3. The programme consists of ten events, each at 15 bluerocks, entrance $1. Targets 1½ cents. Shooting commences at 1 o'clock. Moneys divided 40, 30, 20 and 10 per cent. Take Second avenue electric cars, transferring at Greenfield avenue direct to the shooting grounds. John C. Knobe, Secretary, Greenfield avenue, Pittsburg.

Mr. F. V. Van Dyke, the popular expert of the Winchester Repeating Arms Co., is taking a much-needed vacation at Blue Mountain Lake, N. Y., where he expects to remain about a month; or longer, if he derives the expected benefit from it. Van has been somewhat out of health of late, and a sniff of the country breezes and dwelling where there is sunshine and song birds will do him incalculable good.

Mr. C. L. Funk, of Pueblo, Colo., again won the State championship medal, at the Colorado State shoot, by the excellent score of 49 out of 50, the contest being shot at 40 single targets and 5 pairs. There were eleven competitors who finished the race, and of these Messrs. J. W. Garrett and G. G. Pickett were the next strongest competitors, each scoring 45 out of the 50.

Mr. Elmer E. Shaner, the efficient manager of the Interstate Association, stopped over in New York on Monday for a few hours, and had time to shake hands with a few of his friends in that hamlet. He was en route to Meriden, to run the Interstate shoot at Meriden, Conn., this week, Wednesday and Thursday.

The Cleveland Gun Club, of Cleveland, O., will hold its eighteenth annual tournament Sept. 21 and 22. Programmes will be ready for distribution about Aug. 20. Address Mr. J. R. Donnelly, Sec'y, 516 St. Clair street, Cleveland, O.

Mr. Harry Thurman, of Philadelphia, was in New York last week, Wednesday, on a business trip. We were told that he left the city, therefore did not take it with him, but took a lot of orders for his sterling articles of manufacture.

The club cup will be contested for at the Brooklyn Gun Club shoot, fixed for Aug. 13. John Wright, the club's manager, is already bestirring himself to make the shoot pleasant and worth attending.

The Bound Brook Gun Club, in the return match, defeated the Dunellen Gun Club last Saturday by a score of 43 to 41, five men to a team, each man shooting at 10 live birds. There were very few good birds.

The E. C. cup, contested for at the Boiling Springs Gun Club, Rutherford, N. J., has the second and fourth Wednesdays of August fixed for its consideration. Entrance, price of targets.

Will K. Park's apologue of the Wolves and the Lambs is quite neatly done. Paradoxical as it may seem, the lamb oftentimes becomes a wolf so soon as he has the wolf's ability.

Mr. G. W. Loomis, of Omaha, Neb., under date of July 22 informs us that the Indian tournament announced for Aug. 24 to 27, inclusive, has been postponed indefinitely.

The Hobart Gun Club, Hobart, Ind., will hold an all-day shoot at targets on Aug. 9. C. M. Townsend, Sec'y, Hobart, Ind.

BERNARD WATERS.

Schmelzer Arms Company Tournament.

KANSAS CITY, Mo., July 22.—*Editor Forest and Stream:* We take pleasure in stating that the Schmelzer fifth annual shooting tournament will be held in Kansas City on Sept. 6 to 9. The events will be at live birds, inanimate targets and glass balls, as well as rifle shooting contests. We propose catering to both the manufacturers' agents and the amateurs. The amateurs will be known as Class A shooters, and will be eligible to participate for all merchandise prizes.

All professionals and manufacturers' agents will be known as Class B shooters, and will not be eligible to contest for any of the merchandise prizes offered, but will be charged as their entrance, in all 15-bird events, $1.50; in all 20 and 25-bird events, $2. The management will deduct from Class B shooter's entry 2 cents per target, the remainder of the entrance money to be divided among the winners in Class B on a basis of 40, 30, 20 and 10 per cent.

While a Class B shooter will be barred from participating in the amateur events, an amateur will not be barred from participating with the Class B shooters. The amateur will be required, however, to elect at each event which class he desires to contest in, and will not be permitted to enter both classes in the same event.

We will give in the neighborhood of $1,000 in merchandise prizes and about $250 added money. The Schmelzer cup, representing the world's championship on inanimate targets, will also be contested for at the request of the present holder, Mr. Chas. W. Budd, the entrance fee to the contest will be reduced to $7 per man. J. F. SCHMELZER & SONS ARMS CO.

Sterling Tournament.

STERLING, N. Y.—The annual tournament of the Sterling Rod and Gun Club, July, was a success in every particular, shooters from all parts of Central New York being present. L. V. Byer, of Rochester, N. Y.; Chas. Wagner, and R. B. Hunter, of Fulton, shot exceptionally well. The twelfth event was a team race between the Sterling and Fulton gun clubs, the former winning by 6 points. After the team race a match was shot between R. B. Hunter and Chas. F. Wayte, the score being: Wayte 15 straight, Hunter 11.

Missouri State Amateur Shoot.

PALMYRA, Mo., July 21.—In the year of 1818 the hunting grounds of Daniel Boone on both sides of the Mississippi River were still an almost unknown wilderness, abounding in wild game and wild men. West of the river, in the State of Missouri, the white settlements had only begun their growth. It was in that year away back in the beginning of this century that the first white man, wandering across the forest beyond the river, discovered some sweet springs of running water, which induced him to stop and build his home. Others joined him, and thus was begun the city of Palmyra, located in the region of big timber, good grass and good water, which, like its counterpart east of the river, has been engaged ever since in producing fine horses, fine whisky and beautiful women. In seventy years Palmyra has grown only to the size of 3,000 inhabitants, and its wide spaces are dotted with quaint old dwellings, which carry one back to a distant day. It is a quaint and comfortable town, in a rich country, and tenanted by a people who know how to live. To-day one of the citizens of the place told me that he well remembered times when the Indians roamed all over that country. The wild deer vanished but recently, and the turkeys, which the frontiersman loved, hung on until eight years ago. Quail and other game still exist. Naturally the men of Palmyra would be sportsmen and fond enough of a gun to be interested in its modern exercise at the traps. Thus it came about that Palmyra secured the eighth annual meet of the Missouri State Amateur Shooting Association, which has been successfully concluded after occupying the dates of July 19, 20, 21.

The Palmyra Gun Club is a small one, composed only of ten members: Messrs. John W. Lemmons, W. N. Bates, A. B. Drescher, Frank Diemer, H. A. Hollyman, J. Howard Kelley, T. E. Pratt, W. B. Markell and Frank Bernhard. These gentlemen proved themselves entirely able to take charge of a big and busy tournament and run it smoothly and skillfully. Rarely does one see a more pleasant or better managed shoot. There was no delay, no friction and no kicking. Some forty-five different shooters were present, of whom a goodly per cent. shot through the three days' programme. Once more it became apparent that the unpaid shooters of the country are entirely able to hold a big and successful meet and run it skillfully and pleasantly. This shoot was all right. The handling of the squads was good and rapid. The cash window under Mr. Bates was rapid and correct. President Lemmons was everywhere and always efficient. The two magautraps under Charlie North, of the Cleveland Target Co., kept things moving, and the programme of each day was concluded easily and without hurry. The weather was also kind, although the first day was a trifle warm, and a heavy wind blew down the tents during the first night. Of course it should be remembered that this shoot was in the South, and in the summer time, so that it was not to be expected that the live-bird shooting would show much sport. Really this was the only dull and uninteresting feature of the programme, the birds proving too heavy and slow to entitle the live-bird shooting to the name of high-class sport. The grounds of the Palmyra Gun Club are ideal ones, situated at the top of a racetrack, which offered abundant grand stand room to supplement the several tents. Trap-shooting is not hackneyed at Palmyra, and large numbers of spectators, including many ladies, came out daily to witness the sport.

Among gentlemen present from out of town were the following, not all of whom may be distinguishable under their shooting names: Messrs. A. J. Howell, Alton, Ill.; Wm. Linley, Royal Wright and A. J. Miller, Urbana, Ill.; C. B. Clapp, Moberly; G. W. Hayden, Paris; J. W. Gullick, Alf. Dickson, Brookfield; W. S. Allen, Raymore, Mo.; Dave Elliott, J. W. Bramwell, E. A. Hickman, John J. Cornett, J. W. Smith, R. E. Bellcour, Miss Nettie King, C. M. Lasley and H. B. Collins, St. Louis; M. F. McDonald and H. M. Davis, Richmond, Mo.; J. W. Barre, Louisiana, Mo.; R. N. Howell, Woodland; E. O. Hiles, Lewistown, Mo.; H. G. Lee and Herbert Taylor, St. Louis; A. J. McQuaid, Canton, Ill.; Thos. O. Donnel, Quincy; Wm. Gilbert, Philadelphia, Ill.; Frank Stockton and Tony Connors, Hannibal, Mo.; Dr. Hixson, Moberly; L. H. Korn, Bushnell, Ill.; W. T. Craig, Jacksonville, Ill.; F. M. Cochran, Platte City, Mo.; H. C. Threlkeld, Brookfield; Chas. A. North, Cleveland, O.; John Wilmot, Lexington, Mo.; R. E. Morse, Eureka Springs, Ark.

These guests were received with that hospitality which only a Southern town can show, and they themselves were as companionable and clever as only shooters can be. The two big shooting towns of Kansas City and St. Louis sent strong delegations of their best. Kansas City is easily the live-bird town of the West, and I should not be much surprised if St. Louis came close to being first at targets, for at Du Pont Park alone I am advised that 30,000 to 40,000 targets are shot each month. From St. Louis came the only lady shooter present, Miss Nettie King, well known at Southern traps during the past year. From that city also came Dr. Smith, one of its best amateur live-bird shots, and Mr. Taylor, of the Du Pont Co., also handy with a gun. Wilmot, of Lexington, who has held the State medal for three years, is a cool and steady shot, who might prove warm company for any of the good ones.

The State championship at live birds was won this time by McDonald and Davis, of Richmond, shooting under the names of Green and Menefee. They concluded not to shoot out the tie, but to divide the next year's entrance money. The amateur team championship at targets signified by the L. C. Smith cup was won by Hayden, of Paris, and Dr. Clapp, of Moberly, who made the best team among many good ones.

The annual election of officers was held at the meeting of Tuesday night, and resulted as follows:

President, Nelson Jarrett, Kansas City; Vice-President, J. R. Wilmot, Lexington; Secretary and Treasurer, Walter Bruns, Kansas City. The next tournament will be held at Kansas City, under the auspices of the Washington Park Gun Club.

A reference to the scores will show that in some cases a stiff gait was shot. The liberal purse of $350 added money hung up by the management was pretty widely divided, and no one made any very great killing. Nothing was offered for high average, and the money was disbursed by adding $15 to each event. One live-bird event was shot each day, at the end of the target programme. Following are the scores:

FIRST DAY, TUESDAY, JULY 19.

Events:	1	2	3	4	5	6	7	8		Shot	
Targets:	20	20	20	15	20	20	20	15	Broke.	at.	Av.

Diemer	..	..	..	20	19	12	..	..	51	60	.850
Hollyman	..	..	..	..	..	16	12	8	36	55	.654
Scott	..	..	..	..	..	18	16	10	44	55	.800
Bramhall	..	..	..	..	..	..	..	8	8	15	.533

Event No. 5, L. C. Smith cup, for teams of two men, open to members of the Association, 25 targets per man, entrance $5 per team, $25 added, 50 per cent of entrance money goes to present holder of cup, balance divided 25, 25, 20, 15 and 15 per cent.:

Allen 22, Hickman 23—45. Menefee 23, Green 22—45. Dr. Clapp 23, Haydon 23—46. Dr. Smith 19, Taylor 24—43. Wilmot 24, Stockton 20—44. Hill 22, D. Elliott 19—41. Nipper 20, Drescher 19—39. Collins 24, McFadden 21—45.

Clapp and Haydon won.

Event No. 9, State medal, open to members of the Association only, 15 live birds, $10 entrance, $15 added, 50 per cent. of entrance money goes to present holder of medal, balance divided 35, 30, 20 and 15 per cent.: Dr. Smith 12, Taylor 14, Collins 15, Wright 13, Alberson 13, Green 15, Menefee 15, Allen 14, Wilmot 12, Dr. Clapp 11, Cockrell 14, Bramhall 14, D. Elliott 11, Hickman 13, Nipper 13, Corray 14.

Menefee, Green and Collins shot off their tie at 5 birds, of which Collins killed 3, Menefee and Green 4 each, the latter agreeing to hold the medal jointly. Wilmot and Smith decided to shoot out the tie on 12 and had a spirited encounter. Smith miss his 24th bird. Wilmot killed 25 straight in the tie and won.

THURSDAY, THIRD DAY, JULY 21.

Events:	1	2	3	4	5	6	7	8		Shot	
Targets:	20	20	20	15	20	20	20	15	Broke.	at.	Av.
Dr Clapp	20	18	18	14	18	20	20	14	142	150	.946
Menefee	18	19	19	14	18	18	19	15	140	150	.933
Hayden	17	18	18	14	14	18	17	15	135	150	.900

Gilbert	..	..	16	..	13	..	..	..	29	40	.725
Scott	..	..	14	..	..	17	13	13	57	75	.760
Taylor	..	..	16	15	17	16	17	11	92	110	.836
Dr Smith	..	..	18	15	18	20	17	13	101	110	.918
Drescher	..	..	13	12	12	15	14	..	66	95	.695
Spaulding	..	..	..	..	..	..	..	8	8	15	.533

Event No. 9, Dudley Hotel, 10 live birds, $7.50 entrance, $15 added: Taylor 8, Smith 8, Allen 10, Green 10, Scott 9, Clapp 9, Cockrell 9, Markell 7, Menefee 9, Wilmot 8, Diemer 9, Hixon 7, Kempf 6.

The birds in the above event were very dull, and many could not be induced to fly by the most persistent flagging. In the tie on 12 Taylor, Smith and Wilmot shot at strings of 5. Taylor did not get into the second string, which was concluded with Wilmot 10, Smith 9. There is friendly rivalry between the latter two shooters, which may result in a race later on if a meeting place can be agreed upon

Extras at targets and live birds filled in each day, with entries of ten to twenty-five shooters. At the close of Thursday's shooting the gentlemen gave exhibitions on doubles and trebles from the magautrap, and rapid-fire squad shooting for the benefit of the spectators. Dr. Smith did some trick shooting, breaking a pair, changing the gun from right to left shoulder, shooting with gun upside down above head, etc.

ODD CASE IN CLASS SHOOTING.

In one of the extra sweeps on Thursday an odd division of the money attracted the attention of every shooter present. There were ten shooters entered, at 10 targets, $1, and the scores were as follows: Clapp, Menefee, Hayden, Green, Allen, 10 straight; Hixson, Elliott and Markel, 9; Wilmot and Tupper, 8. The money was divided 50, 30 and 20 per cent., the purse with birds out being $8. Thus the five straight men divided $4, taking down 80 cents each. The three men in second place divided $2.40, also taking down 80 cents each. The two men in the third hole divided $1.60, so that again the winning of each was 80 cents. This is the most singular instance of the vagaries of class shooting which ever came under my notice, and I doubt if its like is apt to be seen again.

IT IS HEALTHY.

It is to be said of the Missouri State Amateur Association that it is in perfect health, and that the meeting at Kansas City next year is apt to be a strong one. These shoots, having but two State events, and offering good added money to outside shooters, are practically open tournaments, with professionals barred. They are in their way successful ones, especially if the meeting of this year may be taken as a criterion.

E. HOUGH.

Colorado State Shoot.

THE ninth annual tournament of the Colorado State Game and Fish Protective Association was held at Denver, July 7, 8 and 9. The attendance was small, for the reason that the July celebrations were held a few days before, and therefore a great many of the best shots could not attend. J. J. Hallowell, of Bridgeport, representing the U. M. C. Co., and C. E. Latshaw, of Chicago, were the only shooters outside the State who attended, and they left a good impression with their newly made friends.

The programme consisted of nine 20 and three 15-target events each day. Bluerocks were used, thrown from a magautrap.

John W. Garrett, of Colorado Springs, won high average for the day, with C. L. Funk, of Pueblo, a close second. Following are the scores for the first day's shoot:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Av.
J W Garrett	18	19	17	15	18	20	19	14	18	19	18	13	.924

SECOND DAY, JULY 8.

The second day saw a larger attendance than the first, and found the interest far more enlivened by the contest for the State championship, which was won by C. L. Funk, of Pueblo. He also won the high average for the day; J. F. Sedam, of Denver, was second, and J. W. Garrett third. Following are the scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Av.
Funk	18	18	17	15	17	18	19	14	20	19	19	15	.929

THE STATE CHAMPIONSHIP.

The individual State championship was competed for to-day after the sixth event was finished. There were but fifteen entries, and four of these withdrew after shooting 20 targets. The medal had been held by Funk, of Pueblo. Each man shot at 40 singles and 5 pairs of doubles. All those in the contest shot fairly well, except Bryan Haywood, of Denver. The only reason I can give for his bad shooting is that he had to entertain the visiting shooters while they were in Denver. Following are the scores as they were shot, C. L. Funk winning the medal:

C L Funk.....1111111111111111111111111111111111111111111111111011111—49

THIRD DAY, JULY 9.

The third and last day there was better shooting done. J. F. Sedam, of Denver, who won the interstate championship on live birds at Kansas City in May, got in the game and showed the younger shooters that age was no drawback. J. W. Garrett made the longest run for the three days, breaking 79 straight. C. L. Funk, J. F. Sedam and J. W. Garrett tied for high average to-day. The following scores were made:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Av.
Funk	20	18	19	13	18	20	19	14	20	19	19	15	.951
Garrett	17	20	20	15	20	19	19	15	17	19	19	14	.951
Sedam	17	20	20	13	20	19	20	13	20	19	18	15	.951
Hallowell	19	18	17	15	20	20	17	13	19	18	17	14	.920
Clark	18	19	20	13	19	16	16	13	16	20	19	14	.907
Lawton	18	19	18	14	17	18	18	10	16	20	20	15	.902
West	16	18	17	13	18	19	19	13	19	18	19	12	.893
Moore	12	12	18	14	17	19	17	15	16	18	18	15	.857

Arkansas and the South.

PINE BLUFF TOURNAMENT.

LITTLE ROCK, Ark., July 22.—The Pine Bluff Gun Club held a one-day tournament on July 21. While the attendance was not large, it was conducive to much good fellowship. The club members as usual exerted themselves to their utmost to make the event both pleasant and agreeable to visitors. It was generally admitted that they succeeded admirably.

The programme consisted of ten events, eight 15-bird events and two 20s. The club added $5 to each of these, and in addition threw targets at 2 cents. But this is not all. At noon all the shooters repaired to the Truelock Hotel, where they dined as guests of the club.

The shooting was spirited and interesting. When the programme was shot out it was found that Sumpter and Clements had tied for high average with .893, Coles coming next with .850 per cent.

The out-of-town shooters who participated were John J. Sumpter, Jr., Hot Springs; John M. Pemberton, John T. Fletcher, J. K. Thibault and Col. J. A. Woodson and the writer, from Little Rock.

The money was divided according to the Rose system, the entrance being $1 for each event and targets extra.

The weather was clear and hot. The targets were thrown hard and low. There were a number of extras shot, and the scores made in the programme events are as follows:

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.
Sumpter	15	14	12	17	14	14	14	20	11	12	160	143	.893
Clements	14	13	14	18	15	14	13	16	14	12	160	143	.893
Coles	14	12	12	19	12	11	14	17	12	13	160	136	.850
Thibault	14	10	14	18	13	12	12	14	14	12	160	133	.831
Woodson	14	9	15	17	12	9	13	17	12	13	160	131	.818
Howell	10	14	11	16	14	14	11	15	11	15	160	131	.818
Pemberton	13	12	14	15	12	12	11	14	14	13	160	130	.812
Fletcher	7	9	7	14	10	10	12	11	8	10	160	98	.612
Lloyd	13	6	9	15	6	10	9	10	7	11	160	96	.600
Arnold	6	7	13	18	13	8	..	14	7	14	145	100	.689
Marsh	10	10	11	14	11	8	11	..	..	..	110	85	.681
Simpson	..	..	..	..	..	..	..	..	12	10	50	34	.680
Langford	9	7	6	..	..	..	..	..	..	..	45	21	.466

HOT SPRINGS DOINGS.

The Hot Springs shooters, though few in number, have been very active of late, and are doing much preparatory work to get fit and well to win the team championship medal at the State shoot, which on form they seem to stand an excellent chance of capturing.

The following scores were shot on July 7:

		Shot at.	Broke.	Av.
Sumpter	21 25 22	75	68	.906
Rix	19 23 23	75	65	.866
Williams	22 21 21	75	64	.853
Collings	22 18 19	75	59	.786

On July 14 the club put the following scores:

		Shot at.	Broke.	Av.
Sumpter	25 23 20	75	68	.906
Williams	18 24 23	75	65	.866
Collings	20 21 18	75	59	.786
Rix	19 17 21	75	57	.760

DONALDSONVILLE, LA.

The gun club at this place is out with the announcement of a tournament for Aug. 20 and 21. Merchandise, medals and $100 will be the inducements for the two days.

PAUL R. LITZKE.

Mr. Fred Gilbert has accepted Mr. R. O. Heikes' challenge in respect to the E

WESTERN TRAPS.

DRAKE WINS IN THE C. A. A.

At the last monthly competition of the live bird club of the Chicago Athletic Association, held Thursday of this week, John B. Drake, with a handicap of two birds, defeated the field and Geo. Thorne, the winner in June contest. Ten members were on hand. Mr. Drake stood at 27yds., and killed 14 birds out of 15, or 16 out 17, handicap in. Mr. Edwards was second, 14; Dr. Frothingham third, 13. The club medal has had three holders in three shoots.

STILL DANGLES.

The Chicago challenge trophy still dangles from the window of the Western office of FOREST AND STREAM, see last week's paper. Mr. Levi felt sure he would get this trophy away from Patti, but he fell by the wayside, as have all contestants up to date. Should Mr. Paterson be equally lucky one more time, the hardware is his'n.

ALPINE GUN CLUB.

At their last shoot, at Ben Fogli's grounds, Alpine Gun Club, of Chicago, made the following scores, which show steady improvement over first efforts:

Medal shoot, 25 targets.

Corrieri	0111110111111001011111101—23
Barto	1111110101011110101101100—17
Simmonetti	1101111111111111011111111—23
Chersia	1011101010001111101110100—15
Maraviglia	0000001111011101011001100—12
Plouech	0110010011110101010111010—14
Checolo	0110111010100101010110010—13
Frugoli	1010100101010100111100111—15
Bacci	1111001101011110101010111—17

Shoot-off on tie of 23 at 5 targets: Corrieri 5, Simmonetti 3.

Sweepstake $1 entrance; ten targets.

R. SIMONETTI, Sec'y.

TERRE HAUTE SHOOT.

The tournament at Terre Haute, Ind., July 19, was a pleasant and progressive affair, enjoyed by all, and all the contestants were satisfied down to the ground. Among others from abroad were Messrs. Bryant, White, Balmer, Elure, Scott, Perry, Kirk and Miller, of Vincennes; Jobe, of Brazil; Buffo and Morris, of Clinton; Davis, Smith, Draper and Cotton, of Paris, Ill.; Dietrich, of Waveland, and James E. Bell, of Indianapolis.

Dietrich, of Waveland, carried off top honors, and his percentage shows a warm pace for any shooter to follow. Scores were as below:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Av.
Dietrich	..	10	10	9	9	9	10	10	10	8	9	9	.940

CENTRAL OF DULUTH.

On last Saturday Central Gun Club, of Duluth, Minn., made the following scores, in 8 events, 10 birds each:

Events:	1	2	3	4	5	6	7	8
Culver	7	9	8	8	7	7	8	19
Wm G	3	3	4	5	5	4	2	4
Hart	8	8	9	7	9	10	8	7
Chase	6	4	5	6	7	7	..	..
Warren	10	8	9	9	8	8	..	..
Duchess	8	9	9	9	7	8	..	..
Nelson	8	9	10	10	9	..	..	..
Glenwood	4	5	4	5	6	..	..	..
Bang	1	5	3	..	..	..	..	..

COMING EVENTS.

Du Pont Gun Club, of Omaha, will hold a tournament in the early fall, 4 days, birds and targets, amateurs only, $500 added money. Date is not yet fixed, but this is worth watching. Address Joe Goldsmith or George Moore.

Du Pont Gun Club, of St. Louis, will hold a big wide open live bird sweep, 50 live birds, for a $300 medal, the first week in August. No bars.

Hobart Gun Club, of Hobart, Ind., will hold an all-day shoot at targets, Aug. 9.

Sidell Gun Club, of Sidell, Ill., will add $75 cash to the entrance in the State championship event. The club puts out a nice programme for their tournament, Sept. 7 and 8. The shoot ought to be good.

Carroll Gun Club, of Carroll, Iowa, offers liberal purses for its tournament, at birds and targets, Aug. 10 and 11. Professionals and agents barred.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

GARFIELD GUN CLUB.

The Garfield Gun Club held its regular weekly shoot on the club grounds, corner West Monroe street and Fifty-second avenue, last Saturday afternoon.

The attendance was fairly large, considering the warm weather. Several good scores were made during the day, Dr. Shaw carrying off highest honor in the trophy contest, with a straight score. The doctor has been shooting in splendid form for the past few weeks.

Considerable shooting was indulged in by those present, and Captain Kuss kept them in line without much loss of time.

Following are scores in the practice events:

Events:	1	2	3	4	6	7	8	9
Targets:	15	10	15	15	15	15	10	10
Fehrman	13	9	13	13	11	13	8	6
Brown	3	0	0	0	..	..	..	..
Richards	13	9	10	8	13	13	7	5
Shaw	15	9	12	..	14	..	6	7
Pollard	8	7	8	..	7	9	..	..
Smedes	..	7	12	11	10	12	5	..
Meek	..	..	..	12	11	12	..	..
Workman	..	..	..	11	..	..	3	..
Hellman	..	..	..	11	11	13	..	..
Kuss	..	..	..	13	13	14	8	8
Eaton	..	..	..	..	10	9	6	4
Cooper	..	..	..	..	8	..	4	..
Paterson	..	..	..	..	11	12	..	..
Wiley	..	..	..	12	15	..	..	..
Young	..	..	..	..	11	14	3	5

Nos. 1, 2, 4, 6 and 8 were known traps, unknown angles; No. 3 was 5 unknown traps, one man up; No. 7 was a team shoot, which was won by Shaw's team; No. 9 was at 5 pairs.

Following are detailed scores in the trophy events, 25 targets, known traps, unknown angles, classified. Class A was won by Dr. Shaw, Class B was won by Samuel Young, and Class C was won by J. Workman:

Fehrman	0111111101111010111101001—18
Brown	0000010000000001000010001— 3

GARDEN CITY GUN CLUB.

The Garden City Gun Club, of Chicago, held its regular bi-weekly contest, on Watson's Park grounds, Saturday last, consisting of live-bird and target shooting. The birds were good and got away quickly. The wind blew strong from the left quarter. The first event was at 10 live birds, resulting in a tie between J. H. Amberg and G. Parker, Jr., which was not shot off. Following are detailed scores, 10 birds, 30yds. rise:

H Levi	2102001211—7	A W Reeves	1211100011—7
J H Amberg	0120221222—8	Smeades	1020202022—6
G Parker, Jr	121221102*—8	J Watson	2200012122—7
M Goldsmith	1001011110—6	*Matticks	0102212111—8

* Visitor.

Following the live-bird event was the trophy target contest of 25 targets, known traps, unknown angles, which was won by J. H. Amberg on the score of 21 out of 25. Following are the detailed scores:

H Levi	0111110010011100111000111—15
J Amberg	1110011111111111101011111—21
M Goldsmith	1111110010101110111111101—19
A W Reeves	1111101111111100111101111—21
Smeades	1001000110101101110111110—15
J Watson	0010011101100010110001001 —11
G Parker, Jr	0101110111001101100110011—15
Woodruff	1010000100000001001110001— 8

AUDUBON GUN CLUB.

The Audubon Gun Club, of Chicago, held its monthly contest at live birds on the grounds of Watson's Park, Burnside Crossing, Ill., on the afternoon of July 20, with a small attendance. The race was at 20 live birds, 30yds. rise, with a handicap of added birds. Amberg won first place. Silas Palmer, who is a new member, has not shot a sufficient number of times to receive a handicap allowance. There was a left quartering wind, and the birds were a good lot. Many good stops were made, and quite a few were scored dead out of bounds. Following are detailed scores of the contest:

J H Amberg	*22212112221220211 22—18—1—19
C S Wilcox	20022112221222200212—16—2—18
H H Frothingham	20021112021*1*222222—15—0—15
J M Gillespie	1201*12101112112*121—16—1—17
Mr Howe	01111002210*102*2112—13—3—16
Silas Palmer	22110110212201120201—15—0—15

CHICAGO ATHLETIC ASSOCIATION.

The Chicago Athletic Association held its monthly contest at Watson's Park, Burnside Crossing, Ill., on the afternoon of July 21. The race was at 15 live birds, handicap of distance and added birds. Mr. J. B. Drake won the honors of the day, killing 14 straight and missing his 15th bird; he had a handicap of 2 birds, one of which was all that was necessary to make his score straight. The wind blew mild from the left quarter, and there was a strong sunlight the greater part of the time. The birds were a good, fair lot, such as are usual to these grounds. Following are detailed scores:

G A Thorn, 30	202*21201102101—10—0—10
J F Turill, 26	100200010100010— 5—3— 8
C E Felton, 25	220*1120 w — 5—1— 6
E S Rice, 28	00002 w — 1—1— 2
J A Edwards, 27	22022221*221101—12—2—14
J B Drake, 27	122221211221210—14—2—15
F B Stone, 27	**1002122100202— 8—3—11
H H Frothingham, 29	2220220112122 11—13—0—13
G O Russell, 29	010100202010000— 5—1— 6
R H Donnelly, 27	022112122110200—11—1—12

After the trophy contest several 10-bird events for $10 and the birds were shot, with the following results:

R H Donnelly	1111122110— 9	Donnelly	2101120221— 8
G A Thorn	1202221010— 7	Thorn	2002120220— 6
R H Donnelly	1012201202— 7	Edwards	2010210100— 5
G A Thorn	1211111112—10	Donnelly	0010011120— 5

Donnelly won shoot-off.

CHICAGO CHALLENGE TROPHY.

The rush of challenges for the Chicago challenge trophy has occasioned considerable interest to the minds of the many shooters about Chicago. Quite a number of eligibles attended the last contest, some even had challenges written while the shoot was in progress, to be ready far mailing on their arrival down town. One conveyed the result of the contest to his lieutenant down town by telephone, and it is believed another occupied the time and attention of a carrier pigeon. All challenges were standard, and registered with special delivery stamps. So near together are they that the services of the trustees will have to be obtained to decide who shall be the one to participate in the next contest. Even the records of Uncle Sam's post-office have been consulted. Of course many of the Chicago shooters are desirous of competing, and it seems too bad that the trophy should not last at least one year before becoming the personal property of any one shooter. It cannot but be hoped that the trophy will continue to remain open to challenge after the next contest, as such would do more toward covering the purpose of its intent than to have it won at this time. The holder though says he desires to respect the wishes of his fellow shooters, but will endeavor to win just the same.

A. C. PATERSON.

Trap Around Reading.

READING, Pa., July 23.—Since the Fourth of July tournament held by the South End Gun Club, of this city, there has been considerable rivalry between its members as to the best shot at targets in the club. Several private matches have been shot, but at the last meeting of the South End Gun Club it was decided to again place the three medals in competition in three classes on Labor Day, Sept. 5.

Some of the best shots in this city are trying to again arrange for another team shoot. In 1896 the South End Club's team, consisting of five men—Capt. Essick, Eshelman, Shaaber, Harrison and F. Yost—defeated teams from the Independent and East End clubs, but since the teams have never met at the traps. The South End Club has some fine shooters, and should challenge Boyertown or Shuler Club, of Pottstown, for a match or a series of team shoots. All I suppose that is wanting would be a suitable trophy.

Lebanon, Pa., July 23.—The Keystone Gun Club, of this place, has accepted the challenge of the Chambersburg Gun Club, and will journey to Chambersburg July 30 to meet in the first match. This club has been quite successful in team matches, having beaten Shuler Shooting Association, of Pottstown, in two series.

Pottstown, Pa., July 20.—The Shuler Shooting Association held a practice shoot to-day. Team shooting was a feature and good scores were made:

W. J. Grubb's Team.

Events:	1	2	3	4
Targets:	15	10	15	10
Slonaker	12	9	9	6
Grubb	11	7	11	8
Trumbauer	13	3	9	10
Smith	8	8	8	9
Longacre	8	8	7	5
Totals	52	35	44	38

Capt. Wickersham's Team.

Events:	1	2	3	4
Targets:	15	10	15	10
Davis	13	8	9	10
Wickersham	11	5	12	7
Shaner	10	7	10	4
Yerger	9	6	10	4
Stone	8	8	8	6
Totals	51	34	49	31

The teams were then changed, and the regulars shot two 10-target matches against the Shuler reserves, each team winning one match. The scores follow:

Shuler Regulars.

Events:	5	6
Targets:	10	10
Slonaker	3	9
Grubb	10	6
Wickersham	8	9
Longacre	7	5
Totals	28	29

Shuler Reserves.

Events:	5	6
Targets:	10	10
Davis	8	4
Shaner	7	6
Smith	7	6
Yerger	7	5
Totals	29	21

Seventh event, team shoot, four men per team, each man at 10 targets:

Davis 8, Grubb 7, Wickersham 7, Shaner 10—32.

Slonaker 7, Smith 6, Longacre 4, Yerger 5—22.

Sweeps at 10 targets and at 4 pairs doubles ended the day's sport:

Eighth event, 10 singles: Slonaker 9, Davis 9, Trumbauer 7, Wickersham 6, Shaner 6, Grubb 5, Smith 5, Yerger 4, Longacre 4.

Ninth event, 4 pairs doubles: Slonaker 5, Shaner 6, Grubb 4, Smith 6, Yerger 4, Longacre 4, Cole 4.

Pottstown, Pa., July 23.—The second of a series of three target matches between the Phoenix Gun Club, of Phoenixville, and the Shuler Shooting Association was held on the grounds of the latter at East End. The first match resulted in the Shuler Club's favor. The teams consisted of twelve men each, each man shooting at 25 targets thrown by the magautrap. Sweepstakes followed. The scores were as follows:

Shuler Shooting Association—Wheeler 23, Benner 23, Wickersham 20, Davis 17, Saylor 17, H. Wein 17, Grubb 18, Shaner 18, Slonaker 16, Smith 19, Urner 17, Lenhart 11—216.

Phoenix Gun Club—Hagenbotham 19, Dotterer 22, Harris 16, Johnson 24, Erb 16, Pehlert 15, Hodge 12, Dunlap 18, Leidy 13, Williams 18, Buckwalter 21, Lambert 12—206.

Sweepstake shooting followed, of which the scores were:

DUSTER.

IN NEW JERSEY.

CHATHAM GUN CLUB.

CHATHAM, N. J., July 16.—The prize hammerless shotgun put up by the Chatham Club attracted quite a crowd of local shooters to the grounds on Saturday, July 16. The afternoon was a perfect one for shooting, a gentle breeze serving to temper the warm summer afternoon, but still not enough to affect the flight of the targets. The scores were possibly materially better than usual on this account, but it is more likely that they were unusually good because the boys had their nerve along and were determined to be in at the finish for the prize.

The management was rather too liberal with the handicaps. Out of eighteen entries, ten were tied with 50 each, including their handicaps.

In the shoot-off two of the men—Budd and Sickley—dropped, leaving eight still tied for the final. By agreement the final shoot-off will take place on Saturday, July 30, at 2:30:

First shoot-off, 25 targets, one-half original handicaps:

	Score.	H'cap.	Total.		Score.	H'cap.	Total.
Drake	24	3	25	Caterson	13	12	25
Feigenspan	23	4	25	Sicley	21	2	23
Geoffroy	25	2	25	Unger	15	12	25
Colquitt	22	6	25	Williamson	20	6	25
Elder	16	10	25	Budd	20	4	24

Second shoot-off, 25 targets, one-half original handicaps:

	Score.	H'cap.	Total.		Score.	H'cap.	Total.
Drake	22	3	25	Elder	17	10	25
Feigenspan	23	4	25	Unger	13	12	25

Nichols	24	25	49	Budd	42	8	50

R. B. BUDD.

BOILING SPRINGS GUN CLUB.

Rutherford, N. J., July 23.—There was a southeasterly wind, a very hard light for shooting and a threatening of rain all the afternoon. In two events, each gun below the elbow, Capt. Money broke 9 out of 10 each time, and was easily first. In the prize shoot C. Matzen scored 50. The conditions of the prize shoot were 50 targets, unknown angles, Sergeant system, allowance handicap:

C Matzen, 18.	1111110110111111111011110001110110111111111111100	—40

DUNELLEN VS. BOUND BROOK.

Dunellen, N. J., July 23.— There was but little wind. The weather was threatening, and a light misty rain fell. The background and birds were dark, and the latter were hard to see, particularly the left-quarterers. The birds were an ordinary lot, some few being good. In flight they were generally outgoers and left-quarterers. The Bound Brook Gun Club proved to be the winner by a score of 43 to 41. This was the second shoot between the two clubs. Each man shot at 10 birds. Anderson drew a good bird, his 7th. Tingley and Geddes' birds were all easy; Hoey's 3d and 9th were good; Lair's 4th, 5th and 9th were good. Baron had a good one in his 6th. Lindzey's 4th and 6th were good ones. Nelson had two fairly good ones. Giles' birds were easy.

The scores:

Bound Brook Gun Club.		Dunellen Gun Club.	
Anderson	2122222121—10	Barron	2222210212— 9
Tingley	2222212212—10	Cramer	2222221222—10
Hoey	2102221211— 9	Lindzey	2220120222— 8
Geddes	22011021*1— 7	Nelson	0011*11121— 7
Lair	2200021122— 7—43	Giles	0011101211— 7—41

The fifth annual tournament of the Schmelzer Arms Co. will be held at Kansas City on Sept. 6 to 9. The events will be both on live birds and targets. Rifle contests will also be a part of the meeting. The programmes will be ready for distribution about Aug. 1.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, AUGUST 6, 1898.

VOL. LI.—No. 6. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

PRIZES FOR AMATEUR PHOTOGRAPHS.

THE FOREST AND STREAM offers prizes for meritorious work with the camera, under conditions which follow:

The prizes will be divided into three series: (1) for live wild game; (2) for game in parks; (3) for other subjects relating to shooting and fishing.

(1) For live game photographs three prizes are offered, the first of $50, the second of $25, and the third of $10.

(2) For live game in parks, for the best picture, a prize of $10.

(3) For the best pictures relating to FOREST AND STREAM'S field—shooting and fishing, the camp, campers and camp life, sportsman travel by land and water, incidents of field and stream—a first prize of $20, a second of $15, a third of $10, and for fourth place two prizes of $5 each.

There is no restriction as to the time nor as to where the pictures have been made or may be made.

Pictures will be received up to Dec. 31 this year.

All work must be original; that is to say, it must not have been submitted to any other competition or have been published.

There are no restrictions as to the make or style of camera, nor as to size of plate.

A competitor need not be a subscriber to the FOREST AND STREAM.

All work must be that of amateurs.

The photographs will be submitted to a committee, who, in making their award, will be instructed to take into consideration the technical merits of the work as a photograph, its artistic qualities, and other things being equal, the unique and difficult nature of the subject.

Photographs should be marked for identification with initials or a pseudonym only, and with each photograph should be given, answering to the initials, the name of sender, title of view, locality, date and names of camera, and plate or film.

NATURE'S COMPASS SIGNS.

OUR issue of Nov. 20, 1897, contained a paper by Mr. Geo. S. Dearborn on the woods signs, which to the practiced eye indicate the cardinal points of the compass. Briefly outlined, Mr. Dearborn's notes stated that:

1. The bark of coniferous trees is lighter in color, harder and dryer on the south side of the tree, while it is darker, damper and often covered with mould and moss on the north side. The gum from knots and wounds is hard and amber colored on the south side of the tree, sticky and dirty on the north.

2. On rough barked trees, the nests and webs of spiders and other insects are found in the crevices on the south side.

3. A preponderance of the large branches will be found on the south side; while the needles are longer, more slender and darker green on the north. Cedars and hemlocks "always bend their slender tops of new growth toward a southern sky."

4. In hardwood trees fungus and moss are on the north side; the longest branches are on the south side; the leaves are larger, damper, more tender, and of a darker green on the north side; nests of insects are on the south side; in the Southern States the air plants are on the north side.

5. The heart of a tree is nearer the north side; stumps and stubs decay and waste away first on the north side.

6. Ledges of rocks and boulders are comparatively bare on the south side, or have a harsh, dry moss; while the north sides are damp and mouldy, and have soft, damp mosses and ferns.

7. The forest floor on the southern slopes of hills, ridges and clumps of trees is noisier under foot than on the northern.

8. In open country wild flowers, especially long stemmed ones, incline toward the south; the ground near clumps of bushes, rocks, mounds and hummocks is greener and moister on the north side; and on this side grow the mosses and ferns.

These are some of the chief points noted by Mr. Dearborn; and the conditions as stated are dependent upon the influences of the sunlight; which is to say that the southern exposure to the warmth of the sun is a determining factor; and the rules laid down are, of course, subject to a multiplicity of exceptions caused by local conditions. It is only where the sunlight and the shadow can mark tree and rock and earth that Mr. Dearborn's rules are applicable.

Just how much reliability there may be in these natural compass signs every woodsman, experienced or amateur, may determine for himself by actual personal observation and study. To take note of branch and bark and gum, and lichen, moss and fern, pine needles and the sun seeking wild flower will prove a fascinating and endless study for the days in forest and camp. Test the facts and the theory, and send FOREST AND STREAM a record of your findings. We print in another column some notes on the subject.

GAME CONDITIONS IN THE WEST.

THE account of the game conditions in the Yellowstone Park, given in our Chicago correspondent's game letter this week, is of much interest, and implies great energy on the part of Capt. Erwin, the superintendent, and of Lieut. Linsley, who for some years has had under his special charge the protection of the Park game.

The slight increase reported for the buffalo herd is encouraging; but the fact that no calves were seen is difficult of explanation. If the buffalo were seen in July, calves should have been with them, if any were born this spring. It seems hardly probable that the buffalo calves have been destroyed by panthers or lynxes, since elk calves are so much more numerous, and would be so much more easily obtained than buffalo calves. The excellent elk calf supply is encouraging. It is the overflow from the Park elk herd that is to supply the game country adjacent to the Park, and so long as the reservation is preserved as a secure breeding ground for this species the numbers of elk killed without the Park will not appreciably affect the stock. The trifling loss reported among the antelope indicates that good work was done last year in killing off the coyotes. They should be destroyed whenever it is possible. They do much harm and no good.

The most interesting point in Mr. Hough's letter is that in his annual report to the Governor of the State the game warden of Colorado purposes to recommend the Maine idea of licensed guides, these to be commissioned as special game wardens. This is certainly an indication that the world moves, and that at last some portions of the Western public are awakening to the fact that in its game and fish a State has proprietary rights which are salable for a valuable consideration. Game Warden Swan estimates that last year the sum of $15,000,000 was spent in Colorado by hunters and fishermen. We have no means of knowing on what figures this estimate is based; it appears absurd, but however that may be, we all know that the sums spent in these recreations are vast in the aggregate, and that it is worth while for any community or set of communities to preserve the conditions which induce the spending within their borders of such great sums. Maine was the first State to appreciate how really valuable a commodity her game and fish were. It will be interesting if Colorado, one of the most progressive as she is one of the oldest of the far Western States, shall now or soon come to comprehend what was learned years ago by the canny and intelligent down-East Yankee.

To those who remember the West of old times, when there was a frontier and beyond that frontier a wilderness, occupied only by wild beasts and wild men, the idea of licensed guides and a modern system of game protection is not a pleasant one. Yet we may as well adapt ourselves now to existing conditions and face the situation. There is no longer "wild country, country uncharted and untabulated"; we kill our game now nearly as they do in the deer forests of Scotland or on the preserved mountains of the Tyrol. The old ways of life are gone, gone as utterly as are the buffalo and the wild Indian, and they will never return. If there still remain a few nooks in the mountains where the hunter or angler may yet live as he used to live, such places are growing fewer each year, and before long will all have disappeared. This is an utilitarian age; domestic cattle have taken the place of the buffalo; ranchers dwell by the streams where once the Indian village stood. The grass and the water are being turned into money through the medium of domestic animals and the plough, why should they not be turned into money by the wild creatures native to the soil and the rod and rifle? Sooner or later this will surely come to pass, and those States which are the first to take steps to adopt a wise system of game protection will be the first to reap its profits in dollars and cents.

THE AMERICAN LOG CABIN.

AMONG the projected institutions of Washington is a series of national galleries of architectural design, to represent, by means of reproductions of typical examples, the characteristic architecture of Egypt, Greece, Rome and other lands and periods from remote antiquity down to the present day.

The National Museum has miniature reproductions of Zuni houses and other aboriginal types, and in the National Zoological Park is a full-size model of a Maine Indian birch-bark lodge, constructed, we believe, under the supervision of Joe Francis, of Oldtown. This is suggestive of a wide field for such work, which might well grace the slopes of that beautiful Park. A series of characteristic American Indian dwellings—lodges, tepees, wigwams; of earth, bark, skins and palmetto; representing Eastern, Western, Northern and Southern tribes—the people of the pine forests, the mountains, the plains and the everglades—these would add immensely to the picturesqueness of the Park, would have a permanent interest and would popularize with the simple directness of object lessons a knowledge of the peoples who occupied the land before us.

The one architectural object which most of all is deserving of commemoration, not only in some fitting site at the nation's capital, but in our large public parks everywhere, is the American log cabin. Poetry and romance invest the log cabin. It is the rude structure which has everywhere marked the advance of civilization. About it have been waged the wars of races. It has been the frontier fortress, the outpost planted in the enemy's country, and held against desperate odds by the high daring, the tenacity and the grit of the expanding nation's best manhood. The story, too, of woman's courage and faith and fortitude is a story inseparable from that of the American log cabin, and one worthy to be written in those characters of gold which the ancients reserved for their sacred writings. The log cabin has sheltered the sterling homespun virtues of an honest, simple and unsophisticated people, those who in the days of the beginnings gave character and stamp to communities and States. It has cradled statesmen and poets and leaders of the people. It is the characteristic and historic dwellings of America, and as such it deserves to be perpetuated in popular memory and affection by typical forms set up in public places.

In his interesting record of the occurrence of the European starling at Bay Ridge, which is within the boundaries of Greater New York, Mr. Townsend reported an unusual abundance of bird life, representing our native songsters. This condition prevails over a very large range. The year is notable for the numbers of birds which have returned in their old-time hosts, as if there had never been such an industry as the bird plumage supply of millinery. This new state of affairs appears to be due to natural causes, since there has been no change of the conditions of pursuit by man which has been held to be so destructive. Whatever the reason, the birds are back once more.

The Pennsylvania public printer is suing to collect his bill of $57,662 for printing the State's "bird book." If there is any virtue in lavish expenditure of public funds and squandering money without stint, every man, woman and child in Pennsylvania should by this time be a bird sharp.

The Sportsman Tourist.

Thieves' Ledge.

It was the chief Clam who started it. Howard was his front name, while as for his last Clam will do as well as any other, since we were all brothers in misfortune, and it is the singular, not to say plural, habit of brothers to have a common denominator all the world over. And our particular denominator, at least as far as the purposes of this story are concerned, was Clam. In other words, we three, Howard, Robert, the auburn haired, and the writer, were the alpha and omega, the beginning and the end—likewise the middle—of the "Clam Club."

Now it might be supposed from this that we belonged to the Board of Aldermen, and went on exploring expeditions to determine the exact amount of tideway that ruffled the waters between Hull Gut and Siasconset, including a shore dinner at government expense. Or that we inspected the dumping scows that improve the channel to our harbor by semi-occasionally dropping a dozen tons or so of refuse into it; or that we followed the lighthouse launch on its rounds, from the spider-legged tower of Bug Light to the tall, needle-like obelisk of Minot's—with the accompanying shore dinner. Or that we examined into the condition of the penal settlement at Deer Island, with no immediate determination of taking up our own residence there, although it might be a fitting habitation for some of our fellow members, and ending by a cautious advance toward the muddy and tortuous channel, that must be threaded before are reached the grand crescent in the sea, and the fleecy breakers that so softly wash and swash in hissing coolness up the sunny sands of rare Nantasket; where too are brave shore dinners; likewise rival hissers by the sea, except soda fountains; likewise, too, a brass band.

But nevertheless a truthful narration determines the fact that we were not members of the Board of Aldermen as yet; although in strict accordance with the proverb of the ancients, to call no man happy until after he is dead, it would not be wise to prophesy that we were not reserved for that or some other exalted fate. The prospects seem to point that way, according to another equally well-known proverb in regard to certain ones who were at least not born to be drowned. But this brings us back again to our starting point, for we certainly were members of the Clam Club.

The Clam Club, then, was a collection of units who were unitedly a single unit as to the advisability of leaving the glorious Fourth to celebrate itself if we could contrive to escape beyond its tin-horned noise. We also had decided that the best way to accomplish this was to join hands with the Y. M. C. A. in chartering a tug; to run said tug down Boston Harbor until abreast of Minot's Light, where lay a rocky expanse of bottom called Thieves' Ledge, and then and there to cast overboard such benevolent invitations to the inhabitants to come in out of the wet that no thing that wore a fin ought to doubt the integrity of our intentions. So we chartered the tug overnight.

That was a singularly quiet morning for the Fourth! Waking, dozing, half expecting a cannon cracker to go off beneath the window at any moment, it was not until the sudden bleat of a tin horn aroused us that we became conscious that it was raining furiously and the streets were all awash. Was there ever such luck for a Fourth of July?

Of course the tug was countermanded, when suddenly the wind shifted, and in ten minutes there was a bright sun overhead, and we sprang to the telephone.

"Br-r-r-r-r-r-r-r-r-r-r-rng!"

"Bing!" came the laconic reply.

"Hello, Central! Give me 479—2."

"Bing—bing!"

"Is this 479?"

"Yes."

"Fire up, Captain! Reckon we'll go after all."

"After what?" came the still, small voice upon the wire.

"A-l-l, all; anyhow, regardless, weather or no. Sabe?"

Apparently the Captain didn't "sabe" in spite of the string of synonyms which Robert had fired at him in the hope of his comprehending one of them. So the monologue continued. Finally:

"Who are you, anyhow?"

A pause.

"Oh, thunder! We don't want you! Hello, Central! we wanted 479—2, and you've given us 479; we want the tug boat Josephine, and not a blamed soap factory! Try it again!"

"Bing!"

"Is this Captain McLane?"

"Good; I've been trying to get you this ten minutes, and they gave me the soap factory down at the point; altogether too patriotic. 'To Greece we give our shining blades'—some other day. Say, fire up! Get the bait! We'll go!"

"Bing!" and Robert came out of the box and began to dance a hornpipe before he wired messages to the other boys.

N. B.—Boys by brevet; youngest still in the thirties.

The tug boat Josephine lay with her fenders over the side, steaming away as quietly as an old tea kettle on the kitchen fire. Central Wharf was in a bustle. There were at least fifty boys of other varieties and of all sizes roaming over it when we reached the boat, and promptly took up a comfortable position on the roof. Everything was dripping, the water below looked oilier than ever, and the harbor was resonant with grum whistles as the steamers shrieked their appreciation of the weather and the day. The shipping in the stream were all decked in bunting or at the very least had their colors hoisted. Even the dingy, spritsailed dory of a longshoreman had a penny flag at the masthead, standing stiffly as a shingle right up into the wind's eye, instead of floating on the breeze like its magnificent but silken aristocrats of neighbors. It was "something" to be able to defy the gales like that. An imp of a boy on a coal barge near was unable to resist the temptation and let drive a chunk of ebony straight at the erratic emblem of liberty, which, true to its motto of eternal vigilance being the price thereof, deftly swung out of range as the dory rose and fell on the swell of the distant ferry boat, its owner threatening dire vengeance on the grinning apostle of smut "if he dared to do it again."

Meanwhile the crowd of boys upon the wharf surged suddenly on board as though there was great danger of being left behind. A deckhand was leisurely thrusting 6ft. rods of curved iron in occasional holes on the edge of the upper deck, and began to stretch an awning from their tips.

A boy came hastily down the wharf.

"Where's the Cap'n? Hi! Cap'n McLane! them clams hain't come!"

"What?"

The captain looked as though he could not believe his ears.

"Nor the hooks 'n' lines nuther; an' what's more, old Bill says as how you said as they wouldn't be wanted, and his mate locked 'em up an' has gorn a-coortin', bein' as it's a holiday."

Shades of the Pilgrims and John Endicott! Such language in classic Boston, under the very walls of Harvard University—when the earth is tipped just right.

Captain McLane is naturally a good tempered man; more, he is a long suffering man, and he carried a cargo of Y. M. C. A.s and three others. But at this juncture he felt himself to be the apex of a pyramid or the focus of a blowpipe in which was centered all the pent up impatience of fifty eager boys. He represented those boys; and when he got through with his remarks relevant to the stupidity of longshoremen in general and old Bill's mate in particular, there wasn't a boy on board who would not instantly have cast his vote in favor of the Cap'n to justly represent him individually in the halls of Congress. But it cleared the air, and for an hour we waited in measurable patience for the missing lines and clams, as light skirmishers had been speedily sent out for more. The hour lengthened into two, and still we swung lazily at the wharf, exploding firecrackers in the water, listening to the boom of distant guns—and getting into mischief. Fifty boys can get together without mischief; but it is about once in a century, and some other fifty must have absorbed the honors of the nineteenth era, and moreover they didn't have fifty rubber catapults among them as we did. But it was the coal barges that started it, as an idea.

It is wonderful what a range a healthy rubber sling can attain; and after the coal episode the very next longshoreman was suddenly transported in mind back to his soldiering days and made to believe that he once more stood half-way up the heights of red Fredericksburg. He was drifting slowly by, trimming his sheets as flat as possible as he hugged the wind. It was too tempting. Fifty pairs of hands stole to their side pockets, and straight across the intervening water flew, at the snap of the cords, as many torpedoes of the largest size, striking the boards of the dory with a thundering crash. Well, that old soldier let fly his sheet and came straight for us! I never saw a madder man. A boat hook lay ready to his hand, heavily shod with iron, and it was clear as harbor mud that he meant to use it.

"We're in for it, boys," said Howard, coolly. "Repel boarders, or he'll have some of us into the drink!" and the snap of a cord lent emphasis to his words.

On came the boat. A flaw of wind caused it to heel slightly, exposing the brighter yellow of the bottom, while the sun fell full upon the dark sail, gilding the canvas with a dazzle and a skimmer. With a crash a score of torpedoes exploded on the sides, as with a deft turn of the helm the rest of the flying missiles were caught in the yielding cloth and glanced with a harsh rasp along the seams before they shot harmlessly into the sea. Right, left, the swift boat swung at her master's motion. A second more and it would be alongside. Suddenly a swift change swept across the rugged face of the longshoreman. The fire died from his eye. Bringing the boat into the wind again—a proceeding that made us pause in turn from sheer astonishment—from the bearded lips came these startling words:

"Be you the Y. M. C. A.? You be? Wall, when you fellows kneel down to-night an' ask God to take care of ye, suppose you take a minnit ter think wut sort of Christians ye ware in the mornin'!"

The next instant, with a flirt of the helm, his sail had caught the breeze, and the fleet old boat was rods away, leaving us looking at each other, blank and ready to punch our own heads. What was to be done? Evidently nothing; not so evidently either, as one proved. The boat was nearly 100yds. away, when Howard drew something hastily from his pocket, flung back his arm with a round sweep and hurled a glittering object across the water. It "scaled" as a flat stone would in a broad curve wide of the boat, then as though attracted to it by some mysterious force, it swung inward, struck the sail at about the first reef near the mast and dropped with a clear ring that was distinctly audible in spite of the distance safe in the bottom of the dory—a freshly minted silver dollar!

"Howard, you always think of the right thing," said Robert, a little grimly for him, "but if you had considerately told us, too, before it was too late, you would have spared me the painful duty of kicking myself around the block at the first convenient opportunity."

There was a laugh and a cheer—"Our sentiments exactly."

And what was this, an answering cheer? From up the long wharf two boys came running, hot, dusty, covered with perspiration, with the queer, three-legged gait peculiar to haste and a two-boy burden. What were they shouting? "Clams—oh!"

Ten minutes later the Josephine was steaming swiftly down the harbor.

Cling! went the captain's bell, and the churning propeller stopped.

Cling, cling! and it gave a turn or two backward, then cling, and it stopped again. Over with the lines! and in a twinkling each hook was baited with a fat clam without a jacket, two dangling hooks to every line, with 1lb. of lead 6ft. above them on the main line. Heavy? Not too heavy; for, unless the line was dropped straight down by the vessel's side, the swift tide carried it far out, and the fishing was vain. "Drop it straight down; don't c it till the lead strikes bottom, then pull it up a foot bite? Robert is a lucky one! Yard by yard the comes in over the rail at racing speed, and wi whoop up flies a crab as big as a dinner plate. No to laugh, for up in the bow come half a dozen sc and at the stern somebody has just hauled in a si hake! Robert ties the arms of his rubber coat ar him like an apron to keep the water from his knees, drops a line again. A bite, Howard? How that whizzes in! and up comes a brick—no, a terra cotta wrong yet except in color, for no brick was ever so ly outside of a Donnybrook fair, no tile ever yawned so wide a mouth as does this splendid rock cod, a cheer runs like a line of fireworks from stem to s But something is the matter with my line. It has f with a weed perhaps; a careless tug—shades of Jo for a minute that line makes me dance a Highland as it cuts into the fingers; then up it comes in turn on the deck a 10lb. haddock flops and quivers, no gray fish of the market slab, but one that see flash of quivering blue flame of the daintiest, most cate coloring seen in the world outside of a rai This is the true sport of deep sea fishing, the utte certainty of what each bite will bring forth, perh prize, perchance a savage shark, or perhaps but o the orange-podded seaweeds that look like nothi much as a burglar's "billy."

"Lines in!"

"What's that for, Captain?" For answer the ca points seaward, and over the distant point a cold, sea fog is swiftly sweeping in, dense as a granite in seeming. "Cling!"

For answer there came a low, crashing sound, a the first half-turn the splash of the propeller stoppe part of the engine had given way.

The captain gave a startled exclamation and through the tube to the engineer, but the answer wa reassuring. The damage itself was slight, but it take time to repair it, and time was the one thing could not be spared just now. "There's no help f in with that awning, men; up with the foresail; ma halliards, Sam!. You, Bob, cast loose the mainsail—us knife on the stops; no time to waste! Jump, men, oh!" and in a twinkling the canvas covers were ca the booms and the two gray sails crept up the mast ghosts. Then with a suddenness that was startlin wraiths of mist came swirling across the deck and ted out the world just after the keen old seaman s back to the compass and took his bearings before t landmark was lost in the smother. There was a trifle of wind, hardly enough to keep steerageway.

"What'll we do if that fails us?" said somebody.

"Oh, we can anchor if it comes to that; but not t There's too many fool skippers drifting round for drop mudhook right here in the ship channel whi travels a foot an hour."

It was almost like a prophecy, that statement. words were hardly out of his mouth when there c startled yell from the deck outside, and out fro dense cloud of drizzling mist loomed up the to sails of a huge coasting schooner, black with coa like a raven of evil, coming in with the fog, crept along the water like an animated blanket, s by the guidance of a pilot who had ascended to t of the foretopsail far above the heavy stratum of that covered our own derrick-like masts; heading st for us.

"Hard a-port!" came a voice from far aloft, in a to the yell. "Hard down!"

Slowly the great pyramid swerved aside with a ly sweep, aside from the fatal directness of her course enough to avoid a direct collision, but not e for clearance. The huge beam of a bowsprit like a in rest plunged ripping through the mainsail, s with a huge twang the shrouds, and lunged strai the foremast. There was a creak, a crash, a snapp timbers and a hurricane of yells, then with a swi poor little foremast toppled forward over the bow the mammoth old five-master, with hardly a scar, c grinding past and vanished in the mist, leaving us ing at one another as though it was all a dream, most unpleasant dream at that.

"Where's the captain?"

Sure enough, where was he? Nay, where w wheel house? for the mast lay across what see pile of kindling wood, from the depths of which series of muffled shouts for help. We rushed for heaved the fragments right and left. Presently H gave a shout—he had uncovered a foot. "Are yo Captain? If you ain't just wriggle your toes!" T kicked! At that we all gave a cheer and dug the l and presently got out the other foot. Then som dicious hand got hold of a coat tail, and there mighty rip, together with some emphatic remark the woodpile. Finally we fairly lifted him out uppermost and stood him right side up with scratched, dusty, red in the face, but unmistakal captain. His first act was to rush for the lower de shout:

"Bob, where's that boat compass?"

"Ashore, sir!"

The captain whistled a long whistle, that had s of feeling enough to raise a gale of wind. The n stant he was back on the upper deck clearing aw anchor, which dropped with a sullen plunge fr bow.

"Why, Captain, I thought you said you w anchor?" said somebody, amazed.

"Got to! binnacle's smashed. Compass busted!" laconic response, as he turned to give orders for loose the raffle around the bows. The rest of u long breaths, while Howard, after assuring himse he could be of no especial assistance, calmly got fish line, and presently had a big cod whopping the deck, an example which stimulated the ideas others thitherward.

Well, we stayed there till nearly the turn of t swaying at anchor. The engineer reported that gine was all right, and still we swung head to the with the lapsing waves drifting great orange an masses of seaweed across the cable. We were t of supper most seriously, and still we swung.

gan to wonder if the stars were out aloft, and whether they had yet begun the fireworks on the Common, and we were right there still, when suddenly we heard a voice hailing us over the quarter.

"Tug ahoy! Be ye in trouble?"

It was a queer, gruff voice, which seemed not altogether unfamiliar. The mate, with classic emphasis not unknown at Harvard, replied:

"You bet! No compass."

"Sho! I've got one, if you'll gimme a tow up!" and out from the fog came a lean old dory with a well-remembered patch upon the sail and a well-remembered old sea dog in the stern. There was a stunning cheer, an enthusiastic, hungry, Fourth-o'-July "Hi-ya-r-r-r-r" that astonished the gulls which circled above the mists and sent them scurrying homeward with weird tales for their little ones as to ye manners and customs of those strange, huge bipeds with wings like penguins and feet like ducks, that could neither swim nor fly.

A tow indeed!

We lifted him on board, dory and all. We filled that craft with fish. We told him we didn't mind coals of fire a bit when they came in that form, and we well nigh burst the seams of his trousers pocket with dollars that bore the stamp of our glorious buzzard, till the abashed and forgiving old soul could only grin, shake as many hands as he could grasp at one time, a dozen or two, and say: "Sho! let up now! I never laid it up agin ye!"

Then as we started up the engine and buzzed away homeward he turned to Robert and cried:

"Land sake, what hev ye got on?"

The "boy" had, at the moment of collision, taken his rubber coat, folded it up like a bag, tied the mouth tightly with a string, and inflated it like a great puff ball, and now was wearing it across his shoulders with the arms tied around his neck.

"Why," said our brother Clam, "I was afraid that there wouldn't be enough life preservers to go round, so I—" Here we interrupted the sagacious youth abruptly by an uncontrollable roar of laughter and a cheer.

"Hi-ya-r-r-r-r-r-r-r-r-r-r-r-r-r-r-r-r-r-r-r-r!"

JOHN PRESTON TRUE.

BOSTON.

A North Carolina Point of View.

BY CHARLES HALLOCK.

I HAVE just rounded out three entrancing weeks at Sapphire, in the Blue Ridge. The environment is superlative. From the top of Toxaway, 5,000ft. elevation, I can count 600 peaks, forty of them 6,000ft. high. From the highest point of vantage in the Catskills we have only sixty, and none of them above 4,000ft. There is no such forested preserve in all the United States as I survey. It is all one compacted mass of verdant superincumbent foliage. Not a stick of timber has been cut for market. No railroads invade. There are no burnt tracts, no brules, no windfalls, no areas which mark the sweep of tornadoes. It is the fountain head and storage reservoir for all the agricultural lowlands which lie betwixt it and the Atlantic Coast. Were it not for these highlands in the clouds, there would be indifferent harvesting below, and all the farm spaces would be torn up by torrents, like the Garonne in France. There are scarcely half a dozen houses visible from all points of view together. I stand on the top of the lookout tower on Mt. Toxaway summit, which occupies a central position like the focal point of a cyclorama, and on every side I see the stupendous environment of hills, all green in the foreground, beautifully green with ever changing shades of blue in the distance. When clouds float over them you can hardly distinguish shadow from valley; and ever and anon there is a shower. Below us, three miles away, is Sapphire Lake, reposing in the lap of the forest. There are only two other lakes in all this mountain region: one at Highlands, eighteen miles away, and the other on the same Toxaway estate, which embraces 26,000 acres. On the latter's shore is located the new Fairfield Inn, just now opened, which compares favorably with any up-to-date hotel. A carriage drive surrounds it, a precipice laces it, and a cataract forms into its upper end over a stupendous ledge; and it is indented with bays and points of land.

Away up here, where I stand in the clouds, on Toxaway summit, five turkey buzzards are cruising overhead, and I am prompted to guess what would tempt them to scale so great a height. A few minutes ago there was but one; after a while two more appeared, and later on the others joined. Whence came they, and why? Ha! I have it; there is a sheep pasture close at hand, and a dead lamb taints the air! Nothing escapes a buzzard's notice. Your readers have discussed this quality, the vulture's keenness of sight and scent, and some have declared for one and some for the other, and the most observant perhaps for them both. But to my notion, given but one single buzzard hovering over Toxaway in all this grand environment of wilderness, and in five hours thereafter all the feathered scavengers of Charleston's streets might be here on signal; not purposely conveyed, but simply flashed from tell-tale wing to repeating wing from distances inappreciable, like the gestures of a semaphore. Birds of prey fly high for the perspective, and they measure distances at sixty miles an hour. It is said that the customary foraging grounds for buzzards on our continent have been deserted since the spring, and that all the ill-omened crew have hied to Cuba, following the armies and the slaughter. It is not improbable, and I would like to see the statement verified, for it would help determine that their means of communication are by flight motions imparted along a line of perspective, and not by direct sight or scent of detected objects. It is not probable that either perceptive faculty could bridge the broad salt-water space between Florida and Cuba, except at lofty elevations.

Up here on the rounded apex of Mt. Toxaway are many partridges and turkeys. The former feed with the domestic fowls sometimes, and I hear the brooding calls of both of them now over in the whortleberry patches. Game is not shot on this preserve except by permit of the Company, and is therefore tame and abundant. Pine root hogs run wild, and I find their tracks mingled with deer tracks on the flats and shoulders of the mountains. An expert can easily tell the two footprints apart, and it is interesting to compare them, lest the tyro when hunting deer waste time on a hog trail. There are special localities which deer frequent in considerable numbers, and sometimes in bands. Berries are abundant and will be until the middle of August. They attract bears. Panthers are seen at rare intervals. One of the resident mountaineers is now watching his stock yard for one which is making himself disagreeable in his vicinity. Rattlesnakes are occasionally killed, and there are many mink and muskrats, and a few summer ducks and cranes. There is no doubt about the value of this property as a game preserve. It has been patrolled continuously for seven years. Portions are much intersected by trails of prospectors for minerals, of which there are corundum and mica in abundance, and it is good practice for the student in woodcraft to trace them, though he is apt to get lost temporarily unless he can read the lay of the land. It is inconvenient sometimes to cross deep streams where there are no bridges, but I usually manage to climb a slender sapling and swing myself across, if the stream be not too wide.

Three times I have made the ascent of Toxaway afoot, accomplishing the three miles and a half in two hours, and the down trip in less than an hour, which is fairly good time for a man in his sixty-fifth year. But then, an old bushranger like myself, who can read the woods like a book, can cut off the bends of the carriage road by traverses and so save distance. This drive up the mountain has the easiest gradients of any I know of. Yesterday, by keeping the carriage team at its place, after the fashion of the old stage drivers, like Hank Monk, on the overland route twenty odd years ago, we came down in half an hour.

The average size of the speckled trout which are caught in these wilds is remarkable. It would be a quarter of a pound, I think, and individuals are frequently caught weighing 2lbs., though the largest are in the lakes, which have been lavishly stocked within two years past. Anglers know that the trout of the Eastern hill streams are never large. They do not average 4oz. in weight, or 6in. in length, wherever taken. But in the large meadow brooks, like the Ondawa in Vermont, or in the Long Island streams, they grow heavier. Perhaps, as as axiom, the larger the stream the larger the trout? In the Androscoggin, or in the Green Mountain brooks which plash over the rocks through the woods and hill pastures, the inky-black beauties would hardly find space to grow larger; accordingly, if one outgrows his pool, he just drops down to more spacious quarters. But in such wide streams as River Phillip in Nova Scotia, the Batiscan in Quebec, the Nipigon in Ontario, and the Killikinnick in Wisconsin, they grow to be monsters, and in proportion here where the streams are large. Facts like these serve their purpose in regulating the legal size of trout to be caught in specified localities. Really, I suppose the mountain streams of eastern Tennessee, West Virginia, and North Carolina to be more prolific of large trout than any other part of the Blue Ridge or the Alleghanies. They are the head waters of large rivers like the French Broad and Tennessee.

Let it be conceded that I do not put my pen to paper "for what there is in it" to me, where the interests of sportsmen are concerned, though I do write for what there is in it for all of us, and I say: Give me ozone! Give me fiber and elasticity, and a home camp where the woodbine twines, and I will climb Toxaways and high peaks for many years after the joints of the young laggards who ride up on horseback are stiff with the gout. It is true that I have talked up this country a good deal for two years past, but the misfortune is that no one whom I have approached in person or by letter seems to care to come. Not one! There are goodly numbers here, but they are not of my calling. What is the reason? Was age any objection to old Moses when he led the Hebrew tourists through the wilderness? Time was, a quarter of a century ago, when I was a good enough bellwether for sportsmen to follow, if ever I gave the cue; but now I am too poor a hand even to toll ducks. *N'importe!* I would not swap one whiff of my pure Sapphire air for any midsummer atmosphere within the limits of the United States, her colonies included.

A branch of the Southern R. R. system, starting from Hendersonville, has penetrated to the town of Brevard, within twenty-seven miles of the Toxaway hostelries, of which there are three, including the spacious lodge on the mountain, all of which communicate by telephone; so that the sojourner can sit in the clouds, if he likes, like Olympian Jove, and flash his orders to the deep down levels below, taking his tea straight meanwhile, and contemplating mundane affairs as mere incidents of existence, and not as events of momentous and supervening consequence. Boys, come up and see us! *Auf Weidersehen.*

ASHEVILLE, N. C., July 25.

[We saw a goodly supply of buzzards in Virginia the other day.]

Highways and Byways.—I.

JUST at the opening of the trout season I started on a wagon trip of over 500 miles in length and of a month's duration. The route was through the mountainous counties of eastern Utah, over the reservations of the Uintah and Uncompahgre Utes, and incidentally over the very trail of the Robber's Roost and Hole in the Rock gang of outlaws that have for the last four years terrorized not only a portion of this State, but also the adjacent districts of Colorado and Wyoming.

A ride of a day and a half brought us through Provo and Daniel's cañons to the summit of the Wasatch range and the western boundary of Strawberry Valley, the most attractive portion of the Uintah Reservation. Between Provo and Daniel's cañons lies Provo Valley, a great, well-watered basin, boasting three flourishing settlements, a creamery, and hay and dairy ranches galore. This region we drove through on the afternoon of our first day from Provo. It was June 14, and although we knew that there was excellent fishing over the entire course, we did not take our rods from their cases. Eight miles above Charleston we passed the last ranch. For the next five days we did not catch sight of a human habitation save the barracks at Ft. Duchesne, and these are well nigh deserted, having but two squadrons of cavalry in lieu of the regiment that was quartered there before the war.

As the sun came over the mountains we were climbing up hill on our second day's journey. Daniel's Creek seemed an ideal trout stream. It also gave promise of being only two months later just the place for chickens. The brook roared and tumbled between walls that were green with stately pines. It meandered through flats where silver-barked aspens invited us to swing our hammocks. It sung its song, now to columbine, now to buttercup, but all its allurements could not make us forget that Strawberry was just ahead. At 11 o'clock we crossed the Rim of the Basin. Presto! Torrent, timber and wild flower disappeared by magic. Before us lay a great rolling valley, sixty miles long and twenty wide, grass-grown and netted by willow-fringed streams. The elevation of Strawberry is 6,500ft., and the surrounding peaks are snow-covered until late in July, so that when this part of the reservation is thrown open it will be valueless except as a stock range.

Beside the road was a spring, and as we journeyed down the brook that flowed from it other springs contributed their mites to the constantly increasing stream until, when we camped at the Forks, about 1 o'clock, we were tempted by a diminutive river a rod or two wide and 18in. deep. For once upon the trip I declared that I did not care for dinner. Jointing my rod, I started for the nearest riffles and pools. Alas, for my hopes! I rang the changes on my casts from dark to light, from bright to dull, all to no purpose. But what flies failed to accomplish, plebeian grasshoppers, sunk to the bottom of the shadiest pools, did effect, and a mess for supper was soon assured. Of course we started about 3 o'clock on our afternoon trip, but it did not amount to much. Every mile or so we would come to a little creek that could be easily stepped across. Here under the shelving banks and amid the sedge roots the largest, gamiest trout were wont to lie. I remember well that both last year and the year before it was no trick to fill a creel in a couple of hours. But the trout lay no longer. Half a dozen fish traps on as many streams solved the mystery. The fish traps were not of Indian fabrication, and the piles of offal that lay near each proved that the market poacher had been at work.

It is too bad that every tale of outing from Utah has to be interlarded with accounts of violation of the game laws. The finding of these fish traps brought forcibly to my mind that during the last week of May a man by the name of Davis, for years a notorious violator of the trout law, left Provo with two companions for Strawberry. A few days later the outfit retailed a load of trout in Park City, the net proceeds being in the neighborhood of $90. Two more wagon-loads were thus disposed of before the open season. Now this was not done secretly. The State fish and game warden was informed of it; the Commissioners of Utah county knew it; the local press commented upon it, and yet nothing was done to bring the offenders to justice. The reservation where the fish were trapped and dynamited is directly under Uncle Sam's surveillance, and possibly the local authorities would not care to make arrests there, but the fish were sold in Wasatch and Summit counties, whose Commissioners should have protected the interests of the people and have shown that their office is something more than an empty title.

Noon of the third day brought us to Currant Creek, and here we found excellent fishing. From this point to Ft. Duchesne the road traverses a rocky and sandy desert, given over to rattlesnakes and coyotes. Twice we approached the Duchesne River, which appeared to be a most admirable sucker stream. Far to the north and east the main chain of the Uintahs was as white as though it were January instead of June. So we journeyed, crossing Lake Fork, which the officers of the post reserve for their own private sport; crossing the Uintah, once supposed to be the main Duchesne, and at length one mid-afternoon Ashley Valley burst upon us. Its principal settlement, Vencal, is embowered in orchards, and the whole valley is waving wheat and lucerne. The surrounding hills are streaked with immense deposits of coal and asphaltum, and the higher mountains contain rich lodes of copper, but all this is 120 miles from the nearest railway station. Opposite us as we enter Ashley Valley is the mouth of Ladore Cañon, the pass by which Green River bursts through the mountains, and beyond that is the White River country and the famous hunting grounds of Colorado.

Every irrigating ditch in Ashley Valley contains its quota of trout; so except when the water is high and muddy, ranchers and town folk can alike fish successfully on their own property. Fly-fishing is not in vogue. When the valley was first settled not an angle worm was to be found in its limits. An enterprising freighter brought in a boxful from Provo Valley and planted them in his garden. This was four years ago, and the angle worm crop has increased until now this species of bait is to be found on several farms. The ranch at which we stopped made a specialty of bee culture, there being 250 stands in the apiary. The boys of the place used drones for bait, and those were certainly more attractive to the trout than [illegible] worms or grubs.

Notwithstanding the [illegible]ning at the door, the people of Ashley enjoy camping out as well as those of cities. It is but thirty miles to the lakes that nestle in the summits of the Uintahs—the lakes where the giant trout lurks, by whose shores the elk still feeds and the grizzly roams. We did not have time to visit the hunter's paradise, but we managed to spare a day for a more wild and romantic spot. Taking a pack animal for our impedimenta, we climbed to the eastward for half a day and then suddenly dropped down almost a precipice into Jones' Hole, one of the most inaccessible box cañons of the Rockies. It has but one means of approach, and has been a favorite rendezvous of the Robber's Roost outfit. The cañon is four miles long and from one-fourth of a mile to 150ft. in width. At the upper end is an immense spring, and numerous tributary springs form a respectable trout stream that wanders through aspen groves and alder brush. The brook never freezes; it is lined along its entire course by watercress, and the supply of trout seems limitless. As we entered the Hole we met a party going out that had camped the night before, and had caught eighty-three in the evening and morning fishing, besides what they had eaten for

supper and breakfast. Even the sight of doe and fawn could not divert us from the matter in hand. These trout had never been allured with anything but bait; it was an open question whether or no we could educate them to the point of leaping for flies.

The royal-coachman has proved a failure. Queen-of-the-water, grizzly-king, professor follow suit. I change my cast to March-brown, cowdung and black-gnat, cast up and let the flies swirl slowly down along the edge of the watercress. Just what followed I did not see, but there was a twitch of the hand, a thrill of the right arm, the song of the reel, and I was fighting to keep a couple of half-pounders out of the entanglement of cress and long moss in which they had an irresistible desire to hide. So the battle was begun. The March-brown and the cowdung had done the work, and all that afternoon we fished down the little stream until the cañon walls narrowed into a chasm, and with a parting laugh Jones' Hole Brook leaped by hundred-foot steps down into Ladore Cañon and was lost in the muddy waters of Green River. We did not catch all that we might have done, but we caught all that we needed for night and morning, some for our good hosts in the valley, and we salted a few to help out the inevitable canned beef and bacon, the bugbear of the return trip. The largest trout that we caught weighed 2¾lbs., but half a pound was a fair average.

Our return trip to Provo lay down the Green River and San Raphael, across Fish Lake Mountain and into Sanpete county. Where there was desert we found cactus and prairie dogs. The streams of Emery county have been washed by cloudbursts until they are absolutely devoid of trout, only along the Basin's River did we find a few little brooks that afforded an hour's sport. The conditions will not improve until our laws are enforced.

SHOSHONE.

PROVO, UTAH, July 15.

Natural History.

Monkey Food and Monkey Health.

THE lion and the tiger, and in short most of the beasts known to students of natural history, so far as their physical condition in captivity is concerned, have come under man's intelligent attention; but the animal which is more closely akin to him than all the others he knows less about. Possibly this kinship may allow for the fact that man does not care to prevent, and is content to share with his cousin german, the monkey, the diseases attendant upon an artificial diet. However this may be, an apathetic state of ignorance exists among the persons who hold positions of authority in our public zoos and menageries, which condemns the monkeys committed to their mercy to lives of untold misery and deaths of agony.

These gentlemen will tell you with complacency that apes, chimpanzees and all simians of differing species and varying values rarely live for more than a brief space of time in captivity. The climate has in each instance to bear the blame, whereas in reality the climate has very little to do with these untimely takings off, beyond finishing what man's callousness and ignorance have begun. The climate, for instance, will develop pneumonia, that being a prevalent disease among monkeys, but the climate has not supplied the animal's system with the purulent poison which comes from a diet of bread, milk, peanuts and refuse stuff which the monkey in his native state would be too wise to touch.

I know of no sadder illustration of the condition, the ill condition of the monkey, than that which exists right here in the New York Central Park zoo. Visitors to Central Park, and citizens living in the vicinity of the arsenal where the monkeys are kept, make loud and constant complaint that the monkeys are a disgusting nuisance, because of the odor which comes from their house, and makes the air foul. If these sensitive souls would berate the governing powers of the Park Department, and not their helpless victims, the matter could soon be rectified. I use New York's zoo as an example, that being looked upon as the finest in the country, but I am sorry to say the grievance is general. All over the United States, wherever monkeys are kept in large numbers, people complain of the stench from their cages. Any physician who makes smell an important factor in his diagnosis of disease would know that the odor with which the monkey house reeks comes from catarrh of the animals' bowels. Wherever bread is fed to the monkeys this condition must prevail. The soda, saleratus, alum and yeast cause fermentation and an irritation of the entire mucous membrane. All sorts of sanitary measures may be taken, cages may be scrubbed and scoured; but so long as the accursed and pestilential bread goes into the monkeys' mouths the existing evil will prevail.

A monkey in health is the cleanest and neatest animal in existence. They hate filth, and from my own observation I know that the monkeys of all genera are naturally healthy, in fact the easiest of all animals to keep in health, because of a superb natural vitality.

Under intelligent conditions all the larger monkeys should live on an average from twenty to thirty years, and even longer; but let any humane person study the death rates of our zoos and menageries, and he will find something to think about. If the present system is one of economy, it is a mistake, for in the long run it costs more to replace the animals than it would have cost to keep them alive. Possibly the dealers are aware of this fact, and have a keen eye to their own interests when they recommend a diet that means death.

The proper food of the monkey is fish, fruit, eggs and vegetables. Bananas are the staff of life to them, and I have saved a diphtheritic monkey's life on the juice of the pineapple. Tapioca, boiled with sugar and water, is cheaper than bread, and far more wholesome and nutritious. Cassava bread would be a prime factor of health, and I wonder that it is not imported in bulk for the use of zoos and menageries. Eggs, both raw and hard-boiled, are capital; corn is of importance, being fattening and cooling, and should be given freely, on the cob in summer and dried in winter. Tomatoes are remedial, and greatly liked by monkeys; likewise potatoes, onions, carrots and all green vegetables and fruits. Rice should never be boiled, as it clogs the bowels.

The larger monkeys demand that their vitality be sustained on fish, live if possible, clams, mussels and lobsters. A monkey only drinks water when there is fever in his system, for this reason watermelons should be given as often as possible. Nature never meant milk for monkeys. It turns to casein in the animal's stomach. The worms which leap to life from this and lactic acid are ravenous. The monkey mopes, becomes emaciated,

OWEN'S APTERYX.

has a racking cough and eventually succumbs to the effects of the "climate."

Doubtless the superintendent and the keepers of the monkeys know as well as I that the present system of feeding is all wrong, but the needed reform cannot come from them. It must come from the top, from the gentlemen who make up and control the Park Department. They are the ones to take the matter in hand, and to extend to the monkey the same generous treatment which makes Central Park's collection of lions and tigers the finest in the country. Fed as I have suggested, the much maligned monkey would soon cease to be an olfactory offense, and a pretty penny would be saved to the treasury.

I have said that monkeys hate filth; I should have added that they love a bath and are champion swimmers. The Javanese monkeys in particular take to the water like fishes. They dive, strike out, float on their

MANTELL'S APTERYX.

backs, swim under water with wide open eyes, and put man's aquatic exploits to shame. Notwithstanding this, I do not think that there is in all the world a zoo which provides a swimming place for its monkeys.

If Mr. William T. Hornaday, under whose humane and scientific supervision the animals are to be cared for in the new Bronx Park zoo, would see to it that in addition to the other comforts of the monkey houses, wherein he promises that "the monkeys shall look finer, be happier, and live longer than in any other zoological garden in the world," a bath should be built, not only would the visitors be provided with prodigious sport, but the monkeys would be living verifications of his own words.

JUSTINE INGERSOLL.

JULY 23.

An "Unnoted Trait" of the Robin.

ANOTHER peculiar trait of the robin, unnoted except by so keen an observer of bird ways as Maurice Thompson, is that, with all its friendly and confiding relations with the human family during the time of nesting and rearing its young, in the fall of the year it becomes a wild bird, betaking itself largely to the woods and even the secluded parts of the mountains, at this season showing little disposition to be on familiar terms with man, giving a note of alarm and flying high and swiftly when surprised at his approach.—New York Tribune.

Nonsense. The robin's autumn wildness has been familiar to mankind for generations; when Mr. Thompson noted it he noted only what his grandfather and his great-grandfather had noted before him.

An Amiable Lynx.

GARDINER, Mont., July 7.—*Editor Forest and Stream:* With this I send four films, pictures of a lynx and dog that are great friends. They play for hours every morning. They interested me so much that I took my camera up there for a few shots. I arrived there after they had been playing for an hour. They are the property of Geo. Mack, the town barber, shoemaker, taxidermist, hunter and picker, but not an "old-timer." The dog is a water spaniel about a year old; the cat Tom is about the same age and was captured while very young.

The first picture taken was of the lynx alone, when it was watching a tame kitten in a very friendly way. Soon after the dog was told to "shake up Tom!" but Tom did most of the shaking. They would roll and tumble around, get hold of each other's necks and ears, and once in a while hurt a little, by the yelps and growls. Tom's favorite hold was the back of Fan's neck. Fan played the usual dog fashion, turning her rump to Tom when she was getting the worst of it. A strange dog came up while they were playing. Tom was on his back; he put both arms around the strange dog's neck in a very friendly way. The strange dog suddenly discovered what it was, and backed away very much astonished. You could not get him anywhere near the lynx after that, but the lynx was still friendly.

George feeds the lynx on woodchucks—rock chucks they call them here. Tom will toss one of the largest up in the air and play with it as a kitten does with a ball, while lying on his back. Tom is quite friendly with most every one; but there are a few he gets very angry at the sight of, growling and spitting at them when they come near. He recognizes his friends at sight.

This is the first instance I ever saw of a lynx being friendly with any other animal. I have never before heard of anything of the kind.

I had considerable trouble getting the pictures, as everyone who saw me at work wanted to "stand 'round." This attracted the attention of the cat and even the dog played in a half-hearted way, not as they would in the cool of the morning or evening, when it was not quite light enough for snap shots.

Later.—The cat escaped the next morning after I took the pictures. I was up there with my camera by sunrise. Tom had just gotten away with quite a long chain attached to him, and soon the whole town was looking after him; and though seen a few times, he soon disappeared in the sage brush. He visited town for several nights, but lately no one has any trace of him. It's feared Tom has gotten his chain fastened in some brush or tree and so has met a miserable fate. I'm sorry Tom escaped, as I was very much interested in him and wished to get all the pictures of his friendly antics with the dog possible.

E. HOFER.

[We regret that only one of the photographs sent by Mr. Hofer can be reproduced.]

Some Animal Pets.—I.

SAN FRANCISCO, July 14.—In the number of the FOREST AND STREAM of July 9 I noticed and was immediately interested in the "Story of a Coon" by Mr. Stark. Having a prevailing weakness for all animal pets, and having indulged it to a great extent, I am always interested and attracted by such experiences of the contributors of FOREST AND STREAM, and especially anything on coons, for I profess to be what is called a coon sharp. I have had all sorts and kinds of animal pets, but never one that gave so much amusement as a coon.

As with Mr. Stark's coon, my Zip came to me when young. He was old enough to drink milk, and soon became very tame. He would go scampering all over the house, and with an insatiate curiosity into everything, sniffing and patting it with his paws. The moment I sat down to read he would jump up in my lap and go through every pocket, taking everything out, including my watch, which puzzled him. He would hold it to his ear, take it down and try to get into it; finally tiring himself out, he would curl up in my lap and go to sleep, only to awake and go through the same rigmarole again.

As he grew older he developed a disposition to keep unseemly hours. Neighbors complained of the loss of chickens. Suspicion fell on Zip, and when interrogated he would assume a look of such guileless innocence that one would declare he understood perfectly. But as Zip could not prove an alibi he was secured at the end of a long light chain. The first time it brought him up he seemed surprised, but exhibited no irritation nor discontent; in fact, he was what Artemus Ward would have designated "a cheerful little cuss" under all circumstances. He was chained to a post of the piazza, and a raisin box was nailed near the top, in which he slept. He finally got so fat that the box was too tight a fit to enable him to curl up, so he would lie flat on his back with his head and feet hanging over, and seemed to enjoy it. Nothing interested him more than when we would put a raisin in a bottle and give it to him to play with. He would poke his nose in the mouth of it, then try his paw; then would squint through the neck at the raisin, then roll it, then try again; and so he would work at it for hours, until getting tired he would climb up to his box, take a nap, come down and go at it again. I have given it to him after breakfast and found him still at it when I came home to dinner at 6 o'clock. As a reward for his perseverance I generally brought him a few raisins or figs, of which he was very fond.

He always did just as Mr. Stark tells us his coon did, putting everything given him in the way of food into his pan of water, and patting it with his forepaws until he had made thick soup of it before eating.

Zip had an antipathy to big dogs. Little ones he would play with. When a big one came on to the piazza he would scramble up to his box and not come down until the dog left. He had great curiosity when visitors came, would go the length of his chain, which allowed him to stand on his hindlegs on the door sill and peer in, the door being always open in the mild climate of Texas. One day a visitor in backing out of the room, not seeing Zip, set his foot rather heavily on his paw. Zip resented by grabbing the gentleman by the seat of his

trousers, flesh included, much to the gentleman's astonishment and a loss of cloth.

One night Zip slipped his collar and raided a neighbor's chicken roost. Hearing trouble in his chicken department, the proprietor slipped out with his gun, and seeing by the moonlight some kind of an animal he let drive, and on picking it up it proved to be old Zip with a chicken in his mouth, conclusive evidence of guilt not to be gainsaid.

Assuming that more or less of the readers of FOREST AND STREAM are interested in the habits of animals, I will devote my next chapter to my experience in domestic pets, especially bears, armadillos, peccaries, Mexican leopards, wildcats, etc. During a residence of two years in Texas I had them all; in fact, had a private menagerie, much to the wonderment and disgust of my only two or three neighbors, who were far less companionable and interesting than coons and armadillos, and not greatly their superiors in intelligence. PODGERS.

Another Florida Pet.

ST. AUGUSTINE, Florida.—*Editor Forest and Stream:* Reading Mrs. Moore-Wilson's sketch of her cranes in FOREST AND STREAM, I thought you might be interested in the story of another Florida pet, and so send you the inclosed photograph of a Florida pet bear resting contentedly in the arms of one of her friends. Jennie, for that is her name, was about a year old when the picture was taken, and had never been confined in any way, but had been brought up in the companionship of the whole family, servants, dogs and all; and consequently developed into a fully domesticated bear. She played with the dogs, one of which, a setter named Flora, exercised quite a motherly care over her while she was a little cub; but she found a more congenial companion as she grew older in the pointer Norman, with whom she could play as long as she liked. She would climb in at the windows, and would often be found upstairs curled up on a bed.

If she were left alone she would cry for very lonesomeness. She would play with all the family, although sometimes inclined to be a little rough. Up to this time she had never left the house or yard, but after a while she began to wander around the neighborhood, returning always after a short call; but still as the neighbors did not always appreciate a friendly call from a bear her owner very reluctantly had to confine her.

The tameness of even crows when they are not disturbed is well shown just now by a flock, or family perhaps, of about a dozen who claim equal rights with ourselves to the figs in the yard, and their musical notes are heard quite early every morning as they are taking an early breakfast. When we go out in the yard they fly away, very much as an ordinary blackbird would, alighting in a higher tree in a neighboring yard, and after a while going about their usual avocations in the more distant woods, but returning regularly every morning for the ripe and delicate figs. The Florida crow has a more delicate and softer note than his Northern cousin, developed, I suppose, in the more balmy air.

Towser, the society dog, of whose habits I gave you some account last winter, has now joined himself to the Can't-Get-Away Club and goes on the train every day to the South Beach, sometimes spending the night there, but generally returning to the city, where he can meet his very numerous friends and acquaintances.

W.

Nature's Compass Signs.

A correspondent writes: I believe that the several points Mr. Dearborn mentions to guide one, as trees having more limbs on the south side, and more moss on the north side; gum being softer on south side, tops of cedar and hemlock pointing toward the south, hearts of trees being nearest north side, etc., have no more existence in fact than the widely believed condition of the goose bone, feathers on partridges' legs, thickness of corn husks and hornets' nests, and muskrats' houses, have to do with the weather. They exist only in imagination. In over fifty years' traveling the woods in company with some of the best men (both Indians of several tribes and white men) who ever trod our Maine woods I have yet to see any man who ever received the least assistance from any of the sources he mentions. Trees, as a rule, do not branch more to the south. Spruce and fir, whether crowded or in open spaces, branch nearly equally on all sides; pine and hemlock and all hard woods branch most toward the nearest open space; being crowded on one side they reach out toward the room offered on the other.

Trees moss up sometimes on one side, sometimes on the other, sometimes all round, according to the slope or the exposure. One might hunt a week in the woods to find a tree with gum on both sides, unless some tree on a spotted line, as the gum exudes from cracks or wounds, and trees very seldom are cracked on both sides; and if any tree were cracked on both sides, in cold weather the gum would all be frozen so hard no one could tell.

I have had many thousands of both cedar and hemlock trees cut, and can say positively that neither have tops pointing in any given direction; usually they point straight up. I have had more than 10,000 cords of wood cut, and the heart is in the center, except in cases when trees, especially pine, grow with the south side exposed to the sun on the edge of an open space.

The whole thing is theory, with no facts, but if all stated were true, it would not help a man any if he were in doubt as to his course in either a rain or snowstorm, which are the only cases in which a real woodsman needs any help, as in a thick snowstorm or rain one cannot see which sides are most mossed, or which way tree tops point. All the men I ever traveled with either depended somewhat on a compass, or went by intuition; that is, they find their way just as an animal does. They carry the north point in their heads. I have been with excellent woodsmen who depended entirely on a compass, and equally good ones who never carried a compass. Most carry a compass, and on no account ever look at it unless it is very cloudy or storms, or is very dark. When very dark, they light a match and take a look just to see if they are varying much. I have traveled hours at a time when too dark to see a man 10ft., unless he were dressed in white. We never think of any of the things that article mentions, but we note carefully the course of all brooks and every high land, and the courses of the ridges, when we first travel a new country.

Some men are born woodsmen; some learn; many can never learn. Our guides tell me that not one man in ten they guide can go a mile straight back from a road and turn around and get back within half a mile of where

BAY LYNX.

Photo by Mr. E. Hofer.

he started, without a compass. A compass is usually of no use to a man who is lost, as he will not believe it.

Hermit says: I agree with Awahsoose, that moss on the north side of a tree is an uncertain method of finding the points of the compass. Mr. Dearborn's paper, if reliable, will cause me to learn a new system of woodcraft, and I should be unwilling to do that, for my woodcraft grew up with my life from boyhood. My father sold out a store in Oldtown, Me. (where he traded largely with the Indians), when I was four years of age, and practically moved into the wildness. My first lesson in woodcraft was a daily hunt for the cows with several country boys during the summer. The cows had the range of North America, and it was no small job to find them before milking time. Wolves and bears killed scores of sheep in Penobscot county, and deer were not

A FLORIDA GROUP.

plentiful until the wolves disappeared years later. My woodcraft received a stimulus from a hunter. He was not just right in his upper story, and was known as "Squire Thomas's fool," but William was no fool in the woods, and for ten years I worshipped his knowledge of woodcraft. He could tell one how not to get lost.

Forestry in America.

SOME people seem to argue as if there was an inherent weakness in our republican form of government that disqualified it from taking care of its forests. France and Switzerland are republican, yet they have no trouble in managing their forests so as to derive from them a continuous net income. Within its proper sphere a republic is as strong as any government. If a republic can carry a letter for a private citizen from Maine to California for two cents, it can take care of its forests. Let anybody meddle with the United States mails and they will see whether or not a republic has power! So there are opponents of forestry who talk as if science was something this country has no need of. Forestry science, they say, will do for Germany, but not for America. But if such people had equipped our navy, Commodore Dewey could not have gained his splendid victory. It was because his ships were up to date in science that he could accomplish such a brilliant result. In those departments of our Government in which we are up to date in science we are the equal of any other country; and if we will apply science to forestry we will, not soon, but in due time, have as good a forestry system as any other country.—C. C. Andrews, Chief Fire Warden of Minnesota.

East African Mammals.

BY D. G. ELLIOT, F.R.S.E.

(*Continued from page* 86.)

BLACK-BACKED JACKAL (*Canis mesomelas*, Schreb). NATIVE NAME, *Dowdo.*

We did not meet with this species until we were south of the Golis Range, and from there, during the remainder of our journey, it was frequently encountered. Its habits are the same as those of the common jackal, but I don't remember ever to have seen the two species consorting together. It is a much handsomer animal than its relative, the dark back contrasting finely with the color of the flanks. I have seen as many as four together in the early morning trotting along, evidently returning to their dens after a night's foray, but as a rule, like the preceding species, they are solitary in their habits, and it is not often that more than one is met with at a time. The peculiar markings of this jackal make it very conspicuous, and it was not difficult to distinguish the species even when at some distance away. The two forms inhabit similar areas, and it was a very common occurrence to meet with both in the same locality. It might be reasonably supposed that hybrids might be produced from animals so closely related, living practically together, but I neither saw any myself nor heard of any having been seen by others. Like its relative, the present species has a wide distribution on the African continent, and is in no wise confined to Somali-land.

FOX (*Otocyon megalotis*, Demarest). NATIVE NAME, *Golo Waraba.*

This pretty species was first seen by me at Mandera, at the base of the Golis Range. It is, like all of its kindred, very shy and averse to exposing any part of its body to the gaze of man. I usually met with it when hunting the lesser koodoo, and would catch a glimpse of it as it stealthily crept along amid the aloes that covered the ground, stopping occasionally to look at me, but showing at such times merely a portion of its head over the thick clumps of long leaves. Of course, being after nobler game, I could not shoot it on such occasions, and many favorable opportunities for securing specimens of this species were thus lost. This fox is generally seen singly, rarely in pairs, but more than two I have never seen together. The very long and broad ears give this animal a peculiar appearance, and its short legs make it appear much smaller than it really is. Of course, although we saw this species frequently at times when we could not shoot it for fear of starting nobler game, we never could find it when especially hunting for it, and this accounts for my only bringing back a single specimen; and at one time indeed it seemed very likely that we would have to return without any examples at all. While by no means common it cannot be considered a very rare species in Somali-land, but its cunning disposition and secretive ways will always cause it to be a rather difficult animal to procure unless in traps.

Two Strange Birds.

As the collector of specimens, in whatever field, very commonly rates himself according to his proprietorship of some one which is unique, or of great rarity, so the possession of a living apteryx confers a sort of distinction upon a zoological collection; although it must be confessed that any advantage derived therefrom lies chiefly in pride of ownership, for so far as the instruction of the visiting public is concerned all that is open to them is the spectacle of a mysteriously empty cage, bearing a suitably descriptive label upon its front. This by reason of the nocturnal habit of these strange birds, which is so incurably fixed that during the two months' occupancy of a cage in the gardens, by two individuals of different species, all that has been seen of them has been a flitting glimpse during the dark hours of night, excepting on the occasion when they were forcibly taken out of their burrow of straw and brush just long enough to be photographed by R. D. Carson, of the Zoological Society.

The classification of birds is still somewhat kaleidoscopic in character, but as we "catch the transient hour," the apteryx, or kiwis, constitute the last order *Apteryges* of the subclass *Ratitae*, which includes all the other terrestrial wingless birds, such as ostriches, emus and cassowaries. In these birds, without power of flight, the sternum is flat like a raft (Latin *ratis*), in opposition to all other birds; the *Carinatae*, in which, having developed wings, the action of the great pectoral muscles in flight or in swimming has pulled out the sternum, so to speak, in its central anterior line into a high ridge or keel like that in the bottom of a vessel (Latin *carina*).

The five or six known species of kiwi are confined to New Zealand; that strange land, almost without native mammals, but which has produced nearly as many struthious birds as all the rest of the world, from the gigantic *Dinornis*, but lately extinct, down to the little apteryx, smallest of the group, which is now becoming so rare that it is obviously following in the path of its larger relative. They are said to inhabit moist or swampy localities, thickly grown over with ferns, making a nest either in hollow trees, crevices among rocks, or sometimes excavating for themselves in the ground. In such soil they find plenty of insects and worms, which form the greater portion of their food supply, and these they probe for in the soft ground with the long, slender bill, after the same manner as the better known woodcock of our own climes.

In captivity, where a sufficient supply of worms is beyond possibility, they thrive fairly well on finely-chopped meat, a few earthworms being added by way of a course of sweets; but in the morning, after rain enough to moisten the ground, the bottom of their enclosure is seen to be covered with the punctures made by inserting the bill in the ceaseless search for a larger supply of their choice dainty.

The external appearance and attitudes of these birds, as is shown by the photographs, may be said to be truly grotesque, to which an element of the unreal or uncanny is added by their stealthy, noiseless and shadowy

movements, amid the darkness which shrouds their hours of exercise and refreshment. I know of no other bird nor mammal so strictly and absolutely nocturnal as these kiwis. Most owls are sometimes seen in full light of day, and even the bat comes out in twilight, but apteryx creeps forth only when twilight has faded into deep darkness, and retires again to his straw nest at the first suggestion of coming dawn; and when, on occasions, they are lifted out into the sunlight, some degree of force is required to control them, and the instant haste of their retreat when released has in it something indescribably ludicrous.

Of the two species represented by the pictures, *Apteryx mantelli* is the larger, being some 22 to 24in. in extreme length; the bill being about 5in. and the tarsus about 3in.; the color being in general a reddish brown. *Apteryx oweni* is smaller, not exceeding 14in. in length, and is grayish brown, banded and spotted with white. The former species inhabits the North Island of New Zealand, while *oweni* is known only from the eastern part of the South Island.

By no means least among the anomalies of these strange creatures is the fact that the unfortunate female —upon whom it would appear that some Pliocene foreshadowing of the curse of Genesis must have rested—is condemned to produce an egg weighing nearly one-fourth as much as herself and having one-fifth of her linear dimensions.

ARTHUR ERWIN BROWN.

ZOOLOGICAL GARDENS, Philadelphia, July 11.

As to Grasshoppers.

DURING my sojourn in Nebraska twenty years ago I had the good fortune to witness a flight of grasshoppers, of which I had heard so much in the East, of their destructiveness and dreaded visitations. The ground, fences, trees, houses, in fact everything that had an outside, was in a manner covered with them.

It was interesting, if not amusing, to see them like flakes of snow rising before pedestrians in Omaha. Wells were covered to keep them out, and along the shores of the Missouri millions of them were struggling and drowning. Their flight would begin about 9 o'clock in the forenoon, and continue for perhaps six hours. What I want to call attention to is the great distance one can see these little marauders. That they can be seen a mile or more away I think I can clearly show. The miscroscopists tell us that of the largest spider's thread it would take 10,000 to make the size of a human hair. The reader, as well as I, has doubtless seen a spider's thread floating high in the air 100yds. away, when it was in such a position as to reflect the sun's rays to the eye. I have seen a spider's thread floating from a telegraph pole 120 paces distant. I suppose I could have seen it much further than that. The thread was clean, no dew nor dust on it. The wings of the grasshopper will reflect many thousand times the number of rays that a spider's thread will. During a flight of hoppers not one could be seen in looking away from the sun, which showed that they were pretty high. But when I looked toward the sun, myriads of them were revealed. The insects darting around the electric lights give some idea of the appearance of the hoppers between one and the sun. The lower stratum seemed to be hundreds of yards high, through which were seen far beyond the glistening wings of the migrating hosts, more than a mile distant. It was an interesting sight. Perhaps the hopper himself was not distinguishable, but the light from his wings was seen, and in common parlance I saw a grasshopper one full mile away.

N. D. ELTING.

Game Bag and Gun.

Bluish-Greenish Gray.

FROM 100 to 200ft. across, covered with small mesquite, cacti and loose stones of volcanic origin, the draw lies before us. On either hand rise steep hills, gray, lifeless and barren, except for the same mesquite, cacti and stone. Not a drop of water is in sight, and the late fall sun is beating fiercely down from a cloudless sky, as it always does in this country 300 out of the 365 days in the year. Gray is the prevailing tone; the stones are gray, the mesquite likewise, and even the cacti are more gray than green. Now that we note closely, the sky itself is of a grayish blue shade that seems to be but a reflection of this draw. Yet we know from experience that the game we have come for, the little Mexican or blue quail, makes its home in just such places as this.

We have no dogs with us, for dogs are useless on this game, as the birds rarely lie to cover, and they would soon be incapacitated from lack of water, so they have been left at home.

Something is moving about the foot of that larger mesquite bush—yes, it's a quail; in fact, there are several of them, and as we rapidly approach they resolve into a bunch of some thirty or thirty-five, excitedly moving about close together. Now in hunting the Mexican quail it is necessary to do some running, as will develop later on. We may just as well make a beginning now, so strike a dog-trot with me and let's see how close we can get to them before they take to the air. Here we are at 40yds. The temptation to take a pot-shot at the bunch is strong, but that is not our style—there they go now, and at the crack of the guns three birds fall out, while the rest scatter out over the draw head of us. No dogs to retrieve for us, so we seek dead ourselves. There is no trouble in finding the first bird, but what has become of that second bird of yours? You saw him drop just about there, but he does not seem to be in sight now, and you have looked carefully around that spot for half a minute, and he ought to be right there—and so he is; you have had your eye on him a half-dozen times, but his colors blended so harmoniously with the soil and stone—bluish-greenish gray—that you overlooked him. This is not the last time you will experience difficulty in finding the dead birds.

Let's see what sort of birds we have shot. They are somewhat different from our old friend Bob White. About the same size, you would say, but that is because you have been shooting in the North. Color is not near so brown as Bob; in fact, almost the only brown about them is of a rusty shade, marking the edges of the back feathers and those of the head, the latter mounted by a well defined crest, whose feathers are from ¾ to 1in. long. The wings have a light brown cast to them; the body appears to be more of a bluish gray than anything else. They are rather pretty little birds nevertheless, and have bright black eyes.

But our cursory glance at the birds has given the bunch time to get some distance ahead of us, and if we expect to see them again we must get a move on. A hundred-yard dash at a good clip, and we are among them again. Now comes our best shooting. As several get up before us we single our birds and bring them to grass in good style. Hastily gathering dead, we do some sprinting worthy of a professional, for we know that the birds will not settle down at the end of their flight, but keep going, doing a little sprinting on their own account, and if you do not think they are good at it, just follow us while we let out another notch. It is not a short run this time, as the birds are keeping ahead of us and we must cover 300yds. before getting within range. But we see our birds ahead scooting in and out among the mesquite bushes and cacti, and as one, hard pressed, takes to the air, I get a fine single on him, and at the report the others are alarmed and get up, scattering in front. A crack or two and they are all out of sight again, scattering badly, while many have taken to the steep sides of the gray hills.

Not much chance of getting more good shots, but we proceed leisurely ahead, keeping a sharp lookout for stragglers. There seem to be none left, but there ought to be at least one—whir-r-r-r-r! Right behind us too; almost stepped on him; the little cuss must have been hidden behind the broad leaf of that cactus or that prickly pear; but if we want him it is time to pull down on him, as he is fast getting away. Hardly know where to look for the next one, but we'll keep good lookout for a stray. Ah, there's one, just out of range! Now comes the tug of war, for we must see who is the better runner. No telling when we can put him up, as he will try to keep just so far ahead, we might as well take it easy at first and let out gradually as we go. How the little fellow runs, dodging in and out among obstructions, and all the time keeping an eye on his pursuer. Guess he must have been deceived by our gait, for we are gaining on him; yes, are almost within gunshot; but it will be necessary to let loose some more steam if we expect to get near enough for a shot, and we let out another notch. That last 100yds. must have been done pretty lively, as we have gained on him considerably, and he is in fair range, if he only would get into the air, but—what! a four foot, thorny mesquite right in front! We can't stop and go around; 'twould cost too much time; only one thing to do: Take it like any other hurdle, thorns and all. As we land on the other side the extra maneuver seems to have frightened the little chap, and with a sudden bound he is in the air and nearly out of range. No time to stop, so as we soar over an ugly spiked cactus a snap shot is taken, with the result of a clean kill, and the satisfaction of that last shot more than pays for the exertion of a quarter-mile run in the hot, dry, thin air, after one poor lone little blue quail.

Such about is blue quail hunting in New Mexico; and each succeeding covey started would be but a repetition of the story of description. I know of no other bird in the hunting of which the peculiar attributes of the sprinter are needed so much as in the chase of the Mexican or blue quail, for it is more of a chase than a hunt. I think I would recommend, as an outfit for the quail hunter in this country, as fitting and almost necessary, a pair of spiked runner's shoes, bicycle cap, and for nether garments 18in. armor plate guaranteed to resist penetration by mesquite thorns and cactus spikes. And above all a record as a sprinter of 10 1-5 seconds for 100yds.—

EDDY, New Mexico.

Indian Mode of Hunting.

II.—Lynx.

SNARING is the principal way in which the lynxes are killed by the North American Indians. After a heavy fall of snow, however, if an Indian crosses a fresh lynx track, he immediately gives chase, even if he has only his belt axe.

The hunter only follows very fresh tracks, and in a short time comes up with the big cat. As soon as the animal knows it is pursued, it either climbs a tree or crouches under some thick shrub. If the hunter finds it up a tree, he sets to work at once to cut down the tree (that is if he has no gun). As soon as the tree totters he makes his way in the direction which it is to fall. The lynx clings to the tree until near the ground, and then springs clear. While he is floundering in the snow, the Indian bravely runs in and knocks him with his axe. Of course, if he has his gun, he simply shoots the cat and it tumbles dead to the foot of the tree. The feat of running down a lynx and shooting him with a bow and arrow is what all Indian youths aim to accomplish; they are then considered hunters.

Lynxes are always found in greatest numbers where their natural food supply is most plentiful. They feed usually on rabbits and partridges, and these are to be found in young growth of such trees as pitch pine, birch and poplar.

The Indian also, when he is dependent on rabbits, lives on the border of such a country, and has long lines of snares which he visits two or three times a week. Along this snare road at certain distances he has his lynx snares, which are nothing different from those set for rabbits, except being much larger. Yes, there is another difference: Instead of the snare being tied to a tossing pole, it is simply tied to a stout birch stick, 3 or 4ft. long by about 2in. in diameter. The extreme ends of this are lodged on two forked sticks, and the snare hanging down in the middle is then set, tied to small dry twigs on each side to keep it in position.

At the back of the snare, at about 2 or 3ft., the head and stuffed skin of a rabbit is fixed under some brush. The skin is filled with moss, or pine brush, and is fixed so as to look as much as possible like a live rabbit in its form. The head being to the skin gives it the natural shape and smell, and the lynx, walking leisurely along the snowshoe track, notices the game and makes a spring for it through the snare. In his headlong bound he carries snare and cross stick along with him, and as soon as he feels the cord tightening about his neck he not infrequently becomes his own executioner by getting his forefeet on the stick and pulling backwards as hard as he can. The more he struggles, the madder he gets, and pulls the harder to free himself, but this is, on the contrary, only making matters worse. The loop of the noose gets matted into the soft, thick hair of the throat, and there is no "slack" after that; in a few moments the great cat is dead.

Sometimes the lynx carries the cross stick in his mouth and climbs a tree. This is invariably the last tree he ever climbs, because once up the tree he lets the stick drop and it hangs down, generally on the opposite side of the limb from that on which the lynx is. As the cat goes down the tree on one side, the cross stick goes up toward the limb on the other and gets fixed in the crotch. As soon as the cord tightens about his neck he tries the harder to get down, and is consequently hanging himself.

Lynxes are very stupid. They will even put their foot into an open and exposed steel trap; and the better-off Indians often use small No. 1 traps instead of snares. This, however, is only done latterly, and by the very well-off Indians. As a rule Indians only have traps for beaver, otter, fox and bear.

Lynxes are very rarely seen in summer, keeping close to the thickest bush. In any case, the skin is then of no value, and they are far from being "a thing of beauty," with nothing but a bare skin.

In the prime state they are largely used on the continent as linings, and each skin is worth about $4.

MARTIN HUNTER.

Stocking with Game Birds.

SHELDON, Vt.—*Editor Forest and Stream:* Blessed be the FOREST AND STREAM; for besides being brimful with the best of information and entertainment, it oftentimes saves us both time and postage by enabling us by one letter to answer a full score of correspondents. I am constantly receiving letters from correspondents in all sections of the country making inquiries about the most desirable game birds to import into their respective localities. During my absence for a few weeks this class of letters has accumulated to such a number that it prompts me to give a brief reply through your columns, and if any of those interested fail to read their answer, their punishment is just and deserved. Moral—Read the FOREST AND STREAM.

The most desirable game birds to import into our country may be divided into two general classes, seed eaters and bud eaters, not migratory, but local in their habits. The seed eaters are most suitable for the range of country occupied by the Virginia quail, the Southern and Middle States, where the snow does not fall to a sufficient depth to cover the seed-bearing vegetation. We would recommend the various varieties of pheasants and the pinnated grouse. The Mongolian pheasant would be the best bird for the Middle States. If turned out in lots of sav five or six hens and one cock, and thoroughly protected for several years—then with an open season say from Oct. 1 to Dec. 31, and a restriction of shooting to only between sunrise and sunset, also the number of birds to four or five to each gun during the first week of the open season—these birds would become abundant even in the vicinity of the larger towns and cities.

The bud eaters are the ones adapted for our Northern States—the home of our noble ruffed grouse. In the heavily wooded districts the most desirable bud-eating game birds are the capercailzie and black cock. When ordering these birds, give special instructions that they must be delivered unmutilated—not with clipped tail and wings. For the farming districts the sharp-tail grouse would live and propagate if they could get thorough protection against the pot shooter. Early in the season they are easily potted while sitting on the fences; and during the colder months we have seen them budding in the orchards within a few yards from the highway where teams were passing every few minutes.

We have released here in northern Vermont both West Virginia quail and Mongolian pheasants. The quail, when in parts of the country where there is sumac, have lived through our winters without assistance; that is every winter until last winter, when the extremely wet season during the preceding summer prevented the sumac seeds from developing, and we believe that most of the quail perished from lack of food.

Our experience with the Mongolians during the past winter was not a pleasing one, as every bird released was lost, with the single exception of a hen that was picked up in the highway with one wing nearly severed from its body, caused by flying against a barb wire fence. This bird is now in the aviary, sitting on a full nest of eggs. After the winter snows came the released pheasants would on pleasant days come in around the buildings for food. They disappeared during every storm, and after the storm had passed by would reappear in a nearly famished condition. At last, during a long continued storm, they made a final disappearance, and in the spring their feathered skeletons were found about the fence corners, where they had skulked, starved and frozen. The birds in the pens, where they had regular feed and water, were during the most severe weather—when it was 30° below zero—bright and lively.

Without doubt there are other Asiatic game birds that would be desirable to introduce into some sections of our country, but as we have not had any experience with them we cannot speak with authority on the matter. In States like Vermont, where our Game Commissioners have the power to appoint one or more wardens in each town, they could, with but little expense, lease large tracts of land from the farmers for game preserves, where both imported and native game could breed and rear their young unmolested. In fact, in many localities this is the only way that our game can be saved from total extermination. The breeding grounds are constantly being encroached on, and the game during the open season is more and more persistently

hunted by the owners of the tens of thousands of new breech-loading guns that are being scattered broadcast through the country every year. With these facts before us, it is the duty of every fish and game association to use their influence in assisting the wardens to secure in every town sections of land for game preserves where no shooting unless that of fox hunting shall be allowed at any season of the year, and there should be no delay in this matter, for a thing that is worth doing and is of such vital importance should be done at once.

N. P. LEACH.

CHICAGO AND THE WEST.

Plans and Problems at the Yellowstone Park.

CHICAGO, Ill., July 30.—I am in receipt of another interesting budget of information from a gentleman who is thoroughly posted on matters at the Yellowstone Park, and who comes to the FOREST AND STREAM in order to make known to the public the condition of things in that interesting locality, remembering that no other paper has taken the same intelligent interest in park matters that has been given by the FOREST AND STREAM. On the whole the report is favorable. The elk and deer are in good condition, the antelope have not suffered so much during the past winter as in the winters before, and even the buffalo, few as they now are, seem to be more numerous than was supposed. The writer of these notes sets forth some of the features of the great problem of summer and winter protection in the park, and it is gratifying to learn that progress is making, albeit a gradual progress, in overcoming some of the difficulties which have always existed. The inadequacy of the available number of scouts is best known by those army officers who have in turn fulfilled the somewhat thankless duties of superintending the park, or by those of the public who have gained some idea of the immensity of the country to be policed. The correspondent who is so good as to submit these notes goes on to say:

"Capt. James B. Erwin, Fourth Cavalry, has been detailed as superintendent of the park, relieving Lt. Cress.

"Capt. Erwin is very energetic, and is taking hold of park affairs hard. He is especially interested in the protection of the game, and is giving this subject the large amount of his attention which it deserves. The appropriation of $40,000 for the improvement and protection of the park is now available, and Capt. Erwin's plans include the permanent employment of one more scout, and the setting aside of a sufficient sum for the employment of special scouts and detectives when needed. He also proposes to cut out and reblaze all the old trails in the park and some new ones, making an aggregate of some 400 miles. This will greatly facilitate communication between the different parts of the park and the protection of the game.

"It is also planned to build four new summer stations for the shelter of detachments of troops engaged in guarding the park in summer, and twenty small cabins for the shelter of scouting parties traveling on skis in winter.

"This snowshoe work has always been so difficult and dangerous that it has not been thoroughly performed. In the spring of 1894 a soldier perished and his remains were not found for fifteen months. Last December a soldier was frozen to death, and another one had a closer call than many men live to tell of, while cases of frozen feet, etc., are of frequent occurrence.

"To travel on skis all day, packing one's food, axe, pistol, etc., on his back, and to sit around a fire in a snowhole all night, catching a few moments of sleep now and then, is a hardship which cannot be expected nor obtained from men many times in a month.

"Last fall General Young had thirteen cabins fixed up and supplied with an axe, shovel, frying pan and coffee pot, and two comfortables each. Each one was also stocked with a small amount of bacon, hard bread and coffee. These cabins were of the greatest assistance last winter, but some of them were old and poorly constructed, nearly all were too small to comfortably shelter more than two men, and most of them had fireplaces built of green logs, which soon burned out. They served, however, to show the necessity of a series of comfortable shelters, and if Capt. Erwin is allowed to carry out his plans, every square mile of the park which is inhabited by game or fur animals can be watched and guarded next winter by snowshoe parties, who will not have to sit around a fire and chop wood all night to keep from freezing to death.

The Park Game.

"Few people realize how rapidly the question of game protection in the park is increasing in importance and in difficulty. The surrounding country is being rapidly settled up, and the number of Eastern sportsmen who come to the vicinity of the park to hunt is increasing each year. The inevitable result is that the game outside of the park is decreasing in numbers. The better the game in the park is protected, the more numerous does it become, and the more does it lose its fear of man, thus becoming an easier prey to poachers. So the service of protection is like a growing colt, the more you feed him the more he needs, and he would probably be stunted in his growth were it not for the fact that he is constantly increasing in value, and therefore it pays to feed him well. I know a hundred men, and many of them not old men either, who have seen countless herds of buffalo on these Western plains. If one had told these men twenty years ago that in 1898 the American bison would be practically extinct, he would have been regarded much as Professor Totten is now. Therefore, I will not ask FOREST AND STREAM to publish my prediction that in 1918 a pair of elk horns such as we build fences of now will be worth $100.

"All the game in the park seems to be doing well. The elk and deer wintered better than usual, owing to the very mild winter, and the crop of young is very large. A scout reported last week that in one band of 300 elk cows there were 250 calves. Several cows have been seen followed by two calves.

"The loss of antelope last winter is estimated as not over five per cent. More moose have been located than ever before. There is no reason to think that any buffalo have been taken by poachers in the last year, or that the herds have been disturbed in any way. The main bunch was carefully observed this month by Morrison, the regular scout, who reports about thirty in the bunch, but could find no calves nor any sign of calves with the herd. I am unable to account for this, as there were several yearlings, showing that they bred last year. Besides this bunch there are probably fifteen or twenty more buffalo in the park, ranging in several small bands.

"The fishing, notwithstanding the large numbers taken last year, is better than ever before. A 3lb. brook trout has been taken from Grizzly Lake, and Dr. Wheaton, of St. Paul, took a rainbow trout from the Madison River which weighed 4¾lbs., and measured 23in. The usual big catches of mountain and brown trout are reported from the Firehole River, and lake trout as big as pack mules are seen in Shoshone Lake.

"Bears are very numerous around all the hotels, and they furnish much amusement to the tourists. All the beaver colonies are thriving and are spreading out, and building new dams and houses.

"A new entrance to the park has been opened up by the Monida and Yellowstone stage line, which is now operating a daily line of first-class Concord stages from Monida, Mont., on the Oregon Short Line, into and through the park. Their equipment is unexcelled in the world, and they reach the Fountain Hotel at noon on the second day. The first night is spent at Grayling Inn, in the Madison Basin, where the grayling fishing is probably the best in the United States. This new route is being well patronized, and will doubtless gain in popularity as its attractions become known.

"DELAWARE."

Colorado Game.

Game Warden Swan, of Colorado, is anticipating more trouble from the Utes this fall. It is stated that these Indians are making plans for another trip into the neighborhood of Lily Park this coming fall, and that they are very much disposed to make trouble in revenge for the killing of their people last year. Warden Swan has asked for United States troops to be despatched to the vicinity of the earlier troubles, hoping the presence of the Long Knives will overawe the belligerents. I was talking with a gentleman the other day who had some information about the state of affairs in the part of the Colorado country which is most visited by the Utes, and I am disposed to think that as between the Indians and the white game poachers there would be few stones cast if the guiltless had to begin the throwing. It seems much a case of six of one and half a dozen of the other. The Indian says, "I saw it first," and the white man says, "I am going to have it myself." As there are rather more white men than Indians, the result is foregone, and about all we can ask it that the white ranch folks who go as deputies and protectors will try to give their red brethren a fair deal when the scrap takes place.

Colorado Licensed Guides.

It is somewhat curious to note that in his annual report to the Governor of Colorado, Game Warden Swan will take the position of recommending for Colorado the Maine idea of licensed guides, these to be commissioned as special wardens. Warden Swan points out the large number of licensed guides in Maine, and hopes for a similar state of affairs in the State of Colorado. He estimates that last year the sum of $15,000,000 was spent in the State of Colorado by hunters and fishermen.

These facts and figures are somewhat startling. The State of Maine is an old, old part of the Union, and it is advertised as the great sporting ground of the East. The system of licensed guides may be only a legitimate part of the development of the business system which has governed the sporting resources of that State for some years. This is no doubt very well. It is necessity. Without such careful system the sporting resources themselves would have been destroyed. In the West, however, it has long been our boast that things were different. We have been proud of the fact that we had a region where a man could get lost if he wanted to, and where perhaps he could not get a guide if he cared to do so. We have felt that wild sport meant wild country, country uncharted and untabulated, country which had its own secrets and its own ways. It is this sort of country which really appeals to the man who has a hunter's instinct of getting away from business places and business methods. It is the desire, I take it, of the real sportsman to prefer, other things being equal, a wild country to a well-known one. The bag of grouse killed on a preserve has not the same value as the bag killed in a region where fences are unknown. The deer killed under the tutelage of a licensed guide will never have the same value as that killed by the sportsman himself in a country which he discovers for himself, and which he loves because he fancies it for the time his own.

Yet the days have passed by in the West as in the East. They have changed and we have changed with them. The West must some day come to the ways of the East. Some day we must hunt our elk in Colorado or Wyoming as they do the stag in Scotland. The wild lands and the wild animals of the West have all too soon come to the day when they need protection. There is no wish to criticize the position of Commissioner Swan in his recommendation of licensed guides. On the contrary, it is true that perhaps the time has come for such appurtenances. But such a time is a sad one in the history of that West which once was wild.

Typhoid Moose.

They have a singular complaint this summer out at Hibbing, Minn., a sort of fever which the doctors describe as similar to typhoid fever, and which they ascribe to the general eating by the population of venison and moose meat in the hot weather. The medical profession of Minnesota is taking great interest in this matter, and I may also add that the Game and Fish Commission of the State is also evincing concern. I do not know whether the State health officer will do anything toward remedying the health of the good folk at Hibbing, but I believe that the State game warden will do rather more toward improving the general state both of health and of morals in that community. They seem to be long on poetic justice at Hibbing.

Sportsmen in Politics.

Mr. Mart. Whitcomb, of Minneapolis, Minn., an ex-president of the Minneapolis Gun Club, has received the nomination of one of the political parties for sheriff of his county. Mr. R. B. Organ, of this city, some weeks ago received the nomination of one of the political parties for representative to Congress from his district. Mr. Organ is very well known in the sportsmanship of Chicago, as all readers of the sporting press may testify. He and Mr. Whitcomb were boys together long ago, and they still take annual shooting trips together. They may both be elected, for you can't tell what is going to happen these days.

The Sooner.

The Gun Club of Aberdeen, South Dakota, has this summer been doing its best to stop the violations of the prairie chicken law. On July 23 action of the club resulted in the arrest of L. A. Gregory, who paid $20 for the privilege of shooting illegal prairie chickens.

I imagine that the American citizen is the most independent being on the face of the earth, as he has every right to be; and I imagine also that one of the dearest rights of the American citizen, especially of the West, has always been to shoot prairie chickens whenever he blame pleased. It will take legislation by Congress and a million United States marshals to shake the American citizen out of his belief in this divine right. That is to say, the American citizen of a certain class, which is by no means the highest class of our humanity.

Duck Island Club.

Duck Island Club, of Illinois, held its semi-annual meeting at Peoria, July 26, and transacted business connected with the preparation of the shooting grounds along the Illinois River for the coming shooting season, which will soon be at hand. This is one of the strong shooting clubs of the State.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

Massachusetts Shore Birds.

BOSTON, July 30.—Shore bird shooting has not yet been much of a success along the Massachusetts coast. Since the open season begun, July 15, some of the local gunners have spent some time along the beaches, but with indifferent success. So far only a few peep have been obtained. Summer yellowlegs have not yet put in a general appearance, though expected shortly. L. W. de Pass has been out once or twice off Scituate, but he reports the birds scarce. Essex county gunners have done but little yet. The weather has been decidedly wet and hot, and gunning, if done at all, has been done under difficulties. Two young men came up from the north shore this morning. They had been down for several days. The fog, rain and general volume of humidity had driven them home. They got very few birds indeed; try the same location later.

Reports are conflicting concerning partridges in Maine. Generally close observers claim that such birds are positively scarce. They did not stand the severe winter well. Fishermen and others, who have had occasion to be in the woods a good deal this spring and summer, say that they have seen very few partridges and still fewer broods. On the other hand some of the papers—those that always boom fishing and shooting in that State, if they say anything at all—claim that the "woods are full of young partridges." A gentleman in the habit of traveling in Androscoggin and Oxford counties a good deal each year, and an observer of fish and game from pure interest in it, says that he has never seen fewer partridges than this season thus far. The Maine Fish and Game Commissioners are actually fearful of the utter extermination of that noble game bird. More restrictive legislation will doubtless be proposed at the session of the Legislature this winter.

SPECIAL.

Forest Preserve Officials.

WASHINGTON, July 22.—The following were to-day appointed by the Secretary of the Interior as forest superintendents at $2,000 a year: J. Blatchford Collins, of Miles City, Mont.; Cameron W. Garbutt, of Sheridan, Wyo.; James Glending, of Salt Lake City, Utah; George L. Robb, of Iowa; Eugene B. Hyde, of Spokane, Wash., and John D. Benedict, of Danville, Ill.

The following were appointed forest superintendents at $5 a day: J. B. Wilhoyt, of Grayson, Ky.; John B. Webber, of Osage City, Kan.; W. H. Odom, of McFarlan, N. C.; W. C. Bartlett, of California; Charles Deloney, of Evanston, Wyo.; N. Langell, of Jacksonville, Ore.; Warren D. Robbins, of Grangeville, Idaho, and W. H. Durfur, of Oregon.

The following were appointed forest rangers at $50 a month: Levi R. Davis, of Rotchford, S. D.; Sidney Scott, of Eugene, Ore.; M. D. Markham, of Forest Grove, Ore.; Max Schulpius, of Oregon City, Ore.; Z. A. Davis, of Eugene, Ore.; Alfred A. Dula, of North Carolina; George Petriquin, of Roseburg, Ore.; Frank Allen, of California; Ben Huntington, of Oregon; William Isaac Lacey, of Independence, Ore.; Charles M. Paine, of California; Howard French, of Dome Lake, Wyo.; Peter Enders, of Shell, Wyo.; Roy J. Peck, of Buffalo, Wyo.; Glen C. Shepard, of Los Angeles, Cal.

Assistant special forest agents for the California national parks were appointed as follows: Archie C. Leonard, George Byde and Henry A. Skelton, of Wowona, Cal.; Joel J. Westfall, Charles T. Leidig and Arthur L. Thurman, of Yosemite, Cal.; Geo. G. Mackenzie, Thomas S. Carter, Darwin S. Lewis and David Lockton, of Raymond, Cal., and Joseph R. Borden, of Borden, Cal.

When deer were plentiful everywhere in the forests of New England, they were killed ruthlessly and sweepingly; but, as they grew scarce and their flesh and hides became higher-priced, laws were made for their protection. Massachusetts ordered, in 1698, that no deer be killed between Jan. 1 and Aug. 1. Other colonies had similar laws. Men called "deer-reeves," or "informers of deer," were appointed to see that these laws were enforced, to watch for signs of deer, and prosecute all unruly hunters.—New York Evening Post.

Sea and River Fishing.

Trout Flies and Trout Whims.

Editor Forest and Stream:

Your letter caught me in the preliminaries of getting ready to go a-fishin' on our "annual" to the North Woods, and it has kept me so busy "figgerin' an' runnin' 'round" getting things together for a party of ten or a dozen for three or four weeks in the "bresh"—with only a short time in the shank of each evening to do it in—that I have had little time to think or write about the question of "dark flies on a light day," light flies on a dark day, or dark and light flies on dark and light days, as the case may be.

My experience in fly-fishing has been very limited, for the reason that nearly, if not all, the streams I have fished for trout have not been "fly" streams, owing to the brush and trees infesting and overhanging the banks, and I am not competent to express an opinion about the merits of dark flies on a light day or light flies on a dark day.

Speaking from personal experience, my favorite fly for a starter is the barnyard hackle—pale red preferable as to color—or the festive grasshopper, and when I have taken the first trout I make a fly of a ventral or anal fin, and never fail to get some trout with it, whether the day is dark or light.

I am aware that for this heresy the æsthetic angler of the Starbuck school (?) will read me out of the brotherhood (albeit they all sneak in the humble worm and the hopper when their "light-as-thistle-down" fly fails to bring a rise), but sentiment cuts no figure with me in trout fishing or any other fishing; I fish for the sport of it, pure and simple, in my way, and if I have to fool an old trout with a worm or a fin from one of his brethren by poking my rod through the overhanging bushes to reach him in his hiding place, I console myself with the thought that I am fishing for that trout, and not for sentiment or to court the criticism of some budding know-it-all fly-fisher, who claims it is unsportsmanlike to take a trout otherwise than with the fly. However, this is a digression from the question of dark or light flies.

Looking at it from a "hoss sense" view—claiming little experience in fishing with the fly—I would say that Bro. Van Cleef's position about dark flies is about my notion of it, and I am at liberty to quote the Colonel in support of it. The Colonel is an old fly-fisher from "'way back"; has fished the home of the big trout—the Nipigon River—several seasons, and ought to know whereof he talks.

He says: "The tastes of trout are more mystifying than the whims of women. (The Colonel is an old bachelor.) Sometimes they want one thing and sometimes another. Some dark days the trout will take a dark fly, like a brown hackle; some other dark days they will take a light fly, and some other days they will take neither dark nor light flies." (Mem.—This is the time to get in your work with the barnyard hackle, if you're not too æsthetic.)

"Other days when the sky is overcast they will take light flies a part of the time and dark flies some other part of the day. I have fished persistently with light-colored flies all the afternoon of a dark, lowery day, using a white-miller at the last, with no rises; then, as twilight came on, I put on a brown hackle and took trout after trout till it was too dark to see the fly or the rise of the fish. You can never tell what sort of a fly a trout will rise to till you try; but my opinion is that dark flies are as a rule more taking than light-colored ones, taking no account of the condition of the weather or the dark or bright aspect of the day.

"My experience is that trout are a mighty uncertain quantity, and that in fishing for them more depends on the humor or whim you find them in than on the deftness of the cast or the color of the fly used."

There is an opinion that is worth far more than mine, and I'm going to indorse it, for I have a heap of respect for the Colonel's judgment in matters pertaining to fishing. However, if I find a stream while we are in camp next month that I can "fly-fish" I will try both light and dark flies and note the result.

We leave here—the same old gang—on Saturday, July 30, over the C. H. & D. and Michigan Central for Detroit, where we take one of the Detroit & Cleveland Navigation Co.'s steamers for Alpena, thence twelve miles by rail and thirteen miles by wagons to Hubbard Lake, where we had our camp in 1894. On that trip we took a good many bass that weighed up to 4 and 4½lbs., and we want to see if there are not some left of the same "heft" or over.

I intend spending a week on a stream that is said to be a fine trout stream, about eight or nine miles west of our camp, in the heart of the wilderness—I don't know whether it can be fished with a fly or not—and will likely drop the readers of FOREST AND STREAM a line to tell them of the luck of an old "trout crank," who believes there is as much "art" in fooling a trout with a fin from his mate as there is in buncoing him with a "bunch o' fool fe'thers."

KINGFISHER.

Editor Forest and Stream:

Anent the discussion of the article of Mr. Van Cleef upon the use of dark and light flies on light and dark days respectively, I would merely state that that theory, like some others, belongs I fear to the past, and which close students of the art of fly-fishing in these latter days of angling on well-whipped waters and less abundance of fish may truthfully testify to.

It is a rather dangerous undertaking for any one to refute the universally accepted rules of the old masters of the art, and with all credit to their teachings not all of these established rules emanate from them; but admitting that this is a progressive age, it should not be supposed that successful angling has failed to keep pace with the period, for we do know that fish are not as abundant as formerly; and (if we may believe) by reason of increased fishing each generation of the species fished for becomes more shy and wary for the matter of self-preservation.

Without any desire to encourage a discussion of the subject and with the same hesitancy as that with which Mr. Van Cleef offered his suggestion, from my own experience I would place more of these theories beside the generally accepted one of light flies on dark days and vice versa in the category of changed conditions, just a few of which most frequently met with are these:

1. That in waters in which fish are not specially plentiful or otherwise it is possible to take them during the middle of the day, also in low water and in bright, hot weather. I refer of course to stream work, and class this as a consistent practice except in muddy water.

2. The utter impossibility of raising for a second or third time a fish once scraped I have long since from experience been inclined to doubt; and this dangerous assertion is not vouchsafed from isolated instances or from such where the one particular fish was not always in view.

3. That fish may be taken when not strictly feeding or hungry can be proven by any one possessing knowledge of their habits and skill in manner of manipulating to surmount such an obstacle.

4. That in working for a fish from below or across the fact that the fish sees you offers little obstacle to his capture, if you understand the art of approach and know just how far, in order to manipulate the drop and play a fly as nature alone instructs. This is one of the essential points of dry fly work, the shorter line especially in stubborn cases; and don't spoil an opportunity under the mistaken theory that the fish does not see you; he is sharp enough, that is admitted; but he has a streak in his make-up called in English "curious," and has also foolish moments—and there's the rub.

It is not to be expected that the great majority of anglers are or would be converts to these and other changed conditions, brought about by the evolution from prolific to almost depleted waters, for the acme of angling with a fly—a sportsman's share under any conditions except muddy water—is not to be learned in a week, a month or a year. The exactions of a business career in this age of keen competition are too severe to permit every angler time and opportunity for such close study; hence it is dangerous to mention any of these subjects without calling down criticism. However, it may be stated that no angler has a license to continued success unless he possesses full knowledge of the resisting powers of his tackle, the good quality of which should create trust therein. This trust in turn quietly but surely affects the creel; and when one is confronted by adverse conditions the reduced percentage of loss in chances is apt to bring angling nearer to the happy medium than all the cry of depleted streams. A rod especially should be of such pitch as to respond to all the various evolutions necessary to work out successfully the problem which each separate pool presents as to rapidity of surface water and obstacles of brush or overhanging tree and bush; for the first principle of the cast forward and back is not a positive preventative of the possible loss of flies or leaders; and any close student has a stock of other casts which will, and thereby finds many fish in difficult spots unsought by others. Certain patterns of flies known to the oldest anglers are still doing duty. That they have been superseded by others more successful in taking qualities needs no argument. That these same flies fail to be catalogued in tackle stores is easy of solution from the fact that they are for the most part originated and tied by the close student of insect life, though they are not always a representation of known species. The many able English works on that subject cover a wide field. They have their origin in the ability to focus nature's panorama into a delicate harmony of color with material most of which, as some of us know, is to be found and procured with the greatest difficulty.

Admitting that good flies are a necessary part of the outfit, their selection or use, in fact in all fly-fishing there is no better instructor or tutor than the one which is always with you on the creek—nature herself, just watch closely and imitate; and as to some of the axioms born when fish were more plentiful, and when less study and conniving were necessary to success, you will first learn to doubt them, then to believe in that doubt, and not because, contrary to all precedent, so and so said so.

Referring to the early days of fishing when prohibitory laws were unknown, what the writer would like to trace through the assistance of these columns is the identity of the notorious individual who counted his catch by the so many dozen, and set that method of work up as an everlasting pinnacle of skill—a fad which unfortunately for the good of sportsmanship is still in evidence. In the old days mature fish were prolific, and the great bulk captured was of that kind as a rule; the decrease was therefore not so sudden, but the latter day slaughter of the infants by the fish-hog is a blow at the very foundation of future supply, and for what?

M. G. SELLERS.

PHILADELPHIA.

Vermont League Meeting.

ST. ALBANS, Vt., July 20.—*Editor Forest and Stream:* The midsummer meeting of the Vermont Fish and Game League will be held at Isle La Motte, Aug. 3. The invitations include all members of the League and members of branch clubs with their lady friends. Members of the League or of branch clubs are also requested to invite any friends who have made application to join the League upon this occasion and have signed the form of application inclosed herewith.

The steamer Reindeer has been chartered to take the members of the League and branch clubs, their guests and the ladies to the island and return. The dinner will be served in a tent with large seating capacity, and the business meeting will be held immediately after the dinner. The place of meeting, at Lieut.-Gov. Fisk's, is the same as on former meetings, and the Ladies' Aid Society will furnish the dinner as heretofore. No further particulars on this subject are necessary for the information of those who have been there. There will be no unusual departure from programmes of former midsummer meetings except that the invitation includes the ladies, and it is hoped that they will honor the League by their presence.

T. M. DEAL, Sec'y.

A Summer Idyl among the Sea Trout.

OCEAN GROVE, N. J., July 28.—*Editor Forest and Stream:* I think I am a dabster with a rod and reel! And for more than a quarter of a century I have found no one to beat me when "armed and equipped as the law directs," for the sleepy flounder at Cape May, or making ready at Anglesea for the bounding mackerel or the skipping sea trout! Alas! I have had to lower my colors; I am no longer "high hook." And it was Rev. Jos. G. Reed, of St. Paul's Church, Ocean Grove, N. J., who reduced me to the ranks (figuratively speaking) by catching this week eighty-eight sea trout to my sixty-four.

But, in extenuation, I must "have leave to print my remarks" and defend myself, by saying this gifted disciple of the good old Izaak Walton, Bro. Reed, is a piscator from way back! I knew him in my youth. His father was a veteran and ever successful angler at Atlantic City; and it was the late Dr. Reed, who died full of years and of honor at ninety-two, and myself who first taught the Senatorial Matt Quay to stand in the surf of the sounding sea off Brigantine Beach half the day in order to bag half a dozen black drum; no mean sport, for it requires endurance and real sportsmanship and staying qualities!

I ceased to be "high hook" in the following manner:

Geo. Bennett came to my cottage in the Grove and said: "Colonel, I am now ready to show you where the sea trout doth most abound. Be ready at 6:40 A. M. Friday." This was a beastly hour to get up and dress and make ready my Bethabara rod! But what is that to a wide-awake angler in touch with the sea when sure of a full day's sport among the finny denizens of the deep. And I now recall, *en passant*, what President Arthur said (and he deserved the "grand old name of gentleman"). "I have always made it a rule," said Chester A. Arthur, "to trust a woman who loved flowers, and to tie to a man who loved a rod and reel."

But to return. I renewed my youth like the eagle's in this wise; and since Gibbon says: "A man cannot talk long of himself without vanity," I shall be short. I accepted Brer Bennett's invitation and was at the Ocean Grove depot at the witching hour of 6:40 A. M., with nothing to gratify or satisfy the inner man save one cup of coffee (the color of Sammy Bettle's quaker coat) and two eggs; a light lunch accompanied the lemonade.

The party was not too large, to wit: Rev. Jos. G. Reed, Geo. Bennett, Jno. M. Dey, Ed. Flitcroft and J. M. S. The train dropped us at Barnegat Pier in half an hour; a cat-rigged yacht was waiting for us, and for lack of wind the skipper had to propel his boat chiefly with a pole.

But at 10 A. M. Bennett threw over the killick and we went at it. I had little doubt I should be, as was usual on such occasions, "high hook" of the party. And as I was guilty of some badinage and persiflage at the expense of the other anglers, I noticed the Methodist pastor exchange a meaning glance with Brother Geo. Bennett, who was one of his sheep. That glance boded no good for me. And it must be confessed that Pastor Reed, who was a good fisherman when Atlantic City was a baby, had his own beautiful 9oz. lancewood rod with Dutch snoods and Limerick hooks, while the rest of us took pot luck, catch-as-catch-can as to rods, reels and Cutty-hunk lines; the poles so antique that Noah had doubtless cut two of 'em to take in the ark with his beasts on a rainy day!

The southwest wind fairly blew the hook into the fishes' mouths.

Brother Reed led the game from the first. "Let no guilty fish escape" was his war cry, and every bite on a soft shell crab bait meant a 1lb. weakfish, which would go skittering along the surface of the bay, only to find the bottom of the cat-rigged yacht. In vain I did my level best to vie with this skillful scholar "in the contemplative man's" amusement. I put on another hook; I pulled in two sea trout. Then I began to crow; but Bro. Reed caught two trout on one hook while I unhooked my two fish. His score was sixty-eight able-bodied fish; mine was fifty-eight up to 1 o'clock, when I bethought myself of a Spanish trick—a kind of a *ruse de guerre!*

I said I was hungry and proposed lunch all around. Up to this hour I was "high hook" next to piscator Reed; the other three were, on an honest count, a good deal behind me. Such a lunch! Nothing stronger than lemonade. Since scientific temperance is taught to Hobson et al. at the Annapolis Academy, I am for temperance-piscatorial lunches. With a cameraderie, part of the inheritance of every lover of forest and stream or of rod and reel, we each divided with one another what we had brought, and it was good enough for the President of the Sandwich Islands.

We indulged the *dolce far niente* for one hour, when Pastor Reed gave the order to fish! But like Bret Harte's hero T. J., when struck with a "chunk" of yellow sandstone in the estomac, the "subsequent proceedings interested me no more." In this instance I was a "Truthful James." Bro. Reed, with his 9oz. rod, began to pull 'em in till he scored eighty-eight, and there was fire in Brer Bennett's eye. He wanted "to wipe my eye." He went on from one degree of glory to another. He scored seventy-two. I had only sixty-four, Jno. M. Dey had sixty-six, but Ed. Flitcroft's score was only sixty-four. But it is not all of fishing to fish. I had enough, and carried home enough to gladden the hearts of two or three Ocean Grovers. I consoled myself with the reflection that Pastor Reed had the best rig. He was an artist after Izaak Walton's own heart, and I never pretended to be an artistic fisherman. But I have now ordered a lancewood rod, with a silk line and a Chestertown hook, and I have told Bros. Reed and Bennett to beware! The skipper spread his sails; the Favonian breezes helped us and we reached the pier in time for the 3:35 P. M. train for home long before the "looming bastions" became "fringed with fire"; and thus ended a summer idyl among the sea trout.

Some time I may tell you briefly how Pastor Reed and I have found deep pools in Deal Lake, near Benson's Park, when amidst "shrubbery that Shenstone might have envied," and in sweet sylvan shades, more beautiful

than the summer lakes of Switzerland at Interlaken, we have filled our basket with the beautiful perch and toothsome sunfish, while the clouds were blushing in purple and in gold around the morning sun, which climbed the sky like a strong and rejoicing bridegroom.

JAMES MATLOCK SCOVEL.

Wild Fishers I Have Fished With.

BY FRED MATHER.

(*Concluded from page 90.*)

No man has a better chance to observe wild life than the angler, especially one who practices still-fishing, so-called in contradistinction to fly or bait-casting, trolling, etc. He is silent, and the birds, beasts and reptiles come near him, often unaware of his presence. The gray squirrel is apt to discover the angler at some distance, for it knows every stump, log or other inanimate thing in all parts of its limited range, and then such a scolding as the angler gets beats any of its kind at home when he has ruined his clothes and caught no fish. This scolding is of the nature of barking, as a dog barks, and it often brings other squirrels to join in the chorus, or a crow will alight near by to learn what the row is about. If the angler keeps still the curiosity of the squirrel is aroused, and it approaches to get a nearer view and to scold away. Once while I was sitting on a log which lay parallel with the stream, a gray squirrel with a nut in its teeth jumped on the log and ran almost within reach before it discovered the intruder, and then such a scare! It dropped the nut, and with long leaps reached the nearest tree, from whose branches I was assailed by all the vile names in a squirrel's vocabulary.

The Fisher or "Black Cat."

During the winter of 1855-56, while I was trapping in western Wisconsin with the old Canadian, Antoine Gardapee, to whom I give three chapters in "Men I Have Fished With," I made the acquaintance of this animal, which naturalists call *Mustela pennanti*, but which has a lot of common names, as pekan and black fox, as well as the names I have given above. Antoine always called it by its Ojibwa name, o-jig. It is one of the great weasel family, but looks more like a fox than a mink or a weasel, with body about 15in. long and tail of equal length.

I brought the skin of one on my first trip to my line of traps, and Antoine said: "I'll tole you, Miss'r O-jig hees skin a'n't wort' so much, an' I'll hope he a'n't too plenty, 'cause he's so bad for de trap w'en we use fish bait. He mos' so bad as old carcajou, he break deadfall for fun, sometam he break 'em, not all a tam; I t'ink some o-jig wusser 'an others."

"But Antoine, the American trappers call this animal the fisher, and I took the trouble to open its stomach, and the only bones I found looked like bones of mice."

"Yes, he eat-a da mouse, an' I 'spec' he on'y like-a da fish w'en somebody catch-a da fish for him; I don' never see him catch no fish, but, like da mink an' da sable, he come out to feed in night tam: an' we don't get good chance to see him if he fishes, but I see hees track, like-a sable, on'y bigger, an' I'll see where he dig in da snow under da log for mice."

The sable of Antoine was the pine marten (*Mustela americana*), a closely related species, which wears more valuable fur than its relative. During that winter we took several fishers, but had no traps destroyed by them. Two wolverines did us damage, and I have told how I killed one and how Antoine killed the other. We each had about thirty miles of traps to run, up one stream, across a divide and down another stream, home, one man being out from one to three nights, while the other kept house and made ready for his tired partner.

Once on my return Antoine looked up from mending his snowshoes to greet me, and I showed him a frozen trout. He glanced at it and said: "You go fish? No?"

"Look at it again, Antoine, and see the marks of a fisher's teeth in it. His skin is in the pack. I took him from a steel trap, and he could not have gotten it from any of our deadfalls or hanging baits, because we only use suckers for bait. This trout was beside Miss'r O-jig, who was dead, and that fact and the tooth marks are good evidence that the fisher sometimes fishes."

Antoine turned the trout over several times, examined the tooth prints carefully, knocked the ashes from his pipe and said: "Yes, Miss'r O-jig mus' been a-fishin', 'cause where he get da trout? Gimme dat tobac."

The Otter.

When the snows melted in the spring and Antoine and I broke camp with our furs we had two trips to make to reach our boat, and then wait a day to swell the seams of the boat. During that time I fished a little, but the waters were swollen and muddy, and I caught only catfish, which have a way of feeling baits on the bottom with their long barbels. Sitting on a log, some animal splashed into the water below me and on the other side of the river, perhaps 100ft. away. I watched up and down for it to come up, but there was no sign of it. The splash was too heavy for a muskrat, and that animal enters the water silently. Could it have been a pike after minnows?

I had left Antoine back with our plunder where the boat had been, and had forgotten both the splash in the water and my partner, when he said: "Look-a dat otter go up da bank wid a big fish!"

I did not know that Antoine was near me until he spoke, for the fallen leaves were wet, but I looked and saw a fine otter, fully 5ft. long, slowly going up the bank carrying a fish of half that length, probably a pike.

"Antoine," said I, "that otter slid in the water some time ago; it seems half an hour, but I can't say how long. It might have come up to breathe several times, for all I know. How long can they stay under water?"

"Well, I dunno rightly, I don' carry no clock; but I'll t'ink he'll stay und' 'bout ten tam so long as you. How long you stay und'?"

"Once I stayed under two minutes and three-quarters, so they said, but it seemed a half-hour to me. Bill Atwood beat all the boys, and was under full three minutes."*

"Well, den, how many minutes ten times w'at you stay und' ?"

"Just twenty-seven and a half minutes, or nearly half an hour. You don't mean to say that an otter can stay under as long as that?"

"Well, mebbe he stay half so long, I dunno, but if it was too week back I stop here and take de hide off Miss'r Otter, but he's too late an' da fur no good, mebbe. I see hees slide on da bank where he tobog down in da water, but I no put in da trap, hit's too late."

The Bear.

On two occasions a bear and I fished close to each other. One was in Louisiana, and is recorded in FOREST AND STREAM of Feb. 12, 1898, when I was out in the fall with a shotgun for yellowlegs and shore birds. The bear passed me on the other side of a small brook, and I kept so still that it did not see me. It was looking for fish, and I afterward saw where it had caught one, the scales being in evidence.

The other occasion was in 1882, when I was appointed to be the ichthyologist of the Adirondack Survey by Supt. Verplanck Colvin. In my report on "Adironack Fishes," pp. 35, 36, I describe two new dwarf suckers found spawning in mountain streams which feed Utawana and Big Moose lakes. It was on the latter, near a shanty called "pancake hall," that I disturbed a bear which was catching the spawning fish. I did not see this fellow as I went up the tumbling stream, but it either saw or heard me. It gave a snorting "woof" and made some noise as it retreated into the brush. A few steps further and there was a small pool crowded with these little fish, and on the bank lay enough heads, tails and other debris to account for many hundred fish caught.

There are four things which a bear does that I would give a big red apple to see him do. They are: To catch fish, rob a bee tree of honey while the bees were active, pick or eat raspberries, and put out his tongue on a big hill of pismires and eat them as they swarm upon it. I have seen places where a bear has done all of these things, but a bear is modest and would stop if he knew a man was looking at him. In FOREST AND STREAM of Aug. 27, 1897, in a sketch of Dr. Spencer M. Nash, it is related how a bear had dug into a hill of these large and formidable ants in order to have them attack his tongue, but a bear is like a pet dog or a child, and will never show off its accomplishments before strangers. But of the four things mentioned I think the gathering of raspberries would be the most interesting. Imagine the briers in tongue and claws! But a bear does not mind trifles like that when it can eat live bees among the honey.

Eels.

The eel would not be selected to appear in this company as a fish that has fished with me, in preference to other predacious fishes, but for the fact that its methods differ in some respects from those of all other fish-eating species.

In the auld lang syne my old boyhood teacher of woodcraft, the old Greenbush trapper, Port Tyler, said unto me: "Come along o' me to-night and bob for eels inside Van Wie's Point light, an' then we'll row up to the island and sleep in Rivenburg's barn, take up my nets in the morning and row up to the city. How's that?"

"It's a thing that's tempting, Porter, but I can't do it; must be in Albany by 8 A. M., dress, breakfast, and get to business an hour later. No! Sorry, but can't do it!"

"Then you're all right. It's daylight about 5, an' I can take up the nets, get breakfast and land you on the Albany dock at 7. Now what excuse is there?"

"None, if you have the bobs made it's a go."

And so we drifted along down the river some half-dozen miles, I partly rowing, while my friend strung the worms and made half a dozen bobs, which he buried in a pail of fresh soil. There is little use in bobbing until after sundown, and time was plenty. We were pulling them in, and the huge sturgeon were jumping freely, for the Hudson was a grand sturgeon stream forty years ago, and soon one jumped just outside the dike and within the range of the light. It looked to be as big as a whale, and its splash rocked our boat.

"I suppose the sturgeon jump in play, don't they, Porter? They can't catch flies, as a trout does, with that round mouth, a foot behind their noses."

"No, they don't jump in play; the eels make 'em jump."

"Eels? How's that?"

"Well, now, some people won't believe it, but it's true, an eel will enter the body of a sturgeon and eat out its insides if it can, an' if it has eggs it eats them first. An' I'll tell ye how I came to find this out. I had ketched two big sturgeon in a gill net, an' it was Wednesday, an' I wanted to keep 'em alive until Thursday night, so as to market 'em early on Friday; so I just slipped a line through their gills an' staked 'em out in deep water to keep 'em alive. Thursday afternoon I rowed down after my fish, an' there they was both dead an' their innards eaten plump outen 'em, an' no outside mark. I was just gettin' into sturgeon fishin', an' as Friday was the day to sell fish I thought I'd beat the eels next time, so I made some canvas jackets about 5ft. long, with strings to tie over their backs, an' then the eels went for the sturgeon's gills an' killed 'em.

"That was hard luck, Porter; did you give up trying to keep sturgeon alive?"

"No, I made a long float, with holes, covered with fine wire cloth and a door in one end, an' I could land live sturgeon in Albany before daylight; that is, if somebody didn't steal 'em, as they did sometimes."

While taking up his nets in the morning the old man showed me several fish in his gill nets that had the abdomen and intestines eaten out. "That's the work of an eel," said he.

While fishing for minnows for bait in brackish water I saw an eel come out of the salt meadow grass and glide into the water. I have seen where they have crossed the road between the harbor and mill pond, and have found them in my wooden trout ponds, where they could only get by travel over land. I have dug them out of 2ft. of muck and have seen the young travel in the moss in the top of an arch, out of water, because the water was too swift to stem. The eel is the most muscular of fishes; its habits are the least known of our common fishes, and its persistence in overcoming obstacles to its ascent of rivers is not equaled by any other fish, the salmon not excepted.

* At the old Aquarium, Broadway and Thirty-fifth street, 1876, we had a "water queen" who stayed under fully five minutes, being timed by many watches, but she spent many minutes in inflating her lungs to their extent, and thus filling her blood with oxygen. We boys were not up to that trick.

The House Cat.

Not exactly a "wild fisher" at all times, but often wild enough to figure in this company. Pussy is very fond of fish and dreads water, yet she will often risk a wetting to satisfy her appetite for fish. While fishing for trout between the mill ponds at Cold Spring Harbor, Long Island, and leisurely casting in a pool a splash drew attention to a large cat just emerging from the water with a handsome trout. She was wet all over, and must have struck her game where the water covered her back. I had neither gun nor pistol, and pussy lived to report. When I have a gun I make it a point to kill every cat that I find in the woods. My love of robins and other birds has brought me to hate this domestic tiger, which kills them.

A maiden lady in the village usually had from twenty to thirty cats, and although she fed them well there was no brook trout on their menu. Near her father's stables there was a private trout stream, and the owner gave me the privilege of taking eggs for the State. My men reported that every morning there were remains of trout on the bank, where cats had eaten them. I rigged a dozen steel traps in places where cat tracks hinted that they would do the most good and said nothing to my men, for they had relatives near. Knowing the racket a cat in a trap would make, I was there before daylight in order that there should be no disturbance of my neighbor's sleep. Three cats were my only reward, and as that didn't pay the scheme was dropped.

I am not sure that the killing of birds and game is my only reason for killing cats. I would not hurt nor injure one any more than I would the pestiferous imported sparrow, but I would annihilate the race if I could. I hate the self-satisfied air the cat has, and its condescension in letting you pet it, so different from the joy of the dog at a caress. Mark Twain had some such feeling toward the camel.

A cat which was bountifully fed once bursted a cage and killed a mockingbird of mine, and the song of that bird was of more value than the lives of all the cruel cats that ever lived. That particular cat never became an old cat.

The Frog.

This animal is generally supposed to spend the time in summer in rendering Wagnerian operas and catching insects, but I have taken from its maw small frogs, young turtles and fish. One day, when Jack Sheppard and I were fishing an Adirondack lake for trout, a great bullfrog plunked in the water and soon climbed the log again, swallowing something.

"That fellow's got a fish," said Jack.

"Don't believe it. His splash would scare a fish, and he can't swim fast enough to catch a fish. Let's catch him and see."

"For the cigars at Bennett's?"

"For the cigars. He never got a fish in that short time, after that plunk."

Jack reeled in his line until it was about the length of the rod, while I slowly paddled and drifted up to the batrachian. Jack swung the fly above his nose, and he was our frog. "Make it half a dozen cigars?" Jack asked.

"All right; make it a round dozen."

I had on a previous day remonstrated with Jack about not killing a frog before he cut it in two and skinned the legs; the sight of the living portion annoyed me, and as he was my guide I forbade the practice. He unhooked the frog and handed it to me. A blow on the head with a heavy knife-handle and a cut into the brain stopped all feeling, and then he opened his inner works, and there was a little sunfish about 2in. long.

"Jack," I remarked, "you've won, but as you were booked to win in any event, as I buy the cigars every night, you have not won much, but I am the real winner, because I have learned something. Now let's not waste this fellow, but stop trouting and get frogs enough for breakfast. How did that frog catch that fish? That's what I want to know."

Jack tossed the little fish overboard and merely remarked: "It's funny how they do it, but they do."

"Jack Sheppard! I asked you a plain question that should have a straight answer, and all I get is the refrain of a music hall song. How did the frog catch that fish? Did it catch it when it made the dive from the log or did the frog dive to the bottom and come up under the fish? That's the question."

Jack threw the skin of the legs overboard and followed it with the body of the frog, laid some fresh grass over the trout in the creel, placed the legs on the grass, looked up and remarked: "I'll be durned if I know."

In this series of articles there has been a feeble attempt at a correct classification of the birds, beasts, insects and other animals mentioned, and the frogs should not be slighted.

To the careless non-observer a frog is a frog, like the primrose on the river bank, "only this and nothing more." A bullfrog simply means a large one, but there are small bullfrogs, for it is a species and not a condition of size. Following Jordan, outside the six species of tree frogs, which are popularly but erroniously called toads, we have, from New York to Texas, eight species of frogs, and only one, *Rana catesbiana*, is the big bullfrog. It varies in color, but may be known by its large ear drums and the absence of bright colors. The tadpoles are very large and light colored; larger even than the body of the young frog, into which they transform.

The Raccoon.

This very scientific fisher has been left for the last

because it is the wisest and therefore the best fisher of them all. The Germans call this animal the "wash bear," from its habit of washing things before it eats them. As the coon is omnivorous, it may be questioned if it washes birds, and I know that it does not wash green corn, the "roastin' ear" of the South. The old darky song says:

"Ole Mistah Coon's a mighty man,
He carry a bushy tail;
He steal ole massa's cawn at night,
An' he husks it awn de rail.

De squirrel hab a bushy tail,
An' stumpy grows de hair;
De ole coon's tail am ringed all 'roun',
An' de possom's tail am bare."

Here is a condensed natural history, and such simple songs made negro minstrelsy popular forty years ago, but what they sing to-day is characterless.

Next to the fox, if not before it, the coon ranks in cuteness. I saw one wade in on a riffle and go up stream, turning a stone with one forepaw and grabbing any fish or crayfish which might dart out with the other. It was in the summer, when the streams were low in Louisiana, and I had been fishing, but at that time was sitting on a log taking a bite at noon. A bunch willow concealed all but my head, and when the coon came in sight I suspended mastication and tried to suppress breathing, for a fellow may be out for years and not get a chance to see a wild animal search for its food as if it were not observed. There was no desire to kill the coon, as it was midsummer, and neither flesh nor skin were worth [illegible] then I'm that sort of fellow that when not pressed for meat would spend half a day to see a chipmunk dig its hole, and think the time well spent.

The coon proceeded cautiously with one paw ready to grab before a stone was disturbed; then the stone was quickly upset and a grab made and a crayfish was captured; just how I could not see, but in a way that avoided the two great pinching claws, which were then broken off, and the crustacean scrubbed and eaten, as some darkies eat peanuts, shells and all. This accounted for the number of these claws seen on the riffles. I wonder if all coons break off the claws from crayfishes before they wash and eat them.

Coons also kill and eat the small pond turtles, the painted and spotted ones of the northeastern United States, and perhaps the larger "sliders" of the South. I have never seen them eat a turtle, but have seen the empty shells picked quite clean along the shore, and usually surrounded by coon tracks, forming good circumstantial evidence.

While fishing in Kansas a coon came out of the woods and washed a frog within 30ft. of me, and scrubbed it well, and went back into the brush.

"Oh, Mistah Coon's a cunnin' t'ing,
He ramble in de dark;
An' de only t'ing dat 'sturbs his mind
Is to hear ole Ringo bark."

A Fishing Cousin's Letter.

NEW YORK, July 26.—*Editor Forest and Stream:* The inclosed letter from my cousin, W. H. Young, of Trenton, N. J., to me has been read with so much pleasure by several of my friends and myself that I thought others who love to read a good letter about fishing would be glad to see it in your paper. If you use it you will give great pleasure to many of your admiring readers.

D. JONES.

TRENTON, N. J., July 23, 1898.—My dear Dave: Well, old boy, I think I can now tell you a fish story that you will enjoy, first, because it is true, and secondly, because I had a hand in it. To go back a month of more—I forget the date, but it was in the "month of roses"—I had the great pleasure to land a bass from behind the identical rock at Goose Island where you caught one two years ago. I drifted down to just above the rock, anchored and cast a helgramite behind the rock on the edge of the swirl of the current, and he took it at once. He made a fine fight and was very gamy, but my new line (for which I thanked you in my letter to you at Bridgeton, and for which I again thanked you while this beauty was on the other end of it) was true and held him firm. He weighed just 3¾lbs., and so far is the Dewey bass at Nelson's boat landing. Have since then landed others of 1, 1½ and 2¼lbs. But there is another one, a dandy, a daisy, the one I have been looking for all my life and could not find, but who was kind enough to look me up, and we both were ready for business when the junction was made. On the 14th of this month I went to the Water Gap; Godley and wife were there, stopping with relatives, and I went to the hotel. We fished all day Friday and Saturday and caught lots of bass, but nothing over 1 and 1¼lbs. The baits used there are helgramite, stone catfish and eels.

Monday we were to come home on the 2:22 train, but of course we went fishing in the morning and started out at 7 o'clock. We floated down from the rapids above to the point of the island below the boat landing. There we anchored and still-fished and caught some. We changed our place three or four times, always a little lower down, and drifting to it. When we got in the boat Mr. Graves, the boat-keeper, put in two of his reed poles, saying, "If you strike a big fish these poles will set the hook better than your rods can, and I advise you to use them." So we had put catfish on and looked for results. We fished with bugs and caught six bass. About the time to pull up and go home my rod (the Graves pole), which had a 5in. catfish on (the loose line I had run off and laid in the bottom of the boat), started off slowly, and I immediately took charge of that rod and all others came into the boat. The line still was moving off down the river, and I could tell by the steady pull that my friend had found me. I think 30 or 40ft. of line went out, and toward the last it went so fast that I had to let him take it himself from the reel; then he stopped and turned it, and put it where it did him the most good. As he started off to look for more dinner, I gave him his check, reminding him that he had not paid me for what I had furnished him; but he tried to get away, and tried so hard that I could not prevent him for a time. It seemed as though I had sunk the hook in a floating railroad tie, he was so heavy and irresistible in his rushes. The reel screamed and sounded like a buzz saw going through a saw log. He made at least a half-dozen fierce runs; of course I took him up between times or the line would have given out. He did not show himself once, but kept down deep. Once it seemed that he was on bottom and tugging away, just as a dog in playing with a rope in his mouth will brace himself and shake his head and pull back with all his strength. I had some difficulty to start him, but by taking up one anchor and swinging around I changed my position and put the strain on from a new point. Oh, what a relief to feel that he had started again, but I would have given something at that time to have seen him, for I knew he was the largest bass ever come to my rod. Godley was all anxiety, and watched with bulging eyes every move of the line as it cut through the water. He was kept busy changing the boat, and was full of devout good wishes for the successful boating of the "mystery," for the fish had not yet broken water. At length nature was compelled to give him to his captor, and the strain became less and less, and up he came slowly to the surface, saying a last good-by to the scenes of his childhood as he passed them for the last time. As he lay on his side some feet from the boat, utterly unable to move that powerful tail, he did look to be a monster, a fit champion of the bass family of the Water Gap. Slowly and cautiously he was led to the side of the boat, while Mr. Godley tenderly raised his gills and laid him softly down, and we sat there and admired his beautiful proportions and graceful shape. Evidently he had swallowed the bait, for it was dead as a mackerel and had run up the line 6 or 8ft. The hook had caught him in the corner of the mouth, just under the skin, and he could not have broken away unless I had been cruel to him, which I was not. He was the fattest fish I ever saw; very thick through the body—22½in. long, 16in. girth, and weighed just 6lbs. He created a deal of excitement at the Kittatinny House, as we had to pass there to go to my hotel, the Glenwood.

There, Dave, that is the biggest bass I ever expect to get, and I can say that I am satisfied. Let others have their turn, and I am willing now to take the ones of lesser degree. "I have dined and fate cannot harm me."

W. H. Y.

Michigan Fishing Waters.

DETROIT, Mich., July 20.—At East Tawas, a pleasant little town on Tawas Bay, in Iosco county, Mich., the central point of a remarkably fine trout country is found, and the place is convenient headquarters for scores of fishermen. The Au Sable is a few miles further on, and is too well known already to require even a mention. The streams hereabout are all good streams and afford excellent sport. True, there are many who go up into this country to fish who are not fishermen. Everything that comes to their hook is fish. The fingerling is eagerly chucked into the creel, and when a ½-pounder comes along they don't get him. The beautiful bay that spreads out before East Tawas, a part of that great lake of the painted Hurons, is dotted with sails, and the beach, a long stretch of gleaming white sand, finds plenty of bathers taking a dip at all hours of the day.

At Alpena, which lies at the head of Thunder Bay, you may be prepared to hear of some of the big black bass catches. Long Lake, a fine, large inland lake, some six or seven miles from Alpena, is the favorite black bass resort. A fine macadam road leads to this place, and there are plenty of boats and boatmen. Speaking of this road, it is worthy of mention that, as a piece of business sagacity which other localities would do well to imitate, the county has constructed these macadam roads in various directions radiating from Alpena, for which purpose the county was bonded for $100,000, and they never made a better investment. The farmers are benefited incalculably, and the mercantile community shares the immense advantage of direct and quick communication with the district tributary to this county town. Long Lake is a great fishing ground and a most attractive spot. The small-mouth bass caught here last August and September were the largest and handsomest specimens of this great game fish that I have ever seen, not even at St. Clair flats have I seen their equal; while the pike and pickerel and muscalonge afford the most exciting sport. I wish Fred Mather's article on the relation of rods and lines, in the FOREST AND STREAM of May 28, could be read by every fisherman who fishes for bass in these great natural homes of this magnificent game fish. But is it evident that what he says is not known to many of them. It is a great mistake that those who profess to be so fond of fishing and shooting do not subscribe for and read regularly some first-class journal devoted to these sports. Half the pleasure of these is lost by losing the interchange of views and experiences of those who are intelligent and careful observers. A man may think he knows all that is worth knowing, but here is where he gets badly left. "Everybody knows more than anybody." And sometimes a kid, such as El Comancho writes so charmingly of, can give a veteran points that will amount to a revelation.

The fish hatchery of the U. S. Fish Commission, located at Alpena, has been enlarged and improved since my last visit; a change has also been made in the superintendent or foreman. Mr. Tulian, who was formerly in charge, is now in charge of Colorado hatchery, and Mr. S. W. Downing succeeds him. Mr. Clarke, of the Northville hatchery, now has both this and the Alpena hatchery. From Mr. Downing I learned much that is interesting relating to the operations at this point, among others that he planted in 1896 35,000,000 whitefish fry, and in 1897 32,000,000, which were distributed as follows: Frankfort, Mich., 2,500,000; Manistique, 4,000,000; Warehouse Point, North Shore, Lake Mich., 2,500,000; Straits of Mackinac, 2,500,000; North Point Lighthouse, 4,000,000; Hammond's Bay, 2,000,000; Crow Island, 2,000,000; Sugue Island, 2,000,000; East Tawas, 2,000,000; Beaver Island, 3,000,000; Thunder Bay, 3,000,000. Mr. Downing is putting everything in fine shape for next season.

There are said to be no less than three distinct species of lake trout in Lake Huron. I have seen two of them, which vary materially, while there are many variations of color, according to the runs and locality from which they are taken. The Mackinac species predominate, and these the local fishermen here say are the true *namaycush*. Next in number seem to be the "buckskins," as they are called; this species varies from the former in that it has a tough, leathery skin, which gives it its name, and is also lighter in color and weight. Then come "the racers," which are growing scarcer every year, and when they are utterly extinct no one will complain—certainly not the fishermen, for they are a perfect terror to all other species; just what has caused the rapid decrease is difficult to tell, for there is no known fish that can get away with them in an evenly matched open fight. They are reputed to be terribly destructive; have a head and mouth of immense proportions—altogether disproportionate to the size of the body as compared with the other species.

KEUKA.

The Sea Lion Case.

THE sea lion which has been on exhibition at Asbury Park in the summers since 1896, and in the winter of 1896-7, was on view at the Smithsonian Institution in Washington, with the card, "Kindly loaned by Mr. James A. Bradley, of Asbury Park," was the subject of a long and interesting argument on escaped animals yesterday before Justices Beekman, Giegerich and Gildersleeve, of the Appellate Term of the New York Supreme Court.

The action was brought by James R. Mullett, a sea captain who has spent a number of years in capturing and dealing in sea lions, to recover the sea lion from Mr. Bradley, and in default of the animal $500 damages for converting it to his own use. The case came up originally before Justice McKean in the Eighth District Municipal Court, who dismissed the action, and Capt. Mullett brought it up on appeal from that decision.

Capt. Mullett testified that as the result of study and experience he had ascertained that such sea lions cannot live in the Atlantic, and are never found there in their natural condition. They are caught off the coast of California, and he had found that the only ones that will live in captivity are those caught at the Santa Barbara Islands, in the Pacific, where the one in suit was taken. They have a sea lion at the Falkland Islands, but it is different from the California sea lions. The sea lions are lassoed on the rocks when asleep, a matter requiring much experience and adeptness. About 50 per cent. of those taken in captivity die, so that one which has been a year in captivity is much more valuable than one recently taken. Capt. Mullett said he has written accounts of these things on orders from the Government. When asked about the intelligence of these animals, he said: "They are the most intelligent animals in the world, and they make friends sooner than a dog or a horse."

He testified that he took a great fancy to the animal in suit, beside which he had slept the fourteen nights that it took to bring it from San Francisco. It got so tame that it readily obeyed his call. He had lent it to William A. Conklin, formerly in charge of the animals at Central Park, and Conklin put it on exhibition at Glen Island. The animal escaped and was caught a few days later by some fishermen in a pound net out in the ocean near Mantoloking, N. J., about seven miles down the coast. The fishermen sold it to James A. Bradley for $50. Capt. Mullett said that the sea lion is worth $500 at least. Capt. Mullett did not learn until the summer of 1897 that Mr. Bradley had his sea lion. He knew it because one of its flippers was injured. When he asked Mr. Bradley for his sea lion, Mr. Bradley "was very stiff" and said that he knew the law, was a lawyer himself and that he would not give up the animal if it cost him $1,000 to retain it.

The defendant contended that the animal was *ferae naturae* (wild), and that ownership was lost on its escape. Among the cases cited by his counsel, F. W. Mount, was: Bracton, De Legibus Angliæ, Book 11, Chapter I., Section 2, edition of Sir Travers Twiss, Q. C., D. C. L., vol. I., page 65, reading:

"The dominion over things by natural right or by the right of nations is acquired in various ways: in the first place, through the taking of those things which belong to no person, and which now belong to the King by civil right, and are not common as of olden times, such, for instance, as wild beasts, birds, fish and all animals born on the earth or in the sea or in the sky, wherever they may be captured, and wherever they shall have been captured they begin to be mine because they are coerced under my keeping, and by the same reason, if they escape from my keeping and recover their natural liberty, they cease to be mine and again belong to the first taker. But they recover their natural liberty then when they have either escaped from my sight in the free air and are no longer in my keeping, or when they are within my sight under such circumstances that it is impossible for me to overtake them."

Quotation was made from Blackstone, who, after speaking of deer in parks, hares and rabbits in an inclosure, doves in a dovehouse, pheasants and partridges in a mew, hawks that are fed and commanded by their owners and fish in a private pond or in trunks, says:

"These are no longer the property of a man than while they continue in his keeping or actual possession; but if at any time they regain their natural liberty his property instantly ceases unless they have the *animum revertendi*, which is only to be known by their usual custom of returning." A further quotation by Blackstone was made:

"If pheasants escape from the view or fishes from the trunk, and are seen wandering at large in their proper element, they become *ferae naturae* again, and are free and open to the first occupant that hath ability to seize them."

A case in 5 Coke, 104, was cited: "If a man makes coney boroughs in his own land which increase in so great a number that they destroy his neighbors' lands next adjoining, his neighbors cannot have an action on the case against him who makes the said coney boroughs, for so soon as the coneys come on his neighbor's lands he may kill them, for they are *ferae naturae*, and he who makes the coney boroughs has no property in them, and he shall not be punished for the damage which the

coneys do in which he has no property and which the other may lawfully kill."

In 7 Coke, 15, it was said: "All white swans not marked which have gained their natural liberty and are swimming in an open common river might be seized to the King's use by his prerogative, as the swan is a royal fowl; and all those the property whereof is not known do belong to the King by his prerogative; and so whales and sturgeons are royal fish and belong to the King by his prerogative."

The Duke of Rutland had pheasants, and a neighbor used to spread food on his grounds to draw them to his property. The Duke fired guns and fireworks over his neighbor's property to scare the birds back, and the neighbor sued the Duke. Lord Bramwell, in his decision, held that the Duke was in the wrong, and said that if he wanted to keep the birds on his property he should have offered greater inducements in the way of food than his neighbor.

The American case of Newkirk vs. Buster in this State was also quoted. It was an action brought to recover the value of a deer skin. Newkirk wounded a deer about six miles from the house of Buster in the Adirondacks, and followed the track of blood until nightfall. The next morning he came up to Buster's house, where the deer had been killed the night before. He demanded the deer, but got only a verdict for 75 cents for the hide, but it was reversed on appeal, the court holding that Newkirk did not have the animal under his control by the wound given.

In the sea lion case, the plaintiff's lawyers, Kisch & Roberts, urged that the sea lion had not returned to its habitat, and they made the same quotations from Blackstone to show that an animal could not regain its freedom until it had got back to its natural conditions. As sea lions cannot live in the Atlantic, it was urged that Capt. Mullett owned the animal just the same as if it had been caught astray in the woods. It was stated that if a lion should escape from a circus and was caught wandering about the streets of this city, the owner would have the right to recover him, because the lion had not got back to its natural conditions.

The judges, who seemed greatly amused over the argument, reserved decision.—New York Sun.

Luck.

Editor Forest and Stream:

It seems to be generally conceded that there is quite an element of luck or chance in angling, but probably this is because we do not possess as thorough an understanding of the subject as we might. Much depends upon the construction which we put on the words. Webster defines luck as "That which happens to a person: an event, good or ill, affecting a man's interest or happiness; a course or series of such events regarded as occurring by chance." Chance is said to be "The absence of any defined or recognized cause." In common parlance among fishermen the two words are often used to convey the same idea—that is, an occurrence which they believe to have been completely out of the pale of law is ascribed to luck or chance. It frequently transpires, however, that events which appear casual at the time, or the work of chance, because unforeseen or inexplicable, are sooner or later found to have been due to a well-defined cause. Hence it will be both safe and wise when a thing is beyond our comprehension to avoid haste in declaring that there was an absence of cause. Emerson tells us: "All successful men have agreed in being causationists, they believed that things were not by luck, but by law—that there was not a weak or cracked link in the chain that joins the first and last of things—the cause and effect."

It would be a difficult task, though, to convince some men who have had experience in angling for trout in the Adirondacks that luck has nothing to do with success. In fact, it is a very ordinary thing in that region to hear the words luck and success used interchangeably. When one fisherman encounters another on lake or stream, it is customary even among strangers to exchange salutations, be they ever so brief, and what is more natural than that they should display an interest in each other's catch of trout. A stereotyped expression on such an occasion is: "Well, what luck?" and the angler is likely to be greeted in the same manner a dozen times while returning to his hotel at the close of a day's sport.

But there is also a marked tendency among people in the great wilderness to use the word luck to indicate a mysterious something with which it is believed law has nothing to do. Were it not for his belief in luck or chance, the expert fisherman would be puzzled to account for the remarkable success which novices in the art of angling not infrequently meet with. It would be humiliating indeed to the man who has, for a score of years or perhaps nearly half a century, visited the woods annually in quest of trout, to be obliged to admit that certain happenings "were not by luck, but by law." He has angled early and late, in all sorts of weather, with all kinds of tackle, at different seasons, in various parts of the wilderness, and possibly has never caught a speckled trout weighing over 3lbs. Imagine his mortification, therefore, but for this convenient word "luck," when his daughter, whom he persuaded to accompany him and for the first time try her hand at fishing, promptly hooks a superb 4-pounder, which is safely landed! Are the veteran angler's years of experience to count for naught, or are his knowledge of the haunts and habits of the trout and his skill in enticing, hooking and landing them of no value, that in accordance with some law a girl should so speedily accomplish what he has been unable to? No, he cannot be a causationist after an occurrence of this kind—"it was simply a piece of unadulterated good luck." Of course he is proud that his daughter made the capture, but he would feel happier over it if the fish weighed an ounce or two less, instead of a whole pound more than the largest he ever brought to creel. And he may be a generous, kind and loving parent, too, in spite of this somewhat envious feeling for which he believes chance alone is responsible.

It frequently happens that a person who is just learning to play cards wins the first game or two, and fortune occasionally favors the amateur angler in an equally surprising manner. If causationists are disposed to argue that the angler's daughter referred to inherited something of her father's skill, and that in consequence her capture of the big trout was traceable to law, other instances can be cited where equally inexperienced persons, whose ancestors were not fishermen, have met with astonishing success. For example, some young fellow, who has never before fished for trout, has been known to sally forth on a lake or stream equipped with tackle wholly unauthorized by precedent, and while angling in an apparently unlikely spot haul in the biggest fish taken in that water during the season. It is a matter of record that just such unexpected things as this come to pass in the Adirondacks as well as elsewhere, and how can they be accounted for in any other manner than by attributing them to luck? Certainly there is no way that is more satisfactory and popular with the masses. Where or what is the law that would compel or induce the monarch of speckled beauties to take the hook of the unsophisticated maiden or that of the other tyro in preference to the carefully arranged and skillfully handled lure of the adept? "Law indeed!" indignantly exclaims the veteran fisherman, "It's no such thing! It's luck, pure luck, and that is all there is of it!"

It is noticeable also, even among anglers whose dexterity is acknowledged to be nearly equal, that there will be one man who, for some reason, or rather without apparent reason, will invariably catch more trout or bigger ones than any of his companions do. The fortunate one may believe his success is due entirely to his superior skill, but the others will surely think it is only luck, even though they are considerate enough to keep their opinion to themselves. "Pitch a lucky man into the Nile," says the Arabian proverb, "and he will come up with a fish in his mouth," and the truth of this seems to be illustrated by the good fortune which some Adirondack anglers have and which cannot be wholly accounted for on the score of extraordinary proficiency. Per contra, there are fishermen of considerable dexterity who, for some inexplicable cause, if cause there be, "play in hard luck," to express it tersely. Perhaps they may be as successful in enticing the trout as their fellow anglers are, but just at the critical moment something goes wrong, the rod snaps, the line parts, the hook breaks or tears out, the quarry finds refuge under a log or tree top, a slippery rock causes an involuntary plunge into the water, or some other unforeseen event occurs which gives freedom to the biggest fish of all. Where is the angler who will unhesitatingly admit that there was carelessness or contributory negligence on his part on such occasions? If one be found he can safely be put down as a thoroughly conscientious man, for to most persons the temptation to attribute the loss of a large fish to hard luck is very greaf. Sometimes people who are ordinarily scrupulously truthful will be able to persuade themselves and others, even though they may feel they have been a little incautious in handling a fish, that its ultimate escape was not so much due to this fact as it was to ill chance.

In view of the widespread belief in luck, which is manifest among those who angle in the Adirondacks, it appeals singular that there should be so little actual superstition in connection with fish and fishing. Of course nearly everyone who catches trout has more or less faith in signs, but they are usually such as are born of observation, and for which reason stands sponsor. The guides and other woodsmen have sayings in regard to fishing, in some of which they impose a great deal of confidence, but in nearly all cases they are based upon knowledge gained from long experience.

For instance, in some parts of the wilderness they say that "the trout won't bite when the water is in bloom," and in other localities that "there is no use in fishing when the mustard is on the water," expressions which have the same meaning. In early summer there is a period of several days' duration when the water in the lakes and streams is literally filled with the pollen from the pines, or other evergreen trees, and it is to this condition that the sayings relate. So great is the quantity of pollen that finds its way into many of the lakes that for some time after it has ceased to fall and the water has cleared, long ridges of the yellow dust, often 2 or 3in. in depth, will be seen along the shores, where it has been washed up by the waves. It is a fact well known to everyone who has essayed to catch trout when the water is filled with pollen that the results obtained at such times are apt to be disappointing, although there may be occasional exceptions to the rule. For some reason, which no one seems to very clearly understand, the trout usually prove reluctant to take the fly or bait, and hence the local aphorisms referred to.

The saying that "it is unlucky to fish up stream" may not influence anglers to any great extent, but the fact remains that nearly all who have had experience invariably prefer fishing down stream. It is quite a common occurrence for a man to walk up a creek for miles, passing en route deep pools where trout are sure to be lurking, without so much as putting his rod together until he reaches the point where he proposes to begin to fish toward home. In nine cases out of ten there is not a trace of superstition associated with the action, for it is not the saying itself that governs his movements, but the fact that practical experience has taught him the advisability of adopting this course. There are more reasons than one why it is better to fish down stream. In the first place, it is much easier; for if the creek is wide enough to make wading necessary, the advantage of going with the current will at once be apparent, and if it is one of the many boisterous mountain brooks which trout so delight in, the angler will be obliged to step or jump from rock to rock in following it, and he will find that he can descend far more readily than he can climb. Again, in going down stream one is enabled to command a better view of the pools and still waters, and is therefore in a more favorable position to determine where to make his casts. His advantage on the rifts is still more evident, for oftentimes his lure will be carried by the current to the precise spot which he desires to reach. The favorite hiding places for trout are under sunken logs and big boulders, and it will be noticed that in the majority of cases there is an opening on the upper side. The speckled beauties like to lie with their noses up stream, and the desirability of having the bait or fly approach from this direction is obvious. When all these facts are taken into consideration, it is not to be wondered at that some one who had tried it declared it was unlucky to fish up stream, that others who subsequently made the experiment corroborated the statement, and that finally it came to be accepted as a maxim.

In some portions of the woods where the principal fishing is in a river or large creek, which the angler has to wade to get the best results, there is a familiar saying to the effect that "You will have no luck with trout until you get wet." That there is reason in this aphorism is very plain, and it is often used by the guides as a civil means of informing novices that they cannot expect to catch many fish while walking along the bank of the stream.

There are fishermen who believe that in some unaccountable manner the moon exerts an influence on the trout, and that they will bite the best when it is in the first quarter. It is also thought that the poorest time to fish is during the two or three days just before the new moon. It is doubtful, however, if the most firm adherents to this theory would attempt to explain why fair Luna should thus affect the appetites of the speckled beauties, although they claim to have learned from observation that there is something in it—and perhaps there is. Who knows?

On some of the larger lakes in the Adirondacks anglers will note the direction of the wind during a gale, and after it has been blowing hard for a few hours will fish for speckled trout near the shore opposite that from which the wind comes. Good success has frequently been known to attend such action, but whether or not the direction of the wind had anything to do with it is another question. Some fishermen maintain that the trout during a heavy gale drift, perhaps unconsciously, toward the further shore, with the constant trend of the waves, while others think the fish go there in quest of insect food, which they know will be more plentiful in that part of the lake where it is naturally carried under the combined influence of wind and water. When we consider the known facts in this connection there appears to be some foundation for the saying that "The wind blows the trout toward shore."

In some localities in the wilderness fishermen pay considerable attention to the direction of the wind in the morning, and frequently allow it to decide whether they shall go after trout then or wait until it shifts. But they are just as likely to want the wind in the southeast or northwest when they angle as they are to have it in accord with the points declared favorable in the poem. As a matter of fact, no rule or set of rules in regard to the most auspicious winds for fishing can be formulated that will be universally applicable in the Adirondack region. Owing to the mountains, valleys and forests, the currents of air are almost constantly changing, and on a day when, in a given lake, the trout are biting freely with the wind blowing from the northwest, they may be exhibiting the same activity in another lake, only a few miles distant, where the wind is in the southeast. It is true, nevertheless, that in many waters the direction of the wind appears to have an important bearing on the fishing, but local rules will be found of more value than those set forth in verse.

There are also various truisms relating to the early portion of the trout fishing season. Many anglers assert that in the Adirondack lakes "the best time to catch trout is just as soon as the ice goes out," and that in the streams the most satisfactory results will be obtained immediately after they become free from "snow water." There is a familiar saw to the effect that trout will bite the best when the butternut leaves or those of the alder are "as large as a mouse's ear," and another, applying more especially to streams, that "the time to go after trout is when the lilacs are in bloom."

The most successful anglers in the wilderness are close observers and quick to take advantage of what they read on the open pages which nature spreads out before them. It is said that in Sweden fishermen who see the print of a flat foot in the sand consider it unlucky, but in the Adirondacks no such superstitious thought would be suggested, although the footprint would be duly noted. If it happened to be near a trout stream in which he intended to fish, the angler who saw it would observe in which direction the person who made it was going, and whether the track was fresh or not. He would readily determine whether it was made by a man, woman or child, and very soon discover if more than one person had been over the ground. These points would have more significance for him than the fact of the print being made by a flat foot. If the recently-made tracks of one or more men were discernible, indicating that they had preceded him up or down the stream, it might cause him to change his plans for the day and go elsewhere, or he might make a detour for the purpose of striking in ahead of the others.

Nearly all of the signs and sayings that have been alluded to thus far are of some value, and deserving of the attention of anglers who are ambitious to capture the speckled beauties, but there are a few so-called signs which savor strongly of superstition. One of the most common instances of this nature in some sections is that "If you spit on the bait before casting it in the water it will bring good luck." Of course none but the most credulous will believe that the saliva has any efficacy to tempt the trout, and even though it had, it must of necessity be washed from the bait the instant it strikes the water. Notwithstanding this fact, it is not unusual to see the experiment tried.

Occasionally an angler is found who has peculiar ideas about particular articles of clothing or fishing tackle, thinking that with them he has better luck than he otherwise would have. By way of illustration, he may, on two or three occasions, while carrying a certain fish basket, make excellent catches of trout, and the next time he goes out he may have another creel and meet with poor success. In some cases experiences of this kind will cause the angler to show a marked preference for the basket which he thinks brings him good luck. Some fishermen can not see a crow fly across the road or stream in front of them without thinking it unlucky.

A party of fishermen from Herkimer county, who visited Honnedaga Lake, in the Adirondacks, several years ago, had a curious way of attempting to charm or attract the trout. When they had selected a spot where

they proposed to fish, and had anchored their boat, one of them would throw a small coin into the water for the purpose of bringing good luck. This act would be repeated whenever they changed locations or captured an uncommonly big trout. They had very good success in fishing, but it is difficult to see how in this enlightened age a person could be found who would believe the coins had anything to do with it. This strange performance brings to mind an Eastern practice mentioned by a famous historian, who says that at Cape Mussendom, at the entrance to the Persian gulf, the Indians, when they pass the promontory, throw cocoanuts, fruits or flowers into the sea, to secure a propitious voyage.

In conclusion it will be appropriate to quote the words of one who has for more than a score of years enjoyed annual expeditions in the Adirondacks and met with gratifying success in angling for speckled beauties: "You will have the best luck catching trout when they are biting well. The best times to fish for them are early in the morning, early in the evening, and just before a warm rain."

W. E. WOLCOTT.

UTICA, N. Y., July 17.

CHICAGO AND THE WEST.

Record Bass.

CHICAGO, Ill., July 30.—We have a certain interest in the West in the record weight of black bass taken each season. I believe that J. B. H. and myself, in our earlier FOREST AND STREAM camps around Mukwonago, Wis., caught about as heavy an average of bass as any of which I have ever heard among my friends. This occurred because we got into a bit of water which was so difficult of access that it had hardly been fished for years. In one string of thirteen fish, which J. B. H. caught one afternoon, we had four fish which weighed over 5lbs. each, one which weighed over 6lbs., and none that weighed under 3lbs. These were all big-mouth bass. At our camp Mr. B. Waters, of the FOREST AND STREAM staff, once caught ten bass one afternoon, of remarkable weights, which I do not now recall distinctly, but I think he had two that weighed over 6lbs. each and several over 4lbs. each, with almost no small ones. At another time Mr. Waters caught in our neighborhood a bass weighing 6lbs. 2 oz., dividing the Natchaug Silk Company's season prize for the heaviest large-mouth bass. On the year following that, a young man by name of Ben Bugbee, who was camping with J. B. H. and myself, caught a big-mouth bass which weighed 6¾lbs. in Chicago two days after it was taken. We thought Ben was certain of first prize that year sure, but I remember he was knocked out by a bass which was taken on the St. Clair Flats which weighed over 7lbs. I think that before this summer the record of the St. Clair Flats for small-mouth bass, and indeed I think the record of the country, was 7lbs. 2 oz. This record no longer stands. On Friday, July 22, in the North Channel, St. Clair Flats, Mr. Dan Davies, of Detroit, caught with rod and reel a small-mouth black bass weighing 8lbs. It was 24½in. long, and had a bust measurement of 17½in. The witnesses of the taking of the fish and its measurements and weight are Mr. Thomas Neal and Mr. H. A. Avery, deputy warden. It will be a long time before a larger bass than this is taken in this part of the country.

Trout in Montana.

The Rod and Gun Club of Helena, Mont., has been active in its attempts to maintain the good fishing in streams adjacent to that city. The club will receive 300,000 trout from the Fish Commission to be deposited in the several streams.

The trout fishing in the neighborhood of Helena has been better this year than for some time, and many grayling have also been taken. The anglers look forward to yet better sport in the future, and believe that the general tendency in protective matters is for the better. The grouse crop is also reported to be good and the general outlook promising.

About Baiting.

A correspondent sends in the following comment:

"In your issue of July 23 I notice an article by W. H. F. on minnow casting for bass. He says catfish minnows are preferable on account of the toughness of their hide. If he will get some yellow fin minnows, run the hook through the mouth, out the gills, then turn the hook so as to pierce the minnow in about the center, I think he will be better satisfied."

Nature seems to have endowed the minnow with two tough places made purposely for the insertion of the hook, one at the lips and one directly under the back fin. An old angler from New York first showed me how to put a minnow on a hook as the above correspondent describes, except that instead of piercing the body of the minnow he passed the point out through the tough skin under the back fin. Baiting a minnow in this way kills the minnow, of course, and a bait so put on a hook is more suitable for crappies, perch, rock bass, etc., than for black bass. A minnow so baited has a whirling motion in the water which is more apt to attract a pickerel than a black bass. A minnow baited through the lips is, of course, presented to the bass in a more natural manner, and is more apt to be taken. It is also more apt to tear away from the hook, and less apt to hook the fish which strikes at it. In all my fishing in the West I have never known any one to use any sort of catfish for bait. I am told that small perch make a good bass bait, but have never tried it. Billy Tuohy, of Eagle, Wisconsin, tells me that in the winter fishing through the ice a black bass will pass by half a dozen minnow baits and take a perch bait in preference. I have heard it said by another angler that in using perch bait in casting for bass the perch ought to be scaled, but I should not regard this as essential. Of course, the bait would be killed after a few casts, and the scaling could then be done, if one cared to paint the lily.

Texas Tarpon.

The tarpon fishing at Aransas Pass, Texas, has been fair during the month of July. General Wade Hampton and party, including Miss Hampton, Hon. A. W. Houston and his son, enjoyed good sport in the week ending July 20. General Hampton took eleven tarpon and his daughter eight. Mr. Houston caught fifteen and his son twenty-one. Nothing startling in weights came out.

Michigan Streams.

Mr. W. B. Mershon writes me regarding the sport on the club stream, Kinne Creek, Mich.: "I do not know of a stream in the world that is fished as hard as Kinne Creek. One of the boys was up last Monday and got twenty-nine nice fish. This is pretty good so late in the season, after the thousands of fish that have been taken out of the little stream this year."

Mr. Mershon was invited to take a day on the famous Fontinalis stream, preserved by the Fontinalis Club, in the upper part of the lower peninsula, and I easily agree with him in his remark that this is an "ideal stream," for it was my good fortune to be a guest there a few years ago. He says: "I had good luck at the Fontinalis stream, though it was the hottest day I ever spent on a trout stream, and I was unfamiliar with the holes. A man starting at the upper end of the stream, and fishing hard for two days could not cover it all. I got thirty-nine nice trout."

Records.

I remember seeing printed some years ago in the Information Wanted columns of FOREST AND STREAM the statement that the record distance of fly-rod casting was 106¼ft. Since that time all these casting records have gone glimmering, Mr. Leonard at New York and Mr. Mansfield at San Francisco fairly doubling what was once considered a good stiff cast with the fly. I have before me last week's records of the Fly-Casting Club, and I notice that Mr. Bellows cast 114ft., Mr. Hascal 111ft., Mr. Peet 113ft., Mr. Goodsell 109ft. Out of five entries in that event the lowest record was that of Mr. Ludlow, 105ft. At an earlier club event Mr. Peet, with a favorable wind, cast 125ft., crowding Mr. Mansfield very close in open air work. These club records are not properly to be called records, since they were not made in open competition, but they are interesting as showing the development of certain possibilities of the rod in later days.

E. HOUGH.

1200 BOYCE BUILDING, Chicago, Ill.

Central New York.

ITHACA, N. Y.—The best day's catch that the writer has thus far learned of the present season consisted of forty good-sized trout, the catch having been made near Slaterville, this county. Some spirited sport ought to be had on the streams found in the neighborhood of the villages here indicated. At the source of Fall Creek, not far from Peruville, a goodly supply of trout is said to abound. Many large-sized trout have been taken from this stream. At McLean, six miles south of Cortland, is a well-known trout stream, and about now delightful sport may probably be had there by those who know a thing or two concerning the ways of the fish. At Harford Mills flow some inviting brooks. At Slaterville, Speedsville, Candor, Enfield and Cortland trout streams are in evidence, and yield, when trout are in the mood, decidedly handsome results.

In lower Fall Creek, just removed from the city limits, a number of exceptionally fine creels of bass were taken, the first of the season. One party took in a few hours' angling ten bass that averaged 1½lbs. each. Later on bass anglers move out into the deeper and wider waters of Cayuga Lake. Perch and pickerel fishing has been disappointing at the Ithaca end of Cayuga Lake this year. Old fishermen hold that the enormous supply of carp now congesting the southern extremity of the lake, the Ithaca Inlet, and streams contributary thereto, is responsible for the pronounced scarcity of the various well-known fish formerly inhabiting these waters. Some very large specimens of carp have been taken by local fishermen. A 22lb. carp gave an angler a noble battle the other day. Many devotees of the sport enjoy taking these big carp on a light fly-casting outfit. These fish, perhaps by virtue of some peculiar effect or influence imparted by the cool, invigorating waters of the lake, exhibit some remarkably exhilarating game qualities, giving, when hooked, a finish fight of a most desperate and fiery character. It is a rather common sight at certain hours of the day, usually late afternoon and early morning, to observe on the inlet here hundreds of carp, many of them veritable leviathans, breaking the surface of the water times without number, working in well described circles in one instance, and again moving directly up or down the stream. These fish, regardless of their gamy fighting habits, are already regarded as a nuisance. They are mud wallowers, as tasteless as the traditional baked sawdust, and a menace to the angling resources of any body of water they may chance to inhabit. They increase in numbers very rapidly, and in respect to the occupancy of such a big body of water as Cayuga Lake they are practically beyond the power of extermination. The carp problem is certainly a most difficult one for local anglers to dispose of.

At Farley's and Union Springs, along the east shore of Cayuga Lake, plenty of satisfying perch fishing may be enjoyed, and perch and pickerel fishing at Canoga, directly opposite Union Springs.

M. CHILL.

Maine's Fishing and Hunting.

BOSTON, Aug. 1.—Fishing in the Maine lakes has again been remarkably good for nearly all of the month of July. A year ago it was considered that July broke the record for fishing in that month, but this year has been nearly as good. Since the rains and wet weather the fishing has seemed to improve. Moosehead reports are good, with plenty of fish in the big iron pan, where the scores are counted and weighed. At the Rangeleys better fishing has never been recorded the season through to date. Of late the fishing has been especially fine at the Big Lake, Mooselucmaguntic. Some remarkably good catches are reported at the Birches, including trout from 3 to 7lbs. A blueback is reported to have been taken recently by trolling; something almost unheard of, these fish only appearing for a short time in the fall when they run up the streams to spawn. Lately there comes a complaint of the small size of the bass taken at the Belgrade ponds, fish up to 3lbs. being rare.

The reports mention a multitude of deer seen at nearly all the fishing resorts, and great hunting is expected this fall. A Moosehead hunter and guide has recently returned from an extended trip, and reports 400 deer counted while absent. A party visiting the Richardson ponds, from the Upper Dam, last week, reports seeing twenty deer while on the trip. Again the farmers of the back settlements are complaining of crops injured by deer. Pleasure seekers, driving through the country, not many miles from the cities even, are frequently rewarded by the sight of deer quietly feeding in the fields or by the roadside. Teams do not seem to alarm them much, and frequently they will allow carriages to approach within a few rods.

Concerning moose and caribou the reports are much less encouraging. A gentleman returning from a trip to Moosehead and the West Branch last week—an excellent moose section—says that he saw no moose and very few tracks or signs.

SPECIAL.

Mullet, Tarpon and Porpoise.

IN his address on the fishery interests of the Florida East Coast, Mr. Geo. W. Scorie told the Tampa Fishery Congress of the relations existing between the mullet and tarpon supply. He said:

I beg leave to ask any of those who do not agree with me in regard to the spawning of the mullet, whether they have ever visited the Atlantic Coast between Melbourne and Canaveral light? My theory is that the mullet do not spawn in the river, but away from the inlet, and my assertion is based upon the fact that among 660,000 caught and handled in my fish house from May 15 to Nov. 1, not one mullet was seen which had thrown its spawn; but at the same time during the latter part of May and again at this very present time at my fishery at Canaveral Bight, I receive information that large schools are daily passing insore, all indicating that they have spawned. Canaveral Bight is the great spawning ground of the East Coast. Millions of mullet have passed there within the past week; and besides, the spawn is found all along the shore. Therefore, when enthusiastic hotel managers and others persuaded our legislators to formulate laws so as to protect the mullet to give food to the tarpon, that they may be kept in good condition from one season to another, to be used as an advertising medium for those liking the sport of catching tarpon during two or three months of the year, you will not wonder that it is under great difficulties that enterprise has to forge ahead here in Florida.

One hundred and sixty-five tarpon and thirty-seven sharks were caught and killed in my pound in three weeks at Canaveral Bight. In one tarpon cut open were found thirty-eight large and seventy-two small mullet. In one shark were found 182 mullet; in a school of drumfish caught and gutted for market, the smallest weighing 9lbs., the largest 17lbs., six fish were picked out and gutted, and found to contain seventy-three mullet, an average of twelve mullet to the drumfish; that, with 300, and you have 3,600 mullet, or thirty barrels, at a commercial value of $100, that the drumfish destroyed.

In the lagoon last summer a large school of porpoises destroyed more mullet than were caught by the fishermen. You, familiar with the fishing of the St. Lawrence River, know that at this time the Canadian Government is considering a way to kill the porpoise, must it not therefore occur to your mind that some remedy must be found for the protection of the mullet other than the fishermen, especially so when you consider that no mullet caught on the East Coast between Nov. 15 and Jan. 15 showed spawn. Still wise men passed a law stopping fishing when the fish were through spawning; further, the spawning is all done outside the river. The fish come into the river to feed, and also run for the inlet to get away from the shark, tarpon, etc., and whenever heavy rains freshen the river they go for the inlets to get into their natural water—the salt waters of the ocean.

In Upper Vermont.

GREENSBORO, Vt., July 30.—The campers on the shores of Caspian Lake, and visiting fishermen from neighboring towns, have had great luck during the past week. Dr. Carl Perkins, of St. Johnsbury, and B. Greenman, of Hardwick, captured a 13½lb. lake trout one day last week, breaking the record of the season. Saturday, O. S. Cogswell, of St. Johnsbury, captured a 6lb. lake trout in the same lake. Fishing is good in all the lakes in this part of the State. The lakes and streams are remarkably low, owing to the protracted drought. Brook trout are found in the dark pools, especially under the waterfalls so numerous in this part of the State. Local fishermen say they bite best when grasshoppers are used as bait, although the campers and boarders, as the visiting fishermen are called, use a variety of flies successfully. Minnows are used mostly for the lake trout. Black bass are found in some of the ponds. Bullheads, yellow perch, sunfish and pickerel satisfy the small boys, and are caught in nearly all of the streams and ponds.

What Flies Shall he Use?

GRAND RAPIDS, Mich., July 25.—*Editor Forest and Stream:* I take the liberty to write to you with regard to fly-fishing for bass. I have a cottage on a lake about six miles long, which is connected with Lake Michigan by a channel. There are many bass in this lake, both large and small-mouth. We also have many white or silver bass in the lake. I have done considerable experimenting with the fly, but have been unable to take any fish by this method. I understand through Chicago friends that nearly all the bass fishing in Wisconsin is done with the fly, with satisfactory results. I have never yet met a fisherman in this State that claimed to catch black bass with the fly to any extent in lake water. I have done fly-fishing for trout in all the principal streams in the lower peninsula, with most satisfactory results, but I cannot get the bass. If you can furnish me or refer me to some authority on fly-fishing for bass I would be very much obliged to you.

A. S. A.

Nessmuk.

KELPIE has sent us for reading some letters which were written by Nessmuk to Antler, and from them we are permitted to quote these characteristic paragraphs:

In Pennsylvania.

You would not know the Pennsylvania counties, of which you speak, at the present time. Lumber, oil, bark, railroads, etc., have got the lead, and the grand old forests are spoiled for you and me. It is well. Untold wealth has waited and wasted for ages, and now when it is needed and can be utilized it is not to be expected that it will remain untouched, that a few old woods loafers may catch trout and kill deer occasionally. But all the same, I feel it, and hate log-butchers, bark-peelers, tanneries, pipe-lines, tram-roads and the whole cursed outfit most cordially. Well the deer and the trout pretty well lasted my time, and I can afford to keep the peace.

In Florida.

But the laziness of the land, the listless carelessness of the Cracker, is over and around me as a misty halo—and the days go and come, and I lose run of the week and even of the month, and don't care a sou marque.

Harvey Cedars.

MORRISTOWN, N. J., July 29.—*Editor Forest and Stream:* I observe in your issue of July 16 a note from Mr. Leonard Hulit on New Jersey shore fishing, in which he says: "From Harvey Cedars the reports continue to be of the best. Mr. Walter Davis spent the Fourth there, and landed eleven red drum or channel bass, aggregating 240½lbs."

This is an error. There were three men in the party with Mr. Davis: H. T. Green, J. Sullivan and L. P. Streeter. We fished two days and the catches were as follows:

July 3.—W. W. Davis, 3 fish, 23, 24 and 22lbs.; H. T. Green, 1 fish, 26lbs.; J. Sullivan, 1 fish, 20lbs.; L. P. Streeter, 3 fish, 22, 22, and 18lbs.

July 4.—L. P. Streeter, 2 fish, 25, 22½lbs. Total, 10 fish, 224½lbs. I sent eight of these fish to a friend in Asbury Park, who distributed them among acquaintances, and somehow the report was circulated that Mr. Davis had caught the fish. L. P. STREETER.

A Dictionary of Trout and Bass Flies.

MR. MALCOLM SHIPLEY, of Philadelphia, sends us a "Dictionary of Trout and Bass Flies," in which he has described 450 and odd flies in such a way that from the particulars given one may identify the artificial flies of the day. The descriptions give colors of body, wings, hackle and tail. Thus one coachman is described: Body brown herl, wings white, hackle brown, no tail. The arrangement is a classification of body color; and a full index affords ease of reference. The dictionary is likely to be well received as a convenient and useful guide.

St. Clair Flats Record Bass.

PORT HURON, Mich., July 22.—*Editor Forest and Stream:* The Detroit Free Press of yesterday reported that Dan Davies, who has been bass fishing in the North Channel with Thomas Neal and H. A. Avery, deputy game warden, last Friday caught the largest small-mouth black bass of which there is any official record. It weighed 8lbs. after being out of the water nearly an hour, was 24½in. long and 17½in. girth. It required nearly twenty minutes of very skillful handling on the part of Mr. Davies to land it. North Channel is at St. Clair Flats. J. R. C.

Massachusetts Low Waters.

CHICOPEE FALLS, Mass., July 27.—The Chicopee, Connecticut and Westfield rivers and their tributaries are lower than they have been in years, and fishermen are reaping a rich harvest. Yellow perch, pickerel, bullheads and suckers are being caught in large numbers in the deep pools in the rivers. One party caught 163 fish in the Chicopee River one day last week. Fishermen say that the low water and the actual drying up of some of the smaller streams will have a disastrous effect upon the fish, and that they will be scarce for a year or two in consequence.

Wisconsin Fishing.

WOODRUFF, Wis., July 26.—J. S. Bockee and David G. Bockee stayed at Trout Lake thirteen days; fished ten days at Trout Lake, Little John, Webb, Muscallonge, White Sand and Olloquash lakes; caught over 100 pike weighing from 2 to 9lbs., mostly large; fifty black bass from 1 to 3lbs., and three muscallonge; could have caught many more fish if we had cared to fish all of the time. K.

Montana Fish and Game.

BOZEMAN STATION, Mont., July 25.—We have had a cool summer so far—to-day the hottest of the season, 86°—and most of the summer too cool. Trout fishing is now at its best, though not phenomenal, in other words, "hog" catches have been made. Grayling and whitefish fishing is fairly good. Dusky grouse and "chickens" (sharp-tailed grouse) promise to be plentiful.
J. A. HENSHALL.

Lake Champlain.

BURLINGTON, Vt., July 30.—Fishing was perhaps never better in the lake than it has been recently. The list of fish caught includes black bass, perch, pickerel, wall-eyed pike, rock bass and muscalonge. Some large catches of bass have been made off the docks in this vicinity. The best fishing grounds are reached with sail or row boats.

The Missouri Dogfish.

ST. LOUIS, July 25.—*Editor Forest and Stream:* I am encouraged to drop you a line after reading Mr. F. A. Lucas' enthusiastic account of his catch of a carp in your issue of 23d inst. I am a firm believer that the bass, black or green, are really the game fish of American waters, tarpon, tuna, etc., to the contrary notwithstanding. With any kind of bait they are found to take hold and make a great fight for their lives or freedom. But there is a fish in these diggin's—Missouri swamps and rivers—which I hold, with many others, are equal to them all; that is the much-despised dogfish or grinnel, as many call them; another name is the cypress trout. If our friend of carp experience will just tackle an 8 or 10lb. swamp angel or dogfish, as I have done, with a 10ft. rod and line to match, and let him "skive" around among the drift logs, slashing everything movable in his efforts for freedom, I am inclined to think he will give the dogfish the preference. In summer and sometimes late spring and fall fishing they are numerous in our rivers. Although we do not enjoy catching them, they always give us a fight and keep us guessing as to whether we have a big jack salmon or some other monster of the deep, as they never come to a show until they are obliged to.

But with all his fighting qualities, we prefer to pull out a 2½ or 3lb. bass to a 10lb. grinnel.

JOHN G. P.

Florida Summer Fishing.

MR. FRANK M. TYLER, of Fort Pierce, on the Indian River, Fla., writes to our correspondent, Mr. E. S. Young, under recent date: "Everything is lively here now on account of the war. Fishing is fine. I killed a tarpon on July 8 at Inlet; first of the season. They are plentiful now, and about first of August I expect to get one or two more."

The Kennel.

Fixtures.

Sept. 7.—Manitoba Field Trials Club trials. William C. Lee, Sec'y, Winnipeg, Man.
Sept. 12.—Northwestern Field Trials Club's Champion Stake, near Winnipeg. Thos. Johnson, Sec'y.
Nov. 7.—Indiana Field Trials Club's trials, Bicknell, Ind. W. H. Dye, Sec'y.
Nov. 11.—Eastern Field Trials Club's trials, Newton, N. C. S. C. Bradley, Sec'y.
Nov. 15.—International Field Trial Club's trials, Chatham, Ont. W. B. Wells, Sec'y.
Dec. 5-6.—Missouri Valley Field Trial Club's trials. C. H. Werner, Sec'y.
Dec. —.—Continental Field Trial Club's trials, Lexington, N. C. W. B. Meares, Sec'y.

Manitoba Derby.

WINNIPEG, July 29.—*Editor Forest and Stream:* I beg to inclose you supplementary list of our club's Derby stake, which were received by mail after former list was sent you. This makes a total of forty:

Pedro, liv. and w. ticked pointer dog, whelped July 23, 1897 (Virden Shot—Jessie), R. H. O'Hara, owner.

Sancho, liv. and w. ticked pointer dog,, whelped July 23, 1897 (Virden Shot—Jessie), D. McEwen, owner.

Lena, b. b. w. and t. setter bitch, whelped May, 1897 (Tony Boy—Nellie C.), D. E. Rose, agent.

Dewey, b. w. and t. setter dog, whelped May, 1897 (Tony Boy—Nellie C.), D. E. Rose, agent.

Sampson, b. w. and t. setter dog, whelped May, 1897 (Tony Boy—Nellie C.), D. E. Rose, agent.

Waddell, lem. and w. setter dog, whelped February, 1897 (Count Gladstone—Lillian Russell), D. E. Rose, agent.

Glad's Girl, lem. and w. setter bitch, whelped February, 1897 (Count Gladstone—Lillian Russell), D. E. Rose, agent.

Lad of Jingo, liv. and w. pointer dog, whelped June, 1897 (Jingo—Dot's Pearl), D. E. Rose, agent.

Dan R., liv. and w. pointer dog, whelped January, 1897 (Love's Kent— ———), D. E. Rose, agent.

WILLIAM C. LEE, Sec'y-Treas.

Brunswick Fur Club Trials.

ROXBURY, Mass., July 25.—*Editor Forest and Stream:* I shall be greatly obliged to you if you will announce that the tenth annual foxhound trials of the Brunswick Fur Club will be held at Barre, Mass., during the week of Oct. 17, 1898. BRADFORD S. TURPIN, Sec'y.

Points and Flushes.

DALLAS, Texas, will have a dog show in connection with the State Fair, Oct. 4 to 8. There will be $2,200 in premiums. Mr. Geo. W. Clayton (P. O. Box 914, Chicago) is superintendent and manager.

About 100 miles below Abbyville we passed Burcket's Ferry. Standing on the bank of the stream was an old man with a long gray beard. He supported himself with a stick and was trembling in every limb.

"You see that old man," said the captain, "his right arm and tongue are paralyzed. The story is a sad one and a lesson to men who are extravagant in their words. The old man had been running this ferry for many years, but he runs it no longer. About a year ago he was a strong and vigorous man. He was fond of deer hunting, and always left a horn at the ferry to be blown when any one desired to cross. He was on a deer hunt a year ago. The dogs were in the head of the chase, and he was thoroughly enthused, when suddenly the sound of the horn called him to duty. He wheeled around to return to the ferry, leaving the dogs to run the race out, and with an oath said:

"If I don't give up that ferry, I hope to be paralyzed."

"As he uttered the words his right arm fell lifeless to his side, and his tongue refused to articulate. He was paralyzed."—Atlantic Constitution.

Yachting.

Fixtures.

AUGUST.

3-4-5. Corinthian Marblehead, midsummer series, Mass. Bay.
3. Taunton, cruise to Newport.
3. Fall River, ladies' day, Mount Hope Bay.
6. Chicago, race to Mackinac Lake, Michigan.
6. Corinthian Marblehead, open, Massachusetts Bay.
6. Beverly, Van Rensselaer cup, Marion.
6. Hempstead Harbor, annual, Long Island Sound.
6. Quincy, handicap, Boston Harbor.
6. Wollaston, open, Boston Harbor.
6-7. Winthrop, cruise, Boston Harbor.
6. Norwalk, club, Long Island Sound.
6. Mount Hope, open, Mount Hope Bay.
6. Woods Holl, championship, Hadley Harbor.
6-8-9. Oshkosh, Green Lake cup, Felker cup, Oshkosh, Wis.
6. Queen City, 16ft. class, Toronto.
6. Royal Canadian, first and 22ft. classes, Toronto.
6. Baltimore, McAllister cup, Chesapeake Bay.
8. American, Newburyport day, Newburyport.
9. Squam, open, Annisquam.
10. East Gloucester, open, Gloucester Harbor.
10-11. Chicago, open, Mackinaw.
13. Beverly, sixth Corinthian, Buzzard's Bay.
13. Queen City, 19ft. class, Toronto.
13. Horseshoe Harbor, annual, Long Island Sound.
13. New Jersey Ath., cup, Newark Bay.
13. Cohasset, open, Cohasset Harbor.
13. Baltimore, Rear-Com. cup, Chesapeake Bay.
13. Corinthian Marblehead, open, Massachusetts Bay.
13. Winthrop, evening race, Boston Harbor.
13. Jubilee, championship, Massachusetts Bay.
13. Burgess, cruise, Massachusetts Bay.
13. Woods Holl, open, Woods Holl.
13. American, cruise, Newburyport.
13. Taunton, cruise to Newport.
13. Shelter Island, open, Gardiner's Bay.
13-14. Corinthian San Francisco, cruise, Port Richmond.
13-18. Royal St. Lawrence, Seawanhaka international cup, Montreal, Lake St. Louis.
13-14. East Gloucester, cruise, Gloucester, Mass.
13. Green Bay, annual, Green Bay, Wis.
18. Miramichi, Stewart pennant, Oak Point.
18. Plymouth, open, Plymouth, Mass.
19. Kingston, open, Kingston, Mass.
20. Huguenot, annual, Long Island Sound.
20. Park City, annual, Long Island Sound.
20. Duxbury, open, Duxbury, Mass.
20. Quincy, handicap, Boston Harbor.
20. Winthrop, club, Boston Harbor.
20. Woods Holl, championship, West Falmouth.
20. Beverly, seventh Corinthian, Buzzard's Bay.
20. Burgess, championship, Massachusetts Bay.
20. Royal Canadian, 27, 22 and skiff classes, Toronto.
20. Baltimore, McAllister cup, Chesapeake Bay.

THE mines in New York waters were all removed last week, those in the Lower Bay being lifted, all but four being recovered in good condition. A number of the mines about Fort Schuyler and Willett's Point were exploded, many people being present to witness the spectacle. A 500lb. anchor was suspended from a raft over one of a group of mines connected by cables. A small amount of explosive was set off on the raft, dropping the anchor, which fell on the mine and canted it and the connected mines as well over to a horizontal position, causing them to explode. The restrictions on vessels entering or leaving the harbor have been entirely removed, and yachtsmen will have no further trouble. The yachts Free Lance, Restless, Aileen and Viking will be placed out of commission this week, their work of harbor patrol being ended.

THE description of the Malay prahu which we publish this week is peculiarly interesting and appropriate from the fact that this strange type of craft, the fastest sailing boat afloat, is now practically an American institution. It may be that we shall some day see a gigantic prahu as a defender of the America Cup.

THE London Times of Aug. 1 announces that the Royal Ulster Y. C. will shortly send a challenge for the America Cup. A particularly silly and improbable story in connection with a challenge from this club was published in April, 1897, and the present report is probably a revival of it.

Fox Lake Y. C.

Lake Villa—Fox Lake.
Saturday, July 23.

THE Fox Lake Y. C. sailed two races on July 23, a free-for-all handicap in the morning, sailed in a light breeze, and the fifth of the cup series in the afternoon, practically a drift. The times of the morning race were: Pistakee, 1:33; El Comancho, 1:33:17; Gadfly, 1:34:23.

In the afternoon race Mabelle led for a time, but was disabled by the loss of her rudder. The times were:

Class A—Start 3:45.

	Finish.	Elapsed.
Pistakee	4 59 43	1 14 55
Gadfly	5 00 13	1 15 13
Louise	5 02 37	1 17 37
Emily G	5 08 49	1 23 49
Mabelle	Did not finish.	

Class B—Start 3:50.

American Girl	5 19 55	1 29 55
Victoria	5 24 55	1 34 55
Sleepy Tom	5 25 59	1 35 59
Margaret	5 47 30	. . . .

Class C—Start 3:55.

El Comancho	5 18 29	1 23 29
Faraway	5 26 33	1 31 33
Starling	5 28 48	1 33 49
Weary Waggles	5 31 53	1 36 53
Aeolus	5 34 28	1 39 28

Cape Cod Y. C.

Orleans—Cape Cod Bay.
Saturday, July 30.

THE Cape Cod Y. C. sailed the second of its series races on the Town Cove on July 30, in a moderate S.W. wind. The times were:

	Length.	Elapsed.	Corrected.
Quahaug, E. Rogers	13.08	1 39 00	1 08 47
Swan, A. T. Newcomb	17.07	1 34 40	1 09 18
Dolphin, Davenport	15.05	1 37 54	1 10 02
Helen, A. Fulcher	18.03	1 34 45	1 10 03
Elsie, Penniman	14.06	1 39 35	1 10 22
Little Brave, G. Ryder	18.03	1 35 31	1 11 03
Little Daisy, D. Fulcher	14.05	1 44 50	1 15 41

The Measurement Rule.

The Yachtsman, under date of July 14, comments as follows on the measurement question in this country:

The race committee of the Seawanhaka Corinthian Y. C. is evidently most anxious, by a change of the measurement rule, to end the peculiar state into which yachting in the United States has fallen; and, as we mentioned some weeks ago, it has already suggested a formula to effect this object. It is a strange thing, but beyond dispute, that at present yacht racing in America is almost stagnant; and at the same time there is every inclination amongst yachtsmen to pursue the sport. This can only be due to the fact that the racing machine has completely spoiled the sport.

A precisely similar state of affairs existed in this country in 1885, when the 1730 rule was in its last stage. So much was this the fact that no appreciable recovery in the largest class took place for years; and the Field actually considered large yacht racing dead forever. Happily, this has not turned out to be the case, but there was every reason for such a despondent view at that time. We trust that America is only passing through the same dull time, and from the same cause.

There is no doubt, from the popularity of the one-design classes, that a satisfactory rule is the sole remedy for the present state of affairs, and the Seawanhaka committee is perfectly alive to that fact. The rule, whatever it is to be, should be settled before next winter; and as we have frequently said, there ought to be no difficulty in framing a satisfactory measure. Our own rule has its weak points, which are perfectly well known, and therefore it is not likely to be adopted as it stands; but a modification of it is so simple that it would be wise to use it as a basis.

This was supposed to be one of its best features when the Y. R. A. first adopted it, but since then the Association has not only forgotten this fact, but has absolutely rendered it useless. That, however, will have no effect in America, for the Seawanhaka Corinthian Y. C. is not composed of ancient mariners, but of yachtsmen who know what they want and know how to get it.

The committee, however, has followed the example of the Y. R. A. council in asking for the opinions of individuals, but it will probably diverge from the English method by attaching weight to those opinions now that it has received them. A catechism of five questions bearing on a change of rule was sent out to various qualified yachtsmen, as follows:

[These questions have already appeared in the Forest and Stream.]

The replies to these questions are somewhat lengthy and discursive, but they are published by the club. The universal opinion seems to be in favor of a yacht on board of which one can live in comfort, and there is complete condemnation of the "fast" type known only to the Y. R. A.

With regard to taking elements of speed, it is clear enough nowadays that whatever element of speed is not taxed will run to seed. Every rule known to history proves this conclusively, but of late years it has become necessary not only to tax dimensions, but the actual shape of the yacht, i. e. the shape of midship section and profile, in order to produce a "wholesome" type. We gather that in America there is a tendency to discountenance girth measurement, but Mr. Benzon's system of taxing the difference between chain girth and skin girth seems to us to be faultless, and should be well considered by the Seawanhaka committee before another plan is adopted.

The above comments are very much to the point, far more so than the Yachtsman's critique of the Hyslop formula, reprinted in the Forest and Stream of July 16. We hope that it will yet take up the formula, apart from the secondary details of the committee's report, and discuss it on its merits as compared with other recent propositions.

While the growth of the racing machine under existing rules is the main cause of the existing condition of American yachting, it is not the sole one; and we do not share the Yachtsman's optimistic anticipations of a speedy revival upon the adoption of a good rule. This it is true is the first step, and no revival can come without it; but at best the measurement rule must be classed as negative rather than positive legislation. It is easy enough in a way to say to yachtsmen: "You shall not build other than good boats"; but it is manifestly impossible to say to any man: "You must build a yacht"; if this were possible the clubs might go still further and compel all members to forswear the seductive golf stick and the wily wheel and to devote all their spare time and money to yacht racing. Unfortunately, the best of the older yachtsmen have got out of the habit of building yachts, and it is too late for the mere removal of the cause, however effectually done, to produce a positive and opposite effect.

The immediate results of the adoption of a new rule, even as good a one as can be looked for, will be precisely the same as in any important measure of national legislation; it will fail to produce an immediate and beneficial effect, it will be hastily and superficially judged both by its friends and enemies, and the party responsible for it will be roundly condemned.

There is fortunately a prospect of a speedy termination of the present war, followed by that long-promised but often deferred revival of business this fall, and this will greatly aid that reaction which is almost a matter of course under any but the most unfavorable conditions after the depression which has culminated in the present season. Should events take the favorable course now probable, there will be a moderate revival of building and racing next season, which will afford a good opportunity for a practical test of a new rule in some of the classes. At the same time, we have little hope of the building up of anything larger than the 51ft. single-stick class; certainly there is no prospect, under any circumstances, of a revival of the 90-footer.

The Yachtsman's suggestion of the adoption of the new Benzon formula is, as a definite proposition, very much to the point at present; the time has gone by for the general discussion of many issues, and the question at stake is as to just what specific formula shall be adopted.

Mr. Alfred Benzon is a Swedish yachtsman, we believe, at least a resident of Copenhagen, who has given a great deal of thought and study to the measurement question; and who is interested in the growing system of yachting in and about the Baltic. He is the author of the formula now used by the German and Scandinavian clubs, adopted in 1893 for a period of five years, a formula similar to the present Y. R. A. rule. In view of the expiration of the limit of the present rule, Mr. Benzon has recently given much time to the measurement question, and this spring published a very interesting pamphlet, comparing all existing rules, suggesting a number of possible modifications to meet the new conditions of racing design, and also including in his comparisons several suggestions such as those of Messrs. Herreshoff and Hyslop.

Mr. Benzon has for some years advocated girth as a factor, his existing formula using what is commonly called "chain girth," or the girth as measured by a chain passed from rail to rail under the keel, at its deepest part, when the yacht is afloat. The British Y. R. A. rule, on the other hand, uses what is termed "skin girth," or the girth measured, when the yacht is ashore, by a tape laid close to the skin from side to side.

Presumably for the reason that neither of these methods of using girth has proved effective, Mr. Benzon has proposed a new factor, the difference between the "skin girth" and the "chain girth," and he suggests a variety of formulas embodying this principle. The one formula in particular which he recommends, as does the Yachtsman, is as follows: $\frac{L.+B.+G.+d.+\frac{1}{4}\sqrt{S.A.}}{2}$. In this formula G. represents the skin girth measured on land from deck to deck, less three times the least freeboard when the yacht is afloat. The factor d. is the difference between the skin girth and the chain girth.

It is, of course, impossible to discuss a new and complicated proposition of this kind offhand, and what is worse, Mr. Benzon's pamphlet, of which we have just received a copy, is in German. The different types, from the skimming dish to the deep and full-bodied cutter, are shown in the diagrams, and the different formulas, twenty in all, are applied to each type. Unfortunately the Hyslop formula is so incorrectly given as to make a comparison with the others worse than useless; the formula ascribed to Mr. Herreshoff fares little better.

The character of Mr. Benzon's work for a better rule is such as to demand a careful study before judgment is passed upon it; but short of this, the argument against the use of girth in any form, as set forth in the Forest and Stream of July 9, is a strong one, and is indirectly in favor of what we consider the more direct, scientific and effective formula proposed by Mr. Hyslop.

The present time, with the Seawanhaka trial races just concluded and the Montreal races, the A. C. A. meet, the Quincy challenge cup races, and other events near at hand, gives us very little time to devote to this important question, but we shall be glad to give space to all who care to discuss it through our columns.

Eastern Y. C. Open Races.

Marblehead—Massachusetts Bay.

Monday, Tuesday, July 25, 26.

The Eastern Y. C., of Marblehead, concluded a very interesting series of three open races on Tuesday of last week, the first of these, on July 23, being reported in our previous issue. The races were open to all yachts of the 30ft. and 25ft. classes, Y. R. A. of Massachusetts, the raceabout class and the knockabout class. On the first day the wind was light S.E., with a little sea, the winners being Elfreda in the 30ft. class; Cartoon in the 25ft. class; Hazard in the raceabout class, and Lorelei in the knockabout class.

On Monday morning Cartoon was measured for the first time, and proved to be 6in. over the class limit of 25ft. l.w.l. Being thus barred from her own class, she went up into the 30ft. class, receiving time allowance on her actual measurement by Seawanhaka rule, as the Eastern Y. C. has not abolished allowance. The courses were, for the 30ft. and 25ft. classes, from off Marblehead Rock around a buoy off Half-Way Rock, thence around the E. Y. C. sea mark and return by same course, thirteen miles naut. The raceabouts and knockabouts sailed around the Half-Way mark, two rounds making nine miles naut. There was a moderate south wind, lighter offshore, and a light chop sea. While the 30-footers carried topsails, Cartoon has only the jib and mainsail rig. Cartoon made a good start and held first place over the first leg, but on the second, with wind and sea heading her, she dropped to fourth, Handsel being first, followed by Elfreda and Ashumet. After a run under spinakers, the order at Half-Way Rock was: Ashumet, Handsel, Cartoon, Elfreda. The final times were:

30ft. Class.

	R. M.	Elapsed.	Corrected.
Cartoon, Howard Parker	29.75	2 50 14	2 40 29
Handsel, J. R. Hooper	31.98	2 50 25	2 43 41

Jacobin, T. E. Jacobs	2 53 17	2 51 16
Widow, J. S. Farlow	3 01 13	2 57 35
Gossip II., Waldo Haskell	Withdrew.	

The winners of the series were: 30ft. class, first day, Elfreda, first, $25 and one leg; second day, Cartoon, first, $25 and one leg; Handsel, second, $15; third day, Ashumet, first, $25 and leg; Cartoon, second, $15. Twenty-five foot class, first day, Cartoon disqualified; Little Peter, first, $20 and one leg; Sally IV., second, $12; second day, Hermes, first, $20 and one leg; Little Peter, second, $12; third day, Hermes, first, $20 and one leg. Raceabout class, first day, Hazard, $20 and one leg; Tunipoo, $12, and Spindrift, $8; second day, Jilt, first, $20 and one leg; Tunipoo, second, $12, and Sintram, third, $8. Third day, Mongoose, first, $20 and one leg; Tunipoo, second, $12, and Fancy, third, $8. Knockabout class, first day, Lorelei, first, $20 and one leg; Polly, second, $12, and Carina, third, $8; second day, Lorelei, first, $20 and one leg; Polly, second, $12, and Gossip, third, $8; third day, Jenny Wren, first, $20 and one leg; Aspenet, second, $12, and Nike, third, $8. Lorelei is the only boat winning a club medal. The Upton cup was not won, a sail-off being necessary.

Saturday proved a poor day for yacht racing, almost all the wind being concentrated in one violent thunder squall. Only four schooners were present at the line, and in the 25ft. class Little Peter had no competitor, so a handicap was arranged between her and Harbinger, the latter allowing 4m. The schooners sailed from off Marblehead Rock to the sea mark, to Boston Lightship and return, 25½ miles naut. The others sailed to the Groves, the sea mark and home, 15 miles. The 30ft. class was started at 11:55, the handicap boats at 12:05, and the schooners at 12:23.

The wind was very light from S.W., and Cartoon, with no topsail, was at a disadvantage, doing poorly and finally giving up. Near the finish the fleet was overtaken by a bad squall, but all came through safely, though the judges' tug picked up the crew of the 18-footer Duchess, capsized while in another race. The times were:

Schooners.

	Elapsed.	Corrected.
Loyal, N. C. Nash	4 56 45	4 54 33

Skipjacks—Start 3:05.

Merlin, R. S. Townsend	Not timed.
Marette, D. James	Did not finish.

The Flying Proa.

Editor Forest and Stream:

At the close of the unpleasantness between the South and the rest of the States, the writer hereof, being one of the few who were debarred from parole, went out into the world to find employment for his energies, and to rough it for victuals and clothes until the time should arrive when he could become a citizen of our common country. Educated as a physician, he was fortunate enough to secure a position on board a British steamer then engaged in the coolie trade to South America and the West Indies, and in this capacity spent several years up and down the China seas and among the islands of the Pacific, now grouped under the head of Oceanica. He has been in the Philippines frequently, and in Manila probably a score of times, and it was in that harbor that he got the opportunity of seeing and closely examining that marvel of sailing crafts, the prahu; or, as incorrectly called, proa.

The word prahu is pronounced very much like "prow," as spoken down on Cape Cod, the h being silent and the u enunciated like oo in cool, hence the word "prow," the common nautical name for the craft, has no reference to that portion of a vessel, but is the nearest approach to the native or Malay name for the boat.

The prahu originated (as I was informed by a surgeon in H. M. Indian service, whose long residence in the East and knowledge of Hindustani and native languages and dialects, including Malayu, made him a mine of information on all matters pertaining to Indonesian history, ethnology and affairs generally*) in the Laccadive group, though just why there, when the same conditions obtain in all the islands and groups of the Indian and Pacific oceans, and the craft so admirably fulfills them, I cannot see.

By what fortunate chance or by what inspiration this marvelous model of naval construction was evolved must ever remain a mystery. Certain it is that, as in the Australian boomerang, the highest mathematical knowledge of our vaunted civilization, while it can follow out by intricate calculations and demonstrate to a nicety that both are built upon the lines of the highest science, yet would never have suggested either.

The prahu is diametrically opposed to all of our ideas of naval construction. While with us bow and stern are widely different, in the prahu they are alike. With us, on the contrary, the two sides of our vessels are exactly alike, with her they are as unlike as they could possibly be made—one, the port, being bellied or rounded out, while the lee side is as flat as boards can be. I can scarcely give a better idea of the shape of the prahu than by saying that if we took a purse-net seine boat, both ends of which are sharp, and sawed it in two longitudinally from stem to stern, and nailed a board sufficiently wide and long to the open side, we would have the models of two prahus, as shown by the outline sketch A.

It is obvious that a craft of this shape, left as it is, has no stability. It would at once list and fill, and probably sink; so to prevent this it is fitted with outriggers of light but strong bamboo, at the extremity of which is a log, sharp at both ends, of palm or other heavy wood, but usually of the body of the cocoanut palm, which is exceedingly hard, close-grained and heavy. The shape of this log is that of a solid pirogue, or of a log that has been shaped for a canoe, but not yet dug out. This is lashed to the extremities of the bamboo poles, so that the distance from the hull of the prahu can be regulated to the load of the latter, being approached when the load is light and removed when it is heavy, thus giving the craft an immense breadth of beam, and one always suited to the occasion.

The mast is stepped in the exact center of the flat (lee) side, and the craft sails equally well with either end as bow or stern. It is in tacking and windward work that the wonderful fitness of the prahu for these seas (where a steady wind can always be relied upon, according to the season) is shown. The prahu, under these circumstances, tacks frequently, and to facilitate matters a steersman or helmsman is kept constantly at each end. When the craft wants to go about the rais (sea-Arabic for captain) gives the order, the prahu bears away and brings what was the stern end of the boat to the wind, the heel of the sail is shifted to the opposite side, the boom swung in the opposite direction, and presto, the maneuver is accomplished, and off she goes like an arrow from a bow, stern formost, the same side, the flat one, however, remaining always the weather one.

The sails are (or were, in my day) invariably of matting, and triangular in shape, the boom being of bamboo.

As to the hull of the prahu, there is not a nail or piece of metal used in its construction. The planks are sewed together with fibers from the native plants, so many of which abound in those regions, rich in strong and durable fibers. The interstices are caulked with coir (cocoanut) oakum, and the whole is made water-tight by a plentiful use of the native resins and gums. The framing, what little there is, is pinned together with wooden pins.

The prahu passes through rather than over the waves, and the first sight of one of the little craft careering along, like a race horse, through the waves, its nearly nude crew perched, if the breeze is heavy, out on the outrigger, its helmsmen standing straight and stiff, like crows in the rain, at either end, is one never to be forgotten while memory lasts.

As to speed, the prahu in any sort of weather can sail around and around out swiftest yachts, and still keep ahead of them. She glides, on the lightest breath of air, through the water like a living thing, and in a gale her speed is astonishing, and while, it must be confessed, not the most comfortable craft in the world, she is the safest.

I remember, now some twenty-five years ago, coming on deck one morning, and seeing the sail of a prahu just visible above the horizon dead astern. We were steaming and sailing, and making some eight or nine knots. In about two and a half hours she was alongside, passed us like a flash, and in two hours more she was hull-down dead ahead.

In constructing the prahu, as in building everything else, the tool most used is the parang, a heavy knife, narrow at the handle, but widening out at the tip to about 3in. The parang is the constant companion of the Malay, whether he be orang laut (man of the sea), orang malayu (the more civilized Malay), or orang benua (the wild or mountain man), and he uses it for hewing, cutting, cleaving and mortising, as knife, axe, adze and saw, and occasionally as weapon; but the weapon of the Malay is the kris or crease. With this he hews out and shapes and joints the slender boards of which the hull is made.

I am convinced, from the observations of five years spent up and down the China and Indian seas, that if we of the West, with our mechanical skill and resources, would take the prahu as a model, and construct a vessel in which the principles involved are developed, the result would be a marvel of speed. The prahus are comparatively small, as may easily be understood from what has been said, since the largest can be no longer than planks hewn from one log. My memory does not serve me very well at this length of time, but as well as I can remember, I never saw one more than 45ft. long, and possibly not this length, since it is a well-known phenomenon of memory that it always exaggerates the dimensions of buildings, vessels, etc. (as anyone who has returned to the scenes of his boyhood after an absence of even a few years can testify. Buildings that were remembered as enormous structures turn out to be very small, and distances once thought long are found to be relatively trifling).

Hitherto attempts have been made to utilize twin hulls, bridged across by a deck over the water, but such attempts have always proven failures as far as speed is concerned, because the hulls, being duplicates of each other, and each having bellying bows (B. B.), heaped up the water between them, and thus retarded progress. If, however, the proa shape of hull were taken (C. C.) with the flat sides inward, this objection would not obtain, and in my opinion the result would be a fast craft. The wheel or screw might be placed in the center, and probably to advantage, though I am not engineer enough to say whether it would be or not.

I cannot say that the prahu is a comfortable craft, according to our European ideas of comfort at least, though many a time I have envied the bath that the chaps on the outrigger were getting as the prahu dashed through the waves on a light breeze, while we were loblollying around in the intolerable heat.

With this craft, as I have described it, the natives put to sea in weather in which no European vessel of twice its size and staunchness could live more than a few minutes, and borne on by the "trades," go from island to island with the directness of the flight of a pigeon, and with nearly the speed of one.

That the prahu is of Malay origin can scarcely be doubted, tradition to the contrary, and from the following facts: The Malay dwellings throughout Indonesia and Australasia resemble prahus in their shape and construction—insomuch indeed that a Malay village looks for all the world like a lot of stranded prahus. The Malay word for "village" is the same as that for "boat" (of any sort), or balangay, a fact which recalls a period when Malays migrating or pirating, sea-rovers that they are, on reaching a new place of habitation, or seeking shelter for a period on shore, drew their boats up out of the water, turned them over to one side and made dwellings of them.

VIEUX MOUSTACHE.

[For several years past Mr. Robert Tyson, of Toronto, an old canoeist, has been experimenting with the proa idea, producing a very comfortable and fast sailing boat. No attempt is made to attain the exceptional speed of the proa, the object being a boat as simple and convenient as the sailing canoe, but more comfortable.—EDITOR FOREST AND STREAM.]

* This description, so far as it goes, fits very closely our old friend Dr. C. M. Douglas, the canoeist; possibly our correspondent has met Dr. Douglas in the East.—EDITOR.

Manchester Y. C. Midsummer Series.

Manchester, Mass.

July 27, 28, 29.

THE Manchester Y. C. held its midsummer series of races last week, beginning on July 27. The races were open to yachts of the 30ft., 25ft., 21ft. and 18ft. classes, Y. R. A., and raceabouts; cabin and open yachts sailing together in the 21ft. class. Cash prizes were given, with the Y. R. A. percentages. The courses were:

For 30ft., 25ft., 21ft. classes, course 1—From starting line, leaving Hardy's Rocks to starboard; thence to black buoy off Martin's Ledge, leaving it to starboard; thence to black buoys Nos. 5 and 7, off Coney Island and Coney Island Ledges, leaving them to port; thence to black buoy 11, off Little Haste, leaving it to starboard; thence to finish line.

Course 2—Reverse of course 1.

For smaller classes, course 3—From starting line to black buoy No. 5, off Baker's Island; thence to black buoy 11, off Little Haste; thence to finish line, leaving all marks to starboard.

Course 4—Reverse of course 3

On Wednesday the conditions were very poor, a light S.E. breeze and heavy fog, but a start was made at 12:30. A very good race was sailed, considering the weather, the times being:

30ft. Class.

	Elapsed.
Ashumet, C. F. Bache	1 34 33
Harbinger, W. F. Bache	.. ..

25ft. Class.

Little Peter, H. Moebs	1 41 11
Beatrice, J. Cavanagh	1 41 28
Hermes, A. W. Chesterton	1 42 43

Raceabout Class.

Jilt, W. O. Gay	1 48 33
Sintram, W. P. Fowle	1 51 37
Mongoose II., J. D. Irving	1 51 55
Fancy, C. F. Lyman	1 42 32
Chinook, Adams Bros	1 54 35
Typhoon, E. V. R. Thayer, Jr.	1 55 40
Tunipoo, J. L. Brewer	1 55 58
Quill, J. F. Cole	1 56 55
Spindrift, W. H. S. Lothrop	1 57 47
Darthea, E. C. Lambert	Withdrew.

18ft. Class.

Circe, F. L. Pigeon	1 52 08
Duchess, C. D. Mower	1 52 38
Vamoose, R. M. Benner	1 52 39

Prize winners were: First prizes, Ashumet $15, Little Peter $15, Jilt $15, Circe $10; second prizes, Beatrice $10, Sintram $10, Duchess $5; third prize, Mongoose, $5

The 21-footer Snipe II. was at the line ready to start, but had no boat to sail against.

The judges were: Messrs. G. M. Mansfield, A. G. Wood, W. A. Tucker, James Bertram, A. Henry Higginson.

The Manchester 15ft. class mustered half a dozen starters, but they were lost in the fog, and none finished.

On Thursday the conditions were still worse, rain being added to the fog, so that the race was postponed to the following morning at 10:30.

On Friday morning the postponed race was started in a light and fluky south wind. Though the course was covered by all but the 15-footers, the race was very fluky and unsatisfactory. The times were:

25ft. Class.

	Elapsed.
Beatrice, J. Cavanagh	2 15 27
Eleanor, D. B. Clapp	2 17 30
